## Preface

This programmer guide provides you with the information required to use Programmable Interface commands for remotely controlling your instrument.

Quick Start User Manual. The user manual has information about installing and operating the instrument. It also provides concepts and theories about using the instrument that are not covered in the online help.
Online Help. This is an online help system that is integrated with the User Interface application that ships with this product. The online help provides in-depth operation and user interface help.
Getting Started with OpenChoice ${ }^{\text {TM }}$ Solutions Manual. A book that explores some options for getting data from your instrument into any one of several available analysis tools.
Specifications and Performance Verification. Instrument specifications and a performance verification procedure.
TekVISA Programmer Manual. The manual describes TekVISA, the Tektronix implementation of the VISA Application Programming Interface (API). TekVISA is industry-compliant software for writing interoperable instrument drivers in a variety of Application Development Environments (ADEs).
Other Included Documentation. Installation booklets are included in the Product Software and Operating System Restore Software packages.
Service Manual. The service manual includes procedures to service the instrument to the module level.

New in the programmer manual

The programmer manual is divided into the following major topics:

- Getting started. This topic introduces you to the programming information and provides basic information about setting up your instrument for remote control.
- Command groups. This topic contains all the commands listed in functional groups. Each group consists of an overview of the commands in that group and a table that lists all the commands and queries for that group. You can click a command in the listing to display a detailed description of the command.
- Command syntax. This topic provides an overview of the command syntax that you use to communicate with the instrument and other general information about commands, such as how commands and queries are constructed, how to enter commands, constructed mnemonics, and argument types.
- Status and events. This topic discusses the status and event reporting system for the GPIB interfaces. This system informs you of certain significant events that occur within the instrument. Topics that are discussed include registers, queues, event handling sequences, synchronization methods, and messages that the instrument might return, including error messages.
- Miscellaneous. This topic contains miscellaneous information, such as a list of reserved words, a table of the factory initialization (default) settings, and interface specifications that can be helpful when using commands to remotely control the instrument.

The following major changes were made to this version of the programmer manual:

- Added the following new commands or groups of commands:
- MULTiscope:CONFig
- MULTiscope:EXIT
- MULTiscope:RESTART
= MULTiscope:STATUS?

## Getting started

This programmer guide provides you with the information required to use Programmable Interface commands for remotely controlling your instrument. With this information, you can write computer programs that will perform functions such as setting the front panel controls, taking measurements, performing statistical calculations, and exporting data for use in other programs, such as spreadsheets.

NOTE. This programmer guide covers many oscilloscope models from Tektronix. Most of the command listed here are available for all of these covered models. However, some commands are available only on certain models; these commands are identified by a NOTE in the description.

In addition to the traditional GPIB electronic interface (referred to as the physical GPIB interface), your instrument is provided with a TekVISA GPIB-compatible interface (referred to as the virtual GPIB interface). This is a software Application Programming Interface (API) which enables you to communicate with the instrument in a variety of ways, including via the Internet. With the following two exceptions, these interfaces are completely independent:

- HEADER. Command headers enabled or disabled on one interface are correspondingly enabled or disabled on the other interface. Refer to the command descriptions for more detailed information.
- VERBOSE. Verbosity enabled or disabled on one interface is correspondingly enabled or disabled on the other interface. Refer to the command description for more detailed information.

Most examples in this document require that both HEADER and VERBOSE are ON.
Refer to Documentation in the Preface for information on related manuals and documents.

## Setting up remote communications

On MSO/DPO5000/B Series instruments only: The instruments require a TEK-USB-488 adapter. You can remotely communicate between your oscilloscope and PC via Ethernet, USB, and GPIB.

- To use Ethernet, start by connecting an appropriate Ethernet cable to the Ethernet port (RJ-45 connector) on the rear panel of your oscilloscope. This connects the oscilloscope to a 10/100/1000 Base-T local area network.

■ To use USB, start by connecting an appropriate USB cable to the USB device port on the rear panel of your oscilloscope. With USB, the system automatically configures itself.

- To use GPIB, start by connecting an appropriate USB cable to the USB device port on the rear panel of your oscilloscope. Connect the other end to the TEK-USB-488 adapter host port. Then connect a GPIB cable from the TEK-USB-488 adapter to your PC or other GPIB-enabled instrument. You can apply power to the TEK-USB-488 adapter in one of the following two ways:
= With an appropriate power supply connected to wall power and the adapter.
= By connecting a USB cable to a Host port on the oscilloscope and the device (B type) connector on the adapter. Without a power connection, the adapter will not function properly.

Before setting up the instrument for remote communications using the electronic (physical) GPIB interface, you should familiarize yourself with the following GPIB requirements:

- A unique device address must be assigned to each device on the bus. No two devices can share the same device address.
- No more than 15 devices can be connected to any one line.
- One device should be connected for every 6 feet ( 2 meters) of cable used.
- No more than 65 feet ( 20 meters) of cable should be used to connect devices to a bus.
- At least two-thirds of the devices on the network should be powered on while using the network.
- Connect the devices on the network in a star or linear configuration. Do not use loop or parallel configurations.

Connecting to the instrument

Your instrument has a 24 -pin GPIB connector on its rear (side) panel. (This connector is available on all instruments except MSO/DPO5000/B Series instruments.) This connector has a D-type shell and conforms to IEEE Std 488.13/41987. Attach an IEEE Std 488.13/41987 GPIB cable to this connector and to your controller as shown in the following figure.

If necessary, the GPIB connectors can be stacked as shown in the following figure:

Setting the GPIB address To function correctly, your instrument must have a unique device address. The default settings for the GPIB configuration are:

- GPIB Address 1.
- GPIB Mode Talk/Listen

To change either of the GPIB settings, do the following:

1. Select GPIB Configuration from the Utilities menu.

2. Click the Configuration Talk/Listen button.

The following screen appears on MSO/DPO5000/B Series instruments:

3. Change the GPIB Address to a unique address.
4. Click the Close button. The instrument is now set up for bidirectional communication with your controller.

## Command syntax

You can control the operations and functions of the instrument through the use of commands and queries. The following related topics describe the syntax of these commands and queries, as well as the conventions that the instrument uses to process them. See the Command Groups topic in the table of contents for a listing of the commands by command group, or use the index to locate a specific command.

## Backus-Naur Form notation

This guide describes the commands and queries using Backus-Naur Form (BNF) notation. Refer to the following table for the symbols that are used.

Table 2-1: Symbols for Backus-Naur Form

| Symbol | Meaning |
| :--- | :--- |
| $\rangle$ | Defined element |
| $:=$ | Is defined as |
|  | Exclusive OR |
| $\}$ | Group; one element is required |
| [] | Optional; can be omitted |
| $\ldots \ldots$ | Previous element(s) may be repeated |

() Comment

## Command and query structure

Commands consist of set commands and query commands (usually called commands and queries). Commands modify instrument settings or tell the instrument to perform a specific action. Queries cause the instrument to return data and status information.

Most commands have both a set form and a query form. The query form of the command differs from the set form by its question mark on the end. For example, the set command ACQuire: MODe has a query form ACQuire:MODe?. Not all commands have both a set and a query form. Some commands have set only and some have query only.

Messages A command message is a command or query name followed by any information the instrument must have in order to execute the command or query. Command messages can contain five element types, defined in the following table.

Table 2-2: Command message elements

| Symbol | Meaning |
| :--- | :--- |
| <Header> | This is the basic command name. If the header ends with a question <br> mark, the command is a query. The header may begin with a colon <br> (:) character. If the command is concatenated with other commands, <br> the beginning colon is required. Never use the beginning colon with <br> command headers beginning with an asterisk (*). |
| <Mnemonic> | This is a header subfunction. Some command headers have only <br> one mnemonic. If a command header has multiple mnemonics, a <br> colon (:) character always separates them from each other. |
| <Argument> <br> This is a quantity, quality, restriction, or limit associated with the <br> header. Some commands have no arguments while others have <br> multiple arguments. A <space> separates arguments from the <br> header. A <comma> separates arguments from each other. |  |
| A single comma is used between arguments of multiple-argument <br> commands. Optionally, there may be white space characters before <br> and after the comma. |  |
| A white space character is used between a command header and the <br> related argument. Optionally, a white space may consist of multiple <br> white space characters. |  |
| <Space> |  |

Commands Commands cause the instrument to perform a specific function or change one of the settings. Commands have the structure:

```
[:]<Header>[<Space><Argument>[<Comma> <Argument>]...]
```

A command header consists of one or more mnemonics arranged in a hierarchical or tree structure. The first mnemonic is the base or root of the tree and each subsequent mnemonic is a level or branch off the previous one. Commands at a higher level in the tree can affect those at a lower level. The leading colon (:) always returns you to the base of the command tree.

Queries Queries cause the instrument to return status or setting information. Queries have the structure:

- [:]<Header>?
- [:]<Header>?[<Space><Argument> [<Comma><Argument>]...]

You can specify a query command at any level in the command tree unless otherwise noted. These branch queries return information about all the mnemonics below the specified branch or level. For example, HIStogram:STATistics:STDdev? returns the standard deviation of the histogram, HIStogram:STATistics? returns all the histogram statistics, and HIStogram? returns all the histogram parameters.

Headers You can use the HEADer command to control whether the instrument returns headers as part of the query response. If header is on, the query returns command
headers and then formats itself as a valid set command. If header is off, the response includes only the values. This can make it easier to parse and extract information from the response. The table shows the difference in responses.

Table 2-3: Comparison of header off and header on responses

| Query | Header off | Header on |
| :--- | :---: | :---: |
| TIME? | "14:30:00" | $:$ TIME"14:30:00" |
| ACQuire:NUMAVg? | 100 | :ACQUIRE:NUMAVG 100 |
| Command Parts | $\overbrace{\text { SAVe:WAVEform }}^{\text {Header }}$ | $\underbrace{\text { Comma }}_{\text {Mnemonics }}$ |

## Clearing the instrument

You can use the selected Device Clear (DCL) GPIB function to clear the Output Queue and reset the instrument to accept a new command or query. Refer to your GPIB library documentation for details about the Device Clear operation.

## Command entry

The following rules apply when entering commands:

- You can enter commands in upper or lower case.
- You can precede any command with white space characters. White space characters include any combination of the ASCII control characters 00 through 09 and 0 B through 20 hexadecimal ( 0 through 9 and 11 through 32 decimal).
- The instrument ignores commands consisting of any combination of white space characters and line feeds.

Abbreviating You can abbreviate many instrument commands. Commands in this document show the abbreviations in capitals. For example, you can enter the command ACQuire:NUMAvg simply as ACQ:NUMA or acq:numa. Abbreviation rules can change over time as new instrument models are introduced. Thus, for the most robust code, use the full spelling.

If you use the HEADer command to have command headers included as part of query responses, you can further control whether the returned headers are abbreviated or are full-length with the VERBose command.

Concatenating You can concatenate any combination of set commands and queries using a semicolon (;). The instrument executes concatenated commands in the order received. When concatenating, you must follow these rules:

1. Separate completely different headers by a semicolon and by the beginning colon on all commands except the first one. For example, the commands TRIGger:MODe NORMa1 and ACQuire:NUMAVg 10, can be concatenated into the following single command:

TRIGger:MODe NORMa1;:ACQuire:NUMAVg 10
2. If concatenated commands have headers that differ by only the last mnemonic, you can abbreviate the second command and eliminate the beginning colon. For example, you can concatenate the commands ACQuire: MODe ENVelope and ACQuire:NUMAVg 10 into a single command:

ACQuire:MODe ENVelope; NUMAVg 10
The longer version works equally well:
ACQuire:MODe ENVelope;:ACQuire:NUMAVg 10
3. Never precede a star $\left({ }^{*}\right)$ command with a colon:

ACQuire: MODe ENVelope;*OPC
Any commands that follow will be processed as if the star command was not there, so the commands ACQuire:MODe ENVelope; *OPC; NUMAVg 10 will set the acquisition mode to envelope and set the number of acquisitions for averaging to 10 .
4. When you concatenate queries, the responses to all the queries are concatenated into a single response message. For example, if the display imageview color is temperature and the display recordview color is spectral, the concatenated query DISplay:COLOr:PALETTE:IMAGEVIEW?; RECORDVIEW? will return the following.

If the header is on:

```
:DISPLAY:COLOR:PALETTE:IMAGEVIEW TEMPERATURE;
```

:DISPLAY:COLOR:PALETTE:RECORDVIEW SPECTRAL

If the header is off:
TEMPERATURE; SPECTRAL
5. Set commands and queries can be concatenated in the same message. For example,

ACQuire:MODe SAMple;NUMAVg?;STATE?
is a valid message that sets the acquisition mode to sample. The message then queries the number of acquisitions for averaging and the acquisition state. Concatenated commands and queries are executed in the order received.

Here are some invalid concatenations:
DISplay:PERSistance:RESET;ACQuire:NUMAVg 10 (no colon before ACQuire)

DISplay:GRAticule FUL1;:FILTer SINX (extra colon before FILTer; use DISplay:GRAticule FUL1;FILTer SINX instead)

DISplay: PERSistance: RESET; : *OPC (colon before a star (*) command)
DISplay:COLOr:MATHCOLOr DEFAULT; COLOr:REFCOLOr INHERIT (levels of the mnemonics are different; either remove the second use of COLor or place :DISPlay: in front of COLOr:REFCOLOr INHERIT)

Terminating This documentation uses <EOM> (End of message) to represent a message terminator.

Table 2-4: End of Message terminator

| Symbol | Meaning |
| :--- | :--- |
| $\angle$ EOM $>$ | Message terminator |

The end-of-message terminator must be the END message (EOI asserted concurrently with the last data byte). The last data byte may be an ASCII linefeed (LF) character.

This instrument does not support ASCII LF only message termination. The instrument always terminates outgoing messages with LF and EOI.

## Constructed mnemonics

Some header mnemonics specify one of a range of mnemonics. For example, a channel mnemonic can be $\mathrm{CH} 1, \mathrm{CH} 2, \mathrm{CH} 3$, or CH 4 . You use these mnemonics in the command just as you do any other mnemonic. For example, there is a CH 1 :POSition command, and there is also a CH2:POSition command. In the command descriptions, this list of choices is abbreviated as $\mathrm{CH}<\mathrm{x}\rangle$.

Cursor Position When cursors are displayed, commands may specify which cursor of the pair to Mnemonics use.

Table 2-5: Cursor mnemonics

| Symbol | Meaning |
| :--- | :--- |
| CURSOR $\langle x>$ | A cursor selector; $\langle x>$ is either 1 or 2. |
| POSITION $\langle x>$ | A cursor selector; $\langle x>$ is either 1 or 2. |
| HPOS $\langle x>$ | A cursor selector; $\langle x>$ is either 1 or 2. |

Math specifier mnemonics

Measurement specifier mnemonics

Channel mnemonics

Reference waveform mnemonics

Commands can specify the mathematical waveform to use as a mnemonic in the header.

Table 2-6: Math specifier mnemonics

| Symbol | Meaning |
| :--- | :--- |
| Math $\langle x\rangle$ | A math waveform specifier; $\langle x\rangle$ is 1 through 4. |

Commands can specify which measurement to set or query as a mnemonic in the header. Up to eight automated measurements can be displayed.

Table 2-7: Measurement specifier mnemonics

| Symbol | Meaning |
| :--- | :--- |
| MEAS $\langle x>$ | A measurement specifier; $\langle x>$ is 1 through 8. |

Commands specify the channel to use as a mnemonic in the header.

Table 2-8: Channel Mnemonics

| Symbol | Meaning |
| :--- | :--- |
| $\mathrm{CH}\langle x>$ | A channel specifier; $\langle x>$ is 1 through 4. |
| SOURCE $<1 . .2>$ | A source specifier, the source can be 1 through 2. |

Commands can specify the reference waveform to use as a mnemonic in the header.

Table 2-9: Reference waveform mnemonics

| Symbol | Meaning |
| :--- | :--- |
| $R E F\langle x\rangle$ | A reference waveform specifier; $\langle x\rangle$ is 1 thru 4. |

## Argument types

Numeric Many instrument commands require numeric arguments. The syntax shows the format that the instrument returns in response to a query. This is also the preferred format when sending the command to the instrument, though any of the formats will be accepted. This documentation represents these arguments as follows:

Table 2-10: Numeric arguments

| Symbol | Meaning |
| :--- | :--- |
| $\langle$ NR1> | Signed integer value |
| <NR2> | Floating point value without an exponent |
| <NR3> | Floating point value with an exponent |

Most numeric arguments will be automatically forced to a valid setting, either by rounding or truncating, when an invalid number is input unless otherwise noted in the command description.

## Quoted String

Some commands accept or return data in the form of a quoted string, which is simply a group of ASCII characters enclosed by a single quote (') or double quote ("). The following is an example of a quoted string: "This is a quoted string". This documentation represents these arguments as follows:

Table 2-11: Quoted string argument

| Symbol | Meaning |
| :--- | :--- |
| <QString> | Quoted string of ASCII text |

A quoted string can include any character defined in the 7-bit ASCII character set. Follow these rules when you use quoted strings:

1. Use the same type of quote character to open and close the string. For example: "this is a valid string".
2. You can mix quotation marks within a string if you follow the previous rule. For example, "this is an 'acceptable' string".
3. You can include a quote character within a string by repeating the quote. For example: "here is a "" mark".
4. Strings can have upper or lower case characters.
5. If you use a GPIB network, you cannot terminate a quoted string with the END message before the closing delimiter.
6. A carriage return or line feed embedded in a quoted string does not terminate the string, but is treated as just another character in the string.
7. The maximum length of a quoted string returned from a query is 255 characters.

Here are some invalid strings:

- "Invalid string argument' (quotes are not of the same type)
- "test<EOI>" (termination character is embedded in the string)

Block Several instrument commands use a block argument form (see the following table).

Table 2-12: Block argument

| Symbol | Meaning |
| :---: | :---: |
| <NZDig> | A nonzero digit character in the range of 1-9 |
| <Dig> | A digit character, in the range of 0-9 |
| <DChar> | A character with the hexadecimal equivalent of 00 through FF ( 0 through 255 decimal) |
| <Block> | A block of data bytes defined as: <Block> ::= \{\#<NZDig><Dig>[<Dig>...][<DChar>...] \|\#0[<DChar>...]<terminator>\} |

$<$ NZDig> specifies the number of $<$ Dig> elements that follow. Taken together, the $<$ NZDig $>$ and $<$ Dig $>$ elements form a decimal integer that specifies how many $<$ DChar $>$ elements follow.

NOTE. The digit <NZDig> is in hexadecimal format. This deviates slightly from the IEEE 488.2 specification that it be in decimal format, as extra allowances must be made for data lengths that are greater than 999,999,999 <DChar> elements (for example 500M record lengths at 2 bytes per point).

## Command groups

The programmable interface conforms to Tektronix standard codes and formats except where noted. The GPIB interface also conforms to IEEE Std 488.2-1987 except where noted.

## Acquisition command group

Acquisition commands set up the modes and functions that control how the instrument acquires signals and processes them into waveforms. Using these commands for acquiring waveforms, you can do the following:

- Start and stop acquisitions.
- Control whether each waveform is simply acquired, averaged, or enveloped over successive acquisitions of that waveform.
- Set the controls or conditions that start and stop acquisitions.
- Determine the action the system takes upon completing an acquisition, such as saving all waveforms and taking a measurement.
- Control acquisition of acquired channel waveforms.
- Set acquisition parameters.

Table 2-13: Acquisition commands

| Command | Description |
| :--- | :--- |
| ACQuire:ENHANCEDEnob | Sets or queries the state of the enhanced effective number of bits. |
| ACQuire:ENHANCEDEnob:STATE? | Returns the state of the enhanced effective number of bits. |
| ACQuire:INTERPEightbit | Sets or queries the interpolation acquisition mode |
| ACQuire:MAGnivu | Sets or queries the MagniVu feature <br> NOTE. Not available on some models |
| ACQuire:MODe | Sets or queries acquisition mode |
| ACQuire:MODe:ACTUal? | Return the actual acquisition mode that the hardware used for HiRes and PkDetect <br> mode |
| ACQuire:NUMFRAMESACQuired? | Returns the number of acquisitions that have occurred |
| ACQuire:NUMACq? | Returns the number of waveform acquisitions that have occurred since starting <br> acquisition with the ACQuire: STATE RUN command |
| ACQuire:NUMAVg | Sets or queries number of acquisitions for an averaged waveform |
| ACQuire:NUMEnv | Sets or queries number of acquisitions for envelope waveform <br> Sets or queries the number of samples that make up a WfmDB for single sequence <br> mode and Mask Pass/Fail Completion Test |
| Sets or queries the sampling mode |  |
| ACQuire:SAMPlingmode | Starts, stops, or returns acquisition state |
| ACQuire:STATE |  |

Table 2-13: Acquisition commands (cont.)

| Command | Description |
| :--- | :--- |
| ACQuire:STOPAfter | Sets or queries whether the acquisition is continuous or single sequence |
| FASTAcq? | Enables, disables, or returns state of Fast Acquisition mode |
| FASTAcq:HIACQRATE | Sets or queries the state of FastAcq optimization |
| FASTAcq:STATE | Returns the Fast Acquisition state |

## Alias command group

Alias commands allow you to define new commands as a sequence of standard commands. You might find this useful when repeatedly using the same commands to perform certain tasks like setting up measurements.

Aliases are similar to macros but do not include the capability to substitute parameters into alias bodies. The alias mechanism obeys the following rules:

- The alias name must consist of a valid IEEE 488.2 message unit, which may not appear in a message preceded by a colon, comma, or a command or query program header.
- The alias name may not appear in a message followed by program date, a colon, comma, or question mark.
- An alias name must be distinct from any keyword or keyword short form.
- An alias name cannot be redefined without first being deleted using one of the alias deletion functions.
- Alias names do not appear in response messages.
- The Alias commands are defined in Tektronix Standard Codes and Formats. Deviations between that standard and what is specified here will be considered errors unless specifically noted in the command description in this document.

Table 2-14: Alias commands

| Command | Description |
| :--- | :--- |
| ALlas | Sets or queries the alias state |
| ALlas:CATalog? | Returns a list of the currently defined alias labels |
| ALlas:DEFine | Assigns a sequence of program messages to an alias label |
| ALlas:DELEte | Removes a specified alias |
| ALlas:DELEte:ALL | Deletes all existing aliases |
| ALlas:DELEte:NAMe | Removes a specified alias |
| ALlas:STATE | Sets or queries the alias state |

## Bus command group

## NOTE. Not available on some models.

Use the commands in the Bus Command Group to configure a bus. These commands let you:

- Specify the bus type
- Specify the digital signals to be used in the bus
- Specify its display style

Bus Mnemonics Commands specify the bus to use as a mnemonic in the header.
NOTE. For MIPI general commands, currently only Lane 1 is supported.

Table 2-15: Bus mnemonics

| Symbol | Meaning |
| :--- | :--- |
| $B<x>$ | A bus specifier; $\langle x\rangle$ is 1 through 16 |

Table 2-16: Bus commands

| Command | Description |
| :---: | :---: |
| BUS:B<x>:CAN:SOUrce | Sets or queries the CAN source channel |
| BUS:B<x>:CAN:BITRate | Sets or queries the CAN bitrate |
| BUS:B<x>:CAN:BITRate:VALue | Sets or queries CAN bitrate value |
| BUS:B<x>:CAN:PRObe | Sets or queries CAN probe type |
| BUS:B<x>:DISplay:DECOde:FILe | Sets or queries the symbol table file for the specified bus |
| BUS:B<x>:DISplay:DECOde:STAte | Sets or queries whether the specified bus is enabled to display symbolic decode of its busform values |
| BUS:B1<x>:DISplay:HIERarchical | This command sets or queries the display of a bus layer on or off. |
| BUS:B1<x>:DISplay:LAYout | This command sets or queries the format a bus layer should use. |
| BUS:B<x>:ETHERnet:PRObe | This command specifies the Ethernet probe type: differential or single-ended. |
| BUS:B<x>:ETHERnet:SOUrce | Specifies the Ethernet data source for differential input |
| BUS:B<x>:ETHERnet:SOUrce:DMINus | This command specifies the Ethernet data source for D-input for differential probing. |
| BUS:B<x>:ETHERnet:SOUrce:DPLUs | This command specifies the Ethernet data source for the $D+$ input for differential probing. |
| BUS:B<x>:ETHERnet:TYPe | Specifies the Ethernet standard type: 10Base-T or 100Base-T |
| BUS:B<x>:FLEXRAY:BITRate | Sets or queries the FLEXRAY bus bit rate |

Table 2-16: Bus commands (cont.)

| Command | Description |
| :---: | :---: |
| BUS:B<x>:FLEXRAY:BITRate:VALue | Sets or queries the bus is specified by x |
| BUS:B<x>:FLEXRAY:CHANnel | Sets or queries the FLEXRAY bus channel |
| BUS:B<x>:FLEXRAY:SOUrce | Sets or queries the FLEXRAY bus source |
| BUS:B<x>:FLEXRAY\{:PROBe\|:SIGnal\} | Sets or queries the FLEXRAY probe |
| BUS:B<x>:12C:CLOCk:SOUrce | Sets or queries the I2C clock (SCLK) source for the specified bus |
| BUS:B<x>:I2C:DATa:SOUrce | Sets or queries the I2C data (SDA) source for the specified bus |
| BUS:B<x>:I2C:RWINADDR | Determines whether decoded I2C slave addresses are pure seven-bit values, or have the R/W* combined with them |
| BUS:B<x>:LABel | Sets or queries the waveform label for the specified bus |
| BUS:B<x>:LIN:BITRate | Sets or queries the LIN bus bit rate |
| BUS:B<x>:LIN:BITRate:VALue | Sets or queries the LIN bus bitrate value |
| BUS:B<x>:LIN:IDFORmat | Sets or queries LIN bus id format |
| BUS:B<x>:LIN:POLarity | Sets or queries the LIN bus polarity |
| BUS:B<x>:LIN:SOUrce | Sets or queries sets the LIN bus source |
| BUS:B<x>:LIN:STANDard | Sets or queries the LIN bus standard |
| BUS:B<x>:MLL1553B:POLarity | Sets the MIL-STD-1553 bus polarity to normal or inverted |
| BUS:B<x>:MLL1553B:RESPonsetime:MAXimum | Specifies the maximum response time to a valid command issued |
| BUS:B<x>:ML1 1553B:RESPonsetime:MINimum | Specifies the minimum response time to a valid command issued |
| BUS:B<x>:MIL1553B:SOUrce | Sets or queries sets the MIL-STD-1553 bus source |
| BUS:B<x>:MIPICSITWo:CLOCk:SOUrce | Sets or queries the MIPI CSI2 clock source for the specified bus |
| BUS:B<x>:MIPICSITWo:CLOCk:TYPe | Sets or queries the MIPI CSI2 clock source type for the specified bus |
| BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce: DIFFerential | Sets or queries the differential source for the specified lane of the specified MIPI CSI2 bus |
| BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce: DMINUS | Sets or queries the D Minus source for the specified lane of the specified MIPI CSI2 bus |
| BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce: DPLUS | Sets or queries the $D$ Plus source for the specified lane of the specified MIPI CSI2 bus |
| BUS:B<x>:MIPICSITWo:LANE<x>:TYPe | Sets or queries the lane source type for the specified MIPI CSI2 bus |
| BUS:B<x>:MIPIDSIOne:CLOCk:SOUrce | Sets or queries the clock source for the specified MIPI DSI1 bus |
| BUS:B<x>:MIPIDSIOne:CLOCk:TYPe | Sets or queries the MIPI DSI1 clock source type for the specified bus |
| BUS:B<x>:MIPIDSIOne:LANE<x>:SOUrce: DIFFerential | Sets or queries the differential source for the specified lane of the specified MIPI DSI1 bus |
| BUS:B<x>:MIPIDSIOne:LANE<x>:SOUrce: DMINUS | Sets or queries the $D$ Minus source for the specified lane of the specified MIPI DSI1 bus |
| BUS:B<x>:MIPIDSIOne:LANE<x>:SOUrce: DPLUS | Sets or queries the D Plus source for the specified lane of the specified MIPI DSI1 bus |
| BUS:B<x>:MIPIDSIOne:LANE<x>:TYPe | Sets or queries the lane source type for the specified MIPI DSI1 bus |
| BUS:B<x>:PARallel:CLOCk:EDGE | Determines which edges of its clock signal cause a clocked parallel bus to sample new states |

| Command | Description |
| :---: | :---: |
| BUS:B<x>:PARallel:CLOCk:SOUrce | Sets or queries the Parallel clock source for the specified bus |
| BUS:B<x>:PARallel:ISCLOCKED | Determines whether the bus operates in a clocked or asynchronous fashion |
| BUS:B<x>:PARallel:SOURCES | Sets or queries the member signals for the Parallel mode of the bus to or reports them as an MSB-to-LSB ordered list |
| BUS:B<x>PPCIE:BITRate | Sets or queries the PCIE bus bit rate |
| BUS:B<x>:PCIE:BITRate:VALue | Sets or queries the PCIE bus bit rate value |
| BUS:B<x>:PCIE:HYSTeresis | Sets or queries the PCIE bus hysteresis |
| BUS:B<x>:PCIE:LANE | Sets or queries the PCIE bus lane |
| BUS:B<x>:PCIE:SOUrce | Sets or queries the PCIE bus source |
| BUS:B<x>PPOSition | Sets or queries the position waveform for the specified bus |
| BUS:B<x>:RS232C:BITRate | Sets or queries the RS-232 bit rate for the specified bus |
| BUS:B<x>:RS232C:DATABits | Sets or queries the number of RS-232 data bits for the specified bus |
| BUS:B<x>:RS232C:DELIMiter | Sets or queries the RS-232 delimiting value for a packet on the specified bus |
| BUS:B<x>:RS232C:DISplaymode | Sets or queries the display mode for the specified bus |
| BUS:B<x>:RS232C:PARity | Sets or queries the RS-232 parity for the specified bus |
| BUS:B<x>:RS232C:POLarity | Sets or queries the RS-232 polarity for the specified bus |
| BUS:B<x>:RS232C:SOUrce | Sets or queries the RS-232 polarity for the specified bus |
| BUS:B<x>:S8B10B:BITRate | Sets the bus data for the specified bus to a standard rate in bits per second, or enables you to specify a custom data rate using the value command |
| BUS:B<x>:S8B10B:BITRate:VALue | Sets the data rate for the specified bus to a rate that you specify in bits per second |
| BUS:B<x>:S8B10B:HYSTeresis | Sets or queries the hysteresis for the specified bus |
| BUS:B<x>:S8B10B:SOUrce | Sets or queries the signal sources for the specified bus |
| BUS:B<x>:SPI:BITOrder | Sets or queries the shift direction used to de-serialize data for the SPI mode of the bus |
| BUS:B<x>:SPI:CLOCk:POLarity | Sets or queries the SPI clock (SCLK) polarity for the specified bus |
| BUS:B<x>:SPI:CLOCk:SOUrce | Sets or queries the SPI clock (SCLK) source for the specified bus |
| BUS:B<x>:SPI:DATa:POLarity | Sets or queries the SPI data (DATA) polarity for the specified bus |
| BUS:B<x>:SPI:DATa:SIZe | Sets or queries the number of bits per word for the specified bus |
| BUS:B<x>:SPI:DATa:SOUrce | Sets or queries the SPI data (DATA) source for the specified bus |
| BUS:B<x>:SPI:FRAMING | Sets or queries the SPI bus framing |
| BUS:B<x>:SPI:IDLETime | Sets or queries the SPI bus idle time |
| BUS:B<x>:SPI:SELect:POLarity | Sets or queries the SPI Slave Select (SS) polarity for the specified bus |
| BUS:B<x>:SPI:SELect:SOUrce | Sets or queries the SPI Slave Select (SS) source for the specified bus |
| BUS:B<x>:TYPe | Sets or queries the bus type specified |
| BUS:B<x>:USB:BITRate | Sets or queries the USB bit rate for the specified bus |
| BUS:B1<x>:USB:HYSTeresis | This command sets or queries the hysteresis for USB Super Speed. |

Table 2-16: Bus commands (cont.)

| Command | Description |
| :--- | :--- |
| BUS:B<x>:USB:PRObe | Sets or queries the type of probe connected to the USB signal for the specified <br> bus |
| BUS:B<x>:USB:SOUrce | Sets or queries the USB Data Source for the specified bus |
| BUS:B<x>:USB:SOUrce:DMINus | Sets or queries the USB Data Source for D- input for the specified bus |
| BUS:B<x>:USB:SOUrce:DPLUs | Sets or queries the USB Data Source for D+ input for the specified bus |
| BUS:CH $<x>:$ :OWTHRESHold | Sets or queries the low threshold value for the analog source in the bus (USB <br> differential) |
| BUS:CH $<x>:$ THRESHold | If there is a high and low threshold for the analog source in the bus, this <br> command sets or queries the high threshold value. Otherwise, this command <br> sets or queries the threshold value |
| BUS:MATH $<x>:$ LOWTHRESHold | Sets or queries the low threshold value of the mathematical waveform for the <br> bus (USB differential) |
| BUS:MATH $<x>:$ THRESHold | If there is a high and low threshold for the mathematical waveform in the <br> bus, this command sets or queries the high threshold value. Otherwise, this <br> command sets or queries the threshold value |
| BUS:REF $<x>:$ THRESHold | If there is a high and low threshold for the reference waveform in the bus, this <br> command sets or queries the high threshold value. Otherwise, this command <br> sets or queries the threshold value |
| SELect:B<x> | Sets or queries the display state for the specified bus |

## Calibration command group

The Calibration commands provide information about the current state of instrument calibration and allow you to initiate internal signal path calibration (SPC).

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes. Any remote command that performs an action on the oscilloscope is also disabled until the SPC is complete.

Table 2-17: Calibration commands

| Command | Description |
| :--- | :--- |
| CALibrate? | Returns the internal and factory calibration status |
| *CAL? | Instructs the instrument to perform self-calibration and returns the calibration status <br> when complete. Takes several minutes to run |
| CALibrate:CALProbe:CH< $\gg ?$ | Performs a probe calibration for the selected channel and returns the calibration <br> status |
| CALibrate:INTERNal | Starts the internal signal path calibration. Takes several minutes to run |
| CALibrate:INTERNal:STARt | Starts the internal signal path calibration |
| CALibrate:INTERNal:STATus? | Returns the status of the internal signal path calibration |
| CALibrate:PRObestate:CH< $\gg ?$ | Returns the probe calibration status for the probe of the selected channel |
| CALibrate:RESults? | Returns the status of all calibration subsystems without performing an SPC <br> operation |
| CALibrate:RESults:SPC? | Returns the results of the last SPC operation |

## Cursor command group

Use the commands in the Cursor Command Group to control the cursor display and readout. You can use these commands to control the setups for cursor 1 and cursor 2 , such as waveform source, cursor position, and cursor color.

You can also use the commands to select one of the following cursor functions:

- Off. Shuts off the display of all cursors.
- Vertical bars. Displays vertical bar cursors, which provide traditional horizontal unit readouts for Cursor 1 (bar1), Cursor 2 (bar2), the delta between them, and $1 /$ delta (results in frequency when the horizontal unit is time).
- Horizontal bars. Displays horizontal bar cursors, which provide traditional vertical unit readouts for Cursor 1 (bar1), Cursor 2 (bar2), and the delta between them.
- Waveform cursors. Consists of two cursors you can independently assign to a waveform. These cursors provide the same readouts that the vertical and horizontal bar cursors provide. Waveform cursors enable you to conveniently measure waveform amplitude and time. In XY or XYZ format, waveform cursors indicate the amplitude position of an XY pair (Ch1 vs Ch2 voltage, where Ch 1 is the X axis and Ch 2 is the Y axis) relative to the trigger.
- Screen cursors. Consists of two pairs of independent horizontal and vertical cursors. You can use these cursors to indicate an arbitrary position within the waveform display area. Screen cursors, depending on the style selected, consist of the intersection of a vertical and horizontal line, an X , or a vertical line with an X . These cursors have no association with any waveform, except that they inherit the color of the waveform they are assigned to.

Table 2-18: Cursor commands

| Command | Description |
| :--- | :--- |
| CURSor? | Returns all cursor settings |
| CURSor:FUNCtion | Sets or queries the cursor type |
| CURSor:HBArs? | Returns hbar cursor settings |
| CURSor:HBArs:DELTa? | Returns hbars cursors vertical difference |
| CURSor:HBArs:POSITION $\langle x>$ | Sets or queries the hbar cursor $<x>$ vertical position |
| CURSor:HBArs:UNIts? | Returns hbar cursor units |
| CURSor:LINESTyle | Sets or queries the cursor line style |
| CURSor:MODe | Sets or queries whether cursors move in unison or separately |
| CURSor:SCREEN:STYIe | Sets or queries the cursor type for screen mode |
| CURSor:SCREEN:XPOSITION $\langle x>$ | Sets or queries the $x$ position of the specified screen cursor |
| CURSor:SCREEN:YPOSITION $\langle x>$ | Sets or queries the $y$ position of the specified screen cursor |
| CURSor:SOUrce<x> | Sets or queries the source for cursor $\langle x>$ |
| CURSor:STATE | Turns cursors on or off or returns their $s t a t e$ |

| Command | Description |
| :---: | :---: |
| CURSor:VBArs | Sets or queries the position of vertical bar cursors |
| CURSor:VBArs:DELTa? | Returns the difference between vbar cursors |
| CURSor:VBArs:POSITION<x> | Sets or queries the vbar cursor<x> horizontal position |
| CURSor:VBArs:POS<x> | Sets or queries the horizontal position for vertical bar cursors |
| CURSor:VBArs:UNIts | Sets or queries the units for vbar cursors |
| CURSor:WAVEform | Sets or queries the current settings for waveform cursors |
| CURSor:WAVEform:HDELTA? | Returns the horizontal difference between waveform cursors |
| CURSor:WAVEform:HPOS<x>? | Returns the position of waveform cursor <x> |
| CURSor:WAVEform:POSition<x> | Sets or queries the position of waveform cursor <x> |
| CURSor:WAVEform:STYle | Sets or queries the cursor type for waveform mode |
| CURSor:WAVEform:UNIts | Sets or queries the units for waveform cursors |
| CURSor:WAVEform:VDELTA? | Returns the vertical difference between waveform cursors |
| CURSor:XY? | Returns the current settings for XY cursors |
| CURSor:XY:PRODDELta? | Returns the product of the difference between the cursors $X$ positions and $Y$ positions |
| CURSor:XY:PRODUCT<x>? | Returns the product of the X and Y positions for the specified cursor |
| CURSor:XY:RADIUS<x>? | Returns the radius of the specified cursor |
| CURSor:XY:RATDELta? | Returns ratio of the difference between the cursors X position and Y position |
| CURSor:XY:RATIO<x>? | Returns ratio of the X (horizontal) and Y (vertical) position for the specified cursor |
| CURSor:XY:RDELta? | Returns the Dr value |
| CURSor:XY:READOUT | Sets or queries the XY cursor readout mode |
| CURSor:XY:RECTX<x> | Sets or queries the X cursor position in rectangular coordinates |
| CURSor:XY:RECTY<x> | Sets or queries the Y cursor position in rectangular coordinates |
| CURSor:XY:THDELta? | Returns the XY cursor angle delta in polar coordinates |
| CURSor:XY:THETA<x>? | Returns the XY cursor angle in polar coordinates |
| CURSor:XY:XDELta? | Returns the XY cursor $\Delta \mathrm{X}$ value in rectangular coordinates |
| CURSor:XY:YDELta? | Returns the XY cursor $\Delta \mathrm{Y}$ value in rectangular coordinates |

## Diagnostics command group

The Diagnostic commands control the selection and execution of diagnostic tests.

## Table 2-19: Diagnostics commands

| Command | Description |
| :--- | :--- |
| DIAg:CONTROL:HALT | Enables or disables halting on first diagnostic failure |
| DIAg:CONTROL:LOOP | Enables or disables looping of diagnostics |
| DIAg:FAILURES:CLEAR | Sets and queries the clearing of pass/fail information from data structures, not the |
| Event Log, at the start of diagnostic tests |  |
| DIAg:EXECUTE | Executes the currently selected set of diagnostics |
| DIAg:ITEM? | Returns all data associated with a selected menu item |
| DIAg:ITEM:NAMe? | Returns the total number of failures that occurred |
| DIAg:ITEM:RESULT? | Returns the name of the selected menu item |
| DIAg:ITEM:SUBITEMS? | Returns the results of the last test executed on this item |
| DIAg:LEVEL | Returns the number of subitems associated with this item |
| DIAg:LOOPS? | Sets the current level of diagnostic test hierarchy |
| DIAg:NAMe? | Returns the number of times the diagnostics were completed during the last |
| DIAg:NAMe:AREA? | execution |
| DIAg:NAMe:SUBSYS? | Returns the subsystem name, area, and test name of the current diagnostic test |
| DIAg:NAMe:TEST? | Returns the selected area of the current diagnostic test |
| DIAg:NUMITEMS? | Returns the subsystem of the current diagnostic test |
| DIAg:RESults? | Returns the name of the current diagnostic test |
| DIAg:RESults:VERBose? | Returns the number of items on the currently selected level of test hierarchy |
| TEST:STOP | Returns a brief pass or fail status of the last test execution |
| DIAg:SELect:ALL | Returns a more explanatory message about the results of the last diagnostic |
| DIAg:SELect:AREA | execution |
| DIAg:SELect:LAST | Selects all available diagnostics the execution of the test |
| DIAg:SELATATE | Select:SUBSYS |

## Digital command group

## NOTE. Not available on some models.

Use the commands in the Digital Command Group to acquire 24 digital signals and analyze them. The digital signals includes:

- Signals from each of the 16 data channels of its digital probes
- Signals derived from each of the four analog acquisition channels
- Signals derived from each of the four math expressions

Table 2-20: Digital commands

| Command | Description |
| :--- | :--- |
| CQ<x>:THRESHold | Sets or queries the threshold for converting the specified clock/qualifier signal to <br> digital form |
| DISplay:DIGital:HElght | Sets or queries the height of the digital input waveform and the label associated <br> with the channel |
| D<x>:LABEL | Sets or queries the label that appears for the specified digital input on the display |
| D<x>:POSition | Sets or queries the position for the specified digital input |
| D<x>:PROBE:ID:SERnumber? | Queries the serial number of the digital probe that provides the specified digital <br> signal |
| D<x>:PROBE:ID:TYPe? | Queries the type of digital probe that provides the specified digital signal |
| D<x>:THRESHold | Sets or queries the threshold level for the digital signal specified |
| REF<x>:THRESHold | Sets or queries the comparable threshold for converting the reference signal to <br> digital form |
| SELect:DALL | Sets the display state of all the digital inputs |
| SELect:DIGTraces:COMbination | Turns on the digital channels that have binary digits as 1 |
| SELect:DIGTraces:LISt | Turns on the specified digital channels or returns the list of digital channels that <br> are on |
| SELect:D<x> | Sets or queries the display state for the digital input specified |

## Display control command group

Use the commands in the Display Control Command Group to change the graticule style, the displayed intensities, and the characteristics of the waveform display.
You can set the display of date and time; cursor, histogram, mask, and measurement readouts; measurement annotations; and the mode in which waveforms are displayed.

There are six color palettes from which you can select:

- Normal. Displays hues and lightness levels for best overall viewing.
- Temp. Displays areas of the waveform with the highest sample density in warmer colors (red shades) and the areas of lowest sample density in cooler colors (blue shades).
- Spectral. Displays areas of the waveform with the highest sample density in blue shades and the areas of lowest sample density in red shades.
- Green. Displays waveforms in shades of green. Areas of the waveform with the highest sample density appear in lighter green shades and the areas of lowest sample density appear in darker green shades.
- Gray. Displays waveforms in shades of gray. Areas of the waveform with the highest sample density appear in lighter gray shades and the areas of lowest sample density appear in darker gray shades.
- User. Allows you to create a customized color palette.

Use the commands to set the style that best displays your waveforms and graticule display properties.

NOTE. The mode you choose globally affects all displayed waveforms.

Table 2-21: Display control commands

| Command | Description |
| :--- | :--- |
| DISplay? | Returns current display settings |
| DISplay:CLOCk | Sets or queries the display of the date/time stamp |
| DISplay:COLOr? | Returns color group settings |
| DISplay:COLOr:MATHCOLOr | Sets or queries the color to be used for math traces |
| DISplay:COLOr:PALEtte:IMAGEView | Sets or queries the color palette for imageview waveforms |
| DISplay:COLOr:PALEtte:RECORDView | Sets or queries the color palette for recordview waveforms |
| DISplay:COLOr:PALEtte:USEr | Returns the user palette group settings |
| DISplay:COLOr:PALEtte:USEr:CARet | Sets or queries the user caret color |
| DISplay:COLOr:PALEtte:USEr:CH<x> | Sets or queries the user palette channel colors |
| DISplay:COLOr:PALEtte:USEr:GRAticule | Sets or queries the user palette graticule |

Table 2-21: Display control commands (cont.)

| Command | Description |
| :---: | :---: |
| DISplay:COLOr:PALEtte:USEr:HIStogram | Sets or queries the user palette histogram color |
| DISplay:COLOr:PALEtte:USEr:MASK | Sets or queries the user palette mask color |
| DISplay:COLOr:PALEtte:USEr: MASKHighlight | Sets or queries the user palette mask hits color |
| DISplay:COLOr:PALEtte:USEr:MATH<x> | Sets or queries the user palette math colors |
| DISplay:COLOr:PALEtte:USEr:REF<x> | Sets or queries the user palette reference colors |
| DISplay:COLOr:PALEtte:USEr:WAVEform | Sets or queries the user palette waveform colors |
| DISplay:COLOr:REFCOLOr | Sets or queries the color to be used for reference traces |
| DISplay:FLLTer | Sets or queries the type of interpolation to use for the display |
| DISplay:FORMat | Sets or queries the display format |
| DISplay:GRAticule | Sets or queries the type of graticule that is displayed |
| DISplay:INTENSITy? | Returns the waveform and graticule saturation levels |
| DISplay:INTENSITy:BACKLight | Sets or queries the waveform backlight intensity settings |
| DISplay:INTENSITy:WAVEform:IMAGEView | Sets or queries the waveform saturation level for imageview waveforms |
| DISplay:INTENSITy:WAVEform: RECORDView | Sets or queries the waveform saturation level for recordview waveforms |
| DISplay:PERSistence | Sets or queries display persistence setting |
| DISplay:PERSistence:RESET | Clears the persistence data |
| DISplay:SCREENTExt? | Returns all screen text settings |
| DISplay:SCREENTExt:LABel<x>? | Sets or queries the screen text setting for a given label |
| DISplay:SCREENTExt:LABel<x>:FONTCOlor | Sets or queries the screen text label font color |
| DISplay:SCREENTExt:LABel<x>: FONTNAme | Sets or queries the screen text label font name for a given label |
| DISplay:SCREENTExt:LABel<x>:FONTSIze | Sets or queries the screen text label font size for a given label |
| DISplay:SCREENTExt:LABel<x>:FONTSTyle | Sets or queries the screen text label font style for a given label |
| DISplay:SCREENTExt:LABel<x>:NAMe | Sets the text to be displayed for a given label |
| DISplay:SCREENTExt:LABel<x>:STATE | Sets or queries the screen text label state for a given label |
| DISplay:SCREENTExt:LABel<x>:XPOS | Sets or queries the horizontal position of a given label |
| DISplay:SCREENTExt:LABel<x>:YPOS | Sets or queries the vertical position of a given label |
| DISplay:SCREENTExt:STATE | Sets or queries the state of the display of screen text |
| DISplay:SHOWREmote | Sets or queries the state of the remote display feature and is equivalent to selecting Display Remote from the Display menu |
| DISplay:STYle | Sets or queries data display style |
| DISplay:TRIGBar | Sets or queries the display setting of the trigger level indicator bar(s) |
| DISplay:TRIGT | Sets or queries the display of the trigger point indicator |
| DISplay:VARpersist | Sets or queries the persistence decay time |
| DISplay:WAVEform | Sets or queries the display of waveform traces |

## E-mail command group

Commands in the E-mail group allow you to send e-mail to one or more designated recipients whenever a selected event, such as a trigger, a mask test failure (Option MTM only), or a limit test failure occurs in the instrument.

Using this feature, you do not have to continually monitor the instrument for the event.

When an event occurs, the instrument will send an SMTP mail message to one or more designated recipients through the specified mail server. The message can include any of the following:

- Screen image
- Waveform data
- Measurement data at the time of the event

NOTE. Your instrument must be connected to the Local Area Network (LAN) using Transfer C Protocol/Internet Protocol (TCP/IP). The recipient must also have an SMTP mail server. To send e-mail for a mask test failure, you must have Mask Testing (Option MTM) installed.

Table 2-22: E-mail commands

| Command | Description |
| :--- | :--- |
| EMail | Sends a test e-mail message or sets the current e-mail sent count to zero |
| EMail:ATTempts | Sets or queries the number of times that an attempt will be made to send e-mail to <br> the SMTP e-mail server |
| EMaii:AUTHLogin | Sets or queries the login name that will be used if the SMTP e-mail server requires <br> one for authentication |
| EMail:AUTHPassword | Sets the password that will be used if the SMTP e-mail server requires one for <br> authentication |
| EMail:COUNt? | Returns the number of e-mails that have been sent since Email on Event was armed |
| EMail:FROm | Sets or queries the From line in the e-mail |
| EMail:HOSTwanted | Sets or queries the hostname that will be used when e-mail is sent to the SMTP <br> e-mail server |
| EMail:IMAGe | Sets or queries whether image data is included in the e-mail |
| EMail:MASK | Sets or queries whether e-mail is sent when a mask test failure occurs |
| EMail:MAXSize | Sets or queries the maximum size (in megabytes) of e-mail that can be sent to <br> the SMTP server |
| EMaii:MEASUrement | Sets or queries whether measurement data is included in the e-mail |
| EMail:NUMEMails | Sets or queries the number e-mails that can be sent when Email onEvent is armed |
| EMail:SMTPPort | Sets or queries the SMTP port number that the e-mail server uses |
| EMail:SMTPServer | Sets or queries the address of the SMTP mail server |

Table 2-22: E-mail commands (cont.)

| Command | Description |
| :--- | :--- |
| EMail:STATUS? | Queries the status of e-mail |
| EMail:TIMEOut | Sets or queries the global timeout in seconds |
| EMail:TO | Sets or queries the address of the recipient(s) of an e-mail. Multiple addresses are <br> separated with a semicolon (;) |
| EMail:TRIGger | Sets or queries whether e-mail is sent when a trigger occurs |
| EMail:WAVEform | Sets or queries whether waveform data is included in the e-mail |

## Error Detector command group

NOTE. Not available on some models.

The error detector provides error detection on many serial standards. This section provides error detector theory and a list of commands in the error detector command group.

Error Detector theory of operation

The Tektronix error detector option provides the following:

- Automated receiver testing using AWG7000 Series
- SATA Bit Error Detection: $1.5 \mathrm{~Gb} / \mathrm{s}, 3.0 \mathrm{~Gb} / \mathrm{s}$, and $6.0 \mathrm{~Gb} / \mathrm{s}$ Standards
- SATA Frame Error Detection: $1.5 \mathrm{~Gb} / \mathrm{s}, 3.0 \mathrm{~Gb} / \mathrm{s}$, and $6.0 \mathrm{~Gb} / \mathrm{s}$ Standards
- USB 3.0 Symbol Error Detection: $5 \mathrm{~Gb} / \mathrm{s}$ Standard
- PCIe Gen1 and Gen2 Bit Error Detection: $5 \mathrm{~Gb} / \mathrm{s}$ Standard
- Illegal Character and Disparity Error Detection: $1.25 \mathrm{~Gb} / \mathrm{s}$ to $6.25 \mathrm{~Gb} / \mathrm{s}$
- Tracking for Spread Spectrum Clocks with up to 5000 ppm (downspread)

The following table lists the various types of error detection:

Table 2-23: Types of error detection

| Error Type | (Units) Error Rate | (Units) <br> Resolution | Effectiveness | Limitations |
| :--- | :--- | :--- | :--- | :--- |
| Character | Number of character errors per <br> number of characters tested | Character | $90 \%$ to 95\% | Can miss errors if a character is <br> changed to a legal character |
| Frame | Number of frame errors per number <br> of frames tested | Frame | $100 \%$ <br> (finds all errors) | Many bit errors can equal one <br> frame error |
| Symbol | Number of symbol errors per number <br> of symbols tested | Symbol | $100 \%$ <br> (finds all errors) | Several bit errors can equal one <br> symbol error |
| Bit | Number of bit errors per number of <br> bits tested | Bit | $100 \%$ <br> (finds all errors) | Pattern length limited by <br> memory depth |

For non-USB bit error testing, you must provide the signal test pattern length and sync pattern. Align characters must be provided for all test types. All of these parameter values depend on the actual signal test pattern. The signal test pattern length is generally known from the signal generator setup.

The align character is a 10 -bit character with both RD+ and RD- disparity values and must actually be present in the signal test pattern to keep the receiver aligned to the 10 -bit character boundaries.

The sync pattern is a unique 10 -, 20 -, 30 -, or 40 -bit sequence (one to four 10 -bit characters) that must actually be present in the signal test pattern to align the
signal so that bit-by-bit comparisons can be made. The sync pattern does not have to be "at the beginning" of the signal test pattern but it can be anywhere in the signal test pattern, as the fixed-length signal test pattern is sent repetitively by the signal generator.

To better understand the bit error detector, examine and use the setup files that contain the parameter settings in GPIB command format. Signal test patterns are supported with the following setup files:

- Any8B10BCJTPatBitErrorSetup.txt
- Any8B10BCJTPcharacterErrorSetup.txt
- PCIeCJTPatBit ErrorSetup.txt
- SataCJTPatBitErrorSetup.txt
- SataCJTPatCharactErrorSetup.txt
- SataFrameComplianceFrameErrorSetup.txt
- SataHFTPbitErrorSetjup.txt
- SataLBPbitErrorSetup.txt
- SataLFTPbitErrorSetup.txt
- SataMFTPbitErrorSetup.txt
- UsbCP0_SKPbitErrorSetup.txt
- UsbCP0_SKPcharacterErrorSetup.txt
- UsbCP0_SKPsymbolErrorSetup.txt
- PcieGen1ComplianceBitErrorSetup.txt
- PcieGen2ComplianceBitErrorSetup.txt

The oscilloscope error detector has the ability to "learn" the pattern from the signal test pattern. This capability can be used when you suspect that your DUT might have unintentional design/logic errors that modify the signal test pattern before it reaches the oscilloscope. In this case, the oscilloscope can "learn" the Modified signal test pattern, so that testing can continue even in the presence of the design/logic error.

The USB bit error and USB symbol error detection follow the same concept as SATA frame error detection. In frame error detection, the received serial data is kept aligned to 10 -bit boundaries, converted from 10 -bit characters to 8 -bit characters, monitored for Start of Frame (SOF) and End of Frame (EOF) symbols, scrambled per the specification, to both compute the Cyclic Redundancy Check (CRC) and extract the transmitted CRC from the data. The align primitives can be detected and rejected if desired.

## Examples of programmatic interface (PI) commands using SATA frame error and PCleGen2 bit error

Example 1. A $6 \mathrm{~Gb} / \mathrm{s}$ SATA Gen 3 Frame Error compliance pattern is injected into the oscilloscope Ch1. Setup Error Detector to detect Frame Errors using the following PI commands:
*RST //Establish Default Setup (wait 3 seconds for command to complete)
ERRORD:PRESET SATA3_FRAME //Select Preset Setup
ERRORD:PRESET:APPLY //Apply Preset (Applying Preset recalls the SATA3 frame error setup) (wait 1 second)

ERRORD:FRAME:TEST SYNC //Sync Recovered Clock (wait 8 seconds for command to complete)

ERRORD:FRAME:TEST:STATUS? //Status must be LOCKED to continue (If Status is not LOCK, retry SYNC command)
ERRORD:FRAME:TEST START //Start Testing for Frame Errors. (Wait 1 second)

ERRORD:FRAME:TEST:STATUS? //View Status
ERRORD:FRAME:TEST:RESULTS? //View Results (repeat the last two commands as desired)

Individual Status and Result values also may be queried. If you want to see the individual PI commands that comprise the SATA3_FRAME Preset, view the following (Win7) text file:

C: \Users\Public\Tektronix\TekScope\ErrorDetector\SataGen3FrameErrorSetup.txt
You can save and recall your own setups using the CUSTOM Preset setting.
Sample AWG setup files are also included on the oscilloscope in
C:\Users\Public\Tektronix\TekScope\ErrorDetector\AWG
To stop testing, clear test results, and quit detecting errors use these commands:
ERRORD:FRAME:TEST STOP //Stop Testing. (Automated Stop Conditions also may be defined)

ERRORD:FRAME:TEST CLEAR //Clear Test Results.
ERRORD:STATE OFF //Disable Error Detection
Example 2. A $5 \mathrm{~Gb} / \mathrm{s}$ PCIE Gen 2 compliance pattern is injected into the oscilloscope Ch1. Setup Error Detector to detect Bit Errors:
*RST //Establish Default Setup (wait 3 seconds for command to complete)
ERRORD:PRESET PCIE2_COMP_BIT //Select Preset Setup
ERRORD:PRESET:APPLY //Apply Preset (Applying Preset recalls the PCIE2 bit error setup) (wait 1 second)

ERRORD:BIT:TEST SYNC //Sync Recovered Clock (wait 8 seconds for command to complete)

ERRORD:BIT:TEST:STATUS? //Status must be SYNC to continue (If Status is not SYNC, retry ERRORD:BIT:TEST SYNC command)

ERRORD:BIT:TEST LEARN //Learn test pattern from signal. (wait 1 second: Once learned, the pattern remains in memory)

ERRORD:BIT:TEST START //Start Testing for Bit Errors. (wait 1 second)
ERRORD:BIT:TEST:STATUS? //Query Status
ERRORD:BIT:TEST:RESULTS? //Query Results (repeat the last two commands as desired)

The PCIE2_COMP_BIT Preset text file is located at
C:\Users\Public\Tektronix\TekScope\ErrorDetector\PcieGen2ComplianceBitErrorSetup.txt
To stop testing, clear test results, and quit detecting errors use these commands:
ERRORD:BIT:TEST:STOP //Stop Testing.
ERRORD:BIT:TEST CLEAR //Clear Test Results.
ERRORD:STATE OFF //Disable Error Detection

Table 2-24: Error Detector commands

| Command | Description |
| :--- | :--- |
| General purpose group | Sets or queries the audible alert setting \{OFF, ON\} for error detection. |
| ERRORDetector:ALERT | This command queries the align primitive minus value. |
| ERRORDetector:ALIGNPRIMitive: | This command queries the align primitive plus value. |
| MINus<x>? | Sets or queries the bit rate enumerated value \{CUSTOM, RATE312, RATE1250, <br> RATE1500, RATE2125, RATE2500, RATE3000, RATE3125, RATE4250, <br> RATE5000, RATE6000, RATE6250\} for error detection |
| ERRORDetector:ALIGNPRIMitive:PLUS<x>? |  |
| ERRORDetector:BITRate | Sets or queries the custom bitrate value \{200000000..3500000000, 1.25e9..6.25e9\} <br> for error detection. Some inetermediate values not supported. See data sheet. |
| ERRORDetector:BITRate:VALue | Sets or queries the channel source \{CH1..CH4\} for error detection. |
| ERRORDetector:CHANnel | Sets or queries the test duration count as number of bits, frames, symbols, or <br> characters to be tested for error testing |
| ERRORDetector:DURATION:COUNt | Sets or queries the test duration in seconds for error testing |
| ERRORDetector:DURATION:SECOnds | Sets or queries the test duration time in days, hours, minutes, and seconds for <br> error detector |
| ERRORDetector:DURATION:TIME | Sets or queries the test duration time days component for error testing |
| ERRORDetector:DURATION:TIME:DAYS | Sets or queries the test duration time hours component for error testing |
| ERRORDetector:DURATION:TIME:HOURS | Sets or queries the test duration time minutes component for error testing |

Table 2-24: Error Detector commands (cont.)

| Command | Description |
| :---: | :---: |
| ERRORDetector:DURATION:TIME:SECOnds | Sets or queries the test duration time seconds component for error testing |
| ERRORDetector:ERRORLIMIT | Sets or queries the error limit value to use when STOPWHEN is ERROR |
| ERRORDetector:FONTSIze | Sets or queries the send fontsize for the error detector UI \{OFF, ON\} for error detection. |
| ERRORDetector:PATTERNNAME | Sets or queries the pattern name stored in the setup file. |
| ERRORDetector:PREset | Sets or queries the preset list selection \{SATA1_CJTPAT_BIT, SATA2_CJTPAT_BIT, SATA3_CJTPAT_BIT, SATA3_FRAME, SATA3_CHAR, SATA3_HFTP_BIT, SATA3_LBP_BIT, SATA3_LFTP_BIT, SATA3_MFTP_BIT, USB3_SYMBOL, USB3_CHAR, PCIE1_COMP_BIT, PCIE2_COMP_BIT, PRBS7_BIT, PRBS9_BIT, ANY_CJTPAT_BIT, ANY_CJTPAT_CHAR, CUSTOM_SETUP\} for error detection. |
| ERRORDetector:PREset:APPLY | This command causes selected preset setup to be applied. |
| ERRORDetector:SAVEIMAGE | Sets or queries the save screen shot on error feature \{OFF, ON\} for error detection. |
| ERRORDetector:SAVEWFM | Sets or queries the save waveform on error feature \{OFF, ON\} for error detection. |
| ERRORDetector:SCRAMBLED | Sets or queries the status of the data scrambling option |
| ERRORDetector:SENDEMAIL | Sets or queries the send email on error feature \{OFF, ON\} for error detection. |
| ERRORDetector:SIGnaltype | Sets or queries the signal type \{SATAGEN1, SATAGEN2, SATAGen3, USB3, PCIEGEN1, PCIEGEN2, ANY8B10B, PRBS7, PRBS9\} for error detection |
| ERRORDetector:STANdard | Sets or queries the standard selection for error testing |
| ERRORDetector:STATE | Sets or queries the error detector state \{OFF, ON\}. |
| ERRORDetector:STATus? | Queries only the "most significant" or "summary" status of the error detector. |
| ERRORDetector:STOPWHEN | Sets or queries the stopping condition |
| ERRORDetector:TIMEformat | This command sets or queries error detector Elapsed Time Format. |
| ERRORDetector:TYPe | Sets or queries the error detector type |
| Bit error Detection group |  |
| ERRORDetector:BIT:LENgth | Sets or queries the signal test pattern length in bits for error testing |
| ERRORDetector:BIT:SYNCPATtern? | Sets or queries all of the sync pattern items |
| ERRORDetector:BIT:SYNCPATtern: ADVanced | This command sets or queries the SYNCPATtern:ADVanced setting. |
| ERRORDetector:BIT:SYNCPATtern:BITString | Sets or queries the bit sync pattern bit string for bit error testing |
| ERRORDetector:BIT:SYNCPATtern: DISParity<x> | Sets or queries the four sync pattern Disparity elements. |
| ERRORDetector:BIT:SYNCPATtern: MINus<x>? | Sets or queries the RD- bit string sync pattern elements. |
| ERRORDetector:BIT:SYNCPATtern: PLUS<x>? | Sets or queries the RD+ bit string sync pattern elements. |
| ERRORDetector:BIT:SYNCPATtern: SYMBOL<x> | Sets or queries the symbolic sync pattern elements |
| ERRORDetector:BIT:TEST | Arguments START and STOP initiate and terminate bit error testing. Argument CLEAR zeroes bit error test results. Argument LEARN copies the test pattern from the signal to memory |

Table 2-24: Error Detector commands (cont.)

| Command | Description |
| :---: | :---: |
| ERRORDetector:BIT:TEST:COUNt? | Queries the bit error count for bit error testing |
| ERRORDetector:BIT:TEST:DURATION? | Queries the elapsed duration of symbols tested for bit error testing |
| ERRORDetector:BIT:TEST:MAXALIGNS? | Queries the maximum consecutive SATA align primitives or USB skip order sets for bit error testing |
| ERRORDetector:BIT:TEST:RATE? | Queries the calculated symbol error rate for bit error testing |
| ERRORDetector:BIT:TEST:RESults? | Queries all the results for bit error testing |
| ERRORDetector:BIT:TEST:SECOnds? | Queries the elapsed time in seconds for bit error testing |
| ERRORDetector:BIT:TEST:STATUS? | Queries all of the bit error test status bits |
| ERRORDetector:BIT:TEST:STATUS:LOCK? | Queries the LOCK status for bit error testing |
| ERRORDetector:BIT:TEST:STATUS: MAX_AP? | Queries the MAX_AP status for bit error testing |
| ERRORDetector:BIT:TEST:STATUS: SIGNAL? | Queries the SIGNAL status for bit error testing |
| ERRORDetector:BIT:TEST:STATUS:START? | Queries the START status for bit error testing |
| ERRORDetector:BIT:TEST:STATUS:SYNC? | Queries the SYNC status for bit error testing |
| ERRORDetector:BIT:TEST:TIME? | Queries the elapsed time (in days, hours, minutes, and seconds) for bit error testing |
| ERRORDetector:BIT:TEST:TIME:DAYS? | Queries the elapsed time days component for bit error testing |
| ERRORDetector:BIT:TEST:TIME:HOURS? | Queries the elapsed time hours component for bit error testing |
| ERRORDetector:BIT:TEST:TIME:MINUTES? | Queries the elapsed time minutes component for bit error testing |
| ERRORDetector:BIT:TEST:TIME:SECOnds? | Queries the elapsed time seconds component for bit error testing |
| ERRORDetector:SSC | Sets or queries the status of the spread spectrum clock tracking option |
| Frame error detection group |  |
| ERRORDetector:FRAME? | Queries all frame error settings, status, and results |
| ERRORDetector:FRAme:EOF | Sets or queries the End of Frame for frame error testing |
| ERRORDetector:FRAme:INITIALCRCVALue | Sets or queries the initial CRC value for frame error testing |
| ERRORDetector:FRAme:SOF | Sets or queries the Start of Frame for frame error testing |
| ERRORDetector:FRAme:TEST | Arguments START and STOP initiate and terminate frame error testing. Argument CLEAR zeroes the frame error results |
| ERRORDetector:FRAme:TEST:BADCHARS? | Queries the illegal character count for frame error testing |
| ERRORDetector:FRAme:TEST:COUNt? | Queries the test error count for frame error testing |
| ERRORDetector:FRAme:TEST:DISParity? | Queries the disparity error count for frame error testing |
| ERRORDetector:FRAme:TEST:DURATION? | Queries the elapsed duration (in number of frames) tested by the frame |
| ERRORDetector:FRAme:TEST: MAXALIGNS? | Queries the maximum consecutive aligns encountered for frame error testing |
| ERRORDetector:FRAme:TEST:RATE? | Queries the calculated frame error rate for frame error testing |
| ERRORDetector:FRAme:TEST:RESults? | Queries all the results for frame error testing |
| ERRORDetector:FRAme:TEST:SECOnds? | Queries the elapsed duration in seconds for frame error testing |
| ERRORDetector:FRAme:TEST:STATUS? | Queries all of the frame error status at once |

Table 2-24: Error Detector commands (cont.)

| Command | Description |
| :---: | :---: |
| ERRORDetector:FRAme:TEST:STATUS: LOCK? | Queries the LOCK status for the frame error test |
| ERRORDetector:FRAme:TEST:STATUS: MAX_AP? | Queries the MAX_AP status for the frame error test |
| ERRORDetector:FRAme:TEST:STATUS: SIGNAL? | Queries the SIGNAL status for the frame error test |
| ERRORDetector:FRAme:TEST:STATUS: START? | Queries the START status for frame error tests |
| ERRORDetector:FRAme:TEST:TIME? | Queries the elapsed time (in days, hours, minutes, and seconds) for frame error testing |
| ERRORDetector:FRAme:TEST:TIME:DAYS? | Queries the elapsed time days component for frame error testing |
| ERRORDetector:FRAme:TEST:TIME: HOURS? | Queries the elapsed time hours component for frame error testing |
| ERRORDetector:FRAme:TEST:TIME: MINUTES? | Queries the elapsed time minutes component for frame error testing |
| ERRORDetector:FRAme:TEST:TIME: SECOnds? | Queries the elapsed time seconds component for frame error testing |
| Symbol error detection group |  |
| ERRORDetector:SYMBOL? | Queries all symbol error settings, status, and results |
| ERRORDetector:SYMBOL:TEST | Arguments START and STOP initiate and terminate symbol error testing. Argument CLEAR zeroes the symbol error results. Argument SYNC re-syncs the recovered clock. |
| ERRORDetector:SYMBOL:TEST: BADCHARS? | Queries the illegal character count for symbol error testing |
| ERRORDetector:SYMBOL:TEST: BITCOUNT? | Queries the bit error count (number of bad bits) for symbol error testing |
| ERRORDetector:SYMBOL:TEST: BITDURATION? | Queries the elapsed duration (in units of bits) tested for symbol error testing |
| ERRORDetector:SYMBOL:TEST:BITRate? | Queries the calculated bit error rate for symbol error testing |
| ERRORDetector:SYMBOL:TEST:COUNt? | Queries the symbol error count for symbol error testing |
| ERRORDetector:SYMBOL:TEST:DISParity? | Queries the disparity error count for symbol error testing |
| ERRORDetector:SYMBOL:TEST: DURATION? | Queries the elapsed duration for symbol error testing |
| ERRORDetector:SYMBOL:TEST: MAXALIGNS? | Queries the maximum consecutive skip order sets encountered for symbol error testing |
| ERRORDetector:SYMBOL:TEST:RATE? | Queries the calculated symbol error rate for symbol error testing |
| ERRORDetector:SYMBOL:TEST:RESults? | Queries all of the results for symbol error testing |
| ERRORDetector:SYMBOL:TEST:SECOnds? | Queries the elapsed duration time in seconds for symbol error testing |
| ERRORDetector:SYMBOL:TEST:STATUS? | Queries all of the status for the symbol error tests |
| ERRORDetector:SYMBOL:TEST:STATUS: LOCK? | Queries the LOCK status for the symbol error test |

## Table 2-24: Error Detector commands (cont.)

| Command | Description |
| :---: | :---: |
| ERRORDetector:SYMBOL:TEST:STATUS: MAX_AP? | Queries the MAX_AP status for the symbol error test |
| ERRORDetector:SYMBOL:TEST:STATUS: SIGNAL? | Queries the SIGNAL status for the symbol error test |
| ERRORDetector:SYMBOL:TEST:STATUS: START? | Queries the START status for symbol error testing |
| ERRORDetector:SYMBOL:TEST:TIME? | Queries the elapsed time (in days, hours, minutes, and seconds) for symbol error testing |
| ERRORDetector:SYMBOL:TEST:TIME: DAYS? | Queries the elapsed time days component for symbol error testing |
| ERRORDetector:SYMBOL:TEST:TIME: HOURS? | Queries the elapsed time hours component for symbol error testing |
| ERRORDetector:SYMBOL:TEST:TIME: MINUTES? | Queries the elapsed time minutes component for symbol error testing |
| ERRORDetector:SYMBOL:TEST:TIME: SECOnds? | Queries the elapsed time seconds component for symbol error testing |
| Character error detection group |  |
| ERRORDetector:CHARacter? | Queries all character error settings, status, and results |
| ERRORDetector:CHARacter:TEST | Argument START and STOP initiate and terminate character error testing. Argument CLEAR zeroes the character error results |
| ERRORDetector:CHARacter:TEST:COUNt? | Queries the number of illegal characters in the signal for error testing |
| ERRORDetector:CHARacter:TEST: DISPCOUNT? | Queries the number of disparity errors in the signal for character error testing |
| ERRORDetector:CHARacter:TEST: DISPRATE? | Queries the calculated disparity error rate for character error testing |
| ERRORDetector:CHARacter:TEST: DURATION? | Queries the elapsed duration in units of characters tested |
| ERRORDetector:CHARacter:TEST: MAXALIGNS? | Queries the maximum consecutive aligns encountered for character error testing |
| ERRORDetector:CHARacter:TEST:RATE? | Queries the calculated illegal character error rate for error testing |
| ERRORDetector:CHARacter:TEST:RESults? | Queries all of the character error test results |
| ERRORDetector:CHARacter:TEST: SECOnds? | Queries the elapsed duration time seconds component for character error testing |
| ERRORDetector:CHARacter:TEST:STATUS? | Queries all of the status for character error tests |
| ERRORDetector:CHARacter:TEST:STATUS: LOCK? | Queries the LOCK status for the character error test |
| ERRORDetector:CHARacter:TEST:STATUS: MAX_AP? | Queries the MAX_AP status for the character error test |
| ERRORDetector:CHARacter:TEST:STATUS: SIGNAL? | Queries the SIGNAL status for the character error test |

Table 2-24: Error Detector commands (cont.)

| Command | Description |
| :---: | :---: |
| ERRORDetector:CHARacter:TEST:STATUS: START? | Queries the START status for the character error testing |
| ERRORDetector:CHARacter:TEST:TIME? | Queries the elapsed time (in days, hours, minutes, and seconds) for character error testing |
| ERRORDetector:CHARacter:TEST:TIME: DAYS? | Queries the elapsed time days component for character error testing |
| ERRORDetector:CHARacter:TEST:TIME: HOURS? | Queries the elapsed time hours component for character error testing |
| ERRORDetector:CHARacter:TEST:TIME: MINUTES? | Queries the elapsed time minutes component for character error testing |
| ERRORDetector:CHARacter:TEST:TIME: SECOnds? | Queries the elapsed time seconds component for character error testing |
| File group |  |
| ERRORDetector:FILE:RECAll | Initiates a file recall of error detector parameters from a text file |
| ERRORDetector:FILE:SAVe | Initiates a file save of error detector parameters to a text file |
| Align pattern group |  |
| ERRORDetector:ALIGNCHARacter? | Queries both of the align character values |
| ERRORDetector:ALIGNCHARacter:MINus? | Sets or queries the RD- align character value |
| ERRORDetector:ALIGNCHARacter:PLUS? | Sets or queries the RD+ align character value |
| ERRORDetector:ALIGNCHARacter:SYMBOL | Sets or queries the Symbolic align character |
| ERRORDetector:ALIGNPRIMitive? | Queries all of the align primitive values |
| ERRORDetector:ALIGNPRIMitive:MINUS? | Queries the RD- align primitive enable and string values |
| ERRORDetector:ALIGNPRIMitive:PLUS? | Queries the RD+ align primitive enable and string values |
| ERRORDetector:ALIGNPRIMitive:STATE | Sets or queries the align primitive enable |
| ERRORDetector:ALIGNPRIMitive: SYMBOL<x> | Sets or queries the align primitive symbolic values |
| ERRORDetector:MAXALIGNS | Sets or queries the maximum consecutive align primitives before an error |
| Skip order set group |  |
| ERRORDetector:SKIPSETPRIMitive: MINus<x>? | Queries the RD- skip order set array of bit string values. |
| ERRORDetector:SKIPSETPRIMitive: PLUS<x>? | This command queries the skip order RD+ array of bit string values. |
| ERRORDetector:SKIPSETPRIMitive:STATE | Sets or queries the status of the RD+ skip order set option |
| ERRORDetector:SKIPSETPRIMitive: SYMBOL<x> | Sets or queries the symbolicc skip order set values |

## File system command group

Use the commands in the File System Command Group to help you use the built-in hard disk drive. You can use the commands to do the following:

- List the contents of the default directory
- Create and delete directories
- Create, copy, read, rename, or delete a file

When using these commands, keep the following points in mind:

- File arguments are always enclosed within double quotes:
"C:\MYDIR\TEK00001.SET"
- File names follow the MS-DOS format: [DRIVE:][PPATH $\backslash]$ filename
- Path separators can be either forward slashes (/) or back slashes ())

#### Abstract

NOTE. Using a back slash as a path separator can produce some unexpected results, depending on how your controller application treats escaped characters. Many applications recognize the sequence of a back slash followed by an alphabetic character as an escaped character, and, as such, interpret that alphabetic character as a control character. For example, the sequence "In" might be interpreted as a newline character; "It" might be interpreted as a tab character. To ensure that this interpretation does not occur, you can use double back slashes. For example, "C:\testfile.txt".

- Some FILESystem commands can fail because a file has read-only attributes. You will not be able to delete or replace such files until this attribute is removed. Refer to the operating system help on file properties for further information.

Table 2-25: File system commands

| Command | Description |
| :--- | :--- |
| FLLESystem? | Returns the file system state |
| FILESystem:COPy | Copies one or more files to a new file |
| FLLESystem:CWD | Sets or queries the current working directory for FILESystem GPIB commands |
| FILESystem:DELEte | Deletes a named file or directory |
| FILESystem:DIR? | Returns a list of directory contents |
| FILESystem:MKDir | Makes a new directory |
| FILESystem:PRInt | Prints a named file to the named port |
| FILESystem:READFile | Copies the named file to the GPIB port |
| FILESystem:REName | Assigns a new name to an existing file |
| FLLESystem:RMDir | Deletes the named directory |
| FILESystem:WRITEFile | Copies the GPIB port block data to a named file |

## Hard copy command group

Hard Copy commands enable you to make hard copies of data files or send the data to a specified file. In addition, these commands provide you with information about (and the ability to set) file path settings.

Table 2-26: Hard copy commands

| Command | Description |
| :--- | :--- |
| EXPort | Copies a waveform to a specified file or returns formatting and file information |
| EXPort:FILEName | Sets or queries the export file path |
| EXPort:FORMat | Sets or queries the export image format |
| EXPort:PALEtte | Sets or queries the export color palette |
| EXPort:READOuts | Sets or queries the position of the readouts for export |
| EXPort:VIEW | Sets or queries the export screen capture area |
| HARDCopy | Sends a screen copy to the selected port or returns the selected port and file path |
| HARDCopy:FILEName | Sets or queries the hard copy file path |
| HARDCopy:LAYout | Sets or queries the page orientation for hard copy |
| HARDCopy:PALEtte | Sets or queries the hard copy color palette |
| HARDCopy:PORT | Sets or queries whether the hard copy data will be sent to a file or printed on the |
| next hard copy command |  |
| HARDCopy:READOuts | Sets or queries the position of the readouts for hardcopy |
| HARDCopy:VIEW | Sets or queries the area of the screen to be hardcopied |

## Histogram command group

Histogram commands let you select the type of histogram, specify what part of the waveform should go into the histogram, and retrieve histogram statistics. Use commands from this group to do the following:

- Create a histogram of vertical or horizontal values for a channel, math, or reference waveform
- Adjust the limits of the waveform area from which the histogram data is obtained
- Clear histogram count and restart
- Retrieve the histogram data

Table 2-27: Histogram commands

| Command | Description |
| :--- | :--- |
| HIStogram? | Returns all histogram parameters |
| HIStogram:BOX | Sets or queries the left, top, right, and bottom positions of the histogram box, in <br> source waveform coordinates |
| HIStogram:BOXPcnt | Sets or queries same as HIStogram: <br> 0,0 upper left and 100,100 lower right |
| HIStogram:COUNt in percentage coordinates, with |  |
| HIStogram:DATa? | Clears histogram count source data and restarts counting |
| HIStogram:DISplay | Returns a comma-separated list of histogram data numbers |
| HIStogram:FUNCtion | Sets or queries whether histogram data is displayed and the current display type <br> setting |
| HIStogram:MODe | Sets the type of histogram to create <br> Or queries the current histogram type |
| HIStogram:SIZe | Sets type of histogram to create or turns histograms off <br> Or queries the current histogram type or that histogram display is disabled |
| HIStogram:SOUrce | Sets or queries the width (or height) of the histogram on the screen in divisions |
| HIStogram:STATE | Sets or queries which source waveform will be compared against the histogram box <br> when the histogram testing is enabled |

## Horizontal command group

Horizontal commands control the time bases of the instrument. You can set the time per division (or time per point) of the main time base. You can use the Horizontal commands to do the following:

- Set the scale, horizontal position and reference, and units of the time base
- Get the screen resolution, time of first point and time of last point, or get all the horizontal settings
- Enable or disable the display of the time base

You can substitute SECdiv for SCAle in the horizontal commands. This provides program compatibility with earlier models of Tektronix instruments.

Table 2-28: Horizontal commands

| Command | Description |
| :--- | :--- |
| HORizontal? | Returns all learnable settings for the horizontal commands |
| HORizontal:ACQDURATION? | Returns the time base duration |
| HORizontal:ACQLENGTH? | Returns the record length |
| HORizontal:DIGital:MAGnivu:POSition? | Queries the horizontal position of the MagniVu digital acquisition <br>  <br> NOTE. Not available on some models |
| HORizontal:DIGital:RECOrdlength? | Queries the record length of the digital acquisition |
| HORizontal:DIGital:RECOrdlength:MAGnivu? | Queries the record length of the MagniVu digital acquisition |
|  | NOTE. Not available on some models |

| Command | Description |
| :---: | :---: |
| HORizontal:FASTframe:SELECTED:CH<x> | Sets or queries the FastFrame selected frame number on the specified waveform |
| HORizontal:FASTframe:SELECTED: MATH<x> | Sets or queries the FastFrame selected frame number on the specified waveform |
| HORizontal:FASTframe:SELECTED:REF<x> | Sets or queries the FastFrame selected frame number on the specified waveform |
| HORizontal:FASTframe:SELECTED:SOUrce | Sets or queries the FastFrame source waveform |
| HORizontal:FASTframe:SEQuence | Sets or queries the FastFrame source waveform |
| HORizontal:FASTframe:SINGLEFramemath | Sets or queries FastFrame single frame math |
| HORizontal:FASTframe:SIXteenbit | Sets or queries FastFrame sixteen bit |
| HORizontal:FASTframe:STATE | Sets or queries the state of FastFrame acquisition |
| HORizontal:FASTframe:SUMFrame | Sets or queries the summary frame mode |
| HORizontal:FASTframe:TIMEStamp:ALL: <wfm>? | Returns the frame number and time stamp for each frame between requested frames, inclusive, within the specified waveform |
| HORizontal:FASTframe:TIMEStamp: BETWeen:<wfm>? | Returns the relative trigger for the delta time between the specified frames, within the specified waveform |
| HORizontal:FASTframe:TIMEStamp:DELTa: <wfm>? | Returns the relative time between the triggers of the FastFrame Selected and the FastFrame Reference, within the specified waveform |
| HORizontal:FASTframe:TIMEStamp:FRAMe: <wfm>? | Returns the absolute trigger date and time for the specified frame and waveform |
| HORizontal:FASTframe:TIMEStamp:REF? | Returns the absolute trigger date and time for the FastFrame specified reference waveform |
| HORizontal:FASTframe:TIMEStamp: SELECTED:<wfm>? | Returns the absolute trigger date and time for the FastFrame Selected, within the specified waveform |
| HORizontal:FASTframe:TRACk | Sets up or returns the state of FastFrame tracking |
| HORizontal:FASTframe:XZEro:ALL:CH<x>? | Returns the time from the trigger to the start of the specified frames on the specified channel |
| HORizontal:FASTframe:XZEro:ALL:REF<x>? | Returns the time from the trigger to the start of the specified frames on the specified reference |
| HORizontal:FASTframe:XZEro:FRAme: $\mathrm{CH}<\mathrm{x}>$ ? | Returns the time from the trigger to the start of the specified frame on the specified channel |
| HORizontal:FASTframe:XZEro:FRAme: REF<x>? | Returns the time from the trigger to the start of the specified frame on the specified reference |
| HORizontal:FASTframe:XZEro:REF? | Sets or queries the time from the trigger to the trigger sample on the reference waveform |
| HORizontal:FASTframe:XZEro:SELECTED: $\mathrm{CH}<\mathrm{x}>$ ? | Sets or queries the time from the trigger to the trigger sample on the selected channel |
| HORizontal:FASTframe:XZEro:SELECTED: REF $<x>$ ? | Sets or queries the time from the trigger to the trigger sample on the selected reference waveform |
| HORizontal:MAIn? | Returns the time per division of the main time base |
| HORizontal[:MAIn]:DELay:MODe | Sets or queries the main time base trigger delay mode |

Table 2-28: Horizontal commands (cont.)

| Command | Description |
| :--- | :--- |
| HORizontal:MAIn]:DELay:POSition | Sets or queries the main time base position when Horizontal Delay Mode is turned <br> off |
| HORizontal[:MAIn]:DELay:TIMe | Sets or queries the main time base trigger delay time |
| HORizontal:MAIn:INTERPRatio? | Returns the main horizontal time base interpolation ratio |
| HORizontal:MAIn]:POSition | Sets or queries the waveform horizontal position on the display |
| HORizontal:MAInnUNIts | Sets or queries the units for the horizontal time base |
| HORizontal:MAIn:UNIts:STRing | Sets or queries the units string for the horizontal main time base trigger delay |
| HORizontal:MODE | Sets or queries the horizontal mode. Auto mode is the factory default |
| HORizontal:MODE:AUTO:LIMITrecordlen | Sets or queries the record length limit used by the auto horizontal mode |
| HORizontal:MODE:RECOrdlength | Sets or queries the record length |
| HORizontal:MODE:SAMPLERate | Sets or queries the sample rate |
| HORizontal:MODE:SCAle | Sets or queries the horizontal scale |
| HORizontal:POSition | Either positions the waveform horizontally on the display or returns its horizontal |
| position on the display |  |
| HORizontal:ROLL | Sets or queries the horizontal roll mode status |
| HORizontal:TIMEStamp:CH<x>? | Returns the absolute trigger date and time for the specified frame and waveform |
| HORizontal:TIMEStamp:REF<x $>?$ | Returns the absolute trigger date and time for FastFrame reference |

## Limit Test command group

Use the commands in the Limit Test Command Group to perform limit testing by selecting channel, math, or reference waveforms and comparing them against a template waveform.

Table 2-29: Limit Test commands

| Command | Description |
| :--- | :--- |
| LIMit? | Returns all settings for the Limit commands |
| LIMit:BEEP | Causes the instrument to beep when the waveform data exceeds the limits set in <br> the limit test |
| LIMit:COMpare | Resets the limit test comparison template |
| LIMit:COMpare:CH<x> | Sets or queries the template against which to compare the waveform acquired <br> from the channel specified by x |
| LIMit:COMpare:MATH<x> | Sets or queries the template against which to compare the math waveform specified <br> by x |
| LIMit:COMpare:REF<x> | Sets or queries the template against which to compare the reference waveform <br> specified by x |
| SIMit:EMail | Sets or queries whether an E-mail is generated when the source waveform data <br> exceeds the limits specified for the limit test |
| SIMit:HARDCopy | Sets or queries whether a hard copy operation is executed on the waveform when <br> any waveform data exceeds the limit set in the limit test. LIMit:STATE must be set to <br> ON for the hard copy operation to execute |
| SIMit:HIGHLIGHTHits | Sets or queries whether violation highlighting occurs when limit testing is active, <br> and, if the RESET argument is set, clears the highlighting |
| Resets the hits highlighting for limit testing |  |

Table 2-29: Limit Test commands (cont.)

| Command | Description |
| :--- | :--- |
| LIMit:TEMPlate:TOLerance:VERTical | Sets or queries the amount in units of vertical divisions, by which the source <br> waveform is varied vertically when creating the destination waveform |
| LIMit:TEMPlate:DESTination | Sets or queries destination reference waveform that the limit template destination <br> command will use |
| LIMit:TEMPlate:SOUrce | Sets or queries the channel, math waveform, or reference waveform that the <br> LIMit:TEMPlate:STORe command will use |

## Link Training command group

Use these commands to control link training on the instrument.
Table 2-30:

| Command | Description |
| :--- | :--- |
| LINKTRaining:ARMscope | Sets or queries the ARMscope setting of Link Training. |
| LINKTRaining:DECOde | Sets or queries the Decode setting of the Link Training. |
| LINKTRaining:LANE | Sets or queries the activation of the individual communications lanes under test. |
| LINKTRaining:MARK | Sets or queries the Mark setting of the Link Training application. |
| LINKTRaining:STANdard | Sets or queries the communication standard for Link Training. |
| LINKTRaining:TRIGgeron | Sets or queries the TriggerOn setting of Link Training. |
| LINKTRaining:STAte | Sets or queries the state of the Link Training application. |

## Low Speed Serial Trigger command group

Use the commands in the Low Speed Serial Trigger Command Group to control serial triggering for the instrument.

NOTE. CAN, FlexRay, I2C, LIN, MIPI, PCIE, RS-232, SPI, USB, and 8B10B trigger commands are optional.

## Table 2-31: Low Speed Serial Trigger commands

| Command | Description |
| :--- | :--- |
| TRIGger:A:BUS:CAN:CONDition | Sets or queries the CAN bus trigger condition |
| TRIGger:A:BUS:CAN:DATa:DIRection | Sets or queries the CAN bus trigger data direction |
| TRIGger:A:BUS:CAN:DATa:FORMat | Sets or queries the CAN bus trigger data format |
| TRIGger:A:BUS:CAN:DATa:QUALifier | Sets or queries CAN bus trigger data qualifier |
| TRIGger:A:BUS:CAN:DATa:SIZe | Sets or queries the CAN bus trigger data size |
| TRIGger:A:BUS:CAN:DATa:VALue | Sets or queries CAN bus trigger data value |
| TRIGger:A:BUS:CAN:FRAMEtype | Sets or queries CAN bus trigger frame type |
| TRIGger:A:BUS:CAN:IDentifier\|:ADDRess\}: | Sets or queries the CAN bus trigger identifier direction |
| DIRection |  |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: | Sets or queries the CAN bus identifier format |
| FORMat |  |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: | Sets or queries CAN bus trigger identifier mode |
| MODe |  |
| TALGger:A:BUS:CAN\{:IDentifier::ADDRess\}: | Sets or queries the CAN bus trigger identifier value |
| TRIGger:A:BUS:DATa:FORMat | Sets or queries the trigger data format for the bus |
| TRIGger:A:BUS:DATa:VALue | Sets or queries the trigger data value depending on the format selected for the bus |
| TRIGger:A:BUS:FLEXRAY:CONDition | Sets or queries the FLEXRAY bus trigger condition |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: | Sets or queries FLEXRAY bus trigger cycle count format |
| FORMat: |  |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: | Sets or queries FLEXRAY bus trigger cycle count qualifier |
| QUALifier |  |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: | Sets or queries the FLEXRAY bus trigger cycle count value |
| VALue |  |
| TRIGger:A:BUS:FLEXRAY:DATa:FORMat | Sets or queries the FLEXRAY bus trigger data format |
| TRIGger:A:BUS:FLEXRAY:DATa:OFFSet | Sets or queries the FLEXRAY bus trigger data offset |
| TRIGger:A:BUS:FLEXRAY:DATa:QUALifier | Sets or queries the FLEXRAY bus trigger data qualifier |
| TRIGger:A:BUS:FLEXRAY:DATa:SIZe | Sets or queries the FLEXRAY bus trigger data size |
| TRIGger:A:BUS:FLEXRAY:DATa:VALue | Sets or queries the FLEXRAY bus trigger data value |
| TRIGger:A:BUS:FLEXRAY:EOFTYPE | Sets or queries the FLEXRAY bus end of file type |
| TRIGger:A:BUS:FLEXRAY:ERRTYPE | Sets or queries the FLEXRAY bus trigger error type |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:FLEXRAY:FRAMEType | Sets or queries the FLEXRAY bus trigger frame type |
| TRIGger:A:BUS:FLEXRAY:HEADER:CRC | Sets or queries the FLEXRAY bus trigger header CRC |
| TRIGger:A:BUS:FLEXRAY:HEADER: CYCLECount | Sets or queries the FLEXRAY bus trigger header cycle count |
| TRIGger:A:BUS:FLEXRAY:HEADER: FRAMEID | Sets or queries the FLEXRAY bus trigger header frame ID |
| TRIGger:A:BUS:FLEXRAY:HEADER:INDBits | Sets or queries the FLEXRAY bus trigger header Indicator Bits |
| TRIGger:A:BUS:FLEXRAY:HEADER: PAYLENgth | Sets or queries the FLEXRAY bus trigger header Payload Length |
| TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat | Sets or queries the FLEXRAY bus trigger identifier format |
| TRIGger:A:BUS:FLEXRAY:IDentifier: QUALifier | Sets or queries the FLEXRAY bus trigger identifier qualifier |
| TRIGger:A:BUS:FLEXRAY:IDentifier:VALue | Sets or queries the FLEXRAY bus trigger identifier value |
| TRIGger:A:BUS:I2C:ADDress:FORMat | Sets or queries the address format for the I2C bus |
| TRIGger:A:BUS:I2C:ADDress:MODe | Sets or queries the address mode for the I2C bus |
| TRIGger:A:BUS:I2C:ADDress:TYPe | Sets or queries the address type for the I2C bus trigger |
| TRIGger:A:BUS:I2C:ADDress:VALue | Sets or queries the binary address string used for the I2C trigger of the bus |
| TRIGger:A:BUS:I2C:CONDition | Sets or queries the trigger condition for the I2C bus |
| TRIGger:A:BUS:I2C:DATa:DIRection | Sets or queries the data direction for the I2C bus |
| TRIGger:A:BUS:I2C:DATa:FORMat | Sets or queries the trigger data format for the I2C bus |
| TRIGger:A:BUS:I2C:DATa:SIZe | Sets or queries the length of the data string in bytes to be used for an I2C trigger |
| TRIGger:A:BUS:I2C:DATa:VALue | Sets or queries the data value of the data token for an I2C trigger |
| TRIGger:A:BUS:LIN:CONDition | Sets or queries the LIN bus trigger condition |
| TRIGger:A:BUS:LIN:DATa:FORMat | Sets or queries the LIN bus trigger data format |
| TRIGger:A:BUS:LIN:DATa:QUALifier | Sets or queries the LIN bus trigger data qualifier |
| TRIGger:A:BUS:LIN:DATa:SIZe | Sets or queries the LIN bus trigger data size |
| TRIGger:A:BUS:LIN:DATa:VALue | Sets or queries the LIN bus trigger data value |
| TRIGger:A:BUS:LIN:ERRTYPE | Sets or queries the LIN bus trigger error type |
| TRIGger:A:BUS:LIN:IDentifier:FORMat | Sets or queries the LIN bus trigger identifier format |
| TRIGger:A:BUS:LIN:IDentifier:VALue | Sets or queries the LIN trigger identifier value |
| TRIGger:A:BUS:PCIE:CHARacter:CHAR | Sets or queries the PCIE bus trigger character |
| TRIGger:A:BUS:PCIE:CHARacter:SYMbol: MINus | Sets or queries the PCIE bus trigger character symbol minus |
| TRIGger:A:BUS:PCIE:CHARacter:SYMbol: PLUS | sets or queries PCIE bus trigger character symbol plus |
| TRIGger:A:BUS:PCIE:CONDition | Sets or queries the PCIE bus trigger condition |
| TRIGger:A:BUS:PCIE:DISParity | Sets or queries the PCIE bus trigger disparity |
| TRIGger:A:BUS:PCIE:ERROR | Sets or queries the PCIE bus trigger error |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:PCIE:FORMat | Sets or queries the PCle bus trigger format |
| TRIGger:A:BUS:PCIE:PATtern:CHAR<x> | Sets or queries the PCIE bus trigger pattern character |
| TRIGger:A:BUS:PCIE:PATtern:ORDERedset | Sets or queries the PCIE bus trigger pattern ordered set |
| TRIGger:A:BUS:PCIE:PATtern:SYMbol: MINus<x> | Sets or queries the PCIE bus trigger pattern symbol minus |
| TRIGger:A:BUS:PCIE:PATtern:SYMbol: PLUS<x> | Sets or queries the PCIE bus trigger pattern plus symbol |
| TRIGger:A:BUS:RS232C:CONDition | Sets or queries the trigger condition for the specified RS232 bus |
| TRIGger:A:BUS:RS232C:DATa:FORMat | Sets or queries the data format for the RS232c bus trigger |
| TRIGger:A:BUS:RS232C:DATa:SIZe | Sets or queries the length of the data string in bytes to be used for an RS232 trigger |
| TRIGger:A:BUS:RS232C:DATa:VALue | Sets or queries the data value of the data token for an RS232 trigger |
| TRIGger:A:BUS:SOUrce | Sets or queries the source for a bus trigger |
| TRIGger:A:BUS:SPI:CONDition | Sets or queries the trigger condition for the SPI bus |
| TRIGger:A:BUS:SPI:DATa:FORMat | Sets or queries the format of the data to be used for an SPI trigger when the trigger condition is Data |
| TRIGger:A:BUS:SPI:DATa:SIZe | Sets or queries the length of the data string in bytes to be used for an SPI trigger |
| TRIGger:A:BUS:SPI:DATa:VALue | Sets or queries the data value of the data token for an SPI trigger |
| TRIGger:A:BUS:USB:ADDress:FORMat | Sets or queries the address format for the USB bus trigger normal token |
| TRIGger:A:BUS:USB:ADDress:HIVALue | Sets address value for normal token to be used with In Range and Out of Range qualifiers |
| TRIGger:A:BUS:USB:ADDress:VALue | Sets address value for normal token |
| TRIGger:A:BUS:USB:CHARacter:CHAR | Sets or queries the USB character when the Trigger Condition is set to Character. |
| TRIGger:A:BUS:USB:CHARacter:SYMbol: MINus | Sets or queries the character bit pattern (negative disparity) when the Trigger Condition is set to Character. |
| TRIGger:A:BUS:USB:CHARacter:SYMbol: PLUS | Sets or queries the Character bit pattern (positive disparity view) when the Trigger Condition is set to Character. |
| TRIGger:A:BUS:USB:CONDition | Sets or queries the trigger condition for the specified USB bus |
| TRIGger:A:BUS:USB:DATa:FORMat | Sets or queries the data format for the USB bus trigger |
| TRIGger:A:BUS:USB:DATa:HIVALue | Sets or queries the trigger data value for data token of the specified USB bus |
| TRIGger:A:BUS:USB:DATa:OFFSet | Sets or queries the data offset for the USB bus trigger |
| TRIGger:A:BUS:USB:DATa:SIZe | Sets or queries the number of contiguous data bytes for the USB bus trigger |
| TRIGger:A:BUS:USB:DATa:TYPe | Sets or queries the data packet type when USB bus trigger condition is Data Packet |
| TRIGger:A:BUS:USB:DATa:VALue | Sets or queries the USB bus trigger data value for data token |
| TRIGger:A:BUS:USB:DISParity | Sets or queries the type of disparity that the bus will trigger on. |
| TRIGger:A:BUS:USB:ENDPoint:FORMat | Sets or queries the endpoint format for data token to be used with in range and out of range qualifiers |
| TRIGger:A:BUS:USB:ENDPoint:HIVALue | Sets or queries the endpoint value for data token to be used with in range and out of range qualifiers |
| TRIGger:A:BUS:USB:ENDPoint:VALue | Sets or queries the endpoint value for normal token of the specified USB bus |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:USB:ERROR | Sets or queries whether the oscilloscope will trigger on a character error or a disparity error. |
| TRIGger:A:BUS:USB:ERRTYPE | Sets or queries the error type when USB bus trigger on condition is set to Error |
| TRIGger:A:BUS:USB:FORMat | Sets or queries the pattern editing format. |
| TRIGger:A:BUS:USB:HANDShaketype | Sets or queries the handshake type when USB bus trigger on condition is set to Handshake Packet |
| TRIGger:A:BUS:USB:PATtern:CHAR<x> | Sets or queries the specified character when the Trigger Condition is set to Pattern. |
| TRIGger:A:BUS:USB:PATtern:ORDERedset | Sets or queries the state of triggering on an ordered set. |
| TRIGger:A:BUS:USB:PATtern:SYMbol: MINus<x> | Sets or queries the specified character bit pattern (negative disparity) when the Trigger Condition is set to Pattern. |
| TRIGger:A:BUS:USB:PATtern:SYMbol: PLUS<x> | Sets or queries the specified character bit pattern (positive disparity) when the Trigger Condition is set to Pattern. |
| TRIGger:A:BUS:USB:QUAlifier | Sets or queries the USB bus trigger qualifier for address, endpoint, and data |
| TRIGger:A:BUS:USB:SOF:FORMat | Sets or queries the format for the SOF frame number |
| TRIGger:A:BUS:USB:SOF:FRAMENUMber | Sets frame number for the USB bus trigger when the condition is Start Of Frame (SOF) |
| TRIGger:A:BUS:USB:SPECIALType | Sets or queries the PID value for Special Packet USB bus trigger on condition |
| TRIGger:A:BUS:USB:SPLIT:ET:VALue | Sets or queries the Endpoint Type value of the specified USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:HUB:FORMat | Sets or queries the format for the hub address of the USB bus trigger on split token field |
| TRIGger:A:BUS:USB:SPLIT:HUB:VALue | Sets or queries the hub address for SPLIT token of the USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:PORT:FORMat | Sets the port address format for the USB bus trigger on split token field |
| TRIGger:A:BUS:USB:SPLIT:PORT:VALue | Sets or queries the port address for SPLIT token of the USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:SC:VALue | Sets or queries the Start/Complete value for the USB bus trigger on split token field |
| TRIGger:A:BUS:USB:SPLIT:SE:VALue | Sets or queries the Start/End value for the USB bus trigger |
| TRIGger:A:BUS:USB:TOKENType | Sets or queries the Token Type when USB Trigger condition is set to Token (Address) Packet |
| DP07000 Series only |  |
| TRIGger:A:CAN:CONDition | Sets or queries the CAN condition <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:DATa:DIRection | Sets or queries the CAN trigger condition to be valid on a READ, WRITE, or either <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:FORMat | Sets or queries the CAN data format <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:DATa:LEVel | Sets or queries the CAN Trigger threshold for the CAN data source <br> NOTE. This trigger is available only with Option LSA installed |

| Command | Description |
| :---: | :---: |
| TRIGger:A:CAN:DATa:SOUrce | Sets or queries the CAN data source <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:DATa:VALue | Sets or queries the binary data string used for CAN Trigger if the trigger condition is ID or IDANDDATA <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:FRAMEtype | Sets or queries the CAN trigger frame type <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:IDENTifier:MODe | Sets or queries the CAN trigger identifier mode <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:IDENTifier:VALue | Sets or queries the binary address string used for the CAN trigger if the trigger condition is ID or IDANDDATA <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:PROBE | Sets or queries the probing method used to probe the CAN signal <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:CAN:SPEed | Sets or queries the bit rate of the CAN system <br> NOTE. This trigger is available only with Option LSA installed |
| TRIGger:A:I2C:ADDRess:MODe | Sets or queries the I2C address mode to 7 or 10 bit |
| TRIGger:A:I2C:ADDRess:RWINClude | Sets or queries the 12 C address mode to include the read/write bit as an additional 8th bit of the 7 -bit address |
| TRIGger:A:I2C:ADDRess:TYPe | Sets or queries the I2C address type |
| TRIGger:A:I2C:ADDRess:VALue | Sets or queries the binary address string used for the I2C trigger if the trigger condition is ADDR or ADDRANDDATA |
| TRIGger:A:I2C:CLOCk:LEVel | Sets or queries the clock source for the I2C Serial Trigger |
| TRIGger:A:I2C:CLOCk:SOUrce | Sets or queries the clock source for the I2C Serial Trigger |
| TRIGger:A:I2C:CONDition | Sets or queries the trigger condition for the I2C trigger |
| TRIGger:A:I2C:DATa:DIRection | Sets or queries the I2C trigger condition valid on a READ, WRITE, or either |
| TRIGger:A:I2C:DATa:LEVel | Sets or queries the threshold level for the I2C data source |
| TRIGger:A:I2C:DATa:SOUrce | Sets or queries the data source for the I2C serial trigger |
| TRIGger:A:I2C:DATa:STARt | Sets or queries the data start byte |
| TRIGger:A:I2C:DATa:VALue | Sets or queries the binary data string used for I2C triggering if the trigger condition is DATA or ADDRANDDATA |
| TRIGger:A:I2C:FORMat | Sets or queries the display format for the I2C data value |
| TRIGger:A:RS232:BAUd | Sets or queries the baud rate for RS232 triggering |
| TRIGger:A:RS232:DATa:LEVel | Sets or queries the threshold for the RS232 data source |
| TRIGger:A:RS232:DATa:SOUrce | Sets or queries the RS232 data source |
| TRIGger:A:RS232:DATa:VALue | Sets or queries the binary data string used for RS232 triggering |

Table 2-31: Low Speed Serial Trigger commands (cont.)

| Command | Description |
| :--- | :--- |
| TRIGger:A:RS232:FORMat | Sets or queries the display format for the RS232 data value |
| TRIGger:A:RS232:PARity | Sets or queries the state of the RS232 parity bit |
| TRIGger:A:SPI:CONDition | Sets or queries the trigger condition for SPI triggering |
| TRIGger:A:SPI:DATa:MISO:ACTIVE | Sets or queries the SPI MISO polarity |
| TRIGger:A:SPI:DATa:MISO:LEVel | Sets or queries the threshold for the SPI MISO data source |
| TRIGger:A:SPI:DATa:MISO:SOUrce | Sets or queries the MISO data source for the SPI trigger |
| TRIGger:A:SPI:DATa:MISO:VALue | Sets or queries the binary data string used for the SPI trigger if the trigger condition <br> is set to MISO or MISOMOSI |
| TRIGger:A:SPI:DATa:MOSI:ACTIVE | Sets or queries the SPI MOSI polarity |
| TRIGger:A:SPI:DATa:MOSI:LEVel | Sets or queries the threshold for the SPI MOSI data source |
| TRIGger:A:SPI:DATa:MOSI:SOUrce | Sets or queries the MOSI data source for the SPI trigger |
| TRIGger:A:SPI:DATa:MOSI:VALue | Sets or queries the binary data string used for the SPI trigger if the trigger condition <br> is set to MOSI or MISOMOSI |
| TRIGger:A:SPI:DATa:STARt | Sets or queries the nth data byte on the data source after the signal on the enable <br> slave source switches to the polarity specified by the Slave Select Polarity |
| TRIGger:A:SPI:FORMat | Sets or queries the SPI trigger data format |
| TRIGger:A:SPI:SCLK:ACTIVE | Sets or queries the SPI SCLK polarity |
| TRIGger:A:SPI:SCLK:LEVel | Sets or queries the threshold for the SPI trigger SCLK |
| TRIGger:A:SPI:SCLK:SOUrce | Sets or queries the SPI SCLK source |
| TRIGger:A:SPI:SS:ACTIVE | Sets or queries the SPI trigger Slave Select (SS) polarity |
| TRIGger:A:SPI:SS:LEVel | Sets or queries the threshold for the SPI trigger Slave Select (SS) signal |
| TRIGger:A:SPI:SS:SOUrce | Sets or queries the SPI trigger Slave Select (SS) source |

## Mask command group

Mask commands compare incoming waveforms to standard or user-defined telecommunications masks. Standard masks are available only with option MTM installed. Without option MTM, you must define your masks. When waveforms fall inside or outside the mask limits, the instrument can generate hard copy, save the waveform, emit a beep or SRQ, stop and wait for your input, send an E-mail message with specified data, $\log$ the time/date of the acquired waveform, or a combination of these actions.

A mask is a set of polygonal regions on the screen. Every vertical line of the screen intersects the polygon in zero, one, or two places, but never in more than two places. (A vertical line that intersects a vertical mask border is counted.) You have to break up more complicated polygons into two separate segments. Unlike limit testing, the inside of a mask is the region where waveform data would not normally fall. A telecommunications standard requires up to eight of these segments. Pulse standards always have two segments. Standards with eye patterns usually have three masks, but some have four.

You use the commands in the Mask Command Group to do the following:

- Specify the waveform source to test and the mask to use.
- Specify whether to use, and the size of, mask margins, which allow you to shrink or expand an existing set of polygons by a specified percentage.
- Specify whether to display a readout of hits and the mask on screen. You can also autofit the incoming waveforms to match the mask you choose.
- Select industry-standard masks that support a variety of electrical and optical communication standards (available with an option).
- Define and edit your own custom mask; create a new mask, or edit a standard mask (optional) to meet your needs.
- Enable, disable, or reset the mask counts. Once you turn on mask counting, it remains on until you explicitly turn it off.

Options also provide communication trigger commands that you can use with the mask commands, such as TRIGger:A:TYPe Communication. Refer to the Trigger Command Group.

Table 2-32: Mask commands

| Command | Description |
| :--- | :--- |
| MASK? | Returns the states of all settable mask parameters |
| MASK:AUTOAdjust | Optimizes signal position within the mask to minimize hits |
| MASK:AUTOAdjust:HDELTA | Sets or queries how far autofit searches horizontally |
| MASK:AUTOAdjust:VDELTA | Sets or queries how far autofit searches vertically |
| MASK:AUTOSet:AUTOAdjust | Controls what happens at the end of a mask autoset. If ON, the horz/vert auto <br> adjustment is run ONCE to potentially improve the result of mask autoset |

Table 2-32: Mask commands (cont.)

| Command | Description |
| :---: | :---: |
| MASK:AUTOSet:HPOS | Controls whether the algorithm will attempt to change the horizontal position of the signal while attempting to autoset |
| MASK:AUTOSet:HSCAle | Controls whether the algorithm will attempt to change the horizontal scale while attempting to autoset |
| MASK:AUTOSet:MODe | Controls whether an autoset will be automatically done after a standard mask is selected |
| MASK:AUTOSet:OFFSETAdj | Sets autoset not to enforce the rule that, for pulse standards, requires 0 V to be in a certain place in the mask. Instead, autoset will attempt to measure the DC offset in the signal and use scope offset or position controls to compensate for the DC offset in the signal |
| MASK:AUTOSet:STANdard | Selects the standard mask in autoset |
| MASK:AUTOSet:TRIGger | Controls if a MASK : AUTOSet affects the trigger level |
| MASK:AUTOSet:USER:ONE | Sets or queries the level 1 used by autoset for user masks |
| MASK:AUTOSet:USER:TYPe | Sets or queries how autoset scales a mask |
| MASK:AUTOSet:USER:ZERo | Sets or queries the level 0 used by autoset for user masks |
| MASK:AUTOSet:VPOS | Controls whether the autoset algorithm will affect the vertical position (or offset) of the signal while attempting to autoset |
| MASK:AUTOSet:VSCAle | Controls whether the autoset algorithm will attempt to change the vertical scale while attempting to autoset |
| MASK:COPy:USER | Copies the currently displayed mask to the User mask |
| MASK:COUNt | Resets to zero the number of hits for all mask segments on the specified source |
| MASK:COUN:FAILURES? | Returns the number of pass/fail tests that have failed |
| MASK:COUN:HITS? | Returns the total number of mask hits on all mask segments |
| MASK:COUNt:SEG<m>:HITS? | Returns the number of hits in mask segment <m> |
| MASK:COUN:STATE | Sets or queries the mask hits count state |
| MASK:COUN:TESTS? | Returns the number of pass/fail tests that have occurred |
| MASK:COUN:TOTal? | Returns the sum of all hits in all mask segments |
| MASK:COUN:VIIOLATIONS? | Returns the number of test violations that have occurred in the current pass/fail test |
| MASK:COUN:WAVEFORMS? | Returns the number of waveforms that have been acquired and processed during pass/fail testing |
| MASK:DISplay | Sets or queries whether the defined masks are displayed on the screen |
| MASK:FILTer | Sets or queries whether the selected optical reference receiver mask filter is enabled |
| MASK:HIGHLIGHTHits | Sets or queries whether the hits in a mask are highlighted in different colors than other waveform data |
| MASK:INVert | Controls whether the mask is drawn inverted |
| MASK:LOCk | Sets or queries the mask lock to waveform mode |
| MASK:MARgin:PERCent | Sets or queries the mask margin percentage |
| MASK:MARgin:STATE | Sets or queries the state of the mask margins |
| MASK:MASKPRE:AMPlitude | Sets or queries the current mask's nominal pulse amplitude in volts |

| Command | Description |
| :---: | :---: |
| MASK:MASKPRE:HSCAle | Sets or queries the nominal timing resolution used to draw the current mask in time/division |
| MASK:MASKPRE:HTRIGPOS | Sets or queries the nominal trigger position (pulse leading edge) used to draw the current mask as a fraction of the display width |
| MASK:MASKPRE:PATTERNBITS | Sets or queries the number of bits used for serial trigger for the current mask standard |
| MASK:MASKPRE:PRESAMPBITS | Sets or queries the number of bits before the (isolated one) pulse leading edge in the serial trigger pass/fail testing |
| MASK:MASKPRE:RECOrdlength | Sets or queries the nominal record length for pulse mask testing |
| MASK:MASKPRE:TRIGTOSAMP | Sets or queries the time in seconds, from the (leading edge) trigger position to the pulse bit sampling position |
| MASK:MASKPRE:VOFFSet | Sets or queries the nominal vertical offset in volts, used to vertically offset the input channels |
| MASK:MASKPRE:VPOS | Sets or queries the nominal vertical position in divisions, used to vertically position the input channels |
| MASK:MASKPRE:VSCAle | Sets or queries the nominal vertical scale in volts per division, used to vertically scale the input channels |
| MASK:MASKPRE:WIDth | Sets or queries the nominal bit width in seconds |
| MASK:POLarity | Sets or queries the input waveform polarity for the pass/fail test |
| MASK:SEG<m> | Deletes the specified mask segment from the Current mask |
| MASK:SEG<m>:NR_Pt? | Returns the number of points that make up the specified mask segment of the Current mask |
| MASK:SEG<m>:POINTS | Sets or queries the X -Y user coordinates of all points in the Current mask segment |
| MASK:SOUrce | Sets or reports which source will be compared against the mask(s) when counting is turned on |
| MASK:STANdard | Deletes the existing mask and sets the selected standard mask |
| MASK:STOPOnviolation | Sets or queries the stop on violation setting |
| MASK:TESt:AUX:COMPLetion | Sets or queries the test: aux on pass/fail test completion mode |
| MASK:TESt:AUX:FAILure | Sets or queries the test : aux status on pass/fail test failure mode |
| MASK:TESt:BEEP:COMPLetion | Sets or queries the beep on pass/fail test completion mode |
| MASK:TESt:BEEP:FAlLure | Sets or queries the beep status on pass/fail test failure mode |
| MASK:TESt:DELay | Sets or queries the amount of time in seconds, to wait after starting pass/fail testing to evaluate waveforms |
| MASK:TESt:HARDCopy | Sets or queries the hard copy in pass/fail failure mode |
| MASK:TESt:LOG:FAlLure | Sets or queries the log status on pass/fail test failure mode |
| MASK:TESt:REPeat | Sets or queries the repeat pass/fail test on completion mode |
| MASK:TESt:SAMple | Sets or queries the minimum number of waveform database (WfmDB) points the instrument can acquire before it stops a single sequence acquisition or stops running a mask test |

Table 2-32: Mask commands (cont.)

| Command | Description |
| :---: | :---: |
| MASK:TESt:SAMple:THReshold | Sets or queries the minimum number of hits in mask regions needed to cause the pass/fail status to change from PASSING to FAILING |
| MASK:TESt:SAVEWFM | Sets or queries the save waveform to file on failure setting |
| MASK:TESt:SAVEWFM:FILEName | Sets or queries the name of the directory and file to use with the MASK:TESt:SAVEWFM command |
| MASK:TESt:SRQ:COMPLetion | Sets or queries an SRQ on pass/fail test completion mode |
| MASK:TESt:SRQ:FAlLure | Sets or queries the SRQ status on pass/fail test failure mode |
| MASK:TESt:STATE | Sets or queries the state of mask pass/fail testing |
| MASK:TESt:STATUS? | Returns the pass/fail test status |
| MASK:TESt:STOP:FAlLure | Sets or queries the stop status on pass/fail test failure mode |
| MASK:TESt:THReshold | Sets or queries the number of failed tested waveforms needed in each pass/fail test to cause the pass/fail status to change from PASSING to FAILING |
| MASK:TESt:WAVEform | Sets or queries the number of waveforms to test during pass/fail testing |
| MASK:USER:AMPlitude | Sets or queries the current mask's nominal pulse amplitude in volts |
| MASK:USER:BITRate | Sets or queries the user mask's bit rate |
| MASK:USER:HSCAle | Sets or queries the nominal timing resolution used to draw the mask in time/division |
| MASK:USER:HTRIGPOS | Sets or queries the nominal trigger position (pulse leading edge) used to draw the mask as a fraction of the display width |
| MASK:USER:LABel | Sets or queries the label assigned to a user mask |
| MASK:USER:PATTERNBITS | Sets or queries the number of bits used for serial trigger for the User mask standard |
| MASK:USER:PRESAMPBITS | Sets or queries the number of bits before the (isolated one) pulse leading edge in the serial trigger pass/fail testing |
| MASK:USER:RECOrdlength | Sets or queries the nominal record length for pulse mask testing |
| MASK:USER:SEG<m> | Deletes the specified mask segment from the User mask |
| MASK:USER:SEG<m>:NR_Pt? | Returns the number of points that make up the specified User mask segment |
| MASK:USER:SEG<m>:POINTS | Sets or queries the $X-Y$ user coordinates of all points in the specified User mask segment |
| MASK:USER:TRIGTOSAMP | Sets or queries the time in seconds, from the (leading edge) trigger position to the pulse bit sampling position |
| MASK:USER:VOFFSet | Sets or queries the nominal vertical offset in volts, used to vertically offset the input channels |
| MASK:USER:VPOS | Sets or queries the nominal vertical position in divisions, used to vertically position the input channels |
| MASK:USER:VSCAle | Sets or queries the nominal vertical scale in volts per division, used to vertically scale the input channels |
| MASK:USER:WIDth | Sets or queries the nominal bit width in seconds |
| RECAII:MASK | Recalls a stored mask as the User mask |
| SAVe:MASK | Saves the User mask to a mass storage file |

## Math command group

Use the commands in the Math Command Group to create and define math waveforms. You can define and display up to four math waveforms simultaneously on four channel models and up to two on two channel models. Use the available math functions to define your math waveform.

The math waveform you create depends on sources listed in the math expression. If you change these sources, the math waveforms you previously defined will be affected.

Math expressions can be simple, containing no mathematical computation, such as CH 1 , which specifies that a waveform shows the signal source of channel 1 . Math expressions can also be complex, consisting of 100 plus characters and comprising many sources, functions, and operands.

The acquisition of a live waveform can stop for several reasons: You can turn off the channel, stop the waveform (via Run/Stop from the Horiz/Acq menu), or stop the trigger (via Run/Stop from the Trig menu). When you turn off the channel, math continues and data is acquired but is not displayed. When you stop either the waveform or the trigger, the math calculation stops, and the last math calculation performed is displayed.

When a live waveform update or reference waveform is altered, math waveforms containing those waveforms as sources are also updated to reflect the changes. Also, sources must exist but do not need to be displayed to be used in and to update math waveforms.

Table 2-33: Math commands

| Command | Description |
| :---: | :---: |
| MATH<x>? | Returns the specified math waveform settings |
| MATH $<x>$ : DEFFine | Sets or queries the math $\langle x>$ waveform definition for the specified waveform |
| MATH<x>:FILTer:MODe | Sets or queries the filter rise time parameter (centered or shifted) |
| MATH<x>:FILTer:RISetime | Sets or queries the filter rise time parameter |
| MATH<x>:LABEI:NAMe | Sets or queries the label string used for annotating the displayed math waveform |
| MATH $<x>$ :LABel:XPOS | Sets or queries the X screen offset where the math waveform label is displayed |
| MATH $<x>$ :LABel:YPOS | Sets or queries the Y screen offset where the math waveform label is displayed |
| MATH<x>:NUMAVg | Sets or queries the acquisition number at which the averaging algorithm will begin exponential averaging |
| MATH $<x>$ :SPECTral? | Returns the specified math waveform spectral setups |
| MATH $<x>$ :SPECTral:CENTER | Sets or queries the center frequency of the spectral analyzer output data span |
| MATH $<x>$ :SPECTral:GATEPOS | Sets or queries the position of the center of the gate |
| MATH<x>:SPECTral:GATEWIDTH | Sets or queries the gate width input to the spectral analyzer |
| MATH<x>:SPECTral:LOCk | Sets or queries the state of the spectral locking for the specified math waveform |
| MATH $\langle$ < $>$ :SPECTral:MAG | Sets or queries the units of the SpectralMag function in the specified math string |
| MATH<x>:SPECTral:PHASE | Sets or queries the units of the SpectralPhase function in the specified math string |

Table 2-33: Math commands (cont.)

| Command | Description |
| :---: | :---: |
| MATH<x>:SPECTral:REFLevel | Sets or queries the vertical position of the output data from the spectral analyzer |
| MATH<x>:SPECTral:REFLEVELOffset | Sets or queries the spectral reference level offset used for calculating the dB value |
| MATH<x>:SPECTral:RESBw | Sets or queries the resolution bandwidth of the spectral analyzer |
| MATH<x>:SPECTral:SPAN | Sets the top of the frequency span to a value that is closest to the specified value Or queries the specified math waveform's current frequency span value |
| MATH<x>:SPECTral:SUPPress | Sets or queries the phase suppression threshold |
| MATH<x>:SPECTral:UNWRap | Enables or disables or returns the state of the phase unwrap of the spectral analyzer output data |
| MATH $<x>$ :SPECTral:WINdow | Sets or queries the window function used to multiply the input data to the spectral analyzer |
| MATH<x>:THRESHold | Sets or queries the comparable threshold for converting the math signal to digital form |
| MATH<x>:UNITString | Sets or queries the units used for the math waveform; command overrides the default unit string |
| MATH<x>:VERTical:AUTOSCale | Sets or queries auto-scaling of the specified math waveform |
| MATH $\langle x>$ :VERTical:POSition | Sets or queries the specified math waveform vertical position |
| MATH $\langle x\rangle$ :VERTical:SCAle | Sets or queries the specified math waveform vertical scale (per div) |
| MATHArbflt<x>:FILepath | Sets the file path for a file of filter coefficients and reads the file |
| MATHArbflt<x>:READFile | Forces a reread of the filter file for the specified arbitrary filter |
| MATHVAR? | Sets or queries all 8 numerical values you can use within math expressions |
| MATHVAR:VAR<x> | Sets or queries a numerical value you can use within math expressions |

## Measurement command group

Use the commands in the Measurement Command Group to control the automated measurement system.

Up to eight automated measurements can be displayed on the screen. In the commands, these measurement readouts are named MEAS $<\mathrm{x}>$, where $<\mathrm{x}>$ can be 1 through 8 .

In addition to the eight displayed measurements, the measurement commands let you specify an additional measurement, IMMed. The immediate measurement has no front panel equivalent. Immediate measurements are never displayed. Because they are computed only when needed, immediate measurements slow the waveform update rate less than displayed measurements.

Whether you use displayed or immediate measurements, use the VALue query to obtain measurement results.

Measurement commands can set and query measurement parameters. You can assign parameters, such as waveform sources and reference levels, differently for each measurement.

Table 2-34: Measurement commands

| Command | Description |
| :--- | :--- |
| MEASUrement? | Returns all measurement parameters |
| MEASUrement:ANNOTation:IMMEDSTAte | Sets or queries the state of immediate measurement annotation |
| MEASUrement:ANNOTation:NUMX? | Returns the number of horizontal measurement annotations being displayed |
| MEASUrement:ANNOTation:NUMY? | Returns the number of vertical measurement annotations being displayed |
| MEASUrement:ANNOTation:STATE | Sets or queries the state of visible measurement annotations |
| MEASUrement:ANNOTation:TYPe | Sets or queries the type of annotations being used |
| MEASUrement:ANNOTation:X<x>? | Returns the value of the specified annotation |
| MEASUrement:ANNOTation:Y<x>? | Returns the value of the specified annotation |
| MEASUrement:GATing | Sets or queries the measurement gating |
| MEASUrement:IMMed? | Returns all immediate measurement setup parameters |
| MEASUrement:IMMed:DELay? | Returns information about the immediate delay measurement |
| MEASUrement:IMMed:DELay:DIREction | Sets or queries the search direction to use for immediate delay measurements |
| MEASUrement:IMMed:DELay:EDGE[1] | Sets or queries the slope of the edge used for immediate delay "from" waveform <br> measurements |
| MEASUrement:IMMed:DELay:EDGE2 | Sets or queries the slope of the edge used for immediate delay "to" waveform <br> measurements |
| MEASUrement:IMMed:METHod | Specifies or queries the method used to calculate the 0\% and 100\% reference level <br> for immediate measurements |
| MEASUrement:IMMed:NOISe | Sets or queries the location of the noise measurement on the eye waveform |
| MEASUrement:IMMed:REFLevel? | Returns the reference levels |

Table 2-34: Measurement commands (cont.)

| Command | Description |
| :---: | :---: |
| MEASUrement:IMMed:REFLevel:ABSolute: $\mathrm{HIGH}$ | Sets or queries the high reference level |
| MEASUrement:IMMed:REFLevel:ABSolute: LOW | Sets or queries the low reference level |
| MEASUrement:IMMed:REFLevel:ABSolute: MID<x> | Sets or queries the middle reference levels |
| MEASUrement:IMMed:REFLevel:METHod | Sets or queries the method used to calculate measurements |
| MEASUrement:IMMed:REFLevel:PERCent: HIGH | Sets or queries the top level for rise time ( $90 \%$ level) |
| MEASUrement:IMMed:REFLevel:PERCent: LOW | Sets or queries the low level for rise time (10\% level) |
| MEASUrement:IMMed:REFLevel:PERCent: MID<x> | Sets or queries the mid levels for measurements |
| MEASUrement:IMMed:SOUrce<x> | Sets or queries the source to measure "to" or "from" for phase or delay immediate measurements |
| MEASUrement:IMMed:SOUrce<x>:SIGType | Sets or queries the type of input signal used for the specified measurement source |
| MEASUrement:IMMed:TYPe | Sets or queries the type of the immediate measurement |
| MEASUrement:IMMed:UNIts? | Returns the units of the immediate measurement |
| MEASUrement:IMMed:VALue? | Returns the value of the immediate measurement |
| MEASUrement:MEAS<x>? | Returns all measurement parameters for the displayed measurement |
| MEASUrement:MEAS<x>:COUNt? | Returns the number of values accumulated since the last statistical reset |
| MEASUrement:MEAS<x>:DELay? | Returns the delay measurement parameters for specified measurement |
| MEASUrement:MEAS<x>:DELay:DIREction | Sets or queries the search direction to use for delay measurements |
| MEASUrement:MEAS<x>:DELay:EDGE<x> | Sets or queries the slope of the edge to use for delay "from" or "to" waveform measurements |
| MEASUrement:MEAS<x>:MAXimum? | Returns the maximum value found since the last statistical reset |
| MEASUrement:MEAS $<x>$ :MEAN? | Returns the mean value accumulated since the last statistical reset |
| MEASUrement:MEAS<x>:METHod | Sets or queries the method used to calculate the 0\% and 100\% reference level |
| MEASUrement:MEAS<x>:MINImum? | Returns the minimum value found since the last statistical reset |
| MEASUrement:MEAS<x>:NOISe | Sets or queries the location of the noise measurement on the eye waveform for MEAS<x> |
| MEASUrement:MEAS<x>:REFLevel? | Returns the reference levels |
| MEASUrement:MEAS<x>:REFLevel: ABSolute:HIGH | Sets or queries the top level for rise time ( $90 \%$ level) |
| MEASUrement:MEAS<x>:REFLevel: ABSolute:LOW | Sets or queries the low level for rise time (10\%) |
| MEASUrement:MEAS<x>:REFLevel: ABSolute:MID<x> | Sets or queries the mid1 or mid2 level for measurements |
| MEASUrement:MEAS<x>:REFLevel: METHod | Sets or queries the reference level units used for measurement calculations |

## Table 2-34: Measurement commands (cont.)

| Command | Description |
| :---: | :---: |
| MEASUrement:MEAS<x>:REFLevel: PERCent:HIGH | Sets or queries the top level for rise time (90\% level) |
| MEASUrement:MEAS<x>:REFLevel: PERCent:LOW | Sets or queries the low level for rise time (10\% level) |
| MEASUrement:MEAS<x>:REFLevel: PERCent:MID<x> | Sets or queries the mid1 or mid2 level for delay measurements |
| MEASUrement:MEAS<x>:SOUrce<x> | Sets or queries the source to measure "from" or "to" for phase or delay measurements |
| MEASUrement:MEAS<x>:SOUrce<x>: SIGType | Sets or queries the type of input signal used for the specified measurement source for the specified measurement slot |
| MEASUrement:MEAS<x>:STATE | Sets or queries whether the specified measurement slot is computed and displayed |
| MEASUrement:MEAS<x>:STDdev? | Returns the standard deviation of values accumulated since the last statistical reset |
| MEASUrement:MEAS<x>:TYPe | Sets or queries the measurement<x> type |
| MEASUrement:MEAS<x>:UNIts? | Returns measurement $<x>$ units |
| MEASUrement:MEAS<x>:VALue? | Returns the value of measurement<x> |
| MEASUrement:METHod | Sets or queries the method used for calculating reference levels |
| MEASUrement:NOISe | Sets or queries the location of the noise measurement on the eye waveform |
| MEASUrement:REFLevel:ABSolute:HIGH | Sets or queries the top reference level for rise time |
| MEASUrement:REFLevel:ABSolute:LOW | Sets or queries the low reference level for rise time |
| MEASUrement:REFLevel:ABSolute:MID<x> | Sets or queries the mid1 or mid2 reference level for measurements |
| MEASUrement:REFLevel:METHod | Sets or queries the method for assigning high and low reference levels |
| MEASUrement:REFLevel:PERCent:HIGH | Sets or queries the top reference percent level for rise time |
| MEASUrement:REFLevel:PERCent:LOW | Sets or queries the low reference percent level for rise time |
| MEASUrement:REFLevel:PERCent:MID<x> | Sets or queries the mid1 or mid 2 reference percent level for waveform measurements |
| MEASUrement:SOUrce<x>:SIGType | Sets or queries the type of input signal used for the specified measurement source |
| MEASUrement:STATIstics:COUNt | Clears existing measurement statistics from memory |
| MEASUrement:STATIstics:MODe | Turns measurement statistics on or off and sets or queries which pair of statistical accumulations is displayed |
| MEASUrement:STATIstics:WElghting | Sets or queries the 'time constant' for mean and standard deviation statistical accumulations |

## Miscellaneous command group

Miscellaneous commands do not fit into other categories.
Several commands and queries are common to all 488.2-1987 devices on the GPIB bus. The 488.2-1987 standard defines these commands. The common commands begin with an asterisk (*) character.

Table 2-35: Miscellaneous commands

| Command | Description |
| :--- | :--- |
| APPLication:ACTivate | Starts the application specified in the string |
| APPLication:SCOPEAPP:WINDOW | Sets or queries whether the oscilloscope application is minimized or displayed <br> full screen |
| AUXout? | Returns the auxiliary out setup |
| AUXout:EDGE | Sets or queries the direction in which the trigger output signal will transition when a <br> trigger occurs |
| AUXout:SOUrce | Sets or queries the trigger source at the BNC connection |
| AUTOSet | Sets the vertical, horizontal, and trigger controls of the instrument to automatically <br> acquire and display the selected waveform |
| BELI | In previous models, this command sounded the audio indicator. Provided for <br> backward compatibiity |
| CHANNELMAPping? | Returns a list of all channel mappings |
| CLEAR | Clears acquisitions, measurements, and waveforms |
| CMDBatch | Turns command batching on or off <br> Or returns the state of command batching |
| DATE | Sets or queries the date that the instrument can display |
| *DDT | Sets or queries the commands that will be executed by the group execute trigger |
| FPANel:PRESS | Turns off the displayed menu |
| HEADer | Sets or queries the Response Header Enable State |
| HDR | Sets or queries the Response Header Enable State |
| ID? | Returns identifying information about the instrument and its firmware |
| *IDN? | Returns the instrument identification code |
| IDNMultiscope? | Returns instrument data on all MultiScope instruments. |
| IDNMultiscope:A? | Returns the *IDN? response for the Master instrument. |
| IDNMultiscope:B? | Returns the *IDN? response for Extension 1. |
| IDNMultiscope:C? | Returns the *IDN? response for Extension 2. |
| IDNMultiscope:D? | Returns the *IDN? response for Extension 3. |
| LOCk | Sets or queries the front panel lock state |
| *LRN? | Returns a listing of instrument settings |
| MULTiscope:CONFig | Sets or queries the current MultiScope operational configuration. |
| MULTiscope:EXIT | Instructs the Configuration Managers (and active scope applications) across the |
| entire MultiScope configuration to shutdown. |  |

Table 2-35: Miscellaneous commands (cont.)

| Command | Description |
| :--- | :--- |
| MULTiscope:RESTART | Instructs the Configuration Managers (and active scope applications) across the <br> entire MultiScope configuration to exit and restart themselves. |
| MULTiscope:STATUS? | Returns the current state of the MultiScope system. |
| NEWpass | Changes the password for user protected data |
| PASSWord | Provides access for changing user protected data |
| REM | Specifies a comment which is ignored by the instrument |
| ROSc:OUT:FREQuency | Sets or queries the selected frequency for the timebase reference output signal |
| ROSc:OUT:ULTRAsync | Sets or queries the state of the UltraSync 12.5 GHz Clock Out. |
| ROSc:SOUrce | Sets or queries the selected source for the time base reference oscillator |
| ROSc:STATE? | Returns whether the time base reference oscillator is locked |
| ROSC:TRACking | Sets or queries the selected source for the time base reference oscillator. The <br> reference oscillator locks to this source |
| SET? | Returns a listing of instrument settings |
| TEKSecure | Initializes both waveform and setup memories |
| TIME | Sets or queries the time displayed by the instrument |
| *TRG | Performs the group execute trigger (GET) |
| *TST? | Tests the GPIB interface and returns status |
| UNLock | Unlocks front panel |
| USBTMC:PRODUCTID:DECimal? | Queries the USBTMC product ID in decimal |
| USBTMC:PRODUCTID:HEXadecimal? | Queries the USBTMC product ID in hexadecimal |
| USBTMC:SERIALnumber? | Queries the instrument serial number |
| USBTMC:VENDORID:DECimal? | Queries the USBTMC product ID in decimal |
| USBTMC:VENDORID:HEXadecimal? | Queries the USBTMC product ID in hexadecimal |
| VERBose | Sets or queries the verbose state |

## Save and Recall command group

Use the commands in the Save and Recall Command Group to store and retrieve internal waveforms and settings. When you save a setup, you save all the settings of the instrument. When you recall a setup, the instrument restores itself to the state that it was in when you originally saved that setting.

Table 2-36: Save and Recall commands

| Command | Description |
| :--- | :--- |
| *RCL | Restores the state of the instrument from a copy of the setting stored in memory |
| *SAV | Stores the current instrument state to a specified memory location |
| *SDS | Changes the specified setup to reference the factory setup instead of the user setup |
| DELEte:SETUp | Removes stored setups from memory and initializes the location with the factory <br> default setups |
| DELEte:WAVEform | Deletes (one or all of) the stored reference waveforms from memory |
| FACtory | Resets the instrument to factory default settings |
| RECAll:SETUp | Recalls saved instrument settings |
| RECAll:SETUp:DESKew | Sets or queries the deskew values that are affected by a default setup or a recalled <br> setup |
| RECAll:WAVEform | Recalls a stored waveform to a reference location |
| SAVe:EVENTtable:BUS<x> | Saves the event table contents of the specified bus in CSV format, to the file that <br> you specify by <string> |
| SAVe:MARKS | Saves the user search marks in CSV format, to the file that you specify |
| SAVe:SETUp | Saves the current front panel setup to a specified memory location or file |
| SAVe:WAVEform | Saves a waveform to one of four reference memory locations or a mass storage file |
| SAVe:WAVEform:DATa:STARt | Sets or queries save waveform starting waveform data sample. |
| SAVe:WAVEform:DATa:STOP | Sets or queries save waveform ending waveform data sample. |
| SAVe:WAVEform:FILEFormat | Sets or queries the format for saved waveforms |
| SAVe:WAVEform:FORCESAMEFilesize | Sets or queries the save waveform force same file size feature |
| SETUp:NAMe | Sets or queries the user-defined setup label |

## Save On command Group

Use this group of commands to program the oscilloscope to save images, measurements, waveforms, or the instrument setup, on triggers that you select.

Table 2-37: Save On commands

| Command | Description |
| :--- | :--- |
| SAVEON | The Reset argument sets the auto-increment file count to 0 |
| SAVEON:COUNt? | Returns the number of events (files) that have been saved since the last reset |
| SAVEON:FILE:AUTOInc | Sets or queries the state of the auto increment file name feature (on or off) <br> name when SAVEON:FILE number that will be appended to the custom file <br> or waveform is saved |
| SAVEON:FILE:COUNt | Sets or queries the location where files are saved image, measurement, |
| SAVEON:FILE:DEST | Sets or queries the file name to use when the file type is set to Custom |
| SAVEON:FILE:NAME | Sets or queries whether to use the data and time as the file name (auto) or to use a <br> custom file name |
| SAVEON:FILE:TYPE | Sets or queries whether to save a screen capture when a limit test failure, mask <br> failure, or trigger occurs |
| SAVEON:IMAGe | Sets or queries whether to save a file when there is a limit failure |
| SAVEON:LIMit | Sets or queries whether to save a file when there is a mask failure <br> Sailure, or trigger occurs to save a measurement when a limit test failure, mask |
| SAVEON:MASK | Sets or queries the maximum number of events that will be saved <br> SAVEON:MEASUrement <br> Saves the instrument setup when there is an event. Queries the status of this <br> feature (on or off) |
| SAVEON:SETUP | Sets or queries whether to save a file when a trigger occurs <br> orts or queries whether to save a waveform when a limit test failure, mask failure, <br> SAVEON:TRIGger |

## Search and Mark command group

Use search and mark commands to seek out and identify information in waveform records that warrant further investigation.

Table 2-38: Search and Mark commands

| Command | Description |
| :---: | :---: |
| MARK | Moves to the next or previous reference mark, or queries the current mark setup |
| MARK:CREATE | Creates a mark on a specified waveform or all waveforms in a column |
| MARK:DELEte | Deletes a mark on a particular waveform, all waveforms in a column, the selected mark, or all marks |
| MARK:FREE? | Returns how many user marks are available for use |
| MARK:SELECTED:END? | Returns the end of the selected mark, 0 to $100 \%$ of the waveform |
| MARK:SELECTED:FOCUS? | Returns the focus of the selected mark, 0 to 100\% of the waveform |
| MARK:SELECTED:LABel | Sets or queries the label for the selected mark |
| MARK:SELECTED:MARKSINCOLumn? | Returns the number of marks in the current zoom pixel column |
| MARK:SELECTED:OWNer? | Returns the owner of the selected mark |
| MARK:SELECTED:SOUrce? | Sets or queries the source waveform for the selected mark |
| MARK:SELECTED:STARt? | Returns the starting point of the selected mark, 0 to $100 \%$ of the waveform |
| MARK:SELECTED:STATE | Returns the on or off state of the selected mark. The selected mark is at or near the center of the display |
| MARK:SELECTED:ZOOm:POSition? | Returns the position of the selected mark, 0 to $100 \%$ of the zoom overview window |
| MARK:SELECTED:ZOOm:SCAle? | Returns the scale of the selected mark, 0 to 100\% of the zoom overview window |
| MARK:TOTal? | Returns how many marks are currently in use |
| SEARCH:MARKALLevents | Sets or queries the mark all trigger events setting |
| SEARCH:SEARCH<x> | Converts the specified search marks to the user marks |
| SEARCH:SEARCH<x>:COPy | Copies the search criteria to the trigger, the trigger criteria to a search, or copy search to search |
| SEARCH:SEARCH<x>:STATE | Selects which search is selected |
| SEARCH:SEARCH<x>:TOTAL? | Returns the total number of matches for the search. The total number of matches may be more than the number of marks placed |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:AUTOBitrate | Sets or queries the auto bit rate setting to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:CONDition | Sets or queries the CAN bus trigger condition |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:DATa:VALue | Sets or queries the CAN bus trigger data value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:FRAMEtype | Sets or queries CAN bus trigger frame type |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:DATa:FORMat | Sets or queries the CAN bus trigger data format |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:DATa:SIZe | Sets or queries the CAN bus trigger data size |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:DATa:QUALifier | Sets or queries the CAN bus trigger data qualifier |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:IDentifier:DIRection | Sets or queries the CAN bus identifier direction |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:IDentifier:FORMat | Sets or queries the CAN bus trigger identifier format |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:IDentifier:MODe | Sets or queries the CAN bus trigger identifier mode |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: CAN:IDentifier:VALue | Sets or queries CAN bus trigger identifier value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:CONDition | Specifies a field or condition within an Ethernet frame to search on |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:DATa:OFFSet | Specifies the data offset value, in bytes, to use when searching on the Ethernet data field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:DATa:SIZe | Specifies the number of contiguous TCP/IPv4/MAC client bytes to use when searching on the Ethernet data field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:DATa:VALue | Specifies the binary value to use when searching on the Ethernet data field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:IPHeader:DESTinationaddr: VALue | Specifies the 32-bit value to use when searching on the Ethernet IPv4 header address destination field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: <br> ETHERnet:IPHeader:DESTinationaddr: FORMat | Specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header address destination field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:IPHeader:PROTOcol:VALue | Specifies the 8 -bit value to use when searching on the Ethernet IPv4 header protocol field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:IPHeader:PROTOcol:FORMat | Specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header protocol field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:IPHeader:SOUrceaddr:VALue | Specifies the 32 -bit value to use when searching on the Ethernet IPv4 header address source field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:IPHeader:SOUrceaddr:FORMat | Specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header address source field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:MAC:ADDRess:DESTination: VALue | Specifies the 48 -bit value to use when searching on the Ethernet MAC address destination field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:MAC:ADDRess:DESTination: FORMat | Specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet MAC address destination field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: ETHERnet:MAC:ADDRess:SOUrce:FORMat | Specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet MAC address source field |

## Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :--- | :--- |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: | Specifies the 48-bit value to use when searching on the Ethernet MAC address <br> source field |
| ETHERnet:MAC:ADDRess:SOUrce:VALue |  |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:DATa:OFFSet | Sets or queries the FLEXRAY bus search trigger data offset |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:DATa:QUALifier | Sets or queries the FLEXRAY bus search trigger data qualifier |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:DATa:SIZe | Sets or queries the FLEXRAY bus search trigger data size |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:DATa:VALue | Sets or queries the FLEXRAY bus search trigger data value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:EOFTYPE | Sets or queries the FLEXRAY bus search trigger end of file type |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:ERRTYPE | Sets or queries the FLEXRAY bus search trigger error type |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:FRAMEType | Sets or queries the FLEXRAY bus search trigger frame type |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:HEADER:CRC | Sets or queries the FLEXRAY bus search trigger header CRC |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:HEADER:CYCLECount | Sets or queries the FLEXRAY bus search trigger header cycle count |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:HEADER:FRAMEID | Sets or queries the FLEXRAY bus search trigger header frame id |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:HEADER:INDBits | Sets or queries the FLEXRAY bus search header Indicator Bits |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:HEADER:PAYLENgth | Sets or queries the FLEXRAY bus search trigger header payload length |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:IDentifier:FORMat | Sets or queries the FLEXRAY bus search trigger identifier format |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:IDentifier:QUALifier | Sets or queries the FLEXRAY bus search trigger identifier qualifier |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: FLEXRAY:IDentifier:VALue | Sets or queries the FLEXRAY bus search trigger identifier value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: CONDition | Sets or queries the LIN bus search trigger condition |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: DATa:FORMat | Sets or queries the LIN bus search trigger data format |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: DATa:QUALifier | Sets or queries the LIN bus search trigger data qualifier |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: DATa:SIZe | Sets or queries the LIN bus search trigger data size |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: DATa:VALue | Sets or queries the LIN bus search trigger data value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: ERRTYPE | Sets or queries the LIN bus search trigger error type |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: IDentifier:FORMat | Sets or queries the LIN bus search trigger identifier format |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN: IDentifier:VALue | Sets or queries the LIN bus search trigger identifier value |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: ADDress:FORMat | Sets or queries the address format for the I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: ADDress:MODe | Sets or queries the address mode for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: ADDress:TYPe | Sets or queries the address type for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: ADDress:VALue | Sets or queries the address string when the search condition for the specified search is Address or AddressData, to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: CONDition | Sets or queries the trigger condition for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: DATa:DIRection | Sets or queries the direction of the data for the I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: DATa:FORMat | Sets or queries the trigger data format for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: DATa:SIZe | Sets or queries the length of the data string in bytes used for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C: DATa:VALue | Sets or queries the data value of the data token for the specified I2C bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:ADDRess:FORMat | Sets the data format of the address (either binary or hex) to use in a MIL-STD-1553 bus command word search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MLL1553B:COMMAND:ADDRess:VALue | Specifies the value of the 5 -bit remote terminal address to use in a MIL-STD-1553 bus command word search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:ADDRess:QUALifier | Specifies the qualifier to use when searching on a MIL-STD-1553 bus command word remote terminal address field |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:COUNt | Specifies the bit pattern for the 5 -bit Word Count/Mode Code sub-address field to use in a MIL-STD-1553 bus command word trigger |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:COUNt:FORMat | Specifies the data format (binary or hex) of the bit pattern for the 5-bit Word Count/Mode Code field to use in a MLL-STD-1553 bus command word search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:PARity | Specifies the parity to use in a MIL-STD-1553 bus command word search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:SUBADdress | Specifies the 5 bit sub-address to use in a MIL-STD-1553 bus command word sub-address search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MIL1553B:COMMAND:SUBADdress: FORMat | Specifies the data format (binary or hex) of the sub-address field bit pattern to use in a MIL-STD-1553 bus command word sub-address search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: MLL1553B:COMMAND:TRBit | Specifies to search on either a "transmit" or a "receive" signal for the transmitreceive bit (bit 9 ), for a MIL-STD-1553 bus command word search |

Table 2-38: Search and Mark commands (cont.)

Description $\quad$\begin{tabular}{ll}
Command \& Specifies which word type or condition within a MIL-STD-1553 bus word to search on <br>

\hline SEARCH:SEARCH<x>:TRIGger:A:BUS: \& | Specifies the format (binary or hex) of the bit pattern to use for a MIL-STD-1553 |
| :--- |
| bus data word search | <br>

\hline SL1553B:CONDition
\end{tabular}

Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :--- | :--- |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: | Sets or queries the search condition for the specified MIPI CSI2 bus trigger search <br> to determine where to place a mark |
| MIPICSITWO:CONDition |  | | Sets or queries the data type for long packets for the specified MIPI CSI2 bus trigger |
| :--- |
| search to determine where to place a mark |

Table 2-38: Search and Mark commands (cont.)

Description \begin{tabular}{ll}

Command \& | Sets or queries the warning type for a specified MIPI CSI2 bus trigger search to |
| :--- |
| determine where to place a mark | <br>

\hline SEARCH:SEARCH $<x>:$ TRIGger:A:BUS: \& | Sets or queries the word count value for a specified MIPI CSI2 bus trigger search to |
| :--- |
| determine where to place a mark | <br>

\hline MIPICSITWo:WARNing
\end{tabular}

## Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :--- | :--- |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: | Sets or queries the generic payload value string of the specified MIPI DSI1 bus <br> trigger search to determine where to place a mark |
| MIPIDSIOne:PAYLoad:VALue |  | | Sets or queries the pixel value for the specified MIPI DSI1 bus trigger search to |
| :--- |
| determine where to place a mark |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:CHARacter:SYMbol:PLUS | Sets or queries the PCIE bus search trigger character symbol plus |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:CONDition | Sets or queries the PCIE bus search trigger condition |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:DISParity | Sets or queries the PCIE bus search trigger disparity |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:ERROR:CHAR | Sets or queries the PCIE bus search trigger error character |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:ERROR:DISParity | Sets or queries the PCIE search trigger error disparity |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:ERROR:ORDERedset | Sets or queries the PCIE bus search trigger error ordered set |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:ERROR:SYNC | Sets or queries the triggering on SYNC error state. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:FORMat | Sets or queries the PCIE search trigger format |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:LONGORDERedset | Sets or queries the PCIE bus search trigger long ordered set |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:PATtern:CHAR<x> | Sets or queries the PCIE bus search pattern character |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:PATtern:ORDERedset | Sets or queries the PCIE bus search trigger pattern ordered set |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:PATtern:SYMbol:MINus<x> | Sets or queries the PCIE bus search trigger pattern symbol minus |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: PCIE:PATtern:SYMbol:PLUS<x> | Sets or queries the PCIE bus search pattern symbol plus |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: RS232C:CONDition | Sets or queries the search condition for the specified RS232c bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: RS232C:DATa:FORMat | Sets or queries the data format for the specified RS232c bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: RS232C:DATa:SIZe | Sets or queries the number of bits per word in the data string for the specified RS232c bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: RS232C:DATa:VALue | Sets or queries the data string value for the specified RS232c bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:CHARacter:CHAR | Sets or queries the single 8B10B character in the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:CHARacter:SYMbol:MINus | Sets or queries the specified 8B10B character (negative disparity) for the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:CHARacter:SYMbol:PLUS | Sets or queries the specified 8B10B character (positive disparity) for the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:CONDition | This command sets or queries the trigger condition for the specified 8B10B bus trigger search to determine where to place a mark |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:DISParity | Sets the disparity to positive, negative, or either |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:ERROR:CHAR | Sets the character error search to on or off, or queries the status of the feature |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:ERROR:DISParity | Sets the disparity error search to on or off, or queries the status of this feature |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:FORMat | Sets the format for the specified search to character or symbol, or queries the state of this feature |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:PATtern:CHAR<x> | Sets or queries the first, second, third or fourth character in the pattern for the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:PATtern:SYMbol:MINus<x> | Sets or queries the specified 8B10B character (negative disparity) for the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: S8B10B:PATtern:SYMbol:PLUS<x> | Sets or queries the specified 8B10B character (positive disparity) for the specified search |
| SEARCH:SEARCH<x>:TRIGger:A:BUS: SOUrce | Sets or queries the bus source for the specified bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI: CONDition | Sets or queries the trigger condition for the specified SPI bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI: DATa:FORMat | Sets or queries the data format for the specified SPI bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI: DATa:SIZe | Sets or queries the length of the data string in bytes used for the specified SPI bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI: DATa:VALue | Sets or queries the data value of the data token for the specified SPI bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ADDress:FORMat | Sets or queries the address format for normal token for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ADDress:HIVALue | Sets or queries the address value for normal token to be used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ADDress:VALue | Sets or queries the address value for normal token for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: CHARacter:CHAR | Sets or queries the single USB character in the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: CHARacter:SYMbol:MINus | Sets or queries the specified USB character bit pattern (negative disparity) for the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: CHARacter:SYMbol:PLUS | Sets or queries the specified character bit pattern (positive disparity) for the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: CONDition | Sets or queries the search condition for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:FORMat | Sets or queries the data format for the specified USB bus trigger search to determine where to place a mark |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:HIVALue | Sets or queries the data value for data token used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:OFFSet | Sets or queries data offset for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:SIZe | Sets or queries the length of the data string in bytes for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:TYPe | Sets or queries the data packet type for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DATa:VALue | Sets or queries the data value for data token for the specified bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: DISParity | Sets or queries the disparity. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ENDPoint:FORMat | Sets or queries the endpoint format for data token (to be used with In Range and Out of Range qualifiers) for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ENDPoint:HIVALue | Sets or queries the endpoint value for data token used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ENDPoint:VALue | Sets or queries the endpoint value for normal token for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ERROR:CHAR | Sets the character error search to on or off, or queries the status of the feature. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ERROR:DISParity | Sets or queries the disparity error search (on or off). |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ERROR:ORDERedset | Sets or queries the state of searching for an ordered set in the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: ERRTYPE | Sets or queries the error type for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: FORMat | Sets the format for the specified search to character or symbol, or queries the state of this feature. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: HANDSHAKEType | Sets or queries the handshake type for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: LONGORDERedset | Sets or queries the USB bus search trigger long ordered set. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: PATtern:CHAR<x> | Sets or queries the first, second, third or fourth character in the pattern for the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: PATtern:ORDERedset | sets or queries the state of searching for an ordered set. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: PATtern:SYMbol:MINus<x> | Sets or queries the specified character bit pattern (negative disparity) for the specified search. |

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:USB: PATtern:SYMbol:PLUS<x> | Sets or queries the specified character bit pattern (positive disparity) for the specified search. |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: QUAlifier | Sets or queries the qualifier for address and data for the specified bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SOF:FORMat | Sets or queries the format for the Start of Frame frame number for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SOF:FRAMENUMber | Sets or queries the frame number string to use for the Start of Frame for the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH $\langle x>$ :TRIGger:A:BUS:USB: SPECIALType | Sets or queries the PID value for the USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:ET:VALue | Sets or queries the Endpoint Type value for the specified USB bus trigger split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:HUB:FORMat | Sets or queries the format for the hub address of the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:HUB:VALue | Sets or queries the hub address of the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB: SPLIT:PORT:FORMat | Sets or queries the port address format for the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:PORT:VALue | Sets or queries the port address for the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:SC:VALue | Sets or queries the Start/Complete value for the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: SPLIT:SE:VALue | Sets or queries the Start/End value for the specified USB bus trigger on split token field search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:BUS:USB: TOKENType | Sets or queries the token type when the specified USB bus trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:AUTOReflevel | Sets or queries the auto reference levels setting to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:BITRate | Sets or queries the DDR memory bit rate to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:CSActive | Sets or queries whether the expected chip-select will be an active HIGH or LOW to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:CSLevel | Sets or queries the DDR memory search chip-select level to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:CSMode | Sets or queries the chip-select mode to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:CSSource | Sets or queries the chip select source |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:DATASource | Sets or queries the DDR memory data source to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: DDRMemory:HYSteresis | Sets or queries the hysteresis percent for DDR memory searches to determine where to place a mark |

$\left.\left.\begin{array}{ll}\text { Table 2-38: Search and Mark commands (cont.) } \\ \text { Description }\end{array}\right] \begin{array}{ll}\text { Command } & \text { Sets or queries the termination logic margin for back-to-back writes } \\ \hline \text { SEARCH:SEARCH<x>:TRIGger:A: } & \begin{array}{l}\text { Sets or queries the maximum distance in clock periods, to the left of the start of the } \\ \text { mark where the instrument looks for the chip-select pulse }\end{array} \\ \hline \text { DDRMemory:MARgin }\end{array} \quad \begin{array}{l}\text { Sets or queries the minimum distance in clock periods, to the left of the start of the } \\ \text { mark where the instrument looks for the chip-select pulse }\end{array}\right]$

## Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:LEVel: MATH<x> | Sets or queries the math waveform level for an edge trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LEVel: REF<x> | Sets or queries the specified reference waveform level for a trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: FUNCtion | Sets or queries the logic operator for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: INPut:CH<x> | Sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: INPut:MATH<x> | Sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: INPut:REF<x> | Sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: THReshold:CH<x> | Sets or queries the channel threshold level for a pattern or state trigger search to determine where to place a mark. SEARCH $\langle x>$ is the search number and $\mathrm{CH}<\mathrm{x}>$ is the channel number |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: THReshold:MATH<x> | Sets or queries the math waveform threshold level for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:LOGIc: THReshold:REF<x> | Sets or queries the reference waveform threshold level for a pattern or state trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:PATtern: WHEn | Sets or queries the pattern trigger pattern test that determines where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:PATtern: WHEn:LESSLimit | Sets or queries the time the pattern trigger less limit test uses to determines where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:PATtern: WHEn:MORELimit | Sets or queries the time the pattern trigger more limit test uses to determines where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:PULse: SOUrce | Sets or queries the source waveform for a pulse trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: POLarity:CH<x> | Sets or queries the polarity setting for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: POLarity:MATH<x> | Sets or queries the polarity setting for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: POLarity:REF<x> | Sets or queries the polarity setting for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: <br> THReshold:HIGH:CH<x> | Sets or queries the channel threshold HIGH level for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: THReshold:HIGH:MATH<x> | Sets or queries the math waveform threshold HIGH level for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH $\langle x>$ :TRIGger:A:RUNT: THReshold:HIGH:REF<x> | Sets or queries the reference waveform threshold HIGH level for a runt trigger search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:RUNT: THReshold:LOW:CH<x> | Sets or queries the channel threshold LOW level for a runt trigger search to determine where to place a mark |

Table 2-38: Search and Mark commands (cont.)

Command
SEARCH:SEARCH<x>:TRIGger:A:RUNT: Sets or queries the math waveform threshold LOW level for a runt trigger search to THReshold:LOW:MATH<x>
SEARCH:SEARCH $\langle x>$ :TRIGger:A:RUNT: Sets or queries the reference waveform threshold LOW level for a runt trigger THReshold:LOW:REF<x>
SEARCH:SEARCH<x>:TRIGger:A:RUNT: Sets or queries the condition setting for a runt trigger search to determine where to WHEn place a mark
SEARCH:SEARCH<x>:TRIGger:A:RUNT: Sets or queries the width setting for a runt trigger search to determine where to WIDth
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the clock slope setting for a setup/hold trigger search to determine CLOCk:EDGE where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the clock source setting for a setup/hold trigger search to determine CLOCk:SOUrce where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the clock threshold setting for a setup/hold trigger search CLOCk:THReshold:CH<x>
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the clock threshold setting for a setup/hold trigger search to CLOCk:THReshold:MATH<x> determine where to place a mark
SEARCH:SEARCH $\langle x>$ :TRIGger:A:SETHold: Sets or queries the clock threshold setting for a setup/hold trigger search to CLOCk:THReshold:REF<x> determine where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the data source setting for a setup/hold trigger search to determine DATa:SOUrce where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the data threshold setting for a setup/hold trigger search to DATa:THReshold:CH Cx > determine where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the data threshold setting for a setup/hold trigger search DATa:THReshold:MATH<x>
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the threshold high voltage level setting for a transition trigger search DATa:THReshold:REF<x>
SEARCH:SEARCH< $x>$ :TRIGger:A:SETHold: Sets or queries the hold time setting for a setup/hold trigger search to determine HOLDTime
SEARCH:SEARCH<x>:TRIGger:A:SETHold: Sets or queries the setup time setting for a setup/hold trigger search to determine
SETTime
SEARCH:SEARCH $<x>$ :TRIGger:A:STATE: Sets or queries the clock slope setting for a state trigger search to determine CLOCk:EDGE
SEARCH:SEARCH $<x>$ :TRIGger:A:STATE: Sets or queries the clock source of the twelve waveforms for a state trigger search CLOCk:SOUrce to determine where to place a mark
SEARCH:SEARCH<x>:TRIGger:A:STATE: Sets or queries the state trigger search to determine where to place a mark WHEn
SEARCH:SEARCH<x>:TRIGger:A:TIMEOut: Sets or queries the polarity for a timeout trigger search to determine where to POLarity:CH<x> place a mark
SEARCH:SEARCH $\langle x>$ :TRIGger:A:TIMEOut: Sets or queries the polarity for a timeout trigger search to determine where to POLarity:MATH<x> place a mark
SEARCH:SEARCH<x>:TRIGger:A:TIMEOut: Sets or queries the polarity for a timeout trigger search to determine where to POLarity:REF<x> place a mark

## Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :--- | :--- |
| SEARCH:SEARCH<x>:TRIGger:A:TIMEOut: | Sets or queries the time setting for a timeout trigger search to determine where to <br> place a mark |
| TIMe | Sets or queries the transition time setting for a transition trigger search to determine <br> where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: | Sets or queries the polarity setting for a transition trigger search to determine <br> where to place a mark |
| TRANsition:DELTATime | Sets or queries the polarity setting for a transition trigger search to determine <br> where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A: | Sets or queries the polarity setting for a transition trigger search to determine <br> where to place a mark |
| TRANsition:POLarity:CH<x> | Sets or queries the threshold high voltage level setting for a transition trigger search <br> to determine where to place a mark |
| TRANCH:SEARCH<x>:TRIGger:A: | Sets or queries the threshold high voltage level setting for a transition trigger search <br> to determine where to place a mark |
| SEARCH:SEARCH[MATH:TRIG](MATH:TRIG) |  |

Table 2-38: Search and Mark commands (cont.)

| Command | Description |
| :---: | :---: |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:HIGH:CH<x> | Sets or queries the channel waveform threshold HIGH level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:HIGH:MATH<x> | Sets or queries the math waveform threshold HIGH level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:HIGH:REF<x> | Sets or queries the reference waveform threshold HIGH level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:LOW:CH<x> | Sets or queries the channel waveform threshold LOW level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:LOW:MATH<x> | Sets or queries the math waveform threshold LOW level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: THReshold:LOW:REF<x> | Sets or queries the reference waveform threshold LOW level for a window search to determine where to place a mark |
| SEARCH:SEARCH<x>:TRIGger:A:WINdow: WIDth | Sets or queries the width setting for a window search to determine where to place a mark |
| SEARCH:STOP | Sets or queries the stop of acquisitions when a search finds an event |

## Status and Error command group

Use the commands in the Status and Error command Group to determine the status of the instrument and control events.

Several commands and queries used with the instrument are common to all devices on the GPIB bus. The IEEE Std 488.2-1987 defines these commands and queries. The common commands begin with an asterisk $\left({ }^{*}\right)$ character.

Table 2-39: Status and Error commands

| Command | Description |
| :--- | :--- |
| ${ }^{*}$ CLS | Clears status |
| *ESE | Sets or queries the bits in the Event Status Enable Register |
| *ESR? | Returns the contents of the Standard Event Status Register |
| *OPC | Generates the operation complete message in the standard event status register <br> when all pending operations are finished <br> Or returns "1" when all current operations are finished |
| *OPT? | Returns a list of options installed in the instrument |
| *PSC | Sets or queries the power on status flag |
| ${ }^{*}$ *PUD | Sets or queries a string of protected user data |
| *RST | Resets the instrument to factory default settings |
| *SRE | Sets or queries the bits in the Service Request Enable Register |
| *STB? | Returns the contents of the Status Byte Register |
| *WAI | Prevents the instrument from executing further commands until all pending <br> operations finish |
| ALLEv? | Returns all events and their messages |
| BUSY? | Returns instrument status |
| DESE | Sets or queries the bits in the Device Event Status Enable Register |
| EVENT? | Returns event code from the event queue |
| EVMsg? | Returns event code, message from the event queue |
| EVQty? | Returns the number of events in the event queue |
| OPCEXtended | This command sets or queries the behavior of OPC commands and queries. |

## Trigger command group

Use the commands in the Trigger Command Group to control all aspects of triggering for the instrument.

There are two triggers: A and B. Where appropriate, the command set has parallel constructions for each trigger.

You can set the A or B triggers to edge mode. Edge triggering lets you display a waveform at or near the point where the signal passes through a voltage level of your choosing.

You can also set A or B triggers to pulse or logic modes. With pulse triggering, the instrument triggers whenever it detects a pulse of a certain width or height. Logic triggering lets you logically combine the signals on one or more channels. The instrument then triggers when it detects a certain combination of signal levels. Video triggering enables you to trigger on the most common Standard Definition, High Definition, and custom video standards. You can trigger on all fields, all lines, or individual video lines.

## NOTE. Not available on some models.

If you have Option MTH or MTM (Mask Testing) installed, you also have access to a communication mode. When this mode is selected, several communication trigger commands are available that work with the mask commands. Refer to Mask Command Group.

Table 2-40: Trigger commands (Not available on some models)

| Command | Description |
| :--- | :--- |
| COUnter | Generates the reference, zeroes both the measured and derived statistical values, <br> number of acquisitions used, and recalculates the A->B Sequence Trig on Nth <br> Event value. |
| COUnter:DURation | Sets or queries the parameter that controls the schedule for updating the Log Table. |
| COUnter:GAln | Sets or queries the Gain (scale) value for the Frequency or Time Interval <br> applications. |
| COUnter:LOGAction | Clears all data from the Log Table. |
| COUnter:LOGNumber | Sets or queries the parameter that controls the schedule for updating the Log Table. |
| COUnter:LOGTable | Sets or queries the parameter that enables/disables the Log Table. |
| COUnter:REFerence | Sets or queries the Reference (offset) value for the Frequency or Time Interval <br> applications. |
| COUnter:RESULTs? | Queries the measured and derived values obtained from the Frequency or Time <br> Interval Applications. |
| COUnter:RESULTs:AVGmean? | Queries the derived values obtained from the Frequency or Time Interval <br> Applications. |

| Command | Description |
| :---: | :---: |
| COUnter:RESULTs:DEViation? | Queries the derived values obtained from the Frequency or Time Interval Applications. |
| COUnter:RESULTs:MAXimum? | Queries the derived values obtained from the Frequency or Time Interval Applications. |
| COUnter:RESULTs:MINimum? | Queries the derived values obtained from the Frequency or Time Interval Applications. |
| COUnter:RESULTs:NUMber? | Queries the derived values obtained from the Frequency or Time Interval Applications. |
| COUnter:RESULTs:VALue? | Queries the measured value obtained from the Frequency or Time Interval Applications. |
| COUnter:SHOWLog | Sets or queries the parameter that controls the display of the Frequency or Time Interval Application Data. |
| COUnter:SHOWMeasurement | Sets or queries the parameter that controls the display of the Frequency or Time Interval Application Data. |
| COUnter:STAte | Enables the counter applications. |
| COUnter:TYPe | Sets or queries the Counter Application type (Frequency or Time Interval). |
| COUnter:UPDate | Sets or queries the parameter that controls the schedule for updating the Log Table. |
| COUnter:VIEW | Sets or queries the View of the Counter Trigger Source Frequency Application Data. |
| TRIGger | Forces a trigger event to occur or returns current trigger parameters for the instrument |
| TRIGger:A | Sets A trigger level to 50\% or returns current A trigger parameters |
| TRIGger:\{A\|B]:EDGE:COUPling | Sets or queries the type of coupling for the edge trigger |
| TRIGger:\{A\|B\}:EDGE:SLOpe | Sets or queries the slope for the edge trigger |
| TRIGger:\{A\|B]:EDGE:SLOpe:AUX | Sets or queries the slope for the edge trigger for the AUX In input |
| TRIGger:\{A\|B]:EDGE:SLOpe:CH<x> | Sets or queries the slope for the edge trigger for the channel |
| TRIGger:\{A\|B]:EDGE:SOUrce | Sets or queries the source for the edge trigger |
| TRIGger:\{A\|B\}:LEVel | Sets or queries the level for the trigger |
| TRIGger:\{A\|B]:LEVel:CH<x> | Sets or queries the level for the trigger for the channel |
| TRIGger:\{A\|B]:EDGE? | Returns the source, coupling and source for the edge trigger |
| TRIGger:\{A\|B]:EDGE:COUPling:CH<x> | Sets or queries the type of coupling for the A or B trigger for the specified channel |
| TRIGger:\{A\|B]:LOGIc? | Returns all of the $A$ or B trigger logic parameters |
| TRIGger:\{A\|B\}:LOGlc:CLAss | Sets or queries the type of trigger logic |
| TRIGger:\{A\|B]:LOGIc:FUNCtion | Sets or queries the logical combination of the input channels for the logic trigger |
| TRIGger:\{A\|B]:LOGIc:INPut? | Returns the logic trigger input expected for channel 1, 2, and 3 |
| TRIGger:\{A\|B\}:LOGIc:INPut:ALL | Sets or queries the A or B logic trigger input condition for all the channels |
| TRIGger:\{A\|B]:LOGIc:INPut:CH<x> | Sets or queries the A or B logical trigger input for the specified channel |
| TRIGger:\{A\|B\}:LOGIc:INPut:FORMat | Sets or queries the A or B logic trigger pattern format |
| TRIGger:AA\|B]:LOGIc:PATtern:INPut:CH<x> | Sets or queries the logic pattern trigger input for the indicated channel |
| TRIGger:\{A\|B\}:LOGIc:PATtern:WHEn | Sets or queries the condition for generating the logic pattern trigger |

| Command | Description |
| :---: | :---: |
| TRIGger:\{A\|B\}:LOGIc:PATtern:WHEn: LESSLimit | Sets or queries the maximum time that the selected pattern can be true and still generate a logic pattern trigger |
| TRIGger:\{A\|B\}:LOGIc:PATtern:WHEn: MORELimit | Sets or queries the minimum time that the selected pattern can be true and still generate a logic pattern trigger |
| TRIGger:\{A\|B]:LOGIc:PATtern? | Returns the conditions for generating a logic pattern trigger |
| TRIGger:\{A\|B\}:LOGIc:SETHold:CLOCk: EDGE | Sets or queries the clock edge polarity for setup and hold triggering |
| TRIGger:\{A\|B\}:LOGIc:SETHold:CLOCk: SOUrce | Sets or queries the clock source for the logic trigger setup and hold input |
| TRIGger:\{A\|B\}:LOGIc:SETHold:CLOCk: THReshold | Sets or queries the clock voltage threshold for setup and hold trigger |
| TRIGger:\{A\|B\}:LOGIc:SETHold:CLOCk: THReshold:CH<x> | Sets or queries the clock voltage threshold for setup and hold trigger for the channel |
| TRIGger:\{A\|B\}:LOGIc:SETHold:CLOCk? | Returns clock edge polarity, voltage threshold, and source input for setup/hold triggering |
| TRIGger:\{A\|B\}:LOGlc:SETHold:DATa:SOUrce | Sets or queries the data source for the setup and hold trigger |
| TRIGger:\{A\|B\}:LOGIc:SETHold:DATa: THReshold | Sets or queries the data voltage threshold for setup and hold trigger |
| TRIGger:\{A\|B\}:LOGIc:SETHold:DATa: THReshold:CH<x> | Sets or queries the data voltage threshold for setup and hold trigger for the channel |
| TRIGger:\{A\|B\}:LOGIc:SETHold:DATa? | Returns the voltage threshold and data source for the setup/hold trigger |
| TRIGger:\{A\|B]:LOGIc:SETHold:HOLDTime | Sets or queries the hold time for the setup and hold violation triggering |
| TRIGger:\{A\|B\}:LOGIc:SETHold:QUAlify | Sets or queries the setup and hold violation trigger qualifications |
| TRIGger:\{A\|B]:LOGIc:SETHold:SETTime | Sets or queries the setup time for setup and hold violation triggering |
| TRIGger:\{A\|B\}:LOGIc:SETHold? | Returns clock edge polarity, voltage threshold and source; data voltage threshold and source; and setup/hold times for setup and hold violation triggering |
| TRIGger:\{A\|B]:LOGIc:STATE:CLOck:SOUrce | Sets or queries the A or B logic trigger state of clock source |
| TRIGger:\{A\|B]:LOGIc:STATE:INPut:CH<x> | Sets or queries the slope for indicated channel of the logic state trigger |
| TRIGger:\{A\|B]:LOGIc:STATE:WHEn | Sets or queries the condition for generating a logic state trigger |
| TRIGger:\{A\|B\}:LOGIc:STATE? | Returns the data input and trigger criteria for the logic state trigger |
| TRIGger:\{A\|B]:LOGIc:THReshold:CH<x> | Sets or queries the logic state trigger threshold voltage for the specified channel |
| TRIGger:\{A\|B]:LOWerthreshold:CH<x> | Sets or queries CH<x> lower trigger level for TRIGger: LVLSrcpreference |
| TRIGger:\{A\|B]:LOGIc:THReshold? | Returns the threshold voltage for all channels in logic trigger |
| TRIGger:\{A\|B]:PULse? | Returns the pulse trigger parameters |
| TRIGger:\{A\|B]:PULse:CLAss | Sets or queries the type of pulse on which to trigger |
| TRIGger:\{A\|B\}:PULse:GLItch:LOWPASSfilter | Turns on or turns off the lowpass filter feature for Glitch trigger. |
| TRIGger:\{A\|B\}:PULse:GLItch:POLarity | Sets or queries the polarity for the pulse glitch trigger |
| TRIGger:\{A\|B\}:PULse:GLItch:POLarity: CH<x> | Sets or queries the polarity for the A or B pulse glitch trigger for the channel |

Table 2-40: Trigger commands (Not available on some models) (cont.)

| Command | Description |
| :---: | :---: |
| TRIGger:A\|B]:PULse:GLItch:QUAlify | Sets or queries the glitch trigger qualifications |
| TRIGger:\{A\|B]:PULse:GLItch:TRIGIF | Sets or queries the acceptance or rejection of pulse glitch trigger, based on width |
| TRIGger:\{A\|B\}:PULse:GLItch:WIDth | Sets or queries the width of the A pulse glitch trigger |
| TRIGger:\{A\|B]:PULse:GLItch? | Returns the current A glitch pulse trigger parameters |
| TRIGger:\{A\|B\}:PULse:RUNT:POLarity | Sets or queries the polarity for the pulse runt trigger |
| TRIGger:\{A\|B]:PULse:RUNT:POLarity:CH<x> | Sets or queries the polarity for the A or B pulse runt trigger for the channel |
| TRIGger:\{A\|B]:PULse:RUNT:QUAlify | Sets or queries the polarity for the A or B pulse runt trigger |
| TRIGger:\{A\|B\}:PULse:RUNT:THReshold: BOTh | Sets the upper and lower switching thresholds for the A pulse runt trigger |
| TRIGger:\{A\|B\}:PULse:RUNT:THReshold: HIGH | Sets or queries the upper limit for the A pulse runt trigger |
| TRIGger:\{A\|B\}:PULse:RUNT:THReshold: LOW | Sets or queries the lower limit for the A pulse runt trigger |
| TRIGger:\{A\|B]:PULse:RUNT:THReshold? | Returns the upper and lower thresholds for the A pulse runt trigger |
| TRIGger:\{A\|B]:PULse:RUNT:WHEn | Sets or queries the type of pulse width the trigger checks for when it uncovers a runt |
| TRIGger:\{A\|B\}:PULse:RUNT:WIDth | Sets or queries the minimum width for A pulse runt trigger |
| TRIGger:\{A\|B]:PULse:RUNT? | Returns the current A runt pulse trigger parameters |
| TRIGger:\{A\|B]:PULse:SOUrce | Sets or queries the source for the A or B pulse trigger |
| TRIGger:\{A\|B\}:PULse:TIMEOut: LOWPASSfilter | Turns on or turns off the lowpass filter feature for Timeout trigger. |
| TRIGger:AA\|B]:PULse:TIMEOut:POLarity | Sets or queries the polarity for the A pulse timeout trigger |
| TRIGger:\{A\|B\}:PULse:TIMEOut:POLarity: CH <x> | Sets or queries the polarity for the A or B pulse timeout trigger for the channel |
| TRIGger:\{A\|B\}:PULse:TIMEOut:QUAlify | Sets or queries the timeout trigger qualifications |
| TRIGger:\{A\|B\}:PULse:TIMEOut:TIMe | Sets or queries the pulse timeout trigger time |
| TRIGger:\{A\|B\}:PULse:TIMEOut? | Returns the parameters for the A pulse timeout trigger |
| TRIGger:\{A\|B\}:PULse:TRANsition: DELTATime | Sets or queries the delta time used in calculating the transition value |
| TRIGger:\{A\|B]:PULse:TRANsition:POLarity | Sets or queries the polarity for the A pulse transition trigger |
| TRIGger:\{A\|B\}:PULse:TRANsition:POLarity: CH <x> | Sets or queries the polarity for the A or B pulse transition trigger for the channel |
| TRIGger:\{A\|B]:PULse:TRANsition:QUAlify | Sets or queries the transition trigger qualifications |
| TRIGger:\{A\|B\}:PULse:TRANsition: THReshold:BOTh | Sets the upper and lower thresholds for the transition trigger |
| TRIGger:\{A\|B\}:PULse:TRANsition: THReshold:HIGH | Sets or queries the upper transition trigger threshold |
| TRIGger:\{A\|B\}:PULse:TRANsition: THReshold:LOW | Sets or queries the lower transition trigger threshold |

| Command | Description |
| :---: | :---: |
| TRIGger:\{A\|B\}:PULse:TRANsition: THReshold? | Returns the upper and lower threshold limits for the transition time trigger |
| TRIGger:\{A\|B]:PULse:TRANsition:WHEn | Sets or queries whether to check for a transitioning signal that is faster or slower than the specified delta time for the transition time trigger |
| TRIGger:\{A\|B\}:PULse:TRANsition? | Returns the delta time, polarity, and both upper and lower threshold limits for the transition time trigger |
| 7TRIGger:\{A\|B\}:PULse:WIDth:HIGHLimit | Sets or queries the upper limit for the A pulse width trigger |
| TRIGger:\{A\|B\}:PULse:WIDth:LOWLimit | Sets or queries the lower limit for the pulse width trigger |
| TRIGger:\{A\|B]:PULse:WIDth:LOWPASSfilter | Turns on or turn off the lowpass filter feature for pulse width trigger. |
| TRIGger:\{A\|B]:PULse:WIDth:POLarity | Sets or queries the polarity for the pulse width trigger |
| TRIGger:\{A\|B\}:PULse:WIDth:POLarity:CH<x> | Sets or queries the polarity for the A or B pulse width trigger for the channel |
| TRIGger:\{A\|B]:PULse:WIDth:QUAlify | Sets or queries the pulse width trigger qualifications |
| TRIGger:\{A\|B\}:PULse:WIDth:WHEn | Sets or queries the criteria for width specification of pulse width trigger events |
| TRIGger:\{A\|B\}:PULse:WIDth? | Returns the trigger pulse width parameters |
| TRIGger:\{A\|B\}:PULse:WINdow? | Returns the current window pulse trigger parameters |
| TRIGger:\{A\|B]:PULse:WINdow:EVENT | Sets or queries the window trigger event |
| TRIGger:\{A\|B]:PULse:WINdow:POLarity | Sets or queries the pulse trigger window polarity of the selected trigger Source |
| TRIGger:\{A\|B\}:PULse:WINdow:POLarity: $\mathrm{CH}\langle\mathrm{x}>$ | Sets or queries the pulse trigger window polarity of the specified channel |
| TRIGger:\{A\|B]:PULse:WINdow:QUAlify | Sets or queries the window trigger qualifications |
| TRIGger:\{A\|B\}:PULse:WINdow:THReshold: BOTh | Sets both window thresholds |
| TRIGger:\{A\|B\}:PULse:WINdow:THReshold: HIGH | Sets or queries high window threshold |
| TRIGger:\{A\|B\}:PULse:WINdow:THReshold: LOW | Sets or queries low window threshold |
| TRIGger:\{A\|B]:PULse:WINdow:THReshold? | Returns the upper and lower thresholds for the pulse window trigger |
| TRIGger:\{A\|B]:PULse:WINdow:WIDTH | Sets or queries minimum width of violation |
| TRIGger:\{A\|B\}:READY? | Queries the trigger ready state |
| TRIGger:\{A\|B]:TYPe | Sets or queries the type of A or B trigger |
| TRIGger:\{A\|B\}:UPPerthreshold:CH<x> | Sets or queries the CH<x> upper trigger level for TRIGger:LVLSrcpreference |
| TRIGger:A:BUS:CAN:CONDition | Sets or queries the CAN bus trigger condition |
| TRIGger:A:BUS:CAN:DATa:DIRection | Sets or queries the CAN bus trigger data direction |
| TRIGger:A:BUS:CAN:DATa:FORMat | Sets or queries the CAN bus trigger data format |
| TRIGger:A:BUS:CAN:DATa:QUALifier | Sets or queries CAN bus trigger data qualifier |
| TRIGger:A:BUS:CAN:DATa:SIZe | Sets or queries the CAN bus trigger data size |
| TRIGger:A:BUS:CAN:DATa:VALue | Sets or queries CAN bus trigger data value |
| TRIGger:A:BUS:CAN:FRAMEtype | Sets or queries CAN bus trigger frame type |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: DIRection | Sets or queries sets the CAN bus trigger identifier direction |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: FORMat | Sets or queries the CAN bus trigger identifier format |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: MODe | Sets or queries CAN bus trigger identifier mode |
| TRIGger:A:BUS:CAN\{:IDentifier\|:ADDRess\}: VALue | Sets or queries the CAN bus trigger identifier value |
| TRIGger:A:BUS:DATa:FORMat | Sets or queries the trigger data format for the bus |
| TRIGger:A:BUS:DATa:VALue | Sets or queries the trigger data value depending on the format selected for the bus |
| TRIGger:A:BUS:ETHERnet:CONDition | Specifies a field or condition within an Ethernet frame to trigger on |
| TRIGger:A:BUS:ETHERnet:DATa:FORMat | This command and query sets the format of the data to either binary or hex. |
| TRIGger:A:BUS:ETHERnet:DATa:OFFSet | Specifies the data offset value, in bytes, to use when triggering on the Ethernet data field |
| TRIGger:A:BUS:ETHERnet:DATa:SIZe | Specifies the number of contiguous TCP/IPv4/MAC client bytes to use when triggering on the Ethernet data field |
| TRIGger:A:BUS:ETHERnet:DATa:VALue | Specifies the binary value to use when triggering on the Ethernet binary data field |
| TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:VALue | Specifies the 32 -bit IPv4 value to use when triggering on the Ethernet IPv4 header address destination field |
| TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv4 header address destination field |
| TRIGger:A:BUS:ETHERnet:IPHeader: PROTOcol:VALue | Specifies the 8 -bit binary value to use when triggering on the Ethernet IPv4 header protocol field |
| TRIGger:A:BUS:ETHERnet:IPHeader: PROTOcol:FORMat | Specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv4 header protocol field |
| TRIGger:A:BUS:ETHERnet:IPHeader: SOUrceaddr:VALue | Specifies the 32 -bit value to use when triggering on the Ethernet IPv4 header address source field |
| TRIGger:A:BUS:ETHERnet:IPHeader: SOUrceaddr:FORMat | Specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv4 header address source field |
| TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination:VALue | Specifies the 48 -bit value to use when triggering on the Ethernet MAC address destination field |
| TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination:FORMat | Specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC address destination field |
| TRIGger:A:BUS:ETHERnet:MAC:ADDRess: SOUrce:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC address source field |
| TRIGger:A:BUS:ETHERnet:MAC:ADDRess: SOUrce:VALue | Specifies the 48 -bit value to use when triggering on the Ethernet MAC address source field |
| TRIGger:A:BUS:ETHERnet:MAC\{:LENgth\|: TYPe\}:VALue | Specifies the 16-bit value to use when triggering on the Ethernet MAC length/type |
| TRIGger:A:BUS:ETHERnet:MAC\{:LENgth\|: TYPe\}:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC length or type |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:ETHERnet:QTAG:VALue | Specifies the 32-bit value to use when triggering on the Ethernet Q-Tag field |
| TRIGger:A:BUS:ETHERnet:QTAG:FORMat | Specifies the data format (binary or hex) to use when triggering on the Q-Tag field |
| TRIGger:A:BUS:ETHERnet:QUALifier | Specifies the qualifier to be used with the Ethernet trigger condition is set to MACLENgth or DATa |
| TRIGger:A:BUS:ETHERnet:TCPHeader: ACKnum:VALue | Specifies the 32-bit value to use when triggering on the Ethernet TCP header acknowledgement number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: ACKnum:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header acknowledgement number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: DESTinationport:VALue | Specifies the 16 -bit value to use when triggering on the Ethernet TCP header destination port number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: DESTinationport:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header destination port number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: SEQnum:VALue | Specifies the 32 -bit value to use when triggering on the Ethernet TCP header sequence number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: SEQnum:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header sequence number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: SOUrceport:VALue | Specifies the 16 -bit value to use when triggering on the Ethernet TCP header source port number |
| TRIGger:A:BUS:ETHERnet:TCPHeader: SOUrceport:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header source port number |
| TRIGger:A:BUS:FLEXRAY:CONDition | Sets or queries the FLEXRAY bus trigger condition |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: FORMat | Sets or queries FLEXRAY bus trigger cycle count format |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: QUALifier | Sets or queries FLEXRAY bus trigger cycle count qualifier |
| TRIGger:A:BUS:FLEXRAY:CYCLEcount: VALue | Sets or queries the FLEXRAY bus trigger cycle count value |
| TRIGger:A:BUS:FLEXRAY:DATa:FORMat | Sets or queries the FLEXRAY bus trigger data format |
| TRIGger:A:BUS:FLEXRAY:DATa:OFFSet | Sets or queries the FLEXRAY bus trigger data offset |
| TRIGger:A:BUS:FLEXRAY:DATa:QUALifier | Sets or queries the FLEXRAY bus trigger data qualifier |
| TRIGger:A:BUS:FLEXRAY:DATa:SIZe | Sets or queries the FLEXRAY bus trigger data size |
| TRIGger:A:BUS:FLEXRAY:DATa:VALue | Sets or queries the FLEXRAY bus trigger data value |
| TRIGger:A:BUS:FLEXRAY:EOFTYPE | Sets or queries the FLEXRAY bus trigger end of file type |
| TRIGger:A:BUS:FLEXRAY:ERRTYPE | Sets or queries the FLEXRAY bus trigger error type |
| TRIGger:A:BUS:FLEXRAY:FRAMEType | Sets or queries the FLEXRAY bus trigger frame type |
| TRIGger:A:BUS:FLEXRAY:HEADER:CRC | Sets or queries the FLEXRAY bus trigger header CRC |
| TRIGger:A:BUS:FLEXRAY:HEADER: CYCLECount | Sets or queries the FLEXRAY bus trigger header cycle count |
| TRIGger:A:BUS:FLEXRAY:HEADER: FRAMEID | Sets or queries the FLEXRAY bus trigger header frame ID |

| Table 2-40: Trigger commands (Not available on some models) (cont.) |  |
| :--- | :--- |
| Description |  |
| Command | Sets or queries the FLEXRAY bus trigger header Indicator Bits |
| TRIGger:A:BUS:FLEXRAY:HEADER:INDBits | SetEXRAY bus trigger header Payload Length |
| TRIGger:A:BUS:FLEXRAY:HEADER: | Sets or |
| PAYLENgth | Sets or queries the FLEXRAY bus trigger identifier format |
| TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat | SRIGger:A:BUS:FLEXRAY:IDentifier: |
| QUALifier | Sets or queries the FLEXRAY bus trigger identifier qualifier |
| TRIGger:A:BUS:FLEXRAY:IDentifier:VALue | Sets or queries the FLEXRAY bus trigger identifier value |
| TRIGger:A:BUS:I2C:ADDress:FORMat | Sets or queries the address format for the I2C bus |
| TRIGger:A:BUS:I2C:ADDress:MODe | Sets or queries the address mode for the I2C bus |
| TRIGger:A:BUS:I2C:ADDress:VALue | Sets or queries the binary address string used for the I2C trigger of the bus |
| TRIGger:A:BUS:I2C:CONDition | Sets or queries the trigger condition for the I2C bus |
| TRIGger:A:BUS:I2C:DATa:DIRection | Sets or queries the data direction for the I2C bus |
| TRIGger:A:BUS:LIN:CONDition | Sets or queries the LIN bus trigger condition |
| TRIGger:A:BUS:LIN:DATa:FORMat | Sets or queries the LIN bus trigger data format |
| TRIGger:A:BUS:LIN:DATa:QUALifier | Sets or queries the LIN bus trigger data qualifier |
| TRIGger:A:BUS:LIN:DATa:SIZe | Sets or queries the LIN bus trigger data size |
| TRIGger:A:BUS:LIN:DATa:VALue | Sets or queries the LIN bus trigger data value |
| TRIGger:A:BUS:LIN:ERRTYPE | Sets or queries the LIN bus trigger error type |
| TRIGger:A:BUS:LIN:IDentifier:FORMat | Sets or queries the LIN bus trigger identifier format |
| TRIGger:A:BUS:LIN:IDentifier:VALue | Sets or queries the LIN trigger identifier value |
| TRIGger:A:BUS:MIL1553B:COMMAND: | Sets the data format of the address (either binary or hex) to use in a MIL-STD-1553 <br> bus command word trigger |
| ADDRess:FORMat |  |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:ML1553B:DATA:FORMat | Specifies the format (binary or hex) of the bit pattern to use for a MIL-STD-1553 bus data word trigger |
| TRIGger:A:BUS:MIL1553B:DATA:PARity | Specifies the parity to use when triggering on a MIL-STD-1553 bus data word parity bit |
| TRIGger:A:BUS:MIL1553B:DATA:VALue | Specifies the value to use for a MIL-STD-1553 bus data word trigger |
| TRIGger:A:BUS:MIL1553B:ERRTYPE | Specifies the signaling error type to use for a MLL-STD-1553 bus data word trigger: Parity, Sync, Manchester, or Data |
| TRIGger:A:BUS:MIL1553B:STATUS: ADDRess:FORMat | Specifies the format (binary or hex) of the bit pattern to use when triggering on the MIL-STD-1553 status address field |
| TRIGger:A:BUS:MIL1553B:STATUS: ADDRess:QUALifier | Specifies the qualifier to use when triggering on the MIL-STD-1553 status address field |
| TRIGger:A:BUS:MIL1553B:STATUS: ADDRess:VALue | Specifies the value of the 5 -bit remote terminal address to use when triggering on the MIL-STD-1553 status address field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR | Specifies the status word broadcast command received (BCR) bit value (bit 15) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT: BUSY | Specifies the status word busy bit value (bit 16) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT: DBCA | Specifies the status word dynamic bus control acceptance (DBCA) bit value (bit 18) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT: INSTR | Specifies the status word instrumentation bit value (bit 10) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME | Specifies the status word message error bit value (bit 9 ) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT: PARity | Specifies the parity to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ | Specifies the status word service request (SRQ) bit value (bit 11) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT: SUBSF | Specifies the status word subsystem flag bit value (bit 17) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF | Specifies the status word terminal flag bit value (bit 19) to use when triggering on the MIL-STD-1553 status bit field |
| TRIGger:A:BUS:MIL1553B:TIME:LESSLimit | Specifies either the minimum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit or the minimum inter-message gap (IMG) |
| TRIGger:A:BUS:MIL1553B:TIME:MORELimit | Specifies either the maximum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit or the maximum inter-message gap (IMG) |
| TRIGger:A:BUS:MIL1553B:TIME:QUALifier | Specifies the qualifier to use when triggering on either the remote terminal response time (RT) or the inter-message gap (IMG) |
| TRIGger:A:BUS:PCIE:CHARacter:CHAR | Sets or queries the PCIE bus trigger character |
| TRIGger:A:BUS:PCIE:CHARacter:SYMbol: MINus | Sets or queries the PCIE bus trigger character symbol minus |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:PCIE:CHARacter:SYMbol: PLUS | Sets or queries PCIE bus trigger character symbol plus |
| TRIGger:A:BUS:PCIE:CONDition | Sets or queries the PCIE bus trigger condition |
| TRIGger:A:BUS:PCIE:DISParity | Sets or queries the PCIE bus trigger disparity |
| TRIGger:A:BUS:PCIE:ERROR | Sets or queries the PCIE bus trigger error |
| TRIGger:A:BUS:PCIE:FORMat | Sets or queries the PCle bus trigger format |
| TRIGger:A:BUS:PCIE:PATtern:CHAR<x> | Sets or queries the PCIE bus trigger pattern character |
| TRIGger:A:BUS:PCIE:PATtern:ORDERedset | Sets or queries the PCIE bus trigger pattern ordered set |
| TRIGger:A:BUS:PCIE:PATtern:SYMbol: MINus<x> | Sets or queries the PCIE bus trigger pattern symbol minus |
| TRIGger:A:BUS:PCIE:PATtern:SYMbol: PLUS<x> | sets or queries the PCIE bus trigger pattern plus symbol |
| TRIGger:A:BUS:RS232C:CONDition | Sets or queries the trigger condition for the specified RS232C bus |
| TRIGger:A:BUS:S8B10B:CHARacter:CHAR | Sets or queries the 8B10B character when the Trigger Condition is set to Character |
| TRIGger:A:BUS:S8B10B:CHARacter: SYMbol:MINus | Sets or queries the 8B10B character (negative disparity) when the Trigger Condition is set to Character |
| TRIGger:A:BUS:S8B10B:CHARacter: SYMbol:PLUS | Sets or queries the Character value (positive disparity view) when the Trigger Condition is set to Character |
| TRIGger:A:BUS:S8B10B:CONDition | Sets or queries the trigger condition for the 8B10B bus |
| TRIGger:A:BUS:S8B10B:DISParity | Sets or queries the type of disparity that the 8B10B bus will trigger on |
| TRIGger:A:BUS:S8B10B:ERROR | Sets or queries whether the oscilloscope will trigger on a character error or a disparity error |
| TRIGger:A:BUS:S8B10B:FORMat | Sets or queries the pattern editing format |
| TRIGger:A:BUS:S8B10B:PATtern:CHAR<x> | Sets or queries the specified 8B10B character when the Trigger Condition is set to Pattern |
| TRIGger:A:BUS:S8B10B:PATtern:SYMbol: MINus<x> | Sets or queries the specified 8B10B character (negative disparity) when the Trigger Condition is set to Pattern |
| TRIGger:A:BUS:S8B10B:PATtern:SYMbol: PLUS<x> | Sets or queries the specified 8B10B character (positive disparity) when the Trigger Condition is set to Pattern |
| TRIGger:A:BUS:SOUrce | Sets or queries the source for a bus trigger |
| TRIGger:A:BUS:SPI:CONDition | Sets or queries the trigger condition for the SPI bus |
| TRIGger:A:BUS:USB:CONDition | Sets or queries the trigger condition for the specified USB bus |
| TRIGger:A:BUS:USB:DATa:HIVALue | Sets or queries the trigger data value for data token of the specified USB bus |
| TRIGger:A:BUS:USB:DATa:OFFSet | Sets or queries the data offset for the USB bus trigger |
| TRIGger:A:BUS:USB:DATa:SIZe | Sets or queries the number of contiguous data bytes to USB bus trigger |
| TRIGger:A:BUS:USB:DATa:TYPe | Sets or queries the data packet type when USB bus trigger condition is Data Packet |
| TRIGger:A:BUS:USB:DATa:VALue | Sets or queries the USB bus trigger data value for data token |
| TRIGger:A:BUS:USB:ENDPoint:HIVALue | Sets or queries the endpoint value for data token of the specified USB bus |
| TRIGger:A:BUS:USB:ENDPoint:VALue | Sets or queries the endpoint value for normal token of the specified USB bus |

| Command | Description |
| :---: | :---: |
| TRIGger:A:BUS:USB:ERRTYPE | Set or queries the error type when USB bus trigger on condition is set to Error |
| TRIGger:A:BUS:USB:HANDShaketype | Set or queries the handshake type when USB bus trigger on condition is set to Handshake Packet |
| TRIGger:A:BUS:USB:QUAlifier | Set or queries the USB bus trigger qualifier for address, endpoint, and data |
| TRIGger:A:BUS:USB:SPECIALType | Set or queries the PID value for Special Packet USB bus trigger on condition |
| TRIGger:A:BUS:USB:SPLIT:ET:VALue | Set or queries the End Point Type value of the specified USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:HUB:VALue | Set or queries the port address for SPLIT token of the USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:PORT:VALue | Set or queries the port address for SPLIT token of the USB bus trigger |
| TRIGger:A:BUS:USB:SPLIT:SC:VALue | Set or queries the Start/Complete value for the USB bus trigger on split token field |
| TRIGger:A:BUS:USB:SPLIT:SE:VALue | Set or queries the Start/End value for the USB bus trigger for the specified USB bus |
| TRIGger:A:BUS:USB:TOKENType | Set or queries the Token Type when Trigger condition is set to TOKEN for the specified USB bus |
| TRIGger:A:COMMunication: \{AM\||HDB3|B3ZS|B6ZS|B8ZS\}:PULSEForm | Sets or queries the selected communication pulse form for the specified USB bus |
| TRIGger:A:COMMunication: \{AM\||HDB3|B3ZS|B6ZS|B8ZS\}:THReshold: HIGH | Sets the communication threshold high level |
| TRIGger:A:COMMunication: \{AM\||HDB3|B3ZS|B6ZS|B8ZS\}:THReshold: LOW | Sets the communication threshold low level |
| TRIGger:A:COMMunication:BITRate | Sets or queries the communication bit rate |
| TRIGger:A:COMMunication:CLOCk:POLarity | Sets or queries the polarity of the clock signal |
| TRIGger:A:COMMunication:CMI:PULSEForm | Selects the CMI pulse form |
| TRIGger:A:COMMunication:CODe | Sets the communication signal code |
| TRIGger:A:COMMunication:SOUrce | Sets the communication source channel |
| TRIGger:A:COMMunication:SOUrce:TYPe | Sets the type of communication source channel |
| TRIGger:A:COMMunication:STANdard | Selects the communication standard that identifies the code and bit rate |
| TRIGger:A:EDGE:ENVelope | Sets or queries whether the A edge trigger will use envelope triggering. |
| TRIGger:A:HOLDoff:ACTUal? | Returns the holdoff time actually used by the A trigger |
| TRIGger:A:HOLDoff:BY | Sets or queries the type of holdoff for the A trigger |
| TRIGger:A:HOLDoff:TIMe | Sets or queries the A trigger holdoff time |
| TRIGger:A:HOLDoff? | Returns the A trigger holdoff parameters |
| TRIGger:A:MODe | Sets or queries the A trigger mode |
| TRIGger:A:PULse:GLItch:ENVelope | Sets or queries whether the A glitch trigger will use envelope triggering. |
| TRIGger:A:PULse:PERiod? | Queries the Pulse Trigger settings specific to Period/Frequency trigger. |
| TRIGger:A:PULse:PERiod:HIGHLimit | Sets or queries the Period/Frequency high limit. |
| TRIGger:A:PULse:PERiod:LOWLimit | Sets or queries the Period/Frequency low limit. |
| $\underline{\text { TRIGger:A:PULse:PERiod:POLarity }}$ | Sets or queries the polarity for the Pulse Period trigger. |

Table 2-40: Trigger commands (Not available on some models) (cont.)

| Command | Description |
| :---: | :---: |
| TRIGger:A:PULse:PERiod:QUAlify | Sets or queries the Qualification setup for Pulse Period Trigger. |
| TRIGger:A:PULse:PERiod:VIEW | Sets or queries the "view" for the pulse period trigger. |
| TRIGger:A:PULse:PERiod:WHEn | Sets or queries the "trigger when" enumeration for the Pulse Period Trigger. |
| TRIGger:A:PULse:TIMEOut:ENVelope | Sets or queries whether the A timeout trigger will use envelope triggering. |
| TRIGger:A:PULse:WIDth:ENVelope | Sets or queries whether the B width trigger will use envelope triggering. |
| TRIGger:A:SERIAL:BITRate | Sets or queries the clock/data bit rate |
| TRIGger:A:SERIAL:CLOCk:LEVel | Sets or queries the serial trigger clock level |
| TRIGger:A:SERIAL:CLOCk:POLarity | Sets or queries the serial clock polarity |
| TRIGger:A:SERIAL:CLOCk:SOUrce | Sets or queries the serial data source channel |
| TRIGger:A:SERIAL:CODe | Sets or queries the signal code |
| TRIGger:A:SERIAL:DATa:FORMat | Sets or queries how the Pattern string is formatted |
| TRIGger:A:SERIAL:DATa:PATtern | Sets or queries the data pattern to allow up to 64 bit serial patterns |
| TRIGger:A:SERIAL:DATa:PATtern:NRZ | Sets or queries the data pattern to allow up to 64 bit serial patterns |
| TRIGger:A:SERIAL:DATa:PATtern:S8B10B | Sets or queries the data pattern to allow up to 64 bit serial patterns |
| TRIGger:A:SERIAL:LOCKLen | Sets or queries the length in bits of the repeating bit pattern for pattern lock trigger |
| TRIGger:A:SERIAL:LOCKOffset | Sets or queries the length in bits of the repeating bit pattern for pattern lock trigger |
| TRIGger:A:SERIAL:SOUrce | Sets or queries the length in bits of the repeating bit pattern for pattern lock trigger |
| TRIGger:A:SERIAL:STANdard | Sets or queries the length in bits of the repeating bit pattern for pattern lock trigger |
| TRIGger:A:SERIAL:TRIGgeron | Sets or queries the length in bits of the repeating bit pattern for pattern lock trigger |
| TRIGger:A:VIDeo? | Returns the video parameters for the A trigger |
| TRIGger:A:VIDeo:CUSTom? | Returns the custom video parameters for the A trigger |
| TRIGger:A:VIDeo:CUSTom:FORMat | Sets or queries the video scan format when the video standard is set to Custom |
| TRIGger:A:VIDeo:CUSTom:LINEPeriod | Sets or queries the custom video line period |
| TRIGger:A:VIDeo:CUSTom:SYNCInterval | Sets or queries the custom video sync interval |
| TRIGger:A:VIDeo:FIELD | Sets or queries the video field trigger |
| TRIGger:A:VIDeo:HOLdoff:FIELD | Sets or queries the trigger holdoff in video field units |
| TRIGger:A:VIDeo:LINE | Sets or queries the trigger delay as several video lines |
| TRIGger:A:VIDeo:POLarity | Sets or queries the polarity of the video trigger |
| TRIGger:A:VIDeo:SCAN | Sets or queries the video scan rate |
| TRIGger:A:VIDeo:SOUrce | Sets or queries the video trigger source |
| TRIGger:A:VIDeo:STANdard | Sets or queries the video standard |
| TRIGger:AUXLevel | Sets or queries the level for the auxiliary trigger |
| TRIGger:B | Sets the B trigger level to 50\% or queries the B trigger parameters |
| TRIGger:B:BY | Sets or queries B trigger time or event qualifiers |
| TRIGger:B:EDGE:ENVelope | Sets or queries whether the B edge trigger will use envelope triggering. |
| TRIGger:B:EVENTS:COUNt | Sets or queries the number of events that must occur before the B trigger occurs |
| TRIGger:B:EVENTS? | Returns the current B trigger events parameter |

| Command | Description |
| :---: | :---: |
| TRIGger:B:PULse:GLItch:ENVelope | Sets or queries whether the B glitch trigger will use envelope triggering. |
| TRIGger:B:PULse:PERiod? | Queries the Pulse Trigger settings specific to Period/Frequency trigger. |
| TRIGger:B:PULse:PERiod:LOWLimit | Sets or queries the Period/Frequency low limit. |
| TRIGger:B:PULse:PERiod:POLarity | Sets or queries the polarity for the Pulse Period trigger. |
| TRIGger:B:PULse:PERiod:QUAlify | Sets or queries the Qualification setup for Pulse Period Trigger. |
| TRIGger:B:PULse:PERiod:VIEW | Sets or queries the "view" for the pulse period trigger. |
| TRIGger:B:PULse:PERiod:WHEn | Sets or queries the "trigger when" enumeration for the Pulse Period Trigger. |
| TRIGger:B:PULse:TIMEOut:ENVelope | Sets or queries whether the B timeout trigger will use envelope triggering. |
| TRIGger:B:PULse:WIDth:ENVelope | Sets or queries whether the B width trigger will use envelope triggering. |
| TRIGger:B:RESET:ACCEPTCOUNT? | Queries the Reset Accept Count for a sequence trigger reset by the ACCept and REJect Reset Types. |
| TRIGger:B:RESET:ACCEPTTIMEout | Sets or queries the Reset Accept Time Out timer for a sequence trigger reset by the ACCept Reset Type. |
| TRIGger:B:RESET:RATIO? | Queries the (floating point) Ratio of accepted to total triggers for a sequence trigger reset by the ACCept and REJect Reset Types. |
| TRIGger:B:RESET:RATIOENable | Sets or queries the Ratio Enable enumerated value (OFF/ON) to display in the graticule are the ratio of accepted to total triggers for a sequence trigger reset by the ACCept and REJect Reset Types. |
| TRIGger:B:RESET:REJECTCOUNT? | Queries the Reset Reject Count for a sequence trigger reset by the ACCept and REJect Reset Types. |
| TRIGger:B:RESET:REJECTTIMEout | Sets or queries the Reset Reject Time Out timer for a sequence trigger reset by the REJect Reset Type. |
| TRIGger:B:RESET:SOUrce | Sets or queries the source for the trigger reset |
| TRIGger:B:RESET:STATE | Sets or queries the state of the B trigger |
| TRIGger:B:RESET:THReshold | Sets or queries the threshold for the trigger reset |
| TRIGger:B:RESET:TIMEOut | Sets or queries the reset time for the timeout trigger reset |
| TRIGger:B:RESET:TOTALCOUNT? | Queries the Reset Total Count for a sequence trigger reset by the ACCept and REJect Reset Types. |
| TRIGger:B:RESET:TRANsition | Sets or queries the type of transition required for a transition trigger reset |
| TRIGger:B:RESET:TYPe | Sets or queries the type of $\mathrm{A} \rightarrow \mathrm{B}$ sequential trigger reset |
| TRIGger:B:SCAN:ADVANCEafter | Sets or queries the B-Event Scan advance after value |
| TRIGger:B:SCAN:ENAble | Sets or queries if the B-Event Scan is on or off |
| TRIGger:B:SCAN:ENDevent | Sets or queries the end event value of B-Event Scan |
| TRIGger:B:SCAN:MODE | Sets or queries the sequence advance mode of B-Event Scan |
| TRIGger:B:SCAN:STARTevent | Sets or queries the start event value of B-Event Scan |
| TRIGger:B:STATE | Returns the current state of the triggering system |
| TRIGger:B:TIMe | Sets or queries the B trigger delay time |
| TRIGger:ENHanced | Sets or queries the state of trigger position enhancement |
| TRIGger:LVLSrcpreference | Sets or queries how the trigger source and levels interact |

Table 2-40: Trigger commands (Not available on some models) (cont.)

| Command | Description |
| :---: | :---: |
| TRIGger:QUALLification:BUS:FORMat | Sets or queries the format of the bit pattern for the bus qualification |
| TRIGger:QUALLification:BUS:SOUrce | Sets or queries the source for the bus qualification |
| TRIGger:QUALification:BUS:VALue | Sets or queries the bit pattern for the bus qualification |
| TRIGger:SENSITivity | Set or queries the state of trigger sensitivity. When on, the instrument calculates a rolling average for trigger position enhancement |
| TRIGger:STATE? | Returns the current state of the triggering system |
| Visual trigger commands (available with Option VET) |  |
| TRIGger:EQUation<1..1> | Sets the Visual Trigger Equation string, which defines the behavior of the areas |
| TRIGger:SHOWEQuation | Causes the Visual Trigger Equation to be displayed in the upper left portion of the oscilloscope graticule |
| VISual? | Returns the settings for each visual trigger area |
| VISual:AREA<x>? | Returns the settings for the specified visual trigger area |
| VISual:AREACOLOr | Sets or queries the colors used by visual trigger areas |
| VISual:AREA<x>:DISplay | Causes the areas to be hidden or displayed on the oscilloscope screen Queries the status of the area display |
| VISual:AREA<x>:FLIP | Flips the specified visual trigger area |
| VISual:AREA $<$ >>:HEIGHT | Sets or queries the height of the specified visual trigger area |
| VISual:AREA<x>:LABel | Sets or queries the label of the specified visual trigger area |
| VISual:AREA $<$ <>:OPERATION<1..1> | Sets or queries the operation of the area specified by <x> |
| VISual:AREA<x>:ROTAtion | Sets or queries the rotation angle of the specified visual trigger area |
| VISual:AREA<x>:SHAPE | Selects or queries the initial shape of area <x> |
| VISual:AREA<x>:SHOWLOGic | Causes area Source and Operation indicators to be hidden or displayed on screen. Queries the status of this feature |
| VISual:AREA<x>:SOURCE<1..1> | Selects or queries the signal source for the area $\langle x\rangle$. The source can only be an analog channel |
| VISual:AREA<x>:VERTICES | Sets or queries the polygon vertex x and y coordinate values for an area |
| VISual:AREA<x>:WIDTH | Sets or queries the width of the specified visual trigger area |
| VISual:AREA<x>:XPOSition | Sets or queries horizontal position of specified visual trigger area |
| VISual:AREA<x>:YPOSition | Sets or queries vertical position of the specified visual trigger area |
| VISual:ASPECTratio | Sets or queries aspect ratio setting of the visual trigger system |
| VISual:DELETEAREA | Deletes the specified visual trigger area |
| VISual:ENAble | Enables or disables the visual triggering. Queries the status (on or off) of the visual triggering |
| VISual:FILE:RECALL | Recalls a file of Visual Trigger Parameters, updating the database appropriately |
| VISual:FILE:SAVE | Saves only the Visual Trigger Parameters, to a file that you name in the <string> |

## Vertical command group

Use the commands in the Vertical Command Group to control the vertical setup of all live (channel) waveforms for acquisition and to control the display of channel, reference, and math waveforms.

You can replace VOLts with SCAle in the vertical commands. This provides program compatibility with earlier models of Tektronix instruments.

Table 2-41: Vertical commands

| Command | Description |
| :---: | :---: |
| AUXIn:BANdwidth | Sets or queries the selectable low-pass bandwidth limit filter of the AUX In input |
| AUXIn:COUPling | Sets or queries the input attenuator coupling setting for the AUX In input |
| AUXIn:OFFSet | Sets or queries the vertical offset for the AUX In input |
| AUXIn:PRObe:AUTOZero | Sets the probe attached to the AUX In input to autozero |
| AUXIn:PRObe:DEGAUSS | Starts a degauss cycle of the probe attached to the AUX In input |
| AUXIn:PRObe:DEGAUSS:STATE? | Returns whether the probe attached to the AUX In input is degaussed |
| AUXIn:PRObe:FORCEDRange | Sets the probe attached to the AUX In input to the default range of the probe, or the command queries the default range of the probe |
| AUXIn:PRObe:GAIN? | Returns the gain factor of the probe that is attached to the AUX In input |
| AUXIn:PRObe:ID:SERnumber? | Returns the probe serial number |
| AUXIn:PRObe:ID:TYPe? | Returns the probe type |
| AUXIn:PRObe:INPUTMode | Sets or queries one of the probe's four input modes |
| AUXIn:PRObe:INPUTMode:AOFFSet | Sets or queries the requested A mode offset control of the probe that is attached to the AUX In input |
| AUXIn:PRObe:INPUTMode:BOFFSet | Sets or queries the requested B mode offset control of the probe that is attached to the AUX In input |
| AUXIn:PRObe:INPUTMode:CMOFFSet | Sets or queries the requested common mode offset control of the probe that is attached to the AUX In input |
| AUXIn:PRObe:INPUTMode:DMOFFSet | Sets or queries the requested differential mode offset control of the probe that is attached to the AUX In input |
| AUXIn:PRObe:RANge | Sets or queries the set attenuation range of the probe on the AUX In input |
| AUXIn:PRObe:RESistance? | Returns the resistance factor of the probe that is attached to the AUX In input |
| AUXIn:PRObe:SET | Sets or queries aspects of probe accessory user interfaces, for example probe attenuation factors |
| AUXIn:PRObe:SIGnal | Sets or queries aspects of probe accessory user interfaces |
| AUXIn:PRObe:TIPtype | Sets or queries the type of probe tip being used |
| AUXIn:PRObe:UNIts? | Returns a string describing the units of measure for the probe attached to the AUX In input |
| AUXIn:PROBEFunc:EXTAtten | Sets or queries the input-output ratio, of external attenuation or gain, between the signal and the AUX In input |
| AUXIn:PROBEFunc:EXTDBatten | Sets or queries the input-output ratio (expressed in decibel units) of external attenuation or gain between the signal and the instrument AUX In input |

## Table 2-41: Vertical commands (cont.)

| Command | Description |
| :---: | :---: |
| AUXIn:PROBEFunc:EXTUnits | Sets or queries the unit of measurement for the external attenuator of the AUX In input |
| AUXIn:VTERm:DUAL:A | Sets or queries the termination voltage for probes with dual inputs that support settable termination voltage |
| AUXIn:VTERm:DUAL:B | Sets or queries the termination voltage for probes with dual inputs that support settable termination voltage |
| CH<x>? | Returns vertical parameters for the specified channel |
| CH<x>:ATIACTive? | Returns whether the specified channel is an ATI channel. |
| CH<x>:AVAILable? | Returns whether the specified channel is available. |
| CH<x>:BANdwidth | Sets or queries the bandwidth of the specified channel |
| CH<x>:BANdwidth:ENHanced | Sets or queries either the "Bandwidth Enhancement (DSP) Enabled" or "Analog Only" option |
| CH<x>:BANdwidth:ENHanced:APPLYtoall | Sets or queries whether the enhanced bandwidth filter applies to all active channels |
| CH<x>:BANdwidth:ENHanced:FORCe | Sets or queries the Force constant sample rate of the Digital Filters (DSP) |
| CH<x>:BANdwidth:ENHanced:STATE? | Returns the state of the bandwidth enhancement filter |
| CH $<x>$ :COUPling | Sets or queries the coupling setting for the specified channel |
| CH<x>:DESKew | Sets or queries the deskew time for the specified channel |
| CH<x>:FASTAcqcapable? | Returns whether the specified channel is capable of FastAcq. |
| CH<x>:FASTFRamecapable? | Returns whether the specified channel is capable of FastFrame acquisitions. |
| CH<x>:ICAPture:SOUrce | Selects which digital probe signal will acquire for the specified channel when put in iCapture mode |
|  | NOTE. Not available on some models |
| CH-x>:ICAPture:STATE | Selects the state of the digital probe signal will acquire for the specified channel when put in iCapture mode |
|  | NOTE. Not available on some models |
| CH<x>:LABel:NAMe | Defines or queries the label for the channel waveform |
| CH<x>:LABel:XPOS | Sets or queries the X display coordinate for the channel waveform label |
| CH<<> LABel :YPOS | Sets or queries the Y display coordinate for the channel waveform label |
| CH<x>:OFFSet | Sets or queries the channel offset |
| CH<x>:POSition | Sets or queries the channel vertical position |
| CH<x>:PRObe? | Returns the gain, resistance, units, and ID of the probe that is attached to the specified channel |
| CH<x>:PRObe:AUTOZero | Autozeros the probe attached to the specified channel |
| CH<x>:PRObe:DEGAUSS | Starts a degauss cycle of the probe attached to the specified channel |
| CH<x>:PRObe:DEGAUSS:STATE? | Returns whether the probe attached to the specified channel is degaussed |
| CH<x>:PRObe:FORCEDRange | Sets the attached probe to its default range, or it queries the default range of the probe |

| Command | Description |
| :---: | :---: |
| CH<x>:PRObe:GAIN? | Returns the gain of the probe that is attached to the specified channel |
| CH<x>:PRObe:ID? | Returns the type and serial number of the probe that is attached to the specified channel |
| CH<x>:PRObe:ID:SERnumber? | Returns the serial number of the probe that is attached to the specified channel |
| CH<x>:PRObe:ID:TYPe? | Returns the type of probe that is attached to the specified channel |
| CH<x>:PRObe:INPUTMode | Sets or queries the input mode of the probe that is attached to the specified channel |
| CH<x>:PRObe:INPUTMode:AOFFSet | Sets or queries the requested A mode offset control of the probe that is attached to the specified channel |
| CH<x>:PRObe:INPUTMode:BOFFSet | Sets or queries the requested $B$ mode offset control of the probe that is attached to the specified channel |
| CH<x>:PRObe:INPUTMode:CMOFFSet | Sets or queries the requested common mode offset control of the probe that is attached to the specified channel |
| CH<x>:PRObe:INPUTMode:DMOFFSet | Sets or queries the requested differential mode offset control of the probe that is attached to the specified channel |
| CH<x>:PRObe:RANge | Sets or queries the attenuation range of the probe on the designated channel |
| CH<x>:PRObe:RESistance? | Returns the resistance of the probe that is attached to the specified channel |
| CH<x>:PRObe:SET | Sets or queries aspects of probe accessory user interfaces, for example probe attenuation factors |
| CH<x>:PRObe:SIGnal | Sets or queries aspects of probe accessory user interfaces |
| CH<x>:PRObe:TIPtype | Sets or queries the type of probe tip being used on the specified channel |
| $\underline{C H<x>: P R O b e: U N I t s ? ~}$ | Returns the units of the probe that is attached to the specified channel |
| CH<x>PPROBECal? | Returns the probe calibration status |
| CH<x>:PROBECOntrol | Sets or queries the probe range |
| CH<x>:PROBEFunc:EXTAtten | Sets the attenuation value for the specified channel to the specified scale factor Or queries the user-specified attenuation |
| CH<x>:PROBEFunc:EXTDBatten | Sets the attenuation value for the specified channel to the specified value in decibels <br> Or queries the user-specified attenuation in decibels |
| CH<x>:PROBEFunc:EXTUnits | Sets the unit of measurement for the external attenuator of the specified channel Or queries the user-specified unit of measurement for the external attenuator |
| CH<x>:SCAle | Sets or queries the vertical scale of the specified channel |
| CH<x>:TERmination | Sets channel input termination |
| CH<x>:THRESHold | Sets or queries the comparison level for converting the specified channel to digital form |
| CH<x>:VTERm:BIAS | Sets or queries the termination voltage for a channel (if control is available). <x> is the channel number |
| CH<x>:VTERm:DUAL:A | Sets or queries the termination voltage for probes with dual inputs that support settable termination voltage |

Table 2-41: Vertical commands (cont.)

| Command | Description |
| :---: | :---: |
| CH<x>:VTERm:DUAL:B | Sets or queries the termination voltage for probes with dual inputs that support settable termination voltage |
| REF $<x>$ :HORizontal:POSition | Sets or queries the horizontal position of the specified reference waveform in percent of the waveform that is displayed to the right of the center vertical graticule |
| REF $<x>$ :LABel $?$ | Returns a branch query containing the waveform label name and the coordinates at which the label is displayed |
| REF<x>:LABel:NAMe | Sets or queries the label of the designated waveform |
| REF<x>:LABel:XPOS | Sets or queries the position of the reference waveform label on the X axis |
| REF<x>:LABel:YPOS | Sets or queries the position of the reference waveform label on the Y axis |
| REF<x>:VERTical:POSition | Sets or queries the vertical position of the specified reference waveform |
| REF<x>:VERTical:SCAle | Sets or queries the reference waveform vertical scale in vertical units/div |
| SELect? | Returns information on which waveforms are on or off and which waveform is selected |
| SELect:<wfm> | Turns on the specified waveform |
|  | Or queries whether the specified channel is on or off |
| SELect:CH<x> | Sets or queries the displayed state of the specified channel waveform |
| SELect:CONTROI | Sets or queries the waveform controlled by the front panel |

## Waveform Transfer command group

Use the commands in the Waveform Transfer Command Group to transfer waveform data points to and from the instrument. Waveform data points are a collection of values that define a waveform. One data value usually represents one data point in the waveform record. When working with envelope waveforms, each data value is either the minimum or maximum of a min/max pair.

Before you transfer waveform data, you must specify the data format, record length, and waveform source.

Data formats. Acquired waveform data uses eight or more bits to represent each data point. The number of bits used depends on the acquisition mode specified when you acquired the data. Data acquired in SAMple or ENVelope mode uses eight bits per waveform data point. Data acquired in AVERage mode uses up to 14 bits per point.

The instrument can transfer waveform data in either ASCII or binary format. You specify the format with the DATa:ENCdg command. The instrument uses signed, 4 byte integers and floating point values; it does not support unsigned floating point values.

ASCII data is represented by signed integer or floating point values. An example ASCII waveform data string can look like this:

CURVE<space>-110,-109,-110,-110,-109,-107, $-109,-107,-106,-105,-103,-100,-97,-90,-84,-80$

Use ASCII to obtain more readable and easier to format output than binary. However, ASCII can require more bytes to send the same values than it does with binary. This can reduce transmission speeds.

Binary data can be represented by signed integer or floating point values. The range of the values depends on the byte width specified. When the byte width is one, signed integer data ranges from -128 to 127, and positive integer values range from 0 to 255 . When the byte width is two, the values range from -32768 to 32767. When a MATH (or REF that came from a MATH) is used, 32-bit floating point values are used that are four bytes in width.

The defined binary formats specify the order in which the bytes are transferred. The following are the four binary formats:

- RIBinary specifies signed integer data-point representation with the most significant byte transferred first.
- SRIBinary is the same as RIBinary except that the byte order is swapped, meaning that the least significant byte is transferred first. This format is useful when transferring data to PCs.
- RFBinary specifies floating point data-point representation with the most significant byte transferred first.
- SRFBinary is the same as RFBinary except that the byte order is swapped, meaning that the least significant byte is transferred first. This format is useful when transferring data to PCs.

Waveform data and record lengths. You can transfer multiple points for each waveform record. You can transfer a portion of the waveform or you can transfer the entire record. You can use the DATa: STARt and DATa: STOP commands to specify the first and last data points of the waveform record.
When transferring data into the instrument, you must first specify the record length of the destination waveform record. You do this with the WFMInpre:NR_Pt command. Next, specify the first data point within the waveform record. For example, when you set DATa:STARt to 1 , data points will be stored starting with the first point in the record. The instrument will ignore the value set by DATa: STOP when reading in data. It will stop reading data when there is no more data to read or when it has reached the specified record length.

The CURVe command cannot be used to transfer FastFrame waveforms into the instrument.

When transferring data from the instrument, you must specify the first and last data points in the waveform record. Setting DATa: STARt to 1 and DATa: STOP to the record length will always return the entire waveform.

For CURVe? queries of FastFrame acquisitions, the data for each frame is concatenated together into one long stream. For example, if you acquire 5 frames of 1000 points each, a curve query (with DATA: START 1 and DATA: STOP 1000) will return $5 * 1000$ or 5000 data points. There is no separator between each frame in the data.

If you set DATA: START and DATA: STOP to a subset of the record length then you get that section of data from each frame. For example, with 5 frames of 1000 points each and DATA:START 101 and DATA: STOP 150, you will get points 101-150 for the first frame followed by points 101-150 of the second frame, and similar things. In this case the total number of points returned will be 5 * 50 or 250 points.

Waveform data locations and memory allocation. The DATa:SOUrce command specifies the waveform source when transferring a waveform from the instrument.

Waveforms sent to the instrument are always stored in one of the four reference memory locations. Use the DATa:DESTination command to specify a reference memory location.

Waveform preamble. Each waveform that you transfer has an associated waveform preamble that contains information such as the horizontal scale, the vertical scale, and other settings in effect when the waveform was created. Refer to the individual WFMInpre? and WFMOutpre? commands for more information.

Scaling waveform data. Once you transfer the waveform data to the controller, you can convert the data points into voltage values for analysis using information from the waveform preamble.

## Transferring waveform data from the instrument.

You can transfer waveforms from the instrument to an external controller using the following sequence:

1. Select the waveform source(s) using DATa: SOUrce.
2. Specify the waveform data format using DATa: ENCdg.
3. Specify the number of bytes per data point using WFMOutpre:BYT_Nr.

NOTE. MATH waveforms (and REF waveforms that came from a MATH) are always set to four bytes.
4. Specify the portion of the waveform that you want to transfer using DATA: STARt and DATa: STOP.
5. Transfer waveform preamble information using WFMOutpre.
6. Transfer waveform data from the instrument using CURVe?.

Transferring waveform data to the instrument.

1. Specify waveform reference memory using DATa:DESTination.
2. Set WFMInpre:NR_Pt to equal the number of data points to be sent.
3. Specify the waveform data format using WFMInpre: ENCdg.
4. Specify the number of bytes per data point using WFMInpre: BYT_Nr.
5. Specify first data point in the waveform record using DATa: STARt.
6. Transfer waveform preamble information using WFMInpre.
7. Transfer the waveform data using CURVe.

NOTE. FastAcq and FastFrame waveforms cannot be returned to the instrument via the CURVe command

Table 2-42: Waveform Transfer commands

| Command | Description |
| :---: | :---: |
| ALLOcate:WAVEform:REF<x>? | Returns the record length for the specified reference waveform, if active, or zero (0) if not active |
| CURVe | The command format transfers waveform data to the instrument (reference memory location specified by DATa: DESTination) |
|  | The query format transfers waveform data from instrument specified by the DATa: SOUrce command |
| CURVENext? | Returns unique waveform data from a new acquisition |
| CURVEStream | Transfers continuously the waveform data from the instrument as it is acquired |
| DATa | Sets the format and location of the waveform data that is transferred with the CURVe Command |
|  | Or queries the format and location of the waveform data that is transferred with the CURVe? command |
| DATa:DESTination | Sets or queries the reference memory location for storing waveform data sent to the instrument |
| DATa:ENCdg | Sets or queries the format of outgoing waveform data |
| DATa:FRAMESTARt | Sets or queries the starting data frame for waveform transfer |
| DATa:FRAMESTOP | Sets or queries the ending data frame for waveform transfer |
| DATa:SOUrce | Sets or queries the location of waveform data transferred from the instrument |
| DATa:STARt | Sets or queries the starting point in waveform transfer |
| DATa:STOP | Sets or queries the ending data point in waveform transfer |
| DATa:SYNCSOUrces | Sets or queries if the data sync sources are on or off |
| WAVFrm? | Returns WFMOutpre? and CURVe? data for the waveform as specified by the DATA: source command |
| WAVFRMStream? | Returns WFMOUTPRE? and CURVESTREAM? data for the waveforms specified by the DATASOURCE command |
| WFMInpre? | Returns the waveform formatting specification to be applied to the next incoming CURVE command data |
| WFMInpre:BIT_Nr | Sets or queries the number of bits per binary waveform point |
| WFMInpre:BN_Fmt | Sets or queries the format of binary data for the incoming waveform |
| WFMInpre:BYT_Nr | Sets or queries the binary field data width for the first ordered waveform |
| WFMInpre:BYT_Or | Sets or queries the byte order of waveform points |
| WFMInpre:ENCdg | Sets or queries the type of encoding for incoming waveform data |
| WFMInpre:NR_Pt | Sets or queries the number of points in the transmitted waveform record |
| WFMInpre:NR_FR? | This query returns the number of frames to be transferred to the instrument with the Curve command |
| WFMInpre:PT_Fmt | Sets or queries the point format of incoming waveform data |
| WFMInpre:PT_Off | Sets or queries the trigger point within the incoming waveform data |
| WFMInpre:WFId | Allows a waveform extracted from the instrument to be more easily sent back |
| WFMInpre:XINcr | Sets or queries the horizontal sampling interval between incoming waveform points |

Table 2-42: Waveform Transfer commands (cont.)

| Command | Description |
| :--- | :--- |
| WFMInpre:XUNit | Sets or queries the horizontal units of the incoming waveform |
| WFMInpre:XZEro | Sets or queries the (sub-sample) time between the trigger sample and the <br> occurrence of the actual incoming waveform trigger |
| WFMInpre:YMUIt | Sets or queries the vertical scale factor, per digitizing level, of the incoming <br> waveform points |
| WFMInpre:YOFf | Sets or queries the vertical position of the incoming waveform in digitizing levels |
| WFMInpre:YUNit | Sets or queries the vertical units of the incoming waveform |
| WFMInpre:YZEro | Sets or queries the offset of the incoming waveform |
| WFMOutpre? | Returns the waveform formatting data for the waveform specified by the <br> DATA:SOURCE command |
| WFMOutpre:BIT_Nr | Sets or queries the number of bits per waveform point that outgoing waveforms <br> contain |
| WFMOutpre:BN_Fmt | Sets or queries the format of binary data for the waveform |
| SFMOutpre:BYT_Nr | Sets or queries the data width for the waveform |
| WFMOutpre:BYT_Or | Sets or queries the byte order of waveform points |
| SFMOutpre:ENCdg | Sets or queries the type of encoding for outgoing waveforms the number of points for the waveform transmitted in response to a <br> CURVe? query |
| WFMOutpre:NR_Pt? | Query-only command returns the number of frames for the DATa:SOUrce waveform <br> transmitted in response to a CURVe? query |
| WFMOutpre:NR_FR? | Returns the point format for the waveform |
| RFMOutpre:PT_Fmt? | Returns the trigger point relative to DATA:START for the waveform |
| WFMOutpre:PT_Off? | Returns whether the source waveform is DPO |
| WFMOutpre:PT_ORder? | Returns a string describing the acquisition parameters for the waveform |
| WFMOutpre:WFId? | Returns the horizontal sampling interval |
| WFMOutpre:XINcr? | Returns the horizontal units for the waveform |
| WFMOutpre:XUNit? | Returns the (sub-sample) time between the trigger sample and the occurrence <br> of the actual waveform trigger |
| WFMOutpre:XZEro? | Returns the vertical scale factor per digitizizg level for the waveform |
| RFMOutpre:YMUIt? | Returns the vertical offset in digitizing levels for the waveform |
| WFMOutpre:YOFf? | Returns the vertical units for the waveform the vertical offset for the waveform |
| WFMOutpre:YUNit? |  |

## Zoom command group

Zoom commands let you expand and position the waveform display horizontally and vertically, without changing the time base or vertical settings.

You can specify up to four zoom areas. You can also specify a zoomed waveform as a zoom source, which enables you to zoom in on a zoomed waveform.

Table 2-43: Zoom commands

| Command | Description |
| :---: | :---: |
| Z00m | Resets the zoom transforms to default values for all traces or live traces. The ZOOm query returns the current vertical and horizontal positioning and scaling of the display |
| ZOOm:GRAticule:SIZE | Sets or queries the size of the zoom graticule |
| zOOm:HORizontal:POSition | Sets or queries the horizontal position around which the zoom waveform is displayed. It is freely movable within the confines of the acquired waveform ( $0 \%$ to $100 \%$ ) and measured from left to right of the acquired waveform |
| ZOOm:HORizontal:SCAle | Sets or queries the zoom horizontal scale factor around which the zoom waveform is displayed |
| ZOOm:MATH<x>:HORizontal:POSition | Sets or queries the horizontal position of the specified math waveform |
| ZOOm:MATH<x>:HORizontal:SCAle | Sets or queries the zoom horizontal scale factor of the specified math waveform |
| ZOOm:MATH<x>:VERTical:POSition | Sets or queries the vertical position of the specified math waveform |
| ZOOm:MATH $\langle$ >>:VERTical:SCAle | Sets or queries the vertical scale of the specified math waveform |
| ZOOm:MODe | Sets or queries the zoom mode |
| ZOOm:REF<x>:HORizontal:POSition | Sets or queries the horizontal position of the specified reference waveform |
| ZOOm:REF $<x>$ :HORizontal:SCAle | Sets or queries the zoom horizontal scale factor of the specified reference waveform |
| ZOOm:REF $<x>$ :VERTical:POSition | Sets or queries the vertical position of the specified reference waveform |
| ZOOm:REF $<$ x $>$ :VERTical:SCAle | Sets or queries the zoom vertical scale of the specified reference waveform |
| ZOOm:SCROLL:DIREction | Sets or queries the direction of AutoScroll for zoomed waveforms |
| ZOOm:SCROLL:LOCk | Sets or queries the state of Scroll Lock, on or off |
| ZOOm:SCROLL:SPEED | Sets or queries the speed of AutoScroll for zoomed waveforms |
| ZOOm:STATE | Specifies or returns a trace as zoomed on or off |
| ZOOm:VERTical:POSition | Sets or queries the vertical position around which the zoom waveform is displayed. It is freely movable within the confines of the acquired waveform ( $0 \%$ to $100 \%$ ) and measured from left to right of the acquired waveform |
| ZOOm:VERTical:SCAle | Sets or queries the zoom vertical scale factor around which the zoom waveform is displayed |
| Z00m:ZOOM<x> | Sets or queries zoom factors for the specified zoom |
| ZOOm:ZOOM<x>:DCHAN:DISplay | Sets or queries the display of the digital waveforms for the specified zoom |
| ZOOm:ZOOM $<$ x>:SCROLLLock | Sets or queries Scroll Lock for the specified zoom |
| ZOOm:ZOOM $<$ <>:STATE | Sets or queries the specified zoom on or off, where x is an integer from 1 to 4 representing the desired zoom window |
| z00m:ZOOM<x>:<wfm>:DISplay | Sets or queries the display of the specified waveform for the specified zoom |

MSO/DPO5000/B, DPO7000/C, DPO70000/B/C/D/DX/SX, DSA70000/B/C/D, and MSO70000/C/DX Series

Table 2-43: Zoom commands (cont.)

| Command | Description |
| :--- | :--- |
| ZOOm:ZOOM $\langle x>:<w f m>: H O R i z o n t a l: ~$ | Sets or queries the horizontal position of the specified waveform for the specified <br> zoom |
| POSition | Sets or queries the horizontal zoom scale of the specified waveform in the specified <br> zoom |
| ZOOm:ZOOM<x>:<wfm>:HORizontal:SCAle |  |
| ZOOm:ZOOM<x>:<wfm>:VERTical:POSition | Sets or queries the vertical zoom position for the specified waveform in the specified <br> zoom |
| ZOOm:ZOOM<x>:<wfm>:VERTical:SCAle | Sets or queries the vertical zoom scale for the specified waveform in the specified <br> zoom |

## Commands listed in alphabetical order

NOTE. Some of the following commands may not be available on your instrument model. Also, some of the following commands are only available if your instrument has the associated option installed.

## ACQuire:ENHANCEDEnob

This command sets or queries the state of the enhanced effective number of bits.

Group Acquisition

Syntax ACQuire:ENHANCEDEnob \{OFF|AUTO\}

Arguments OFF turns off enhanced effective number of bits. AUTO turns enhanced effective number of bits to AUTO.

Examples ACQUIRE: ENHANCEDENOB AUTO sets enhanced effective number of bits to AUTO.

## ACQuire:ENHANCEDEnob:STATE? (Query Only)

This command queries the state of the enhanced effective number of bits.

Group Acquisition

Syntax ACQuire:ENHANCEDEnob:STATE?

Returns 0 indicates that the enhanced effective number of bits in not on.
1 indicates that the enhanced effective number of bits in on.

Examples ACQUIRE:ENHANCEDENOB:STATE? might return :ACQUIRE: ENHANCEDENOB: STATE 0 indicating that enhanced effective number of bits in not on.

## ACQuire:INTERPEightbit

This command sets or queries the interpolation acquisition mode of the instrument.

Group Acquisition

Syntax ACQuire:INTERPEightbit \{AUTO|ON|OFF\} ACQuire:INTERPEightbit?

Arguments
AUTO lets the instrument automatically select the interpolation acquisition mode.
ON turns on the eight bit interpolation mode.
OFF turns off the eight bit interpolation mode.

Examples ACQUIRE:INTERPEIGHTBIT ON sets the interpolation sampling mode On.
ACQUIRE:INTERPEIGHTBIT? might return :ACQUIRE:INTERPEIGHTBIT AUTO indicating the interpolation sampling mode is set to Auto.

## ACQuire:MAGnivu

## NOTE. Not available on some models.

This command sets or queries the MagniVu feature.
This feature provides up to 32 times signal detail for fast viewing of short events and is not recommended for slow data formats such as RS-232.

Group Acquisition

Syntax ACQuire:MAGnivu \{<NR1>|OFF|ON\}
ACQuire:MAGnivu?

Arguments <NR1> = 0 disables the MagniVu feature; any other value turns this feature on. OFF disables the MagniVu feature.

ON enables the MagniVu feature.

Examples ACQUIRE:MAGNIVU ON sets the MagniVu mode to On.
ACQUIRE:MAGNIVU? might return :ACQUIRE:MAGNIVU ON, indicating that the MagniVu mode is On.

## ACQuire:MODe

This command sets or queries the selected acquisition mode of the instrument. This affects all live waveforms. This command is equivalent to selecting Horizontal/Acquisition from the Horiz/Acq menu, and then choosing the desired mode from the Acquisition Mode group box. ACQuire:MODe is the desired acquisition mode.

Waveforms are the displayed data point values taken from acquisition intervals. Each acquisition interval represents a time duration set by the horizontal scale (time per division). The instrument sampling system always samples at the maximum rate and so an acquisition interval can include more than one sample.

The acquisition mode (which you set using this ACQuire: MODe command) determines how the final value of the acquisition interval is generated from the many data samples.

NOTE. In cases when either HIRes or PkDetect is the selected mode, and the sampling rate is greater than or equal to the base sampling rate (that is $6.25 \mathrm{Gs} / \mathrm{s}$ for 70 K oscilloscopes and $5 \mathrm{Gs} / \mathrm{s}$ for 5 K and 7 K oscilloscopes), neither HIRes nor PkDetect mode is available for the instrument to actually use. Sample mode is used instead, regardless of the mode setting. To determine which mode is actually used in these cases, use the query ACQuire:MODe:ACTUal?

## Group Acquisition

Syntax ACQuire:MODe
\{SAMple|PEAKdetect|HIRes|AVErage|WFMDB|ENVelope\}
ACQuire:MODe?

Related Commands ACQuire:NUMAVg, CURVe, ACQuire:MODe:ACTUal?

Arguments SAMple specifies that the displayed data point value is the first sampled value that is taken during the acquisition interval. In sample mode, all waveform data has 8 bits of precision. You can request 16 bit data with a CURVe query but the lower-order 8 bits of data will be zero. SAMple is the default mode.

PEAKdetect specifies the display of high-low range of the samples taken from a single waveform acquisition. The high-low range is displayed as a vertical column that extends from the highest to the lowest value sampled during the acquisition interval. PEAKdetect mode can reveal the presence of aliasing or narrow spikes.

HIRes specifies Hi Res mode where the displayed data point value is the average of all the samples taken during the acquisition interval. This is a form of averaging, where the average comes from a single waveform acquisition. The
number of samples taken during the acquisition interval determines the number of data values that compose the average.

AVErage specifies averaging mode, in which the resulting waveform shows an average of SAMP1e data points from several separate waveform acquisitions. The instrument processes the number of waveforms you specify into the acquired waveform, creating a running exponential average of the input signal. The number of waveform acquisitions that go into making up the average waveform is set or queried using the ACQuire:NUMEnv command.

WFMDB (Waveform Database) mode acquires and displays a waveform pixmap. A pixmap is the accumulation of one or more acquisitions.

ENVelope specifies envelope mode, where the resulting waveform shows the PEAKdetect range of data points from several separate waveform acquisitions. The number of waveform acquisitions that go into making up the envelope waveform is set or queried using the ACQuire:NUMEnv command.

The instrument acquires data after each trigger event using Sample mode; it then determines the pix map location of each sample point and accumulates it with stored data from previous acquisitions.

A Pix map is a two dimensional array. The value at each point in the array is a counter that reflects the hit intensity. Infinite and noninfinite persist display modes affect how pix maps are accumulated. Zoom, Math, FastAcq, FastFrame, XY, Roll, and Interpolated Time (IT) Sampling Mode are conflicting features to WFMDB acqMode. Turning on one of them generally turns the other one off. Selection of some standard masks (for example, eye masks, which require option MTM) changes the acquisition mode to WFMDB.

Examples ACQUIRE:MODE ENVELOPE sets the acquisition mode to display a waveform that is an envelope of many individual waveform acquisitions.

ACQUIRE:MODE? might return :ACQuire:MODe AVERAGE, indicating that the displayed waveform is the average of the specified number of waveform acquisitions.

## ACQuire:MODe:ACTUal? (Query Only)

This query returns the acquisition mode that the instrument is actually using for acquisitions, as opposed to the ACQuire: MODe query, which returns the currently selected acquisition mode. The acquisition mode that the instrument is using may differ from the selected mode in cases where the HIRes or PkDetect mode has been selected and the sample rate is greater than or equal to the base sampling rate (that is $6.25 \mathrm{Gs} / \mathrm{s}$ for 70 K oscilloscopes and $5 \mathrm{Gs} / \mathrm{s}$ for 5 K and 7 K oscilloscopes). This is because the HIRes and PkDetect modes are not available at such high sampling rates. In these cases, the instrument uses sampling mode, and this query returns SAMPLe, regardless of the mode selected.

In other words, when either HIRes or PkDetect mode has been selected, and the sample rate is greater than or equal to the base sampling rate (that is $6.25 \mathrm{Gs} / \mathrm{s}$ for 70 K scopes and $5 \mathrm{Gs} / \mathrm{s}$ for 5 K and 7 K oscilloscopes), use the ACQuire:MODe query to determine the current mode selection; use ACQuire:MODe:ACTUa1? to determine which mode the instrument is actually using. For other modes, use either query, as they will return the same mode.

Group Acquisition

Syntax ACQuire:MODe:ACTUa1?

## Related Commands ACQuire:MODe

Examples ACQUIRE:MODE:ACTUAL? might return the following:
In cases where the sampling rate $\geq 6.25 \mathrm{Gs} / \mathrm{s}$ for 70 K oscilloscopes and $5 \mathrm{Gs} / \mathrm{s}$ for 5 K and 7 K oscilloscopes, and HIRes or PkDetect is the currently selected mode, then ACQuire:MODe:ACTUa1? will return SAMPLE.

In cases where the sampling rate $<6.25 \mathrm{Gs} / \mathrm{s}$ for 70 K oscilloscopes and $5 \mathrm{Gs} / \mathrm{s}$ for 5 K and 7 K oscilloscopes, and HIRes or PkDetect is the currently selected mode, then ACQuire:MODe:ACTUal? will return either HI RESOLUTION or PEAK DETECT.

In cases where one of the other modes has been selected (that is AVErage, WFMDB or ENVelope), then ACQuire: MODe:ACTUa1? will return AVERAGE, WFMDB or ENVELOPE.

## ACQuire:NUMACq? (Query Only)

This query-only command returns the number of waveform acquisitions that have occurred since starting acquisition with the ACQuire:STATE RUN command. This value is reset to zero when any acquisition, horizontal, or vertical arguments that affect the waveform are changed. The maximum number of acquisitions that can be counted is $2^{30}-1$. The instrument stops counting when this number is reached. This is the same value that displays in the lower right of the screen.

Group Acquisition

Syntax ACQuire: NUMACq?

Related Commands ACQuire:STATE

Examples ACQUIRE:NUMACQ? might return :ACQUIRE: NUMACQ 350, indicating that 350 acquisitions have occurred since executing an ACQuire:STATE RUN command.

## ACQuire:NUMAVg

Group Acquisition

Syntax ACQuire:NUMAVg <NR1>
ACQuire:NUMAVg?

Related Commands ACQuire:MODe

Arguments <NR1> is the number of waveform acquisitions to average.

Examples ACQUIRE:NUMAVG 10 specifies that 10 waveform averages will be performed before exponential averaging starts.

ACQUIRE:NUMAVG? might return :ACQUIRE:NUMAVG 75, indicating that there are 75 acquisitions specified for averaging.

## ACQuire:NUMEnv

This command sets or queries the number of waveform acquisitions that make up an envelope waveform. Sending this command is equivalent to setting the \# of Wfms in the Acquisition Setup menu when Envelope Acquisition mode is selected.

NOTE. Sending INFInite as an argument sets $2 e 9$ envelopes. The query response will be $2 e 9$ not INFInite.

Group Acquisition

Syntax ACQuire:NUMEnv \{<NR1>|INFInite\}
ACQuire: NUMEnv?

Arguments <NR1> is the number of waveform acquisitions to be enveloped.
INFInite specifies the number of waveform acquisitions to be enveloped. Setting the argument to infinite sets the envelopes to 2 e 9 .

Examples ACQUIRE:NUMENV 10 specifies that an enveloped waveform will show the result of combining 10 separately acquired waveforms.

ACQUIRE: NUMENV? might return :ACQUIRE:NUMENV 75, indicating that 75 acquisitions are acquired for enveloped waveforms.

## ACQuire:NUMFRAMESACQuired? (Query Only)

This query-only command returns the number of frames acquired when in FastFrame Single Sequence and acquisitions are running. When the FastFrame single sequence stop condition is set to Stop Manually, this number counts past the number of frames which were requested as new frames are acquired, until STOP is pushed. When not in FastFrame Single Sequence, this value is the same number reported by ACQ: NUMACQ.

Group Acquisition

Syntax ACQuire: NUMFRAMESACQuired?

Related Commands ACQuire:NUMACq?

Examples ACQUIRE:NUMFRAMESACQUIRED? might return :ACQUIRE: NUMFRAMESACQUIRED 350, indicating that 350 frames have been acquired.

## ACQuire:NUMSAMples

This command sets or queries the minimum number of acquired samples that make up a waveform database ( WfmDB ) waveform for single sequence mode and Mask Pass/Fail Completion Test. This is equivalent to setting the Waveform Database Samples in the Acquisition Mode side menu.

Group Acquisition

Syntax ACQuire:NUMSAMp1es <NR1> ACQuire: NUMSAMples?

Arguments <NR1> is the minimum number of acquired samples that make up a waveform database ( WfmDB ) waveform for single sequence mode and Mask Pass/Fail Completion Test. The default value is 16,000 samples. The range is 5,000 to $2,147,400,000$ samples.

In real time mode, if the entire trace is displayed, one triggered acquisition should acquire 5000 samples for a record length of 5000 . If you want 5001 samples, the instrument will need to make two acquisitions ( 10,000 samples). If you request fewer samples than the record length, the number of samples will be the same as the record length.

Examples ACQUIRE:NUMSAMPLES 5000 specifies that 5000 samples will be acquired in WfmDB mode for single sequence mode and Mask Pass/Fail Completion Test.

ACQUIRE:NUMSAMPLES? might return :ACQUIRE:NUMSAMples 10000, indicating that there are 10,000 samples to be acquired in WfmDB mode for single sequence and Mask Pass/Fail Completion Test.

## ACQuire:SAMPlingmode

This command sets or queries the sampling mode.

Group Acquisition

Syntax ACQuire:SAMPlingmode \{RT|ET|IT\}
ACQuire:SAMPlingmode?

Arguments RT sets the sampling mode to real time only.
ET sets the sampling mode to equivalent time allowed (ON in REPET).
IT sets the sampling mode to interpolation allowed (OFF in REPET).
The number of channels selected and the sampling speed affects the mode that the instrument uses to acquire data. At slow sampling speeds the instrument uses real time sampling. At fast sampling speeds, the instrument uses equivalent time sampling or interpolation. For speeds between these extremes, some instruments create waveform records differently, depending on the number of input channels selected.

Examples ACQUIRE:SAMPLINGMODE IT specifies that interpolation is allowed.
ACQUIRE:SAMPLINGMODE? might return :ACQUIRE:SAMPLINGMODE RT, indicating that sampling mode is real time only.

## ACQuire:STATE

This command starts or stops acquisitions. When state is set to ON or RUN, a new acquisition will be started. If the last acquisition was a single acquisition sequence, a new single sequence acquisition will be started. If the last acquisition was continuous, a new continuous acquisition will be started.

If RUN is issued in the middle of completing a single sequence acquisition (for example, averaging or enveloping), the acquisition sequence is restarted, and any accumulated data is discarded. Also, the instrument resets the number of acquisitions. If the RUN argument is issued while in continuous mode, a reset occurs and acquired data continues to acquire.

If acquire:stopafter is SEQUENCE, pressing the front panel RUN/STOP button is equivalent to sending these commands: ACQUIRE:STOPAFTER RUNSTOP and either ACQUIRE:STATE ON or ACQUIRE:STATE RUN.

Arguments <NR1> = 0 stops acquisitions; any other value starts acquisitions.
OFF stops acquisitions.
ON starts acquisitions.
RUN starts acquisitions.
STOP stops acquisitions.

Examples ACQUIRE:STATE RUN starts the acquisition of waveform data and resets the count of the number of acquisitions.

ACQUIRE:STATE? might return : ACQUIRE:STATE 0 , indicating that the acquisition is stopped.

## ACQuire:STOPAfter

This command sets or queries whether the instrument continually acquires acquisitions or acquires a single sequence. Pressing SINGLE on the front panel button is equivalent to sending these commands: ACQUIRE:STOPAFTER SEQUENCE and ACQUIRE: STATE 1.

Group Acquisition

Syntax ACQuire:STOPAfter \{RUNSTop|SEQuence\}
ACQuire:STOPAfter?

Related Commands ACQuire:STATE

Arguments RUNSTop specifies that the instrument will continually acquire data, if ACQuire: STATE is turned on.

SEQuence specifies that the next acquisition will be a single-sequence acquisition.

Examples ACQUIRE:STOPAFTER RUNSTOP sets the instrument to continually acquire data.
ACQUIRE:STOPAFTER? might return :ACQUIRE:STOPAFTER SEQUENCE, indicating that the next acquisition the instrument makes will be of the single-sequence type.

## ALlas

This command sets or queries the state of alias functionality.

Group Alias

Syntax ALIas \{OFF|ON|<NR1>\}
ALIas?

Related Commands ALIas:STATE

## Arguments OFF turns Alias expansion off. If a defined alias is sent when ALIas: STATE is off, a command error (102) will be generated. <br> ON turns Alias expansion on. When a defined alias is received, the specified command sequence is substituted for the alias and executed.

<NR1> = 0 disables Alias mode; any other value enables Alias mode.

Examples ALIAS ON turns the alias feature on. When a defined alias is received, the specified command sequence is substituted for the alias and executed.

ALIAS? might return :ALIAS:STATE 1 , indicating that the alias feature is on.

## ALlas:CATalog? (Query Only)

This query-only command returns a list of the currently defined alias labels, separated by commas. If no aliases are defined, the query returns the string "".

```
Group Alias
Syntax ALIas:CATalog?
Examples ALIAS:CATALOG? might return the string :ALIAS:CATALOG
    "SETUP1","TESTMENU1", "DEFAULT" showing that there are three aliases
    named SETUP1, TESTMENU1, and DEFAULT.
```

## ALlas:DEFine

This command assigns a sequence of program messages to an alias label. These messages are then substituted for the alias whenever it is received as a command or query, provided that ALIas: STATE is turned on. The query form of this command returns the definitions of a selected alias.

NOTE. Attempting to give two aliases the same name causes an error. To give a new alias the name of an existing alias, the existing alias must first be deleted.

Group Alias

Syntax ALIas:DEFine <QString><,>\{<QString>|<Block>\}
ALIas:DEFine?

Related Commands ALIas:STATE

Arguments The first <QString> is the alias label.
This label cannot be a command name. Labels must start with a letter and can contain only letters, numbers, and underscores; other characters are not allowed. The label must be less than or equal to 12 characters.

The second <QString> or <Block> is a complete sequence of program messages.
The messages can contain only valid commands that must be separated by semicolons and must follow all rules for concatenating commands. The sequence must be less than or equal to 256 characters.

Examples ALIAS:DEFINE "ST1",":RECALL:SETUP 5;:AUTOSET EXECUTE;:SELECT:CH1 ON" defines an alias named "ST1" that sets up the instrument.

ALIAS:DEFINE? "ST1" returns :ALIAS:DEFINE "ST1",\#246
:RECALL:SETUP 5;:AUTOSET EXECUTE;:SELECT:CH1 ON.

## ALlas:DELEte (No Query Form)

This command removes a specified alias and is identical to ALIas:DELEte: NAMe. An error message is generated if the named alias does not exist.

Group Alias

Syntax ALIas:DELEte <QString>

Related Commands *ESR?, ALIas:DELEte:ALL

Arguments <QString> is the name of the alias to be removed. Using ALIas: DELEte without specifying an alias causes an execution error. <QString> must be a previously defined value.

Examples ALIAS:DELETE "SETUP1" deletes the alias named SETUP1.

## ALlas:DELEte:ALL (No Query Form)

This command deletes all existing aliases.

Group Alias

Syntax ALIas:DELEte:ALL

Related Commands ALIas:DELEte, ALIas:DELEte:NAMe

Examples ALIAS:DELETE:ALL deletes all existing aliases.

## ALlas:DELEte:NAMe (No Query Form)

This command removes a specified alias. An error message is generated if the named alias does not exist. This command is identical to ALIas: DELEte.

Group Alias

Syntax ALIas:DELEte:NAMe <QString>

Arguments <QString> is the name of the alias to remove. Using ALIas: DELEte: NAMe without specifying an alias causes an exception error.<QString> must be a previously defined alias.

Examples ALIAS:DELETE:NAME "STARTUP" deletes the alias named STARTUP.

## ALlas:STATE

This command turns aliases on or off and is identical to the ALIas command. The query form of this command returns the state of the aliases.

Group Alias

Syntax ALIas: STATE \{<NR1>|OFF|ON\}
ALIas: STATE?

Arguments <NR1> = 0 turns off aliases; any other value turns on aliases.
OFF turns alias expansion off. If a defined alias is sent when ALIas:STATE is OFF, the instrument generates a command error (102).

ON turns alias expansion on. When a defined alias is received, the specified command sequence is substituted for the alias and executed.

Examples ALIAS:STATE OFF turns off the alias feature.
ALIAS: STATE? might return :ALIAS: STATE ON, indicating that alias expansion is currently turned on.

## ALLEv? (Query Only)

This query-only command prompts the instrument to return all events and their messages (delimited by commas), and removes the returned events from the Event Queue. Use the *ESR? query to enable the events to be returned. This command is similar to repeatedly sending *EVMsg? queries to the instrument.

Group Status and Error

Syntax ALLEv?

Related Commands *ESR?, EVMsg?

Examples ALLEV? might return :ALLEV 2225,"Measurement error, No waveform to measure; "420,"Query UNTERMINATED;".

## ALLOcate:WAVEform:REF<x>? (Query Only)

This query-only command returns the record length for the specified reference waveform, if active, or zero ( 0 ) if not active (that is, no slot exists for the reference waveform).

Group Waveform Transfer

Syntax ALLOcate:WAVEform:REF<x>?

Examples ALLOCATE:WAVEFORM:REF3? might return 5000 if a 5000 point waveform was active in the reference 3 slot.

## APPLication:ACTivate (No Query Form)

For legacy Java based applications, starts the application specified in the string. The available applications depend on the oscilloscope model and installed options. (DPOJET and DPOJET-based applications do not require this command
and are started automatically by sending them any command, such as DPOJET: VERsion?)

Group Miscellaneous

Syntax APPLication:ACTivate <string>

Related Commands APPLication:SCOPEAPP:WINDOW

Arguments <string> is the name of the application that you want to start. Enter the application name exactly as it appears in the oscilloscope Analyze menu.

Examples APPLICATION:ACTIVATE "PCI Express" starts the PCI Express application.

## APPLication:SCOPEAPP:WINDOW

Sets or queries whether the oscilloscope application is minimized or displayed full screen.

Group Miscellaneous

Syntax APPLication:SCOPEAPP:WINDOW \{FULLSCREEN|MINIMIZED\} APPLication:SCOPEAPP:WINDOW?

Related Commands APPLication:ACTivate

Arguments FULLSCREEN sets the oscilloscope display to fill the oscilloscope screen.
MINIMIZED minimizes the oscilloscope display to an icon at the bottom of the screen.

Examples APPLICATION:SCOPEAPP:WINDOW FULLSCREEN causes the oscilloscope display to fill the oscilloscope screen.

APPLICATION:SCOPEAPP:WINDOW? might return :APPLICATION:SCOPEAPP:WINDOW MINIMIZED, indicating that the oscilloscope display has been minimized.

## AUTOSet (No Query Form)

This command (no query format) sets the vertical, horizontal, and trigger controls of the instrument to automatically acquire and display the selected waveform. (To autoset a video waveform, the video trigger must be set to video standard, not custom. Video arguments require video hardware.) This is equivalent to pressing the front panel AUTOSET button. For a detailed description of autoset functionality, see Autoset in the index of the online help for your instrument.

Group Miscellaneous

Syntax AUTOSet \{EXECute|UNDo|VFields|VIDeo|VLines\}

Related Commands DISplay:GRAticule

#### Abstract

Arguments EXECute autosets the displayed waveform; this is equivalent to pressing the front panel AUTOSET button. If the display is set to a PAL, MV, or IRE graticule, this argument forces the graticule display to full mode (frame, grid, and cross hair).

UNDO returns the instrument to the setting prior to executing an autoset. VFields autosets the displayed waveform. VIDeo autosets the displayed waveform. VLines autosets the displayed waveform.

Examples AUTOSET VFields sets the instrument to trigger on all video fields.

## AUXIn:BANdwidth

This command sets or queries the selectable low-pass bandwidth limit filter of the AUX In input. The bandwidth will change with an appropriate probe attached. This is equivalent to selecting Bandwidth from the Vertical menu.
The query form of this command always returns the maximum bandwidth of the AUX In input.

Group Vertical

Syntax AUXIn: BANdwidth <NR3> AUXIn:BANdwidth?

Arguments <NR3> is one of the supported bandwidths on the attached probe.

Examples AUXIN: BANDWIDTH $10.0000 \mathrm{E}+9$ sets the bandwidth of AUX In input to 10 GHz .

AUXIN: BANDWIDTH?, for DPO7054 instruments, might return :AUXIN: BANDWIDTH $500.0000 \mathrm{E}+06$, indicating that there is no bandwidth limiting on the AUX In input.

## AUXIn:COUPling

Group Vertical

Syntax AUXIn: COUPling <NR3>
AUXIn:COUPling?

Arguments <NR3> is one of the supported input attenuator couplings on the attached probe.

## Examples AUXIN:COUPLING GND sets the AUX In input to ground.

AUXIN: COUP7ing? might return :AUXIN: COUPling GND, indicating that AUX In input is set to GND coupling.

## AUXIn:OFFSet

This command sets or queries the vertical offset for the AUX In input. This command is equivalent to selecting Offset from the Vertical menu.

This command offsets the vertical acquisition window (moves the level at the vertical center of the acquisition window) for the input. Visualize offset as scrolling the acquisition window towards the top of a large signal for increased offset values, and scrolling towards the bottom for decreased offset values. The resolution of the vertical window sets the offset increment for this control.

Offset adjusts only the vertical center of the acquisition window to help determine what data is acquired. The instrument always displays the input signal minus the offset value. The channel reference marker will move to the vertical graticule position given by the negative of the offset value divided by the scale factor, unless that position is off-screen. If the computed coordinate for the reference
mark is off-screen, the mark moves to the nearest screen limit and changes from a right-pointing arrow $(\rightarrow)$ to an arrow pointing in the appropriate off-screen direction.

Group Vertical

Syntax AUXIn:OFFSet <NR3> AUXIn:OFFSet?

Arguments <NR3> is the offset value for the specified channel.

Examples AUXIN:OFFSet 2.0E-3 sets the offset for AUX In input to 2 mV .
AUXIN:OFFSet? might return :AUXIN:OFFSET 1.0000E-03, indicating that the offset for AUX In input is set to 1 mV .

## AUXIn:PRObe:AUTOZero (No Query Form)

The command sets the probe attached to the AUX In input to autozero.

Group Vertical

Syntax AUXIn:PRObe:AUTOZero EXECute

Arguments EXECute sets the probe to autozero.

Examples AUXIN: PROBE:AUTOZERO EXECUTE sets the probe to autozero.

## AUXIn:PRObe:DEGAUSS (No Query Form)

This command starts a degauss cycle of the probe attached to the AUX In input. The degauss cycle will change with an appropriate probe attached.

Group Vertical

Syntax AUXIn:PRObe:DEGAUSS EXECute

Arguments EXECute starts a probe degauss cycle.

Examples AUXIN:PROBE:DEGAUSS EXECUTE, degausses the probe attached to the AUX In input.

## AUXIn:PRObe:DEGAUSS:STATE? (Query Only)

This command queries whether the probe attached to the AUX In input is degaussed.

Group Vertical

Syntax AUXIn:PRObe:DEGAUSS:STATE?

Examples AUXIN:PROBE:DEGAUSS:STATE? might return
AUXIN:PROBE:DEGAUSS:STATE PASSED, indicating that the probe is degaussed.

## AUXIn:PRObe:FORCEDRange

This command sets the probe attached to the AUX In input to the specified range, or the command queries the probe range.

Group Vertical

Syntax AUXIn:PRObe:FORCEDRange <NR3> AUXIn: PRObe:FORCEDRange?

Arguments <NR3> specifies the probe range.

Examples If a TCP0030 current probe is attached the AUX IN input, AUXIN: PROBE: FORCEDRANGE 5.0 sets the probe to its 5 Ampere range.

AUXIN: PROBE:FORCEDRANGE might return :AUXIN:PROBE:FORCEDRANGE $10.0000 \mathrm{E}+36$, indicating that the probe range is set to $10.0000 \mathrm{E}+36 \mathrm{~dB}$.

## AUXIn:PRObe:GAIN? (Query Only)

This query-only command returns the gain factor of the probe that is attached to the AUX In input. The "gain" of a probe is the output divided by the input transfer ratio. For example, a common 10x probe has a gain of 0.1.

Group Vertical

Syntax AUXIn:PRobe:GAIN?

Examples AUXIN:PROBE:GAIN? might return :AUXIN:PROBE:GAIN 0.1000E+00, indicating that the attached 10x probe delivers 0.1 V to the AUX In BNC for every 1.0 V applied to the probe input.

## AUXIn:PRObe:ID:SERnumber? (Query Only)

This query-only command returns the probe serial number.

Group Vertical

Syntax AUXIn:PRObe:ID:SERnumber?

Examples AUXIN:PROBE:ID:SERNUMBER? might return :AUXIN:PROBE:ID:SERNUMBER "B999999", indicating that the probe serial number is set to B999999.

## AUXIn:PRObe:ID:TYPe? (Query Only)

This query-only command returns the probe type.

Group Vertical

Syntax AUXIn:PRObe:ID:TYPe?

Examples AUXIN:PROBE:ID:TYPE? might return :AUXIN:PROBE:ID:TYPE "TAP1500", indicating that the probe type is set to TAP1500.

## AUXIn:PRObe:INPUTMode

This command sets or queries one of the probe's four input modes on the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:INPUTMode \{COMmonmode|DEFault|DIFFerential|A|B\} AUXIn:PRObe:INPUTMode?

Arguments COMmonmode sets the probe to route common-mode signals to the host.
DEFault sets the probe to the default mode.
DIFFerential sets the probe to route differential signals to the host.
A sets the probe to route single-ended A signals to the host.
$B$ sets the probe to route single-ended $B$ signals to the host.

Examples AUXIN: PROBE:INPUTMODE A sets the probe to route single-ended A signals to the host.

AUXIN: PROBE:INPUTMODE? might return :AUXIN: PROBE:INPUTMODE DEFAULT, indicating that the probe input mode on the AUXIN input is set to Default.

## AUXIn:PRObe:INPUTMode:AOFFSet

This command sets or queries the requested A mode offset control of the probe that is attached to the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:INPUTMode:AOFFSet <NR3> AUXIn: PRObe:INPUTMode:AOFFSet?

Arguments <NR3> specifies the A mode offset control.

Examples AUXIN:PROBE:INPUTMODE:AOFFSET 0.2 sets the A mode offset control to 0.2 V .

AUXIN: PROBE:INPUTMODE:AOFFSET? might return : AUXIN: PROBE:
INPUTMODE: AOFFSET 0.0000 , indicating that the A mode offset control is set to 0 V .

## AUXIn:PRObe:INPUTMode:BOFFSet

This command sets or queries the requested $B$ mode offset control of the probe that is attached to the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:INPUTMode:BOFFSet <NR3> AUXIn:PRObe:INPUTMode:BOFFSet?

Arguments <NR3> specifies the B mode offset control.

Examples AUXIN:PROBE:INPUTMODE: BOFFSET 0.2 sets the B mode offset control to 0.2 V .

AUXIN: PROBE: INPUTMODE:BOFFSET? might return : AUXIN: PROBE:
INPUTMODE: BOFFSET? " 0.0000 ", indicating that the B mode offset control is set to 0 V .

## AUXIn:PRObe:INPUTMode:CMOFFSet

This command sets or queries the requested common mode offset control of the probe that is attached to the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:INPUTMode:CMOFFSet <NR3> AUXIn:PRObe:INPUTMode:CMOFFSet?

Arguments <NR3> specifies the common mode offset control

Examples AUXIN:PROBE:INPUTMODE:CMOFFSET 0.2 sets the common mode offset control to 0.2 V .

AUXIN: PROBE:INPUTMODE: CMOFFSET? might return :AUXIN: PROBE: INPUTMODE: CMOFFSET? " 0.0000 ", indicating that the common mode offset control is set to 0 V .

## AUXIn:PRObe:INPUTMode:DMOFFSet

This command sets or queries the requested differential mode offset control of the probe that is attached to the AUX In input.

Group Vertical

```
Syntax AUXIn:PRObe:INPUTMode:DMOFFSet <NR3> AUXIn:PRObe:INPUTMode:DMOFFSet?
```

Arguments <NR3> specifies the differential mode offset control.

Examples AUXIN:PROBE:INPUTMODE:DMOFFSET 0.2 sets the differential mode offset control to 0.2 V .

AUXIN: PROBE: INPUTMODE: DMOFFSET? might return : AUXIN: PROBE: INPUTMODE: DMOFFSET? " 0.0000 ", indicating that the differential mode offset control is set to 0 V .

## AUXIn:PRObe:RANge

Group Vertical

Syntax AUXIn:PRObe:RANge
\{ATTEN1X|ATTEN1_25X|ATTEN1_5X|ATTEN1_75X|ATTEN2X|ATTEN2_5X|
ATTEN3X|ATTEN3_5X|ATTEN4X|ATTEN4_5X|ATTEN5X|ATTEN5_5X|
ATTEN6X|ATTEN6_5X|ATTEN7X|ATTEN7_5X|ATTEN8X|ATTEN8_5X|
ATTEN9X|ATTEN9_5X|ATTEN10X|ATTEN12_5X|ATTEN15X|ATTEN17_5X|
ATTEN20X|ATTEN25X|ATTEN30X|ATTEN35X|ATTEN40X|ATTEN45X|
ATTEN50X|ATTEN55X|ATTEN60X|ATTEN65X|ATTEN70X|ATTEN75X|
ATTEN80X|ATTEN85X|ATTEN90X|ATTEN95X|ATTEN100X|ATTEN125X|
ATTEN150X|ATTEN175x|ATTEN200X|ATTEN250X|ATTEN300X|
ATTEN350X|ATTEN400X|ATTEN450X|ATTEN500X|ATTEN550X|
ATTEN600X|ATTEN650X|ATTEN700X|ATTEN750X|ATTEN800X|
ATTEN850X|ATTEN900X|ATTEN950X|ATTEN1000X\}
AUXIn: PRObe:RANge?

Examples AUXIN: PROBE:RANGE ATTEN10X sets the probe attenuation to 10X.
AUXIN:PROBE:RANGE? might return :AUXIN:PROBE:RANGE ATTEN1_25X, indicating that the probe attenuation is set to 25 X .

## AUXIn:PRObe:RESistance? (Query Only)

This query-only command returns the resistance factor of the probe that is attached to the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:RESistance?

Examples AUXIN:PROBE:RESISTANCE? might return :AUXIN: PROBE:RESISTANCE $10.0000 \mathrm{E}+06$, indicating that the input resistance of the probe attached to the AUXIN input is set to $10 \mathrm{M} \Omega$.

## AUXIn:PRObe:SET

This command sets or queries aspects of probe accessory user interfaces, for example probe attenuation factors. The available arguments for this command will vary depending on the accessory you attach to the instrument auxiliary trigger input.

For the P7260 probe, you can select between two attenuation factors using either this GPIB command or the push switch on the probe. The probe enables the relevant path and adjusts the settings based on the characteristics of the path in use. The probe signal path selection is not kept in persistent storage. The probe will lose the selection if you reboot the instrument or remove the probe. Also, the instrument does not store the selection in the save/recall setup operation.

Group Vertical

Syntax AUXIn:PRobe:SET <QString> AUXIn:PRObe:SET?

Arguments <QString> is a quoted string representing a settable aspect of the attached accessory.

Example strings for some probes are shown as follows:

ATTENUATION 5 X sets the P7260 probe to $\pm 0.75 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 5X attenuation.

ATTENUATION 25 X sets the P 7260 probe to $\pm 3 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 25 X attenuation.

VTERMsource AUTO sets the P7380SMA probe voltage termination source to auto.

VTERMsource INTerna1 sets the P7380SMA probe voltage termination source to internal.

VTERMsource EXTerna1 sets the P7380SMA probe voltage termination source to external.

## Examples

AUXIN: PROBE: SET "ATTEN 25 X " sets the P7260 probe to the selection for $\pm 3 \mathrm{~V}$ dynamic range with 3 GHz bandwidth and 25 X attenuation.

AUXIN: PROBE:SET? might return :CH2:PROBE:SET "ATTENUATION 5X" indicating that the P7260 probe is set to the selection for $\pm 0.75 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 5 X attenuation.

AUXIN: PROBE:SET? "ATTEN" might return :CH2:PROBE:SET
"ATTENUATION $25 \times$ ", indicating that the P7260 probe is set to the selection for $\pm 3 \mathrm{~V}$ dynamic range with 3 GHz bandwidth and 25 X attenuation.

## AUXIn:PRObe:SIGnal

This command sets or queries aspects of probe accessory user interfaces. The available arguments for this command will vary depending on the accessory you attach to the instrument.

Group Vertical

Syntax AUXIn:PRObe:SIGna1 \{PASS|BYPass\}
AUXIn:PRObe:SIGna1?

Arguments PASS opens a relay passing your signal to the instrument.
BYPass closes a relay preventing your signal from reaching the instrument. During probe degauss, the signal should be bypassed.

Examples AUXIN:PROBE:SIGNAL PASS opens a relay passing your signal to the instrument.
AUXIN:PROBE:SIGNAL? might return :AUXIN:PROBE:SIGNAL BYPASS, indicating that the relay is closed preventing your signal from reaching the instrument.

## AUXIn:PRObe:TIPtype

This command sets or queries the type of probe tip being used.

Group Vertical

Syntax AUXIn:PRObe:TIPtype \{HBWStraightflex|OTHer\} AUXIn:PRObe:TIPtype?

Arguments HBWStraightflex lets the instrument know you are using a high bandwidth straight-flex probe tip.

отнer lets the instrument know you are not using a high bandwidth straight-flex probe tip.

Examples AUXIN: PROBE:TIPTYPE HBWStraightflex sets the auxiliary input probe tip type to HBWStraightflex.

AUXIN:PROBE:TIPTYPE? might return :AUXIN: PROBE:TIPTYPE OTHER, indicating the probe tip is not a HBWStraightflex type.

## AUXIn:PRObe:UNIts? (Query Only)

This query-only command returns a string describing the units of measure for the probe attached to the AUX In input.

Group Vertical

Syntax AUXIn:PRObe:UNIts?

Examples AUXIN:PROBE:UNITS? might return :AUXIN:PROBE:UNITS " V ", indicating that the units of measure for the attached probe are volts.

## AUXIn:PROBEFunc:EXTAtten

This command sets the input-output ratio, of external attenuation or gain, between the signal and the AUX In input.
The query form of this command returns the user-specified attenuation. Note that this command deals with an attenuation factor, not a gain factor, unlike $\mathrm{CH}<\mathrm{x}>$ :PRObe? (This command returns a value independent of the external attenuation). For example, if you specify a 20 X attenuation factor, the commands
return the following values (assuming that a 1x probe is presently attached, since the external attenuation is used in combination with the probe attenuation):

AUXIN: PROBE:EXTA? 20.00E+0
AUXIN: PROBE? 1.0E+0
This command is equivalent to selecting Attenuation from the Vertical menu, and then either viewing or setting Ext Atten.

Group Vertical

Syntax AUXIn: PROBEFunc:EXTAtten <NR3>
AUXIn: PROBEFunc:EXTAtten?

Related Commands AUXIn:PROBEFunc:EXTDBatten

Arguments <NR3> is the attenuation value, which is specified as a multiplier in the range from $1.00 \mathrm{E}-10$ to $1.00 \mathrm{E}+10$.

Examples AUXIN:PROBEFUNC:EXTATTEN 167.00E-3 sets specifies an external attenuation, which is connected between the user's input signal and the input of the probe attached to the AUX In input.

AUXIN:PROBEFUNC:EXTATTEN? might return :AUXIN:PROBEFUNC:EXTATTEN $1.0000 \mathrm{E}+00$, indicating that the attached probe is connected directly to the user's signal.

## AUXIn:PROBEFunc:EXTDBatten

This command sets the input-output ratio (expressed in decibel units) of external attenuation or gain between the signal and the instrument AUX In input.

The query form of this command returns the user-specified attenuation in decibels: $1 \mathrm{X}=0 \mathrm{~dB}, 10 \mathrm{X}=20 \mathrm{~dB}, 100 \mathrm{X}=40 \mathrm{~dB}$, and similar things.

This command is equivalent to selecting Attenuation from the Vertical menu, and then either viewing or setting Ext $\operatorname{Att}(\mathrm{dB})$.

Group Vertical

Syntax AUXIn: PROBEFunc:EXTDBatten <NR3> AUXIn: PROBEFunc:EXTDBatten?

Related Commands AUXIn:PROBEFunc:EXTDBatten

Arguments <NR3> is the attenuation value, which is specified in the range from -200.00 dB to 200.00 dB .

Examples AUXIN: PROBEFUNC: EXTDBATTEN 2.5 sets the attenuation value on the AUX IN input to 2.5 dB .

AUXIN:PROBEFUNC:EXTDBATTEN? might return :AUXIN: PROBEFUNC: EXTDBATTEEN $2.5000 \mathrm{E}+00$, indicating that the attenuation value on the AUX IN input is set to 2.5 dB .

## AUXIn:PROBEFunc:EXTUnits

This command sets the unit of measurement for the external attenuator of the AUX In input. There is also a corresponding query that returns the user-specified unit of measurement for the external attenuator. Unless these units are set to the factory default string value of "None", they become the attenuated units of measurement for the input. It is assumed that the probe connected to the input is of the correct type to receive the output of the user's external transducer or network.

Group Vertical

Syntax AUXIn:PROBEFunc:EXTUnits <QString> AUXIn: PROBEFunc:EXTUnits?

Related Commands AUXIn:PRObe:UNIts?

> Arguments <QString> can contain a string of up to eight characters to indicate the attenuation unit of measurement for the AUX In input. However, most instrument attenuators only display the first two characters.

$\begin{array}{ll}\text { Examples } & \text { AUXIN: PROBEFUNC: EXTUNITS "Pa" sets the unit of measurement for the } \\ & \text { AUX IN external attenuator. }\end{array}$
AUXIN: PROBEFUNC:EXTUNITS? might return :AUXIN: PROBEFUNC: EXTUNITS "Pa", indicating that the AUX IN external attenuator units of measurement are Pascals.

## AUXIn:VTERm:DUAL:A

This command sets or queries the termination voltage for probes with dual inputs that support settable termination voltage.

Group Vertical

Syntax AUXIn:VTERm:DUAL:A <NR3>
AUXIn:VTERm:DUAL:A?

Arguments <NR3> specifies the termination voltage.

Examples AUXIN:VTERM:DUAL:A 1.5 sets the termination voltage of the A input of the AUXIN probe to 1.5 Volts.

AUXIN:VTERm:DUAL:A? might return AUXIN:VTERM:DUAL:A 0.0000, indicating that the termination voltage for the A input of the probe plugged into the AUX In input is set to 0 volts.

## AUXIn:VTERm:DUAL:B

This command sets or queries the termination voltage for probes with dual inputs that support settable termination voltage.

Group Vertical

Syntax AUXIn:VTERm:DUAL:B <NR3>
AUXIn:VTERm:DUAL:B?

Arguments <NR3> specifies the termination voltage.

Examples AUXIN:VTERM:DUAL:B 0.5 sets the termination voltage of the $B$ input of the AUXIN probe to 0.5 Volts.

AUXIN:VTERm:DUAL: B? might return AUXIN:VTERM:DUAL:B 0.0000, indicating that the termination voltage for the $B$ input of the probe plugged into the AUX In input is set to 0 volts.

## AUXout? (Query Only)

This query-only command returns the auxiliary output setup and is equivalent to selecting External Signals. From the Utilities menu, and then viewing the current settings for the AUX OUT Configuration.

Group Miscellaneous

Syntax AUXout?

Related Commands AUXout:SOUrce

Examples AUXOUT? might return :AUXOUT:SOURCE ATRIGGER;EDGE RISING, indicating that the source at the BNC connector is set to the A trigger and the polarity is set to the rising edge of the trigger output signal.

## AUXout:EDGE

This command sets or queries the direction in which the trigger output signal will transition when a trigger occurs.

Group Miscellaneous

Syntax AUXout:EDGE \{RISing|FALling\}
AUXout:EDGE?

Arguments RISing sets the polarity to the rising edge.
FALling sets the polarity to the falling edge.

Examples AUXOUT: EDGE RISING sets the polarity to rising edge.
AUXOUT: EDGE? might return :AUXOUT: EDGE FALLING, indicating that the polarity is set to falling edge.

## AUXout:SOUrce

This command sets or queries the trigger source at the BNC connection. This command is equivalent to selecting External Signals from the Utilities menu and then selecting the desired Configuration setting.

Group Miscellaneous

Syntax AUXout: SOUrce \{ATRIGger|BTRIGger|DELayed|EVENT|REFOUT\} AUXout: SOUrce?

Related Commands AUXout?

Arguments ATRIGger sets the source at the BNC connector to the main trigger.
BTRIGger sets the source at the BNC connector to the delayed trigger. ( $7 \mathrm{~K} / 70 \mathrm{~K}$ )
EVENT sets the source at the BNC connector to a specified event. ( $7 \mathrm{~K} / 70 \mathrm{~K}$ )
DELayed sets the source at the BNC connector to the delayed trigger.
REFOUT sets the source at the BNC connector to the reference output. ( $5 \mathrm{~K} / 7 \mathrm{~K}$ )

Examples AUXOUT:SOURCE? might return :AUXOUT: SOURCE ATRIGGER, indicating that the source at the BNC connector is set to the A trigger.

## BELI (No Query Form)

This command was previously used to beep an audio indicator and is provided for backward compatibility.

Group Miscellaneous

Syntax BEL1

Examples BELL is accepted but does nothing.

## BUS:B1<x>:DISplay:HIERarchical

This command sets or queries the display of a bus layer on or off.

Group Bus

Syntax BUS:B1<x>:DISplay:HIERarchical <QString> BUS:B1<x>:DISplay:HIERarchical?

Arguments <QString> consists of two items; the layer identifier and the ON/OFF value.

Examples BUS:B1:DISplay:HIERarchica1 "BUS1.Lane0 OFF" sets the display of bus 1 , lane 0 off.

## BUS:B1<x>:DISplay:LAYout

This command sets or queries the format a bus layer should use.

Group Bus

Syntax BUS:B1<x>:DISplay:LAYout <QString>
BUS:B1<x>:DISplay:LAYout?

Arguments <QString> consists of two items; the layer identifier and the format identifier.

Examples BUS:B1:DISplay:LAYOUT "BUS1.Lane0 Hex" sets the display layout to display bus 1 , lane 0 in hex format.

## BUS:B1<x>:USB:HYSTeresis

This command sets or queries the hysteresis for USB Super Speed.

Group Bus

Syntax BUS:B1<x>:USB:HYSTeresis <NR3> BUS:B1<x>:USB:HYSTeresis?

Arguments <NR3> sets the hysteresis for USB Super Speed.

Examples BUS:B1:USB:HYSTeresis? might return :BUS:B1:USB:HYSTERESIS $20.0000 \mathrm{E}-3$ indicating the hysteresis is set to 20 ms .

## BUS:B<x>:CAN:BITRate

This command sets or queries the CAN bitrate. The bus is specified by x .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<X>:CAN:BITRate \{RATE10K|RATE100K|RATE1M|RATE125K
| RATE153K|RATE20K|RATE25K|RATE250K
| RATE31K|RATE33K|RATE37K|RATE400K | RATE50K|RATE500K|RATE62K|RATE68K | RATE800K|RATE83K|RATE92K|CUSTom \} BUS: B<x>:CAN:BITRate?

Arguments Arguments specify the bitrate.

$$
\begin{array}{ll}
\text { Examples } & \text { BUS:B1:CAN:BITRate Rate1M sets the CAN bitrate to } 1 \mathrm{Mb} \\
\text { BUS:B1:CAN:BITRate? might return :BUS:B1:CAN:BITRATE RATE500K, } \\
\text { indicating the CAN bitrate is set to } 500 \mathrm{k} .
\end{array}
$$

## BUS:B<x>:CAN:BITRate:VALue

This command sets or queries CAN custom bitrate value. The bus is specified by x .
NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:CAN:BITRate:VALue <nr3> BUS:B<X>:CAN:BITRate:VALue?

Arguments <nr3> specifies the CAN custom bitrate value.

Examples BUS:B1:CAN: BITRate:VALue 400000 sets the custom bitrate value to 400 k .
BUS:B1:CAN:BITRate:VALue? might return :BUS:B1:CAN:BITRATE:VALUE $500.0000 \mathrm{E}+3$, indicating that the custom bitrate value is set to 500,000 .

## BUS:B<x>:CAN:PRObe

This command sets or queries CAN probe type. The bus is specified by x .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:CAN:PRObe \{DIFFerential|CANH|CANL|RX|TX\} BUS: $B<x>$ :CAN: PRObe?

Arguments DIFFerential specifies a differential probe.
CANH specifies a CANH probe type.
CANL specifies a CANL probe type.
RX specifies an RX probe type.
TX specifies a TX probe type.

Examples BUS:B1:CAN: PRObe DIFF sets the probe type to differential.
BUS:B1:CAN:PRObe? might return :BUS:B1:CAN:PROBE CANH, indicating that the CANH is the probe type.

## BUS:B<x>:CAN:SOUrce

This command sets or queries the CAN source channel. The bus is specified by x .
NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:CAN:SOUrce \{CH1|CH2|CH3|CH4 |DO|D1|D10|D11
|D12|D13|D14|D15 |D2|D3|D4|D5 |D6|D7|D8|D9
|MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:CAN:SOUrce?

Arguments Arguments specify a channel.

Examples BUS:B1:CAN: SOUrce MATH4 sets the source channel to MATH4.
BUS:B1:CAN:SOUrce? might return :BUS:B1:CAN:SOURCE CH1, indicating that the CAN source channel is CH1.

## BUS:B<x>:DISplay:DECOde:FILe

NOTE. Not available on some models.

This command sets or queries the name of a TSF-formatted text file used to construct a symbolic decode table from for the specified bus.

The decode table associates symbolic names with the numeric values they represent. When a Bus is set to perform symbolic decode, numeric values in its "busform" trace are replaced by the first matching symbol (if any) from the table. Each Bus can use its own specific lookup table. For example, an I2C-type Bus might use a table that associates the symbol "ROM" with the number 0b10100111, even though another the decode table for another bus associates the symbol "MAX" with that same number. The lookup table format is the same for all the bus types.

The decode files for all the buses are available in the default location C:\Users\Public\Tektronix\TekScopelbusDecodeTables\.

Group Bus

Syntax BUS:B<x>:DISplay:DECOde:FILe \{decodeFileName\} BUS:B<X>:DISplay:DECOde:FILe?

Arguments decodeFileName specifies the name of a TSF-formatted text file.

Examples BUS:B1:DISPLAY:DECODE:FILE
"C:\Users\Public\Tektronix\TekScope\busDecodeTables BusDecode.tsf" uses the TSF-formatted text file BusDecode.tsf.

BUS:B1:DISPLAY:DECODE:FILE? might
return :BUS:B1:DISPLAY:DECODE:FILE
"C:\Users\Public\Tektronix\TekScope\busDecodeTables\} BusDecode.tsf", indicating that the TSF-formatted text file used is BusDecode.tsf.

## BUS:B<x>:DISplay:DECOde:STAte

NOTE. Not available on some models.

This command sets or queries whether the specified bus is enabled to display symbolic decode of its busform values.

Group Bus

Syntax BUS:B<X>:DISplay:DECOde:STAte \{OFF|ON|RELoad\}
BUS:B<X>:DISplay:DECOde:STAte?

## Related Commands

Arguments

Examples

OFF $=$ the specified bus does not display symbolic decode of its busform values.
$\mathrm{ON}=$ the specified bus displays symbolic decode of its busform values.
RELoad reparses to whatever symbolic decode file name it is currently assigned. For example, this can be useful if the contents of that file are changed after having assigned it to a Bus.

BUS:B1:DISPLAY:DECODE:STATE ON enables the bus B1 to display symbolic decode of its busform values.

BUS:B1:DISPLAY:DECODE:STATE? might return
:BUS:B1:DISPLAY:DECODE:STATE OFF, indicating that the bus B1 does not display symbolic decode of its busform values.

## BUS:B<x>:ETHERnet:PRObe

This command specifies the Ethernet probe type: differential or single-ended. The default is DIFFerentia1. $B<x>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Bus

Syntax BUS:B<x>:ETHERnet:PRObe \{DIFFerential|SINGleended\} BUS: $B<X>:$ ETHERnet:PRObe?

Related Commands BUS:B $<\mathrm{x}>:$ ETHERnet:SOUrce
BUS:B<x>:ETHERnet:SOUrce:DMINus
BUS:B $<\mathrm{x}>$ :ETHERnet:SOUrce:DPLUs

## Arguments DIFFerential

SINGleended

Examples BUS:ETHERNET:PROBE DIFFERENTIAL specifies that a differential probe is connected to the input channels specified by BUS: $\mathrm{B}<\mathrm{x}>:$ ETHERnet:SOUrce: DPLUs and BUS:B<x>:ETHERnet:SOUrce:DMINus.

BUS: ETHERNET: PROBE? might return SINGLEENDED, indicating the probe type has been set to single-ended.

## BUS:B<x>:ETHERnet:SOUrce

This command specifies the Ethernet data source for differential input. The supported source waveforms are channels $1-4$ and math waveforms $1-4$. The default is channel $1 . \mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Bus

Syntax BUS: $\mathrm{B}<\mathrm{x}>$ :ETHERnet:SOUrce
\{CH1|CH2|CH3|CH4|MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:ETHERnet:Source?

Related Commands BUS:B<x>:ETHERnet:PRObe

Arguments $\mathrm{CH} 1-4$ specifies to use one of the channels 1-4 as the Ethernet data source for differential input.

MATH1-4 specifies to use a math waveform as the source for Ethernet data differential input

Examples BUS:B1:ETHERNET:SOURCE CH4 specifies to use the channel 4 waveform as the source for Ethernet data.

BUS: B1: ETHERNET: SOURCE? might return CH2, indicating that channel 2 is the currently specified source for Ethernet data.

## BUS:B<x>:ETHERnet:SOUrce:DMINus

This command specifies the Ethernet data source for D- input for differential probing. The default is Channel 2 . $\mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Bus

Syntax BUS:B<x>:ETHERnet:SOUrce:DMINus \{CH1|CH2|CH3|CH4| D0|D1|D2|D3 |D4| D5|D6|D7|D8| D9|D10|D11|D12| D13|D14|D15| MATH1|MATH2|MATH3|MATH4\}

BUS:B<x>:ETHERnet:SOUrce:DMINus?

Related Commands BUS:B<x>:ETHERnet:PRObe
BUS:B<x>:ETHERnet:SOUrce:DPLUs

Arguments $\quad \mathrm{CH} 1-4$ specifies to use one of the analog channels as the Ethernet data source for the D - input.

D0-D15 specifies to use one of the digital channels D0 - D15 as the Ethernet data source for the D - input.

MATH1-4 specifies to use one of the math waveforms as the Ethernet data source for the D - input.

Examples BUS:ETHERNET:SOURCE:DMINUS D5 specifies digital channel 5 as the Ethernet data source for the D- input.

BUS: ETHERNET: SOURCE:DMINUS? might return CH3, indicating that channel 3 is the currently specified Ethernet data source for the D- input.

## BUS:B<x>:ETHERnet:SOUrce:DPLUs

This command specifies the Ethernet data source for the $\mathrm{D}+$ input for differential probing. The default is channel $1 . \mathrm{B}<\mathrm{X}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Bus<br>Syntax BUS:B<x>:ETHERnet:SOUrce:DPLUs \{CH1|CH2|CH3|CH4|<br>D0|D1|D2|D3| D4| D5|D6|D7|D8| D9|D10|D11|D12| D13|D14|D15| MATH1|MATH2|MATH3|MATH4\} BUS:B<X>:ETHERnet:SOUrce:DPLUs?<br>Related Commands BUS:B<x>:ETHERnet:PRObe<br>BUS:B $<\mathrm{x}>:$ ETHERnet:SOUrce:DMINus

Arguments $\mathrm{CH} 1-4$ specifies to use one of the analog channels $1-4$ as the Ethernet data source for the D+ input.

D0-D15 specifies to use one of the digital channels D0 - D15 as the Ethernet data source for the $\mathrm{D}+$ input.

MATH1-4 specifies to use one of the math waveforms as the Ethernet data source for the $\mathrm{D}+$ input.

Examples BUS:ETHERNET:SOURCE:DPLUS D5 specifies D5 as the Ethernet data source for the $\mathrm{D}+$ input.

BUS:ETHERNET: SOURCE:DPLUS? might return CH3, indicating that channel 3 is the currently specified Ethernet data source for the D+ input.

## BUS:B<x>:ETHERnet:TYPe

This command specifies the Ethernet standard type: 10Base-T or 100Base-T. The default is ENET100BASETX. $\mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Bus

Syntax BUS:B<x>:ETHERnet:TYPe \{ENET10BASET|ENET100BASETX\} BUS:B<X>:ETHERnet:TYPe?

Related Commands BUS:B<x>:ETHERnet:PRObe

Arguments ENET10BASET specifies the Ethernet type as 10Base-T.
ENET100BASETX specifies the Ethernet type as 100Base-T.

Examples buS:B1:ETHERNET:TYPE ENET100bASETX specifies the Ethernet type as 100Base-T.

BUS:B1:ETHERNET:TYPE? might return ENET10BASET, indicating that 10Base-T is the currently specified Ethernet type.

## BUS:B<x>:FLEXRAY:BITRate

This command sets or queries the FLEXRAY bus bit rate. The bus is specified by x . The value of x can range from 1 to 16 .

## NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:FLEXRAY:BITRate \{RATE10M|RATE5M|RATE2M|CUSTom\} BUS:B<x>:FLEXRAY:BITRate?

Arguments Arguments specify the bit rate.

Examples BUS:B1:FLEXRAY:BITRate RATE2M sets the bit rate to 2 Mb .
BUS:B1:FLEXRAY:BITRate? might return :BUS:B1:FLEXRAY:BITRATE RATE10M, indicating the bit rate is 10 Mb .

## BUS:B<x>:FLEXRAY:BITRate:VALue

This command sets or queries FLEXRAY custom bit rate. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:FLEXRAY:BITRate:VALue <nr3> BUS:B<x>:FLEXRAY:BITRate:VALue?

Arguments <nr3> specifies the custom bit rate value.

Examples BUS:B1:FLEXRAY:BITRate:VALue $2.0 \mathrm{E}+6$ sets the custom bit rate to 2 Mb .
BUS:B1:FLEXRAY:BITRate:VALue? might return :BUS:B1:FLEXRAY:BITRATE:VALUE $10.0000 \mathrm{E}+6$, indicating the custom bit rate is set to 10 Mb .

## BUS:B<x>:FLEXRAY:CHANnel

This command sets or queries the FLEXRAY bus input channel. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<X>:FLEXRAY:CHANne1 \{A|B\} BUS:B<X>:FLEXRAY:CHANne1?

Arguments A specifies the A channel. $B$ specifies the $B$ channel.

Examples BUS:B1: FLEXRAY:CHANne1 B sets the FLEXRAY channel to B.
BUS:B1:FLEXRAY:CHANne1? might return :BUS:B1:FLEXRAY:CHANNEL A, indicating the channel is set to A .

## BUS:B<x>:FLEXRAY\{:PROBe|:SIGnal\}

This command sets or queries the FLEXRAY probe. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:FLEXRAY\{:PROBe|:SIGnal\} \{BDIFFBP|BM|TXRX\} BUS:B<X>:FLEXRAY\{:PROBe|:SIGnal\}?

Arguments Arguments are the FLEXRAY probe or signal types.

Examples BUS:B1:FLEXRAY: PROBe BM sets the FLEXRAY probe type to BM.
BUS:B1:FLEXRAY: PROBe? might return :BUS:B1:FLEXRAY:PROBE BDIFFBP, indicating the FLEXRAY probe is set to BDIFFBP.

## BUS:B<x>:FLEXRAY:SOUrce

This command sets or queries the FLEXRAY bus signal source. The bus is specified by $x$. The value of $x$ can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:FLEXRAY: SOUrce \{CH1|CH2|CH3|CH4 |DO|D1|D10|D11
|D12|D13|D14|D15 |D2|D3|D4|D5 |D6|D7|D8|D9 |MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:FLEXRAY:SOUrce?

Arguments Arguments are the available FLEXRAY sources.

Examples BUS:B1:FLEXRAY: SOUrce Math4 sets the FLEXRAY source to Math4.
BUS:B1:FLEXRAY:SOUrce? might return :BUS:B1:FLEXRAY:SOURCE CH1, indicating the source is channel 1 .

## BUS:B<x>:|2C:CLOCk:SOUrce

## NOTE. Not available on some models.

This command sets or queries the I2C clock (SCLK) source for the specified bus.

Group Bus

Syntax BUS:B<x>:I2C:CLOCk:SOUrce
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4|\}

```
BUS:B<x>:I2C:CLOCk:SOUrce?
```

Related Commands

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the I2C SCLK source. D0-D15 specifies a digital channel to use as the I2C SCLK source. MATH1-MATH4 specifies a math channel to use as the I2C SCLK source.

Examples BUS:B1:I2C:CLOCK: SOURCE CH1 sets the I2C SCLK source to CH1. BUS:B1:I2C:CLOCK: SOURCE? might return :BUS:B1:I2C:CLOCK: SOURCE D4, indicating that the I2C SCLK source is set to D4.

## BUS:B<x>:I2C:DATa:SOUrce

NOTE. Not available on some models.

This command sets or queries the I2C data (SDA) source for the specified I2C bus.

Group Bus

Syntax BUS:B<X>:I2C:DATa:SOUrce
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12| D13|D14|D15|MATH1|MATH2|MATH3|MATH4\} BUS:B<x>:I2C:DATa:SOUrce?

Related Commands
BUS: $\mathrm{B}<\mathrm{x}>:$ I2C:CLOCk:SOUrce, BUS: $\mathrm{B}<\mathrm{x}>:$ I2C:RWINADDR

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the I2C SDATA source. D0-D15 specifies a digital channel to use as the I2C SDATA source. MATH1-MATH4 specifies a math channel to use as the I2C SDATA source.

Examples BUS:B1:I2C:DATA:SOURCE D5 sets the I2C SDATA source to D5.
BUS:B1:I2C:DATA:SOURCE? might return :BUS:B1:I2C:DATA:SOURCE MATH1, indicating that the I2C SDATA source is set to MATH1.

## BUS:B<x>:I2C:RWINADDR

NOTE. Not available on some models.

This command sets or queries the manner in which seven-bit I2C slave addresses are represented in the "busform" display of the specified bus.

Group Bus

Syntax BUS:B<x>:I2C:RWINADDR \{No|Yes\} BUS:B<X>:I2C:RWINADDR?

Related Commands

Arguments No displays seven-bit slave addresses as integers in the range of 0 to 127 , with the state of the R/W* bit from the LSB of the slave address byte. For example, the slave address byte of 0 b10100101 is displayed as the value $0 \times 52 \mathrm{R}$.

Yes displays the entire slave address byte as a number, with the R/W* signal as its LSB (bit 0 ) and the slave address in bits 7..0. For example, the slave address byte of 0 b 10100101 is displayed as the value $0 \times \mathrm{xA} 5 \mathrm{R}$.

Examples BUS:B1:I2C:RWINADDR NO displays seven-bit slave addresses as integers in the range of 0 to 127 .

BUS:B1:I2C:RWINADDR? might return :BUS:B1:I2C:RWINADDR YES, indicating that the entire slave address byte is displayed as a number, with the $\mathrm{R} / \mathrm{W}^{*}$ signal as its LSB (bit 0 ) and the slave address in bits $7 . .0$.

## BUS:B<x>:LABel

## NOTE. Not available on some models.

This command sets or queries the waveform label for the specified bus. The bus name string accepts only eight characters and truncates when more than eight characters.

Group Bus

Syntax BUS:B<x>:LABe1 <string> BUS: $B<x>: L A B e 1 ?$

Related Commands BUS:B<x>:POSition, BUS:B<x>:TYPe

Arguments <string> is an alphanumeric string of text enclosed in quotes. The text string is limited to 30 characters. It contains the text label information for bus.

Examples BUS:B1:LABEL "TEST" sets the waveform label for the bus B1 to Test.
BUS:B1:LABEL? might return :BUS:B1:LABEL "BUS 1", indicating that the waveform label for the bus B 1 is set to "Bus 1 ".

## BUS:B<x>:LIN:BITRate

This command sets or queries the LIN bus bit rate. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<X>:LIN:BITRate
\{RATE10K|RATE1K|RATE19K|RATE2K|RATE4K|RATE9K|CUSTom\}
BUS:B<X>:LIN:BITRate?

Arguments Arguments are the available bit rates.

Examples BUS:B1:LIN:BITRate Rate 4 k sets the bit rate to 4 kb .
BUS:B1:LIN:BITRate? might return :BUS:B1:LIN:BITRATE RATE19K, indicating that the bit rate is set to 19 kb .

## BUS:B<x>:LIN:BITRate:VALue

This command sets or queries the LIN bus custom bitrate value. The bus is specified by $x$. The value of $x$ can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:LIN:BITRate:VALue <nr3> BUS:B<x>:LIN:BITRate:VALue?

Arguments <nr3> specifies the custom bit rate.

Examples BUS:B1:LIN:BITRate:VALue 19200 sets the custom bit rate value to 19.2 k .
BUS:B1:LIN:BITRate:VALue? might return :BUS:B1:LIN:BITRATE:VALUE $19.2000 \mathrm{E}+3$, indicating the custom bit rate value is 19.2 k .

## BUS:B<x>:LIN:IDFORmat

This command sets or queries LIN bus id display mode. The bus is specified by x. The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:LIN:IDFORmat \{NOPARity|PARity\} BUS:B<x>:LIN:IDFORmat?

Arguments NOPARity specifies an id format that includes parity. PARity specifies an id format that separates parity.

Examples BUS:B1:LIN:IDFORmat PARITY set the id format to parity.
BUS:B1:LIN:IDFORmat? might return :BUS:B1:LIN:IDFORMAT NOPARITY, indicating the id format is set to no parity.

## BUS:B<x>:LIN:POLarity

This command sets or queries the LIN bus polarity. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:LIN:POLarity \{INVerted|NORMa1\} BUS:B<X>:LIN:POLarity?

Arguments INVerted specifies inverted polarity.
NORMal specifies normal polarity.

Examples BUS:B1:LIN:POLarity Inverted sets the polarity to inverted.
BUS:B1:LIN:POLarity? might return :BUS:B1:LIN:POLARITY NORMAL, indicating the bus polarity is set to normal.

## BUS:B<x>:LIN:SOUrce

This command sets or queries sets the LIN bus source. The bus is specified by x . The value of x can range from 1 to 16 .

## NOTE. Not available on some models.

Group Bus

Syntax BUS: $\mathrm{B}<\mathrm{x}>:$ :LIN: Source $\{\mathrm{CH} 1|\mathrm{CH} 2| \mathrm{CH} 3|\mathrm{CH} 4| \mathrm{DO}|\mathrm{D} 1| \mathrm{D} 10 \mid \mathrm{D} 11$
|D12|D13|D14|D15 |D2|D3|D4|D5 |D6|D7|D8|D9
|MATH1|MATH2|MATH3|MATH4\}
BUS: B<x>:LIN:SOUrce?

Arguments Arguments specify the available sources.

Examples BUS:B1:LIN: SOUrce MATH4 sets the source to MATH 4
BUS:B1:LIN:SOUrce? might return :BUS:B1:LIN:SOURCE CH1, indicating the source is set to channel 1 .

## BUS:B<x>:LIN:STANDard

This command sets or queries the LIN bus standard. The bus is specified by x . The value of $x$ can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:LIN:STANDard \{MIXed|V1X|V2X\} BUS:B<X>:LIN:STANDard?

Arguments MIXed specifies V1X and V2X.
V1X specifies the V1X standard.
V2X specifies the V2X standard.

Examples BUS:B1:LIN:STANDard V1X sets the standard to V1X.
BUS:B1:LIN:STANDard? might return :BUS:B1:LIN:STANDARD V2X, indicating the standard is set to V2X.

## BUS:B<x>:MIL1553B:POLarity

This command sets the MIL-STD-1553 bus polarity to normal or inverted. $\mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Bus

Syntax BUS:B<x>:MIL1553B:POLarity \{NORMa1|INVerted\} BUS: $B<X>:$ MIL1553B:POLarity?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition
BUS:B<x>:MIL1553B:SOUrce

Arguments NORMa1 - A high-low transition sets the MIL-STD-1553 bus polarity to positive. INVerted - A high-low transition sets the MIL-STD-1553 bus polarity to negative.

Examples BUS:B1:MIL1553B:POLARITY INVERTED sets the MIL-STD- 1553 bus polarity to negative.

BUS:B1:MIL1553B:POLARITY? might return NORMAL.

## BUS:B<x>:MIL1553B:RESPonsetime:MAXimum

This command specifies the maximum response time to a valid command issued. $\mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

NOTE. The MIL-STD-1553 bus specification requires devices to respond to a valid command within 4 to 12 microseconds.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Bus

Syntax BUS:B<x>:MIL1553B:RESPonsetime:MAXimum <NR3> BUS:B<x>:MIL1553B:RESPonsetime:MAXimum?

Related Commands $\mathrm{BUS}: \mathrm{B}<\mathrm{x}>$ :MIL1553B:RESPonsetime:MINimum

Arguments <NR3> is a floating point number that specifies the maximum response time, in seconds.

Examples BUS:B1:MIL1553B:RESPONSETIME:MAXIMUM 12.0E-6 specifies the maximum response time to a valid command received to be 12 microseconds.

BUS:B1:MIL1553B:RESPONSETIME:MAXIMUM? might return 12.0000E-6.

## BUS:B<x>:MIL1553B:RESPonsetime:MINimum

This command specifies the minimum response time to a valid command issued. $\mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

NOTE. The MIL-STD-1553 bus specification requires devices to respond to a valid command within 4 to 12 microseconds.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Bus

Syntax BUS:B<x>:MIL1553B:RESPonsetime:MINimum <NR3> BUS: $B<x>: M I L 1553 B:$ RESPonsetime:MINimum?

Related Commands BUS:B<x>:MIL1553B:RESPonsetime:MAXimum

Arguments <NR3> is a floating point number that specifies the minimum response time in seconds.

Examples BUS:B1:MIL1553B:RESPONSETIME:MINIMUM 4.0E-6 specifies the minimum response time to a valid command received to 4 microseconds.

BUS:B1:MIL1553B:RESPONSETIME:MINIMUM? might return 4.0000E-6.

## BUS:B<x>:MIL1553B:SOUrce

This command sets or queries sets the MIL-STD-1553 bus source. The supported source waveforms are channels 1-4 and math waveforms 1-4. The default is channel $1 . \mathrm{B}<\mathrm{x}>$ specifies the bus number, which can range from 1 to 16 .

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Bus

Syntax BUS:B<x>:MIL1553B:SOUrce \{CH1|CH2|CH3|CH4|MATH1|MATH2|MATH3|MATH4\} BUS: B<x>:MIL1553B:SOUrce?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:CONDition

Arguments CH1-4 specifies to use one of the analog channels as the MIL-STD- 1553 bus source for differential input.

MATH1-4 specifies to use the math waveform as the MIL-STD-1553 bus source for differential input

Examples BUS:B1:MIL1553B:SOURCE CH4 specifies to use analog channel 4 waveform as the source for MIL-STD-1553 bus input.

BUS:B1:MIL1553B:SOURCE? might return CH2, indicating that channel 2 is the currently specified source for MIL-STD-1553 bus input.

## BUS:B<x>:MIPICSITWo:CLOCk:SOUrce

NOTE. Not available on some models.

This command sets or queries the MIPI CSI2 clock source for the specified bus.

Group Bus

Syntax BUS:B<x>:MIPICSITWo:CLOCk:SOUrce \{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10| D11|D12|D13|D14|D15|MATH1|MATH2 |MATH3|MATH4\} BUS:B<x>:MIPICSITWo:CLOCk:SOUrce?

Related Commands BUS:B<x>:MIPICSITWo:CLOCk:TYPe

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the MIPI CSI2 clock source. D0-D15 specifies a digital channel to use as the MIPI CSI2 clock source. MATH1-MATH4 specifies a math channel to use as the MIPI CSI2 clock source.

Examples BUS:B1:MIPICSITWO:CLOCK:SOURCE CH1 sets the MIPI CSI2 clock source for bus B1 to CH1.

BUS:B1:MIPICSITWO:CLOCK:SOURCE? might return
:BUS:B1:MIPICSITWO:CLOCK:SOURCE MATH1, indicating that the MIPI CSI2 clock source for bus B1 is set to MATH1.

## BUS:B<x>:MIPICSITWo:CLOCk:TYPe

NOTE. Not available on some models.

This command sets or queries the MIPI CSI2 clock source type for the specified bus.

Group Bus

Syntax BUS:B<x>:MIPICSITWo:CLOCk:TYPe \{ANALog|DIGItal\} BUS:B<x>:MIPICSITWo:CLOCk:TYPe?

## Related Commands BUS:B<x>:MIPICSITWo:CLOCk:SOUrce

Arguments ANALog sets the clock source type to support analog input for the specified bus. DIGIta 1 sets the clock source type to support digital input for the specified bus.

Examples BUS:B1:MIPICSITWO:CLOCK:TYPE ANALOG sets the clock source type for bus B1 to analog.

BUS:B1:MIPICSITWO:CLOCK:TYPE? might return :BUS:B1:MIPICSITWO:CLOCK:TYPE DIGITAL, indicating that the clock source type for bus B1 is digital.

## BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce:DIFFerential

## NOTE. Not available on some models.

This command sets or queries the differential source for the specified lane of the specified MIPI CSI2 bus.

Group Bus

Syntax BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce:DIFFerential \{D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|D13|D14|D15\} BUS:B<X>:MIPICSITWo:LANE<x>:SOUrce:DIFFerential?

Related Commands
BUS: $\mathrm{B}<\mathrm{x}>:$ MIPICSITWo:LANE $<\mathrm{x}>:$ SOUrce:DMINUS, BUS:B $<\mathrm{x}>$ : MIPICSITWo:LANE $<\mathrm{x}>$ :SOUrce:DPLUS, BUS:B<x>:MIPICSITWo: LANE $<x>$ :TYPe

Arguments D0-D15 specifies a digital input signal to use as the differential source.

Examples BUS:B1:MIPICSITWO:LANE1:SOURCE:DIFFERENTIAL D2 sets the differential source for lane 1 of MIPI CSI2 bus B1 to D2.<br>BUS:B1:MIPICSTWO:LANE2:SOURCE:DIFFERENTIAL? might return :BUS:B1:MIPICSITWO:LANE2:SOURCE:DIFFERENTIAL D3, indicating that the differential source for lane 2 of MIPI CSI2 bus B1 is D3.

## BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce:DMINUS

NOTE. Not available on some models.

This command sets or queries the D Minus source for the specified lane of the specified MIPI CSI2 bus.

Group Bus

Syntax BUS:B<x>:MIPICSITWO:LANE<x>:SOUrce:DMINUS
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|

BUS: $B<x>$ :MIPICSITWo:LANE<x>:SOUrce:DMINUS?

Related Commands BUS:B<x>:MIPICSITWo:LANE $<x>$ :SOUrce:DIFFerential, BUS:B $<x>$ : MIPICSITWo:LANE $<x>$ :SOUrce:DPLUS, BUS: $\ll x>$ :MIPICSITWo: LANE $<x>$ :TYPe

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the D Minus source for the specified lane.

D0-D15 specifies a digital channel to use as the D Minus source for the specified lane.

MATH1-MATH4 specifies a math channel to use as the D Minus source for the specified lane.

Examples BUS:B1:MIPICSITWO:LANE1:SOURCE:DMINUS CH4 sets the D Minus source to CH 4 for lane 1 of bus B1.

BUS:B1:MIPICSITWO:LANE2:SOURCE:DMINUS? might return :BUS:B1:MIPICSITWO:LANE2:SOURCE:DMINUS CH3, indicating that the D Minus source for lane 2 of bus B1 is D3.

## BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce:DPLUS

## NOTE. Not available on some models.

This command sets or queries the D Plus source for the specified lane of the specified MIPI CSI2 bus.

```
    Group Bus
Syntax BUS:B<x>:MIPICSITWo:LANE<x>:SOUrce:DPLUS
        {CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|
        D11|D12|D13|D14|D15|MATH1|MATH2|MATH3|MATH4}
        BUS:B<x>:MIPICSITWO:LANE<x>:SOUrCe:DPLUS?
Related Commands BUS:B<x>
        MIPICSITWo:LANE<x>:SOUrce:DMINUS, BUS:B<x>:MIPICSITWo:
        LANE<x>:TYPe
Arguments \(\mathrm{CH} 1-\mathrm{CH} 4\) specifies an analog channel to use as the D Plus source for the specified lane.
D0-D15 specifies a digital channel to use as the D Plus source for the specified lane.
MATH1-MATH4 specifies a math channel to use as the D Plus source for the specified lane.
Examples BUS:B1:MIPICSITWO:LANE1:SOURCE:DPLUS CH3 sets the D Plus source for Lane 1 to CH3 for bus B1.
BUS:B1:MIPICSITWO:LANE1:SOURCE:DPLUS? might return :BUS:B1:MIPICSITWO:LANE1:SOURCE:DPLUS CH4, indicating that the D Plus source for Lane 1 is CH4 for the bus B1.
```

## BUS:B<x>:MIPICSITWo:LANE<x>:TYPe

## NOTE. Not available on some models.

This command sets or queries the lane source type for the specified MIPI CSI2 bus.

Group Bus

Syntax BUS:B<X>:MIPICSITWo:LANE<X>:TYPe \{ANALog|DIGItal\}
BUS:B<x>:MIPICSITWO:LANE<x>:TYPe?

Related Commands BUS:B<x>:MIPICSITWo:LANE $<x>$ :SOUrce:DIFFerential, BUS:B $<\mathrm{x}>$ : MIPICSITWo:LANE $<x>$ :SOUrce:DMINUS, BUS:B $<x>$ :MIPICSITWo: LANE $<\mathrm{x}>:$ SOUrce:DPLUS,

Arguments ANALog sets the source type for the specified lane to support analog input. DIGIta1 sets the source type for the specified lane to support digital input.

Examples BUS:B1:MIPICSITWO:LANE1:TYPE ANALOG sets the lane 2 source type for bus B1 to analog.

BUS:B2:MIPICSITWO:LANE2:TYPE? might return
:BUS:B2:MIPICSITWO:LANE2 DIGITAL, indicating that the lane 2 source type for bus B 2 is set to digital.

## BUS:B<x>:MIPIDSIOne:CLOCk:SOUrce

NOTE. Not available on some models.

This command sets or queries the clock source for the specified MIPI DSI1 bus.

Group Bus

Syntax BUS:B<X>:MIPIDSIOne:CLOCk:SOUrce \{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10| D11|D12|D13|D14|D15|MATH1|MATH2|MATH3|MATH4\} BUS:B<x>:MIPIDSIOne:CLOCk:SOUrce?

Related Commands BUS:B<x>:MIPIDSIOne:CLOCk:TYPe

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the clock source. MATH1-MATH4 specifies a math channel to use as the clock source. D0-D15 specifies a digital channel to use as the clock source.

Examples BUS:B1:MIPIDSIONE:CLOCK:SOURCE CH2 sets the clock source for bus B1 to CH2.

BUS:B1:MIPIDSIONE:CLOCK:SOURCE? might return :BUS:B1:MIPIDSIONE:CLOCK:SOURCE CH4, indicating that the clock source for MIPI CSI1 bus B1 is set to CH4.

## BUS:B<x>:MIPIDSIOne:CLOCk:TYPe

NOTE. Not available on some models.

This command sets or queries the clock source type for the specified MIPI DSI1 bus.

Group Bus

Syntax BUS:B<x>:MIPIDSIOne:CLOCk:TYPe \{ANALog|DIGItal\} BUS:B<X>:MIPIDSIOne:CLOCk:TYPe?

Related Commands BUS:B<x>:MIPIDSIOne:CLOCk:SOUrce
$\begin{array}{ll}\text { Arguments } & \text { ANALog sets the clock source type to support analog input. } \\ \text { DIGItal sets the clock source type to support digital input. }\end{array}$

Examples BUS:B1:MIPIDSIONE:CLOCK:TYPE DIGITAL sets the clock source type for MIPI DSI1 bus B1 to digital.

BUS:B1:MIPIDSIONE:CLOCK:TYPE? might return :BUS:B1:MIPIDSIONE:CLOCK:TYPE ANALOG, indicating that the clock source type for MIPI DSI1 bus B1 is analog.

## BUS:B<x>:MIPIDSIOne:LANE<x>:SOUrce:DIFFerential

NOTE. Not available on some models.

This command sets or queries the differential source for the specified lane of the specified MIPI DSI1 bus.

Group Bus

Syntax BUS:B<x>:MIPIDSIOne:LANE<x>:SOUrce:DIFFerential \{D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|D13|D14|D15\} BUS:B<X>:MIPIDSIOne:LANE<x>:SOUrce:DIFFerential?

## Arguments

CH1-CH4 specifies an analog channel to use as the D Plus source for the specified lane.

D0-D15 specifies a digital channel to use as the D Plus source for the specified lane.

MATH1-MATH4 specifies a math channel to use as the D Plus source for the specified lane.

Examples BUS:B1:MIPIDSIONE:LANE1:SOURCE:DPLUS D2 sets the D Plus source for lane 1 of MIPI DSIl bus B1 to D2.<br>BUS:B1:MIPIDSIONE:LANE2:SOURCE:DPLUS? might return :BUS:B1:MIPIDSIONE:LANE2:SOURCE:DPLUS CH4, indicating that the D Plus source for lane 2 of MIPI DSI1 bus B1 is CH4.

## BUS:B<x>:MIPIDSIOne:LANE<x>:TYPe

NOTE. Not available on some models.

This command sets or queries the lane source type for the specified MIPI DSI1 bus.

Group Bus

Syntax BUS:B<x>:MIPIDSIOne:LANE<x>:TYPe \{ANALog|DIGItal\} BUS: $B<x>$ :MIPIDSIOne:LANE<x>:TYPe?

Related Commands BUS:B<x>:MIPIDSIOne:LANE $<x>$ :SOUrce:DIFFerential, BUS:B $<\mathrm{x}>$ : MIPIDSIOne:LANE $<x>$ :SOUrce:DMINUS, BUS:B $<x>:$ MIPIDSIOne: LANE $<x>$ :SOUrce:DPLUS

Arguments ANALog sets the source type for the specified lane to support analog input. DIGIta1 sets the source type for the specified lane to support digital input.

Examples BUS:B1:MIPIDSIONE:LANE1:TYPE ANALOG sets the lane 1 type for MIPI DSI1 bus B1 to analog.

BUS:B1:MIPIDSIONE:LANE1:TYPE? might return :BUS:B1:MIPIDSIONE:LANE1:TYPE DIGITAL, indicating that the lane 1 type of MIPI DSI1 bus B1 is digital.

## BUS:B<x>:PARallel:CLOCk:EDGE

NOTE. Not available on some models.

This command sets or queries which edge of a clocked parallel busses' signal establishes when new bus values are sampled.

Group Bus

Syntax BUS:B<x>:PARal1e1:CLOCk:EDGE \{FALL|RISe|EITHer\} BUS:B<X>:PARa11e1:CLOCk:EDGE?

## Related Commands $\quad \mathrm{BUS}: \mathrm{B}<\mathrm{x}>:$ PARallel:CLOCk:SOUrce, $\mathrm{BUS}: \mathrm{B}<\mathrm{x}>:$ PARallel:ISCLOCKED, BUS: $\ll x>$ :PARallel:SOURCES

Arguments FALL decodes on the falling edge of the clocked parallel bus signal.
RISe decodes on the rising edge of the clocked parallel bus signal.
EITHer decodes on the rising or falling edge of the clocked parallel bus signal.

Examples BUS:B1:PARALLEL:CLOCK:EDGE FALL sets the decoding to happen on the falling edge of its clocked parallel bus B1.

BUS:B1:PARALLEL:CLOCK:EDGE? might return
: BUS:B1:PARALLEL:CLOCK:EDGE RISE, indicating that when bus B1 operates in Clocked Parallel mode, it samples new data values on the rising edge of its clock source signal.

## BUS:B<x>:PARallel:CLOCk:SOUrce

## NOTE. Not available on some models.

This command sets or queries the Parallel clock source for the specified bus.

```
Group Bus
Syntax BUS:B<x>:PARa11e1:CLOCk:SOUrce
\{CH1|CH2|CH3|CH4|D0|D1|D3|D4|D5|D6|D7|D8|D9|D10|
D11|D12|D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:PARa11e1:CLOCk:SOUrce?
Related Commands BUS:B<x>:PARallel:CLOCk:EDGE, BUS:B \(<x>:\) PARallel:ISCLOCKED, BUS: \(<x>x>\) PARallel:SOURCES
```

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the Parallel clock source. D0-D15 specifies a digital channel to use as the Parallel clock source.

MATH1-MATH4 specifies the math channel to use as the Parallel clock source.

Examples BUS:B1:PARALLEL:CLOCK:SOURCE D6 sets the Parallel clock source for the bus B1 to D6.

BUS:B1:PARALLEL:CLOCK:SOURCE? might return :BUS:B1:PARALLEL:CLOCK:SOURCE D11, indicating that the Parallel clock source for the bus B1 is set to D11.

## BUS:B<x>:PARallel:ISCLOCKED

## NOTE. Not available on some models.

This command sets or queries the Parallel bus behavior to either Clocked or not Clocked for the specified bus.

Group Bus

Syntax BUS:B<X>:PARa11e1:ISCLOCKED \{YES|NO\} BUS:B<X>:PARa11e1:ISCLOCKED?

Related Commands BUS:B<x>:PARallel:CLOCk:EDGE, BUS:B<x>:PARallel:CLOCk:SOUrce, BUS:B $<x>$ :PARallel:SOURCES

Arguments YES specifies the Parallel mode of the specified bus to be clocked. NO specifies the Parallel mode of the specified bus to be unclocked (asynchronous).

Examples BUS:B1:PARALLEL:ISCLOCKED YES sets B1 bus to have Clocked behavior when operating in Parallel mode.

BUS:B1:PARALLEL:ISCLOCKED? might return : BUS:B1:PARALLEL:ISCLOCKED YES, indicating that the bus B1 is set to Clocked Parallel mode.

## BUS:B<x>:PARallel:SOURCES

NOTE. Not available on some models.

This command sets or queries the members of the Parallel mode of specified bus according to a supplied list of signals.

The first item on the list becomes the MSB signal of the Bus. The second becomes the next-most-significant, and so on, with the last item becoming the LSB of the bus. If no signals are listed, the Bus is emptied of members.

No signal can appear more than once in the list of bus members.

```
Group Bus
Syntax BUS:B<x>:PARalle1:SOURCES
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS:B<X>:PARa11e1:SOURCES?
```

Related Commands BUS:B<x>:PARallel:CLOCk:EDGE, BUS:B<x>:PARallel:CLOCk:SOUrce, BUS: $<x>x>$ PARallel:ISCLOCKED

Arguments $\quad \mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the Parallel source.
D0-D15 specifies a digital channel to use as the Parallel source.
MATH1-MATH4 specifies the math channel to use as the Parallel source.

Examples BUS:B1:PARALLEL:SOURCES D3, D1, D4, D2 sets the digital signals D3, D1, D4, and D2 as members of the Parallel bus B1.

BUS:B1:PARALLEL:SOURCES? might return :BUS:B1:PARALLEL:SOURCES D3, D5, indicating that the digital signals D3 and D5 are part of the Parallel bus B1.

## BUS:B<x>:PCIE:BITRate

This command sets or queries the PCIE bus bit rate. The bus is specified by x . The value of x can range from 1 to 16 .

## NOTE. Not available on some models.

Group Bus

Syntax $\begin{array}{ll}\text { BUS: } B<x>: \text { PCIE:BITRate } \\ & \text { \{RATE2500|RATE5000|RATE8000|AUTO|CUSTom }\end{array} r l$
BUS:B<X>:PCIE:BITRate?

Arguments Arguments are the available bit rates.

Examples BUS:B1:PCIE:BITRate RATE8000 sets the bitrate to 8.0 G .
BUS:B1:PCIE:BITRate? might return :BUS:B1:PCIE:BITRATE RATE2500, indicating the bit rate is 2.5 G .

## BUS:B<x>:PCIE:BITRate:VALue

This command sets or queries the PCIE bus bit rate value. The bus is specified by x . The value of x can range from 1 to 16 .

## NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:PCIE:BITRate:VALue <nr3> BUS:B<x>:PCIE:BITRate:VALue?

Arguments <nr3> specifies the bit rate value.

Examples BUS:B1:PCIE:BITRate:VALue $1.5 \mathrm{E}+9$ sets the bit rate value to 1.5 Gb .
BUS:B1:PCIE:BITRate:VALue? might return :BUS:B1:PCIE: BITRATE:VALUE 2.5000E+9, indicating the bit rate value is 2.5 Gb .

## BUS:B<x>:PCIE:HYSTeresis

This command sets or queries the PCIE bus hysteresis. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:PCIE:HYSTeresis <nr3> BUS:B<X>:PCIE:HYSTeresis?

Arguments <nr3> specifies the hysteresis.

Examples BUS:B1:PCIE:HYSTeresis 0.02 sets the hysteresis to 20 mV .
BUS:B1:PCIE:HYSTeresis? might return :BUS:B1:PCIE:HYSTERESIS
$50.0000 \mathrm{E}-3$, indicating the hysteresis is 50 mV .

## BUS:B<x>:PCIE:LANE

This command sets or queries the PCIE bus lane number. The bus is specified by x . The value of x can range from 1 to 16 .

## NOTE. Not available on some models.

Group Bus

Syntax BUS: $B<x>$ :PCIE:LANE <nr3>
BUS: $B<x>:$ PCIE: LANE?

Arguments <nr3> specifies the bus lane.

Examples BUS:B1:PCIE:LANE 1 sets the bus lane to 1 .
BUS:B1:PCIE:LANE? might return :BUS:B1:PCIE:LANE 0, indicating bus lane 0 .

## BUS:B<x>:PCIE:SOUrce

This command sets or queries the PCIE bus source. The bus is specified by x . The value of x can range from 1 to 16 .

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:PCIE:Source \{CH1|CH2|CH3|CH4 | DO|D1|D10|D11
| D12|D13|D14|D15 | D2|D3|D4|D5 | D6|D7|D8|D9 |
MATH1|MATH2|MATH3|MATH4\}
BUS: B<x>:PCIE:SOUrce?

Arguments Arguments are the available sources.

Examples BUS:B1:PCIE:SOUrce MATH4 sets the PCIE bus source to MATH4.
BUS:B1:PCIE:SOUrce? might return :BUS:B1:PCIE:SOURCE CH1, indicating the PCIE bus source is channel 1.

## BUS:B<x>:POSition

## NOTE. Not available on some models.

This command sets or queries the position for the waveform specified bus.

Group Bus

Syntax BUS:B<x>:POSition <NR3> BUS:B<x>:POSition?

Related Commands BUS: $\mathrm{B}<\mathrm{x}>:$ LABel, BUS: $\mathrm{B}<\mathrm{x}>:$ TYPe

Arguments <NR3> specifies the position.

Examples BUS:B1:POSITION 3 sets the position of the busform of the bus B1 to 3 Divisions. (above the zero level).

BUS:B1:POSITION? might return :BUS:B1:POSITION 5.0000, indicating that the position of the busform of the bus B1 is set to 5 Divisions. (above the zero level).

## BUS:B<x>:RS232C:BITRate

NOTE. Not available on some models.

This command sets or queries the RS232C bit rate for bus $<\mathrm{x}>$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:BITRate <NR3> BUS: $B<x>: R S 232 C: B I T R a t e ?$

Arguments <NR3> is the bit rate in bits-per-second. You can enter any positive integer, and the instrument will coerce the value to the closest supported bit rate.

Examples BUS:B1:RS232C:BITRATE 9500 sets the bit rate for the RS232C bus B1 to 9500 bits-per-second.

BUS:B1:RS232C:BITRATE? might return :BUS:B1:RS232C:BITRATE $9.5000 \mathrm{E}+3$, indicating that the bit rate for the RS232C bus B1 is set to 9500 bits-per-second.

## BUS:B<x>:RS232C:DATABits

## NOTE. Not available on some models.

This command sets or queries the number of RS-232C data bits for bus $<\mathrm{x}>$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:DATABits <NR3> BUS:B<x>:RS232C:DATABits?

Arguments <NR3> specifies the number of bits in the RS-232C data frame.

Examples BUS:B1:RS232C:DATABITS 8 sets the data bits to 8 for the RS-232C bus B1. BUS:B1:RS232C:DATABITS? might return :BUS:B1:RS232C:DATABITS 8, indicating that the data bits is set to 8 for the RS-232C bus B1.

## BUS:B<x>:RS232C:DELIMiter

NOTE. Not available on some models.

This command sets or queries the RS-232C delimiting value for a packet on bus $<\mathrm{x}\rangle$, where x is the bus number.

Group Bus

```
Syntax BUS:B<x>:RS232C:DELIMiter \{NUL1|CR|LF|SPace|XFF\}
```

BUS: $B<x>:$ RS232C:DELIMiter?

Arguments NUL1 specifies NUL1 ( $0 \times 00$ ) delimiting value for a packet. CR specifies $C R(0 x 0 D)$ delimiting value for a packet. LF specifies LF (0x0A) delimiting value for a packet. XFF specifies XFF ( 0 xFF ) delimiting value for a packet. SPace specifies SPace delimiting value for a packet.

Examples BUS:B1:RS232C:DELIMITER LF sets the delimiter to 0x0A for the RS-232C bus B1.

BUS:B1:RS232C:DELIMITER? might return :BUS:B1:RS232C:DELIMITER NULL, indicating that the delimiter to $0 \times 00$ for the RS-232C bus B1.

## BUS:B<x>:RS232C:DISplaymode

## NOTE. Not available on some models.

This command sets or queries the RS-232 display mode for the bus $\langle\mathrm{x}\rangle$ display and event table, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:DISp1aymode \{FRAme|PACKET\} BUS:B<x>:RS232C:DISp1aymode?

Arguments FRAme displays each frame as a single entity.
PACKET displays a group of frames terminated with a single frame defined by the BUS: $B<X>$ :RS232C:DELImiter command or the front panel.

Examples BUS:B1:RS232C:DISPLAYMODE FRAME sets the display mode for the RS-232C bus B1 to Frame.

BUS:B1:RS232C:DISPLAYMODE? might return :BUS:B1:RS232C:DISPLAYMODE PACKET, indicating that the display mode for the RS-232C bus B1 is set to Packet.

## BUS:B<x>:RS232C:PARity

## NOTE. Not available on some models.

This command sets or queries the RS-232C parity for bus $<\mathrm{x}\rangle$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:PARity \{NONe|EVEN|ODD\} BUS:B<x>:RS232C:PARity?

Arguments NONe specifies no parity.
EVEN specifies even parity. ODD specifies odd parity.

Examples BUS:B1:RS232C:PARITY ODD sets the parity for the RS-232C bus B1 to odd. BUS:B1:RS232C:PARITY? might return :BUS:B1:RS232C:PARITY NONE, indicating that the display mode for the RS-232C bus B1 is set to none.

## BUS:B<x>:RS232C:POLarity

NOTE. Not available on some models.

This command sets or queries the RS-232 polarity for bus $<\mathrm{x}>$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:POLarity \{NORMal|INVERTed\} BUS:B<x>:RS232C:POLarity?

Arguments NORMa1 sets the RS232C bus polarity to positive. INVERTed sets the RS232C bus polarity to negative.

Examples BUS:B1:RS232C:POLARITY inverted sets the polarity for the RS232C bus B1 to Inverted.

BUS:B1:RS232C:POLARITY? might return :BUS:B1:RS232C:POLARITY NORMAL, indicating that the polarity for the RS232C bus B1 is set to Normal.

## BUS:B<x>:RS232C:SOUrce

NOTE. Not available on some models.

This command sets or queries the RS-232 polarity for bus $\langle\mathrm{x}\rangle$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:RS232C:SOUrce \{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12| D13|D14|D15|MATH1|MATH2|MATH3|MATH4\} BUS:B<x>:RS232C:SOUrce?

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the RS232C source. D0-D15 specifies a digital channel to use for the RS232C source. MATH1-MATH4 specifies a math channel to use for the RS232C source.

Examples BUS:B1:RS232C:SOURCE D0 sets the source for the RS232C bus B1 to D0. BUS:B1:RS232C:SOURCE? might return :BUS:B1:RS232C:SOURCE CH1, indicating that the source for the RS-232 bus B1 is CH1.

## BUS:B<x>:S8B10B:BITRate

Sets the bus data for the specified bus to a standard rate in bits per second, or enables you to specify a custom data rate using the value command. The query returns the bus data rate that is set for the specified bus.

## NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:S8B10B:BITRate
\{CUSTom|RATE1250|RATE1500|RATE2125|RATE2500|RATE3000| RATE3125|RATE4250|RATE5000|RATE6000|RATE6250\}
BUS:B<x>:S8B10B:BITRate ?

Related Commands BUS:B<x>:S8B10B:BITRate:VALue

Arguments CUSTOM sets the bus data rate to Custom, allowing you to set the value (see Related Commands)

RATE1250 sets the bus data rate to $1.25 \mathrm{~Gb} / \mathrm{s}$
RATE1500 sets the bus data rate to $1.5 \mathrm{~Gb} / \mathrm{s}$.
RATE 2125 sets the bus data rate to $2.125 \mathrm{~Gb} / \mathrm{s}$.
RATE 2500 sets the bus data rate to $2.5 \mathrm{~Gb} / \mathrm{s}$.
RATE 3000 sets the bus data rate to $3.0 \mathrm{~Gb} / \mathrm{s}$.
RATE 3125 sets the bus data rate to $3.125 \mathrm{~Gb} / \mathrm{s}$.
RATE4250 sets the bus data rate to $4.25 \mathrm{~Gb} / \mathrm{s}$.
RATE 5000 sets the bus data rate to $5.0 \mathrm{~Gb} / \mathrm{s}$.
RATE6000 sets the bus data rate to $6.0 \mathrm{~Gb} / \mathrm{s}$.
RATE 6250 sets the bus data rate to $6.25 \mathrm{~Gb} / \mathrm{s}$.

Examples BUS:B1:S8B10b:BITRATE 1500 sets the bit rate for the 8 B10B bus B 1 to 1.5 gigabits per second.

BUS:B1:S8B10b:BITRATE? might return :BUS:B1:S8B10b:BITRATE $1.25000 \mathrm{E}+9$, indicating that the bit rate for the 8 B 10 B bus B 1 is set to 1.25 gigabits per second.

## BUS:B<x>:S8B10B:BITRate:VALue

Sets the data rate for the specified bus to a rate that you specify in bits per second. The bitrate must be set to custom (see Related Commands, below).

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:S8B10B:BITRate:VALue <NR3> BUS: $B<x\rangle: S 8 B 10 B: B I T R a t e: V A L u e ?$

Related Commands BUS:B<x>:S8B10B:BITRate

Arguments <NR3> is the data rate in bits per second.

Examples BUS:B2:S8B10B:BITRATE:VALUE 1.2500E+9 sets the data rate for 8B10B bus B2 to $1.25 \mathrm{~Gb} / \mathrm{s}$.

BUS:B2:S8B10b:BITRATE:VALUE? might return : BUS: $B<x>$ : S8B10B: BITRATE:VALUE 1.25 e 9 , indicating that the data rate for bus B 2 is set to 1.25 gigabits per second.

## BUS:B<x>:S8B10B:HYSTeresis

Sets or queries the hysteresis for the specified bus.

NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:S8B10B:HYSTeresis <NR3> BUS:B<X>:S8B10B:HYSTeresis?

Arguments $<$ NR3> is the hysteresis setting.

Examples BUS:B1:S8B10b:BITRATE:VALUE 20e-3 sets the B1 bus value to 20 mV .
BUS:B2:S8B10b:BITRATE:VALUE? might return
:bus:b2:S8b10b:bITRATE:VALUE 20.000e-3, indicating that the B2 bus value is set to 20 mV .

## BUS:B<x>:S8B10B:SOUrce

Sets or queries the signal sources for the specified bus.
NOTE. Not available on some models.

## Group Bus

Syntax BUS:B<x>:S8B10B:SOUrce $\{C H 1|C H 2| C H 3|C H 4| D 0|D 1| D 2|D 3| D 4 \mid$ D5|D6|D7|D8|D9|D10|D11|D12|D13|D14|D15| MATH1|MATH2|MATH3|MATH4\} BUS: B<X>:S8B10B:SOUrce?

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies an analog channel to use as the bus signal source.
D0-D15 specifies a digital channel to use as the bus signal source.
MATH1-MATH4 specifies a math channel to use as the bus signal source.

Examples BUS: $\mathrm{B} 1: \mathrm{S} 8 \mathrm{~B} 10 \mathrm{~B}:$ SOURCE CH 2 sets the bus B 1 signal source to channel 2 .
BUS:B1:S8B10B:SOURCE? might return :BUS:B1:S8B10b:SOURCE D5, indicating that the bus B1 signal source is digital channel 5 .

## BUS:B<x>:SPI:BITOrder

NOTE. Not available on some models.

This command sets or queries the shift direction used by the SPI buss decoding operation to deserialize the data bit sequence into recovered word values.

Group Bus

Syntax BUS:B<x>:SPI:BITOrder \{LSB|MSB\}
BUS:B<x>:SPI:BITOrder?

Related Commands BUS:B<x>:SPI:DATa:SIZe

Arguments LSB specifies that each bit becomes the recovered value's new LSB, after shifting previously recovered bits one place to the left. The decoding happens right to left. MSB specifies that each successive bit from the bus's data line becomes the new MSB of the recovered value, shifting any previously recovered bits one place to the right. The decoding happens left to right.

Examples BUS:B1:SPI:BITORDER LSB sets each bit order for the SPI bus B1 to LSB. BUS:B1:SPI:BITORDER? might return :BUS:B1:SPI:BITORDER MSB, indicating that the bit order for the SPI bus B1 is set to MSB.

## BUS:B<x>:SPI:CLOCk:POLarity

NOTE. Not available on some models.

This command sets or queries the SPI clock (SCK) polarity for the specified bus.

Group Bus

Syntax BUS:B<x>:SPI:CLOCk:POLarity \{FALL|RISE\}
BUS:B<X>:SPI:CLOCk:POLarity?

Related Commands BUS:B<x>:SPI:CLOCk:SOUrce

Arguments FALL sets the clock to the falling edge of the signal.
RISE sets the clock to the rising edge of the signal.

Examples BUS:B1:SPI:CLOCK: POLARITY FALL sets the SPI clock polarity to the falling edge for the bus B 1 .

BUS:B1:SPI:CLOCK: POLARITY? might return
:BUS:B1:SPI:CLOCK:POLARITY RISE, indicating that the SPI clock polarity for the bus B 1 is set to the rising edge.

## BUS:B<x>:SPI:CLOCk:SOUrce

NOTE. Not available on some models.

This command sets or queries the SPI clock (SCK) source for the specified bus.

Group Bus

Syntax BUS:B<x>:SPI:CLOCk:SOUrce
\{CH1|CH2|CH3|CH4|DO|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:SPI:CLOCk:SOUrce?

Related Commands
BUS:B<x>:SPI:CLOCk:POLarity

Arguments D0-D15 designates a digital input signal as the clock source.
CH1-CH4 designates an analog channel as the buss SPI clock source.
MATH1-MATH4 designates a math waveform as the clock source.

## Examples

BUS:B1:SPI:CLOCK: SOURCE D8 sets the SPI clock source for the bus B1 to D8.
BUS:B1:SPI:CLOCK:SOURCE? might return :BUS:B1:SPI:CLOCK:SOURCE D11, indicating that the SPI clock source for the bus B1 is set to D11.

## BUS:B<x>:SPI:DATa:POLarity

NOTE. Not available on some models.

This command sets or queries the SPI data (DATA) polarity for the bus specified by $x$. The value of $x$ can range from 1 through 16. The SPI decode operation treats high inputs as ones in normal polarity and zeros in inverted polarity.

Group Bus

Syntax BUS:B<x>:SPI:DATa:POLarity \{high|low\} BUS:B<X>:SPI:DATa:POLarity?

## Related Commands

Arguments high sets the SPI data polarity to active high.
low sets the SPI data polarity to active low.

Examples BUS:B1:SPI:DATA: POLARITY high sets the SPI data polarity for the bus B1 to active high.

BUS:B1:SPI:DATA: POLARITY? might return :BUS:B1:SPI:DATA: POLARITY LOW, indicating that the SPI data polarity for the bus B1 is set to active low.

## BUS:B<x>:SPI:DATa:SIZe

NOTE. Not available on some models.

This command sets or queries the number of bits per word for the specified SPI bus.

Group Bus

Syntax BUS:B<x>:SPI:DATa:SIZe <NR3> BUS:B<x>:SPI:DATa:SIZe?

## Related Commands

Arguments <NR3> is the data size for the specified bus. The minimum value is 2 and maximum is 64 .

Examples BUS:B1:SPI:DATA:SIZE 7 sets the data size for SPI bus B1 to seven bits per word.

BUS:B1:SPI:DATA:SIZE? might return :BUS:B1:SPI:DATA:SIZE 8, indicating that the data size for SPI bus B1 is set to eight bits per word.

## BUS:B<x>:SPI:DATa:SOUrce

## NOTE. Not available on some models.

This command sets or queries the SPI data (DATA) source for the bus specified by $x$. The value of $x$ can range from 1 through 16 .

Group Bus

Syntax BUS:B<x>:SPI:DATa:SOUrce \{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10| D11|D12|D13|D14|D15|MATH1|MATH2|MATH3|MATH4\} BUS:B<x>:SPI:DATa:SOUrce?

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ designates an analog channel as the data source for the specified SPI bus. MATH1-MATH4 designates a math waveform as the data source.

D0-D15 designates a digital input signal as the data source.

Examples BUS:B1:SPI:DATA:SOURCE D2 sets the SPI data source for the bus B1 to D2.
BUS:B1:SPI:DATA:SOURCE? might return :BUS:B1:SPI:DATA:SOURCE D3, indicating that the SPI data source for the bus B1 is set to D3.

## BUS:B<x>:SPI:FRAMING

This command sets or queries the SPI framing setting. The bus is specified by x .

## NOTE. Not available on some models.

Group Bus

Syntax BUS:B<X>:SPI:FRAMING \{IDLE|SS\}
BUS: $B<x>: S P I:$ FRAMING?

Arguments IDLE specifies IDLE SPI framing.
SS specifies SS SPI framing.

Examples BUS:B1:SPI:FRAMING IDLE sets the SPI framing to IDLE.
BUS:B1:SPI:FRAMING? might return :BUS:B1:SPI:FRAMING SS, indicating that the SPI framing is set to SS.

## BUS:B<x>:SPI:IDLETime

This command sets or queries the SPI idle time. The bus is specified by x .

## NOTE. Not available on some models.

Group Bus

Syntax BUS:B<x>:SPI:IDLETime <nr3>
BUS:B<x>:SPI:IDLETime?

Arguments <nr3> specifies the SPI idle time.

Examples BUS:B1:SPI:IDLETime 0.000004 sets the idle time to $4 \mu \mathrm{~s}$.
BUS:B1:SPI:IDLETime? might return :BUS:B1:SPI:IDLETIME 5.0000E-6, indicating that the idle time is set to $5 \mu \mathrm{~s}$.

## BUS:B<x>:SPI:SELect:POLarity

NOTE. Not available on some models.

This command sets or queries the SPI Slave Select (SS) polarity for the specified bus.

Group Bus

Syntax BUS:B<x>:SPI:SELect:POLarity \{LOW|HIGH\} BUS: B<x>:SPI:SELect:POLarity?

Related Commands BUS:B<x>:SPI:SELect:SOUrce

Arguments Low sets an active low polarity. HIGH sets an active high polarity.

Examples BUS:B1:SPI:SELECT:POLARITY HIGH sets the SPI Slave Select polarity for the bus B1 to active high.

BUS:B1:SPI:SELECT:POLARITY? might return :BUS:B1:SPI:SELECT: POLARITY HIGH, indicating that the SPI Slave Select polarity for the bus B1 is set to active high.

## BUS:B<x>:SPI:SELect:SOUrce

## NOTE. Not available on some models.

This command sets or queries the SPI Slave Select (SS) source for the specified bus.

Group Bus

Syntax BUS:B<x>:SPI:SELect:SOUrce
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS:B<x>:SPI:SELect:SOUrce?

Related Commands

Arguments

Examples

## BUS:B<x>:TYPe

## NOTE. Not available on some models.

This command sets or queries the type for the specified bus.

```
Group Bus
Syntax BUS:B<x>:TYPe
    {CAN|CUSTom|FLEXRAY|LIN|I2C|MIPICSITWo|MIPIDSIOne|
            PARa11e1|PCIE|RS232c|S8B10B|SPI|USB|ETHernet}
    BUS:B<x>:TYPe?
```

Arguments CAN specifies a CAN bus.
CUSTom specifies a custom bus.
FLEXRAY specifies a FLEXRAY bus.
LIN specifies a LIN bus.
I2C specifies the Inter-IC bus.
MIPICSITWo specifies the MIPI CSI2 bus.
MIPIDSIOne specifies the MIPI DSI1 bus.

PARalle 1 specifies the Parallel bus.
PCIE specifies a PCIe bus.
RS232 specifies the RS232 Serial bus.
S8B10B specifies the 8 B 10 B bus.
SPI specifies the Serial Peripheral Interface bus.
USB specifies the Universal Serial Bus.
ETHernet specifies the Ethernet bus.

Examples BUS:B1:TYPE I2C sets the bus B1 type to I2C.
BUS: B1:TYPE? might return :BUS:B1:TYPE SPI, indicating that the bus B1 type is set to SPI and that the bus behavior is governed by the : BUS:B1:SPI: Xxxx commands.

## BUS:B<x>:USB:BITRate

NOTE. Not available on some models.

This command sets or queries the USB bit rate for bus $<\mathrm{x}\rangle$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:USB:BITRate \{FULL|HIGH|LOW\}
BUS: $B<x>:$ USB: BITRate?

Arguments FULL indicates the bit rate is 12 Mbps .
HIGH indicates the bit rate is 480 Mbps .
Low indicates the bit rate is 1.5 Mbps .

Examples BUS:B1:USB:BITRATE FULL sets the bit rate to 12 Mbps .
BUS:B1:USB:BITRATE? might return :BUS:B1:USB:BITRATE LOW, indicating that the bit rate is 1.5 Mbps .

## BUS:B<x>:USB:PRObe

NOTE. Not available on some models.

This command sets or queries the type of probe connected to the USB signal for bus $<\mathrm{x}>$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:USB:PRObe \{DIFFerential|SING1eended\} BUS: $B<x>:$ USB: PRObe?

Arguments DIFFerential indicates that the bus probe is a differential probe. SING7eended indicates that the bus probe is a single-ended probe.

Examples BUS:B1:USB:PROBE DIFFERENTIAL sets the bus probe to be differential probe.

BUS:B1:USB:PROBE? might return :BUS:B1:USB:PROBE SINGLEENDED, indicating that a single-ended probe is used.

## BUS:B<x>:USB:SOUrce

NOTE. Not available on some models.

This command sets or queries the USB Data Source for bus $\langle\mathrm{x}\rangle$, where x is the bus number.

Group Bus

Syntax BUS:B<x>:USB:SOUrce
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS:B<X>:USB:SOUrce?

Related Commands BUS:B<x>:USB:SOUrce:DMINus, BUS:B<x>:USB:SOUrce:DPLUs

Arguments $\mathrm{CH} 1-\mathrm{Ch} 4$ specifies an analog channel as the data source for the specified USB bus. D0-D15 specifies a digital channel as the data source for the specified USB bus. MATH1-MATH4 specifies a math channel as the data source for the specified USB bus.

Examples BUS:B1:USB:SOURCE D2 sets the USB Data Source for bus B1 to D2.
BUS:B1:USB:SOURCE? might return :BUS:B1:USB:SOURCE D3, indicating that the USB Data Source for bus B1 is D3.

## BUS:B<x>:USB:SOUrce:DMINus

NOTE. Not available on some models.

This command sets or queries the USB Data Source for D- input for bus $<x>$, where x is the bus number.

If you are using single-ended probes, you need to set the sources for both the D+ and D - inputs.

Group Bus

Syntax BUS:B<x>:USB:SOUrce:DMINus
\{CH1|CH2|CH3|CH4|D0|D1|D2|D3|D4|D5|D6|D7|D8|D9|D10|D11|D12|
D13|D14|D15|MATH1|MATH2|MATH3|MATH4\}
BUS: $B<x>$ :USB: SOUrce:DMINus?

Related Commands BUS:B<x>:USB:SOUrce, BUS:B<x>:USB:SOUrce:DPLUs

Arguments $\quad \mathrm{CH} 1-\mathrm{Ch} 4$ specifies an analog channel as the D- source for the specified USB bus. D0-D15 specifies a digital channel as the D-source for the specified USB bus. MATH1-MATH4 specifies a math channel as the D- source for the specified USB bus.

Examples BUS:B1:USB: SOURCE:DMINUS CH2 sets the USB Data Source for D- input to CH2.

BUS:B1:USB:SOURCE:DMINUS? might return :BUS:B1:USB:SOURCE:DMINUS CH 4 , indicating that CH 4 is set to be the D- input for USB data.

## BUS:B<x>:USB:SOUrce:DPLUs

## NOTE. Not available on some models.

This command sets or queries the USB Data Source for D+ input. If you are using single-ended probes, you need to set the sources for both the $\mathrm{D}+$ and D - inputs.

Group Bus

Related Commands

Arguments

Examples BUS:B1:USB:SOURCE:DPLUS D2 sets the USB Data Source for D+ input to D2. BUS:B1:USB:SOURCE:DPLUS? might return :BUS:B1:USB:SOURCE:DPLUS D 3 , indicating that D3 is set to be the $\mathrm{D}+$ input for USB data.

## BUS:CH $\langle x\rangle$ :LOWTHRESHold

This command sets or queries the low threshold value for the analog source in the bus (USB differential).

Group Bus

Syntax BUS:CH<x>:LOWTHRESHold <NR3> BUS:CH<x>:LOWTHRESHold?

Related Commands BUS:CH $<\mathrm{x}>$ :THRESHold, BUS:MATH $<\mathrm{x}>$ :LOWTHRESHold, BUS:MATH $<\mathrm{x}>$ :THRESHold, BUS:REF $<\mathrm{x}>$ :THRESHold

Arguments <NR3> is a floating point number that specifies the threshold in millivolts. The default value is -200 mV .

Examples BUS:CH1:LOWTHRESHOLD $-100.0000 \mathrm{E}-3$ sets the low threshold value of the analog source to -100 mV .
BUS:CH1:LOWTHRESHOLD? might return :BUS:CH1:LOWTHRESHOLD:
$-100.0000 \mathrm{E}-3$, indicating that the low threshold value for CH 1 of the bus is -100 mV .

## BUS:CH<x>:THRESHold

If there is a high and low threshold for the analog source in the bus, this command sets or queries the high threshold value. Otherwise, this command sets or queries the threshold value.

```
Group Bus
Syntax BUS:CH<x>:THRESHold <NR3> BUS:CH<X>:THRESHold?
Related Commands BUS:CH \(<\mathrm{x}>\) :LOWTHRESHold, BUS:MATH \(<\mathrm{x}>\) :LOWTHRESHold, BUS:MATH \(<x>\) :THRESHold, BUS:REF \(<x>\) :THRESHold
```

Arguments <NR3> is a floating point number that specifies the high threshold value for the specified analog source. The default value is 1.4 V .

Examples BUS:CH1:THRESHOLD 1.2500 sets the high threshold value to 1.25 V if there is a high and low threshold for the analog source for the bus; otherwise, sets the threshold value to 1.25 V .

BUS:CH1:THRESHOLD? might return :BUS:CH1:THRESHOLD 1.5000, indicating that the (high if applicable) threshold value for the analog source is 1.5 V .

## BUS:MATH<x>:LOWTHRESHold

This command sets or queries the low threshold value of the mathematical waveform for the bus (USB differential).

Group Bus

Syntax BUS:MATH<x>:LOWTHRESHo1d <NR3> BUS:MATH<X>:LOWTHRESHold?

Related Commands BUS:MATH $<\mathrm{x}>$ :THRESHold, BUS:CH $<\mathrm{x}>$ :LOWTHRESHold, BUS:CH $<\mathrm{x}>$ :THRESHold, BUS:REF $<\mathrm{x}>$ :THRESHold

Arguments <NR3> is a floating point number that specifies the threshold in Volts. The default value is 0 V .

Examples BUS:MATH1:LOWTHRESHOLD 1.000 sets the low threshold value of the mathematical waveform to 1 V .

BUS:MATH1:LOWTHRESHOLD? might return :BUS:MATH1:LOWTHRESHOLD $100.0000 \mathrm{E}-3$, indicating that the low threshold value of the mathematical waveform is 0.1 volts.

## BUS:MATH<x>:THRESHold

If there is a high and low threshold for the mathematical waveform in the bus, this command sets or queries the high threshold value. Otherwise, this command sets or queries the threshold value.

Group Bus

Syntax BUS:MATH<x>:THRESHold <NR3> BUS:MATH $<x>$ :THRESHold?

Related Commands BUS:MATH $<x>$ :LOWTHRESHold, BUS:CH $<x>$ :LOWTHRESHold, BUS:CH $<\mathrm{x}>$ :THRESHold, BUS:REF $<\mathrm{x}>$ :THRESHold

Arguments <NR3> is a floating point number that specifies the high threshold value for the mathematical waveform. The default value is 0 V .

Examples BUS:MATH2:THRESHOLD 1 sets the threshold value of the mathematical waveform to 1 volt.

BUS:MATH1:THRESHOLD? might return :BUS:MATH1:THRESHOLD 1.0000, indicating that the threshold value of the mathematical waveform is 1 volt.

## BUS:REF<x>:THRESHold

If there is a high and low threshold for the reference waveform in the bus, this command sets or queries the high threshold value. Otherwise, this command sets or queries the threshold value.

Group Bus

Syntax BUS:REF<x>:THRESHold <NR3>
BUS:REF<x>:THRESHold?

Related Commands
BUS:CH $<\mathrm{x}>$ :LOWTHRESHold, BUS:CH $<\mathrm{x}>$ :THRESHold, BUS:MATH $<\mathrm{x}>$ : LOWTHRESHoldBUS:MATH $<x>$ :THRESHold

Arguments <NR3> is a floating point number that specifies the high threshold value for the reference waveform. The default value is 0 V .

Examples BUS:REF1:THRESHOLD 1.5 sets the high threshold value for REF 1 to 1.5 V if there is a high and low threshold; otherwise, sets the threshold value to 1.5 V .

BUS:REF1:THRESHOLD? might return :BUS:REF1:THRESHOLD 1.5000, indicating that the REF 1 threshold is set to 1.5 volts.

## BUSY? (Query Only)

This query-only command returns the status of the instrument. This command allows you to synchronize the operation of the instrument with your application program.

Group Status and Error<br>Syntax BUSY?<br>Related Commands *OPC, *WAI

Returns <NR1> = 0 means that the instrument is not busy processing a command whose execution time is extensive.
<NR1> = 1 means that the instrument is busy processing a command Commands that Generate an OPC Message (See Table 2-47.).

Examples BUSY? might return : BUSY 1, indicating that the instrument is currently busy.

## *CAL? (Query Only)

This query-only command starts signal path compensation and returns the status upon completion.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes. Any remote command that performs an action on the oscilloscope is also disabled until the SPC is complete.

Group Calibration

Syntax *CAL?

Related Commands CALibrate:RESults:SPC?

Returns 0 indicates SPC passed.
-1 indicates SPC failed.
3 indicates the instrument is still in the warm up phase and SPC was not run.

Examples *CAL? starts the internal signal path calibration and returns the status upon completion.

## CALibrate? (Query Only)

This query returns the status of instrument calibration, including internal signal path calibration, factory calibration, and probe calibration.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate?

| Examples | CALIBRATE? might return :CALIBRATE:INTERNAL:STATUS |
| :--- | :--- |
|  | PASS;CALIBRATE:FACTORY:STATUS PASSO;:CALIBRATE:RESULTS:SPC |
|  | PASS;:CALIBRATE:PROBESTATE:CH1 1;CH2 1;CH3 1;CH4 1, indicating |
|  | the calibration status. |

## CALibrate:CALProbe:CH<x>? (Query Only)

This query-only command instructs the instrument to perform a probe calibration for the selected channel and returns the calibration status. The Channel $<x>$ range is 1 through 4 . This command is equivalent to selecting Probe Cal from the Vertical menu. You must warm up the instrument for at least 20 minutes before running this command.

NOTE. A probe query takes approximately 30 seconds to complete. No other commands will be executed until calibration is complete.

Group Calibration

Syntax CALibrate:CALProbe:CH<x>?

Related Commands CALibrate:PRObestate: $\mathrm{CH}<\mathrm{x}>$ ?, $\mathrm{CH}<\mathrm{x}>:$ PROBECal?

Returns - -1 indicating the probe calibration failed for the selected channel.
0 indicating the probe calibration passed for the selected channel.
1 indicating the probe calibration is initialized for the selected channel.

Examples CALIBRATE:CALPROBE:CH2? might return :CALIBRATE:CALPROBE:CH2 0, indicating the probe calibration passed for Channel 2.

## CALibrate:INTERNal (No Query Form)

This command (no query form) starts the internal signal path calibration (SPC) of the instrument. You can use the CALibrate:INTERNal:STATus? query to return the current status of the internal signal path calibration of the instrument.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate:INTERNa1

Related Commands CALibrate:INTERNal:STATus?, CALibrate:RESults:SPC?

## Examples CALIBRATE:INTERNAL starts the internal signal path calibration of the

 instrument.
## CALibrate:INTERNal:STARt (No Query Form)

This command (no query form) starts the internal signal path calibration (SPC) of the instrument. This command is the same as the CALibrate:INTERNal command. You can use the CALibrate:INTERNal:STATus? query to return the current status of the internal signal path calibration of the instrument.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate:INTERNa1:STARt

Related Commands CALibrate:INTERNal:STATus?, CALibrate:RESults:SPC?

Examples CALIBRATE:INTERNAL:START starts the internal signal path calibration of the instrument.

## CALibrate:INTERNal:STATus? (Query Only)

This query-only command returns the current status of the internal signal path calibration.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate:INTERNa1:STATus?

Related Commands *CAL?, CALibrate:RESults:SPC?

Returns This query will return one of the following:

- INIT indicates the instrument has not had internal signal path calibration run.
- WARMUP indicates the instrument has not warmed up for the required time to perform signal path calibration.
- PASS indicates that the signal path calibration completed successfully.
- FAIL indicates that the signal path calibration did not complete successfully.
- TEMPDRIFT indicates that the instrument has not reached a state of stable temperature adequate for performing signal path calibration.
- RUNNING indicates that the signal path calibration is currently running.

## Examples CALIBRATE:INTERNAL:STATUS? might return

:CALIBRATE:INTERNAL:STATUS INIT, indicating that the current status of the internal signal path calibration is that it has not been run.

## CALibrate:PRObestate:CH<x>? (Query Only)

This query-only command returns the probe calibration status for the probe of the selected channel, 1 through 4.

Group Calibration

Syntax CALibrate:PRobestate:CH<x>?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>:$ PROBECal?

Returns This query will return one of the following:

- -1 Indicating the probe calibration failed for the selected channel.
- 0 Indicating the probe calibration passed for the selected channel.
- 1 Indicating the probe calibration is initialized for the selected channel.
- 2 Indicating that the probe calibration for the selected channel is running.

Examples CALIBRATE:PROBESTATE:CH1? might return :CALIBRATE: PROBESTATE:CH1 0 , indicating that the probe calibration for Channel 1 passed.

## CALibrate:RESults? (Query Only)

This query-only command returns the status of internal and factory calibrations, without performing any calibration operations. The results returned do not include the calibration status of attached probes. The CALibrate:RESults? query is intended to support GO/NoGO testing of the instrument calibration readiness: all returned results should indicate PASS status if the instrument is "fit for duty". It is quite common, however, to use uncalibrated probes (particularly when the instrument inputs are connected into a test system with coaxial cables).

This command is equivalent to selecting Instrument Calibration from the Utilities menu and then viewing the contents of the Status field.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate:RESults?

Related Commands *CAL?

Examples CALIBRATE:RESULTS? returns the status of all the calibration subsystems.
The query might return :CALIBRATE:RESULTS:SPC PASS;FACTORY PASS, indicating that the status of internal and factory calibrations, without performing any calibration operations is set to PASS.

## CALibrate:RESults:SPC? (Query Only)

This query-only command returns the results of the last SPC operation. However, this query does not cause an SPC to be run. This command is equivalent to selecting Instrument Calibration from the Utilities menu.

NOTE. When running SPC through the remote interface, calibration status cannot be obtained until after the SPC completes, which can take several minutes.

Group Calibration

Syntax CALibrate:RESults:SPC?

Related Commands *CAL?
$\begin{array}{ll}\text { Examples } \quad \text { CALIBRATE: RESULTS: SPC? returns the results of the last SPC operation: either } \\ & \text { PASS, FAIL, WARMUP, TEMPDRIFT, INIT, or RUNNING. }\end{array}$

## CHANNELMAPping? (Query Only)

This query returns a list of all channel mappings (such as, CH1.B2,CH2.A2,CH3.C2,CH4.D2). DPO70000SX Series only.

Group Miscellaneous

Syntax CHANNELMAPping?

Examples CHANNELMAPPING? may return the channel mapping CH1.B2,CH2.A2,CH3.C2,CH4.D2.

## $\mathrm{CH}<\mathrm{x}>$ ? (Query Only)

This query-only command returns the vertical parameters for the specified channel. The channel is specified by x . The value of x can range from 1 through 4. This command is similar to selecting Vertical Setup from the Vertical menu.

Group Vertical

Syntax CH<x>?

Examples CH1? might return the following vertical parameters for channel 1: : CH1:BANDWIDTH 1.0000E+09;COUPLING DC;DESKEWO.0000E+00;OFFSET 0.0000E+00;POSITION 0.0000E+00;SCALE 5.0000E-01;PROBCAL INIT; PROBE:GAIN $1.0000 \mathrm{E}+00$;RESISTANCE $1.0000 \mathrm{E}+06$;UNITS " V ";ID:TYPE "1X";SERNUMBER "N/A";:CH1:PROBEFUNC:EXTATTEN 1.0000E+00;EXTUNITS "None";:CH1:LABEL:NAME "";XPOS 5; YPOS 5.

## CH<x>:ATIACTive? (Query Only)

This query-only command returns whether the specified channel is an ATI channel.

Group Vertical

Syntax CH<x>:ATIACTive?

Examples CH2:ATIACTive? might return :CH2:ATIACTIVE 1, indicating that channel 2 is an ATI channel.

## CH<x>:AVAILable? (Query Only)

This query-only command returns whether the specified channel is available.

Group Vertical

Syntax CH<x>:AVAILable?

Examples CH4:AVAILable? might return :CH4:AVAILABLE 0, indicating that channel 4 is not available.

## CH<x>:BANdwidth

This command sets or queries the selectable low-pass bandwidth limit filter of the specified channel. The channel is specified by x . The value of x can range from 1 through 4. This is equivalent to selecting Bandwidth from the Vertical menu.

The query form of this command always returns the approximate realized bandwidth of the channel.

Available arguments depend upon the instrument and the attached accessories.

Group Vertical

Syntax CH<x>:BANdwidth \{<NR3>|FIVe|FUL1|TWEnty|ONEfifty|TwOfifty\} $\mathrm{CH}<\mathrm{x}>:$ BANdwidth?

Arguments <NR3> argument is a double-precision ASCII string. The instrument rounds this value to an available bandwidth using geometric rounding and then uses this value set the upper bandwidth.

FIVe sets the upper bandwidth limit to 500 MHz .
FUL1 disables any optional bandwidth limiting. The specified channel operates at its maximum bandwidth.

TWEnty sets the upper bandwidth limit to 20 MHz .
ONEfifty sets the upper bandwidth limit to 150 MHz .
Twofifty sets the upper bandwidth limit to 250 MHz .

Examples CH1: BANDWIDTH TWENTY sets the bandwidth of Channel 1 to 20 MHz .
CH2 : BANDWIDTH?, for DPO7054 instruments, might return : CH2 : BANDWIDTH $500.0000 \mathrm{E}+06$, indicating that there is no bandwidth limiting on Channel 2.

For DPO7104 instruments, this query might return : CH2 : BANDWIDTH $1.0000 \mathrm{E}+09$ indicating that there is no bandwidth limiting on Channel 2.

## CH<x>:BANdwidth:ENHanced

This command sets or queries the "Bandwidth Enhancement (DSP) Enabled" or "Analog Only" option.

NOTE. When possible, use the $\mathrm{CH}<x>$ :BANdwidth command to choose the enhanced bandwidth DSP filter.

Group Vertical

Syntax CH<x>:BANdwidth:ENHanced \{AUTO|OFF\}
$\mathrm{CH}<\mathrm{x}>:$ BANdwidth: ENHanced?

Arguments AUTO allows "Bandwidth Enhanced (DSP) Enabled", filtering as possible.
OFF allows "Analog Only", preventing DSP filtering.

Examples CH1:BANDWIDTH:ENHANCED AUTO allows bandwidth enhancement filtering as possible.

CH1:BANDWIDTH: ENHANCED? might return :CH1:BANDWIDTH: ENHANCED AUTO, indicating that the bandwidth will be enhanced if possible.

## CH<x>:BANdwidth:ENHanced:APPLYtoall

This command sets or queries specified channel's bandwidth and bandwidth enhanced selection, "DSP" or "Analog Only" to set the other channels the same. Bandwidth achieved on each channel can further be limited while conditions, such as a lower bandwidth probe, that limited the bandwidth exist. A query will almost certainly return 0 , as once the request is processed, ApplyToAll will return to its default state of OFF allowing the channels to continue operating independently.

Group Vertical

Syntax CH<x>:BANdwidth:ENHanced:APPLYtoal1 \{ON|OFF|1|0\}
CH<x>:BANdwidth:ENHanced:APPLYtoal1?

Arguments ON sets other channels to bandwidth and bandwidth enhancement filters or analog only of the specified channel.

OFF is the default setting, each channel operates independently regarding bandwidth and bandwidth enhanced (DSP).

1 sets other channels to bandwidth and bandwidth enhancement filters or analog only of the specified channel.

0 is the default and each channel operates independently regarding bandwidth and bandwidth enhanced (DSP).

Examples CH1:BANDWIDTH:ENHANCED:APPLYTOALL ON sets the CH1 Bandwidth selection and Digital Filters (DSP) Enabled or Analog Only selection to the other 3 channels. The bandwidth set is influenced by the BW limitations of the channel. If CH1 is not physically limited and has requested 15.0 GHz (DSP) bandwidth, while CH2 has a P7313 probe attached which is limited to 12.5 GHz (HW). A request via CH1 ApplyToAll might result in 13 GHz (DSP) on CH2. If no other Bandwidth selections were made on CH 2 , subsequent removal of the probe on CH 2 would result in 15 GHz (DSP) on CH 2 .

CH:BANDWIDTH:ENHANCED:APPLYTOALL? might return
:CH:BANDWIDTH:ENHANCED:APPLYTOALL 0, indicating that each channel operates independently regarding bandwidth and bandwidth enhanced (DSP).

## CH $<x>$ :BANdwidth:ENHanced:FORCe

This command sets or queries the Force constant sample rate of the Digital Filters (DSP). The bandwidth Enhanced Filter provides you the ability to "Force"
constant sample rate, keeping the system in the sample rate base. This is also known as Bandwidth Enhanced AUTO.

NOTE. The bandwidth set is influenced by the requested bandwidth and its channel limitations.

NOTE. If Force is ON, a request to lower the sample rate below the DSP supported rate is rejected.

Group Vertical

Syntax CH<x>:BANdwidth:ENHanced:FORCe \{OFF|ON\}
CH<x>:BANdwidth:ENHanced:FORCe?

Arguments OFF is the default setting; DSP filtering occurs when sample rate is supported.
ON forces the conditions appropriate for Digital Filtering (DSP) to occur. With this option system changes are made to achieve sample rate that Bandwidth Enhanced Digital Filters (DSP) operate in, a Horizontal Mode of Constant Sample Rate, appropriate DSP BW, and Bandwidth Enhanced Auto on the specified channel would all be selected. Incompatible features would be turned off for example, FastAcq would be inhibited.

Examples CH1:BANDWIDTH:ENHANCED:FORCE? might return
:CH1:BANDWIDTH: ENHANCED: FORCE ON, request to lower the sample rate below the DSP supported rate would be rejected.

## CH<x>:BANdwidth:ENHanced:STATE? (Query Only)

This query-only command returns the state of the bandwidth enhancement filter (DSP).

Group Vertical

Syntax CH<x>:BANdwidth:ENHanced:STATE?

Examples CH1:BANDWIDTH:ENHANCED: STATE? might return
:CH1: BANDWIDTH: ENHANCED:STATE 1, indicating the bandwidth enhancement filter is on.

## $\mathrm{CH}<\mathrm{x}>$ :COUPling

This command sets or queries the input attenuator coupling setting for the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4. This command is equivalent to selecting Coupling from the Vertical menu.

NOTE. The available arguments depend on the instrument and the attached accessories.

Group Vertical

Syntax CH<x>:COUPling \{AC|DC|DCREJect|GND\}
$\mathrm{CH}<\mathrm{x}>:$ COUPling?

Arguments AC sets the specified channel to AC coupling.
DC sets the specified channel to DC coupling.
DCREJect sets DC Reject coupling when probes are attached that have that feature.

GND sets the specified channel to ground. Only a flat, ground-level waveform will be displayed.

Examples CH2: cOUPLING GND sets Channel 2 to ground.
CH3: COUPLING? might return :CH3:COUPLING DC, indicating that Channel 3 is set to DC coupling.

## CH<x>:DESKew

This command sets or queries the deskew time for the specified channel. The channel is specified by x . The value of x can range from 1 through 4 . This command is equivalent to selecting Deskew from the Vertical Setup menu.

You can adjust the deskew time to add an independent, channel-based delay time to the delay (set by the horizontal position control and common to all channels) from the common trigger point to first sample taken for each channel. This lets you compensate individual channels for different delays introduced by their individual input hook ups.

Group Vertical

Syntax $\quad C H<x>$ :DESKew <NR3> CH<x>:DESKew?

Arguments <NR3> is the deskew time for this channel, ranging from -25 ns to +25 ns with a resolution of 1 ps . Out-of-range values are clipped.

Examples CH4:DESKEW 5.0E-9 sets the deskew time for Channel 4 to 5 ns .
CH2 : DESKEW? might return : CH2:DESKEW 2.0000E-09, indicating that the deskew time for Channel 2 is set to 2 ns .

## CH<x>:FASTAcqcapable? (Query Only)

This query-only command returns whether the specified channel is capable of FastAcq.

Group Vertical

Syntax CH<x>:FASTAcqcapable?

Examples CH2:FASTAcqcapable? might return : CH2:FASTACQCAPABLE 0, indicating that channel 2 is not FastAcq capable.

## CH<x>:FASTFRamecapable? (Query Only)

This query-only command returns whether the specified channel is capable of FastFrame acquisitions.

Group Vertical

Syntax CH<x>:FASTFRamecapable?

Examples CH2:FASTFRamecapable? might return :CH2:FASTFRAMECAPABLE 0, indicating that channel 2 is not capable of FastFrame.

## CH<x>:ICAPture:SOUrce

NOTE. Not available on some models.

This command sets or queries the digital source to acquire iCapture signals.
NOTE. To use this command, iCapture should be turned on.

Group Vertical

Syntax CH<x>:ICAPture:SOUrce \{D0|D1|D2|D3|D4|D5|D6|D7
|D8|D9|D10|D11|D12|D13|D14|D15|CQ0\}
CH<x>:ICAPture:SOUrce?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :ICAPture:STATE

Arguments D0-D15 or CQ0 specifies the digital channel.

Examples CH1:ICAPTURE:SOURCE D8 selects the signal from digital probe input D8 as the signal CH1 acquires in iCapture mode (:CH1:ICAPture:STATE is ON).

CH1:ICAPTURE:SOURCE? might return :CH1:ICAPTURE:SOURCE D9, indicating that the signal from digital probe input is set to D9.

## CH<x>:ICAPture:STATE

## NOTE. Not available on some models.

This command sets or queries the state of the iCapture feature for the channel specified by x . The value of x can range from 1 through 4 .

Group Vertical

Syntax CH<x>:ICAPture:STATE \{<NR1>|OFF|ON\}
CH<x>:ICAPture:STATE?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>:$ ICAPture:SOUrce

$$
\begin{array}{ll}
\text { Arguments } & <\text { NR1 }>=0 \text { turns off the iCapture feature; any other value turns on the iCapture } \\
\text { feature. } \\
& \text { OFF turns off the iCapture feature. }
\end{array}
$$

ON turns on the iCapture feature.

Examples CH1:ICAPTURE:STATE ON turns on the iCapture feature.
CH1:ICAPTURE:STATE? might return :CH1:ICAPTURE:STATE 0, indicating that the iCapture feature is turned off.

## CH<x>:LABel:NAMe

This command sets or queries the label attached to the displayed waveform for the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4. This command is equivalent to selecting Label from the Vertical menu.

Group Vertical

Syntax CH<x>:LABe1:NAMe <QString>

Arguments <QString> is an alphanumeric character string, ranging from 1 through 32 characters in length.

Examples CH2:LABEL: NAME "Pressure" changes the waveform label for the Channel 2 waveform to "Pressure".

CH3:LABEL:NAME? might return :CH3:LABEL:NAME "Force", indicating that the waveform label for the Channel 3 waveform is "Force".

## CH<x>:LABel:XPOS

This command sets or queries the X screen offset at which the label (attached to the displayed waveform of the specified channel) is displayed, relative to the left edge of the screen. The channel is specified by $x$. The value of $x$ can range from 1 through 4. This command is equivalent to selecting Label from the Vertical menu and either viewing or setting X Pos.

Group Vertical

Syntax CH<x>:LABe1:XPOS <NR1>
CH<x>:LABe1:XPOS?

Arguments <NR1> is the location (control in divisions) where the waveform label for the selected channel is displayed, relative to the left edge of the screen. Arguments should be integers ranging from 0 through 10 .

Examples

CH3:LABEL:XPOS 5 moves the waveform label for the Channel 3 that it begins 5 divisions to the right of the left edge of the screen.

CH2:LABEL:XPOS? might return :CH2:LABEL:XPOS 5, indicating that the waveform label for the Channel 2 currently 5 divisions to the right of the left edge of the screen.

## CH<x>:LABel:YPOS

This command sets or queries the Y screen offset at which the label (attached to the displayed waveform of the specified channel) is displayed, relative to the waveform handle. The channel is specified by $x$. The value of $x$ can range from 1 through 4. This command is equivalent to selecting Label from the Vertical menu and either viewing or setting Y Pos.

Group Vertical

Syntax CH<x>:LABE1:YPOS <NR1>
CH<x>:LABe1:YPOS?

Arguments
<NR1> is the location (in divisions) where the waveform label for the selected channel is displayed, relative to the waveform handle. Arguments should be integers ranging from 10 to -10 .

## Examples CH3:LABET:YPOS -2.5 moves the waveform label for the Channel 3

 2.5 divisions below the waveform handle.CH2:LABE1:YPOS? might return :CH2:LABEL:YPOS 0, indicating that the waveform label for the Channel 2 is currently located at the waveform handle.

## CH<x>:OFFSet

This command sets or queries the vertical offset for the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4 . This command is equivalent to selecting Offset from the Vertical menu.

This command offsets the vertical acquisition window (moves the level at the vertical center of the acquisition window) for the selected channel. Visualize offset as scrolling the acquisition window towards the top of a large signal for increased
offset values, and scrolling towards the bottom for decreased offset values. The resolution of the vertical window sets the offset increment for this control.

Offset adjusts only the vertical center of the acquisition window for channel waveforms to help determine what data is acquired. The instrument always displays the input signal minus the offset value. The channel reference marker will move to the vertical graticule position given by the negative of the offset value divided by the scale factor, unless that position is off-screen. If the computed coordinate for the reference mark is off-screen, the mark moves to the nearest screen limit and changes from a right-pointing arrow $(\rightarrow)$ to an arrow pointing in the appropriate off-screen direction.

Group Vertical

Syntax CH<x>:OFFSet <NR3> $\mathrm{CH}<\mathrm{x}>$ :OFFSet?

## Related Commands $\mathrm{CH}<\mathrm{x}>$ :POSition

Arguments <NR3> is the offset value for the specified channel.

Examples CH3:OFFSET 2.0E-3 sets the offset for Channel 3 to 2 mV .
CH4:OFFSET? might return :CH4:OFFSET 1.0000E-03, indicating that the offset for Channel 4 is set to 1 mV .

## CH<x>:POSition

This command sets or queries the vertical position of the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4 . The position value is applied to the signal before it is digitized. This command is equivalent to selecting Position/Scale from the Vertical menu and either viewing or setting Position.

Increasing the position value of a waveform causes the waveform to move up, and decreasing the position value causes the waveform to move down. Position adjusts only the display position of a waveform, whether it is a channel, math, or reference waveform. The position value determines the vertical graticule coordinate at which input signal values, minus the present offset setting for that channel, are displayed. For example, if the position for Channel 3 is set to 2.0 and the offset is set to 3.0 , then input signals equal to 3.0 units are displayed 2.0 divisions above the center of the screen.

Group Vertical

Syntax CH<x>:POSition <NR3> $\mathrm{CH}<\mathrm{x}>$ : POSition?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :OFFSet, $\mathrm{D}<\mathrm{x}>:$ POSition,MATH $<\mathrm{x}>$ :VERTical:POSition, REF $<\mathrm{x}>$ :VERTical:POSition,

Arguments <NR3> is the position value, in divisions from the center graticule, ranging from 8 to -8 divisions.

Examples CH 2 : POSITION $1.3 \mathrm{E}+00$ positions the Channel 2 input signal 1.3 divisions above the center graticule.

CH1: POSITION? might return : CH1: POSITION $-1.3000 \mathrm{E}+00$, indicating that the current position of Channel 1 is 1.3 divisions below the center graticule.

## CH<x>:PRObe? (Query Only)

This query-only command returns all information concerning the probe that is attached to the specified channel. The channel is specified by x . The value of x can range from 1 through 4.

Group Vertical

Syntax CH<x>:PRObe?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :PROBECal?

Examples CH2:PROBE? might return :CH2:PROBE:GAIN 1.0000E-01; RESISTANCE 1.0000E+07;UNITS "V";ID:TYPE "10x"'SERNUMBER "N/A" for a 10X probe, indicating that (among other parameters) the attenuation factor for the probe attached to Channel 2 is 100.0 mV (assuming that probe units are set to volts).

## CH <x>:PRObe:AUTOZero (No Query Form)

This command sets the probe attached to the input to autozero. The channel is specified by x . The value of x can range from 1 through 4 .

Group Vertical

Syntax CH<x>:PRObe:AUTOZero EXECute

Arguments EXECute sets the probe attached to the specified channel to autozero.

Examples CH1:PROBE:AUTOZERO EXECUTE sets the probe attached to the Channel 1 to autozero.

## CH<x>:PRObe:DEGAUSS (No Query Form)

This command starts a degauss cycle of the probe attached to the specified channel. The channel is specified by x . The value of x can range from 1 through 4 .

Group Vertical

Syntax CH<x>:PRObe:DEGAUSS EXECute

Arguments EXECute starts the degauss cycle.

Examples CH1:PROBE:DEGAUSS EXECUTE causes the probe attached to Channel 1 to degauss.

## CH $<x>$ :PRObe:DEGAUSS:STATE? (Query Only)

This command queries whether the probe attached to the specified channel is degaussed.

Group Vertical

Syntax CH<x>: PRObe:DEGAUSS:STATE?

Examples CH2:PROBE:DEGAUSS:STATE? might return :CH2:PROBE:DEGAUSS:STATE PASSED, indicating that the probe attached to the Channel 2 is degaussed.

## CH<x>:PRObe:FORCEDRange

This command sets the attached probe to the specified range, or it queries the range of the probe attached to the specified channel. The channel is specified by x . The value of $x$ can range from 1 through 4 .

A partial list of probes supported by this command includes the following probes: TCP0001, TCP0030, TCP0150, TDP0500, TDP1000, and TDP1500.

- $\mathrm{CH}<\mathrm{x}>$ : PRObe: FORCEDRange response will not appear in $\mathrm{CH}<\mathrm{x}>$ :PRObe? or *LRN? query responses for channels that do not have probes that implement the appropriate features.
- This command can be sent to any channel whose 'range-selection' policy is Manual without regard to the kind of probe installed in that channel (an error results if the policy is Auto). This permits accepting previous SET? or *LRN? query responses even if the attached probe is different from the one when the query was sent.
- The $\mathrm{CH}<\mathrm{x}>$ : PRObe: FORCEDRange? query can be sent explicitly to any channel even though these commands do not appear in a "SET?" response, but the oscilloscope will reply with the string "N/A" if the probe does not implement those control mechanisms.

Group Vertical

Syntax CH<x>:PRObe:FORCEDRange <dynamicRangeNR3> $\mathrm{CH}<\mathrm{x}>$ : PRObe: FORCEDRange?

Arguments <dynamicRangeNR3> specifies the probe range.

Examples If a TCP0030 current probe is attached to the Channel 1 input, CH1: PROBE: FORCEDRANGE 5.0 sets the attached probe to its 5 Ampere range.

CH1: PROBE: FORCEDRANGE? might return :CH1: PROBE: FORCEDRANGE
2.5000, indicating that the range of the probe attached to the Channel 1 is set to 2.5 Ampere.

## CH<x>:PRObe:GAIN? (Query Only)

This query-only command returns the gain factor of the probe that is attached to the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4. The "gain" of a probe is the output divided by the input transfer ratio. For example, a common 10x probe has a gain of 0.1 .

Group Vertical

Syntax CH<x>:PRObe:GAIN?

Related Commands $\mathrm{CH}<\mathrm{x}>$ :SCAle

Examples CH2:PROBE:GAIN? might return :CH2:PROBE:GAIN $0.1000 \mathrm{E}+00$, indicating that the attached 10 X probe delivers 0.1 V to the Channel 2 BNC for every 1.0 V applied to the probe input.

## CH<x>:PRObe:ID? (Query Only)

This query-only command returns the type and serial of the probe that is attached to the specified channel. The channel is specified by x . The value of x can range from 1 through 4.

Group Vertical

Syntax CH<x>:PRObe:ID?

Examples CH2:PROBE:ID? might return :CH2:PROBE:ID:TYPE "10X";SERNUMBER " $\mathrm{N} / \mathrm{A}$ ", indicating that a passive 10 X probe of unknown serial number is attached to Channel 2.

## CH<x>:PRObe:ID:SERnumber? (Query Only)

This query-only command returns the serial number of the probe that is attached to the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4.

NOTE. For Level 0 and 1 probes, the serial number will be "N/A".

Group Vertical

Syntax CH<x>:PRObe:ID:SERnumber?

Examples CH1:PROBE:ID:SERNUMBER? might return :CH1:PROBE:ID:SERNUMBER "в010289", indicating that the serial number of the probe attached to Channel 1 is B010289.

## CH<x>:PRObe:ID:TYPe? (Query Only)

This query-only command returns the type of probe that is attached to the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4. Level 2 (or higher) probes supply their exact product nomenclature; for Level 0 or 1 probes, a generic 'type string' of " $n \mathrm{nX}$ " is returned.

Group Vertical

Syntax CH<x>:PRObe:ID:TYPe?

Examples CH1:PROBE:ID:TYPE? might return :CH1:PROBE:ID:TYPE "P6203", indicating that P6203-type probe is attached to Channel 1.

## CH<x>:PRObe:INPUTMode

This command sets or queries the input mode of the probe that is attached to the specified channel.

Group Vertical

Syntax CH<x>:PRObe:INPUTMode \{DEFault|DIFFerential|commonmode|A|B\} CH<x>:PRObe:INPUTMode?

Arguments DEFault sets to the default.
DIFFerential sets the probe to route differential signals to the host.
COMmonmode sets the probe to route common-mode signals to the host.
A sets the probe to route single-ended A signals to the host.
$B$ sets the probe to route single-ended $B$ signals to the host.

Examples CH1:PROBE:INPUTMODE 5.0 sets the attached probe to Channel 1 to its 5 Ampere range.

CH1: PROBE: INPUTMODE? might return :CH1: PROBE:INPUTMODE A, indicating that the input mode of the probe that is attached to the Channel 1 is set to DEFAULT

## CH<x>:PRObe:INPUTMode:AOFFSet

This command sets or queries the requested A mode offset control of the probe that is attached to the specified channel.

Group Vertical

Syntax CH<x>:PRObe:INPUTMode:AOFFSet <NR3>
CH<x>: PRObe:INPUTMode:AOFFSet?

Arguments <NR3> specifies the A mode offset control.

Examples CH1:PROBE:INPUTMODE:AOFFSET 5.0 sets the requested A mode offset control of the probe that is attached to the Channel 1 to its 5 Ampere range.

CH1:PROBE:INPUTMODE:AOFFSET? might return
:CH1: PROBE:INPUTMODE:AOFFSET? 0.0000, indicating that the requested A mode offset control of the probe that is attached to the Channel 1 is set to 0.0 .

## CH<x>:PRObe:INPUTMode:BOFFSet

This command sets or queries the requested B mode offset control of the probe that is attached to the specified channel.

Group Vertical

Syntax CH<x>:PRObe:INPUTMode:BOFFSet <NR3>
CH<x>:PRObe:INPUTMode:BOFFSet?

Arguments <NR3> specifies the B mode offset control.

Examples CH1:PROBE:INPUTMODE:BOFFSET 5.0 sets the requested B mode offset control of the probe that is attached to the Channel 1 to its 5 Ampere range.

CH1:PROBE:INPUTMODE:BOFFSET? might return
: CH1: PROBE: INPUTMODE: BOFFSET 0.0000 , indicating that the requested A mode offset control of the probe that is attached to the Channel 1 is set to 0.0 .

## CH<x>:PRObe:INPUTMode:CMOFFSet

This command sets or queries the requested common mode offset control of the probe that is attached to the specified channel.

Group Vertical

Syntax CH<x>:PRObe:INPUTMOde:CMOFFSet <NR3> CH<x>:PRObe:INPUTMode:CMOFFSet?

Arguments <NR3> specifies the common mode offset control.

Examples CH1:PROBE:INPUTMODE:CMOFFSET 5.0 sets the requested common mode offset control of the probe that is attached to the Channel 1 to its 5 Ampere range.

CH1:PROBE:INPUTMODE:CMOFFSET? might return
:CH1:PROBE:INPUTMODE:CMOFFSET 0.0000, indicating that the requested common mode offset control of the probe that is attached to the Channel 1 is set to 0.0 .

## CH<x>:PRObe:INPUTMode:DMOFFSet

This command sets or queries the requested common mode differential mode offset control of the probe that is attached to the specified channel.

Group Vertical

Syntax CH<x>:PRObe:INPUTMode:DMOFFSet <NR3> CH<x>:PRObe:INPUTMode:DMOFFSet?

Arguments <NR3> specifies the differential mode offset control.

Examples CH1:PROBE:INPUTMODE:DMOFFSET 5.0 sets the requested differential mode offset control of the probe that is attached to the Channel 1 to its 5 Ampere range.

CH1:PROBE:INPUTMODE:DMOFFSET? might return
:CH1:PROBE:INPUTMODE:DMOFFSET 0.0000, indicating that the requested differential mode offset control of the probe that is attached to the Channel 1 is set to 0.0 .

## CH<x>:PRObe:RANge

This command controls or queries the attenuation range of the probe on the designated channel.

A partial list of probes supported by this command is: P7260, P7313, P7313SMA, P7340A, P7360, P7360A, P7380, P7380A, P7380SMA, and P7520.

- $\mathrm{CH}<\mathrm{x}>$ : PRObe: RANge response will not appear in $\mathrm{CH}<\mathrm{x}>$ :PRObe? or *LRN? query responses for channels that do not have probes that implement the appropriate features.
- This command can be sent to any channel whose 'range-selection' policy is Manual without regard to the kind of probe installed in that channel (an error results if the policy is Auto). This permits accepting previous SET? or *LRN? query responses even if the attached probe is different from the one when the query was sent.
- The $\mathrm{CH}<\mathrm{x}>$ : PRObe: RANge? query can be sent explicitly to any channel even though these commands do not appear in a SET? response, but the oscilloscope will reply with the string "N/A" if the probe does not implement those control mechanisms.

Group Vertical

Examples CH1:PROBE:RANGE ATTEN10X sets the attenuation range of the probe attached to Channel 1 to 10X.

CH1:PROBE:RANGE? might return :CH1:PROBE:RANGE ATTEN1_25X, indicating that the attenuation range of the probe on the designated Channel 1 is set to 25 X .

## CH<x>:PRObe:RESistance? (Query Only)

This query-only command returns the resistance factor of the probe that is attached to the specified channel. The channel is specified by x . The value of x can range from 1 through 4.
Group Vertical
Syntax CH<x>: PRobe:RESistance?

## Examples CH2:PROBE:RESISTANCE? might return :CH2:PROBE:RESISTANCE

 $1.0000 \mathrm{E}+06$, indicating that the input resistance of the probe attached to Channel 2 is $1 \mathrm{M} \Omega$.
## CH<x>:PRObe:SET

This command sets or queries aspects of probe accessory user interfaces, for example probe attenuation factors. The available arguments for this command will vary depending on the accessory you attach to the instrument.

For the P7260 probe, you can select between two attenuation factors using either this GPIB command or the push switch on the probe. The probe enables the relevant path and adjusts the set of available vertical settings based on the characteristics of the path in use. The probe signal path selection is not kept in persistent storage. The probe will lose the selection if you reboot the instrument or remove the probe. Also, the instrument does not store the selection in the save/recall setup operation.

Group Vertical

Syntax CH<x>:PRObe:SET<QString>
$\mathrm{CH}<\mathrm{x}>$ : PRObe:SET?

Arguments <QString> is a quoted string representing a settable aspect of the attached accessory. Example strings for some probes are shown as follows:

ATTENuation 5 X sets the P 7260 probe to $\pm 0.75 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 5X attenuation.

ATTENuation 25 X sets the P 7260 probe to $\pm 3 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 25 X attenuation.

VTERMsource AUTO sets the P7380SMA probe voltage termination source to auto.

VTERMsource INTerna1 sets the P7380SMA probe voltage termination source to internal.

VTERMsource EXTerna1 sets the P7380SMA probe voltage termination source to external.

Examples CH2:PROBE:SET "ATTEN 25 X " sets the P7260 probe to the selection for $\pm 3 \mathrm{~V}$ dynamic range with 3 GHz bandwidth and 25 X attenuation.

CH2: PROBE:SET? might return :CH2:PROBE:SET "ATTENUATION 5X" indicating that the P7260 probe is set to the selection for $\pm 0.75 \mathrm{~V}$ dynamic range with 6 GHz bandwidth and 5 X attenuation.

CH2:PROBE:SET? "ATTEN" might return :CH2:PROBE:SET "ATTENUATION 25 X ", indicating that the P7260 probe is set to the selection for $\pm 3 \mathrm{~V}$ dynamic range with 3 GHz bandwidth and 25 X attenuation.

## CH<x>:PRObe:SIGnal

This command sets or queries aspects of probe accessory user interfaces. The available arguments for this command will vary depending on the accessory you attach to the instrument.

Group Vertical

Syntax CH<x>:PRObe:SIGnal \{PASS|BYPass\}
CH<x>:PRObe:SIGnal?

Arguments PASS opens a relay passing your signal to the instrument.
BYPass closes a relay preventing your signal from reaching the instrument.
During probe degauss, the signal should be bypassed.

Examples CH2:PROBE:SIGNAL PASS opens a relay passing your signal on Channel 2 to the instrument.

CH1:PROBE:SIGNAL? might return :CH1:PROBE:SIGNAL BYPASS, indicating that the relay is closed preventing your Channel 1 signal from reaching the instrument.

## CH<x>:PRObe:TIPtype

This command sets or queries the type of probe tip being used on the specified channel.

Group Vertical

Syntax CH<x>:PRObe:TIPtype \{HBWStraightflex|OTHer\}
$\mathrm{CH}<\mathrm{x}>$ : PRObe:TIPtype?

Arguments HBWStraightflex lets the instrument know you are using a high bandwidth straight-flex probe tip.

OTHer lets the instrument know you are not using a high bandwidth straight-flex probe tip.

Examples CH1:PROBE:TIPTYPE HBWSTRAIGHTFLEX sets the channel 1 probe tip type to HBWStraightflex.

CH1:PROBE:TIPTYPE? might return :CH1:PROBE:TIPTYPE OTHER, indicating the probe tip is not an HBWStraightflex type.

## CH <x>:PRObe:UNIts? (Query Only)

This query-only command returns a string describing the units of measure for the probe attached to the specified channel. The channel is specified by x . The value of x can range from 1 through 4 .

Group Vertical

Syntax CH<x>:PRObe:UNIts?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :PROBEFunc:EXTUnits

Examples CH4:PROBE:UNITS? might return :CH4:PROBE:UNITS " V ", indicating that the units of measure for the probe attached to Channel 4 are volts.

## CH<x>:PROBECal? (Query Only)

This query-only command returns the probe calibration state for the selected channel. The channel is specified by x . The value of x can range from 1 through 4. This command is equivalent to selecting Probe Cal from the Vertical menu.

Group Vertical

Syntax CH<x>: PROBECa1?

Returns This query will return one of the following:

- FAI1 signifies that the probe calibration has failed for the selected channel.
- INIT signifies that the probe calibration has not yet been run for the selected channel.
- PASS signifies the probe calibration has passed for the selected channel.

Examples CH2: PROBECAL? might return : CH 2 : PROBECAL PASS indicating that the probe calibration has passed for Channel 2.

## CH<x>:PROBECOntrol

This command allows you to set or query the probe range.

Group Vertical

Syntax CH<x>: PROBECOntrol \{AUTO|MANual\}
$\mathrm{CH}<\mathrm{x}>$ : PROBECOntrol?

Arguments AUTO sets the values. The probe range is automatically calculated.
MANual allows you to select various valid values for the probe connected to a particular channel.

Examples CH2: PROBECONTROL AUTO sets the values and the probe range is automatically calculated.

CH2 : PROBECONTROL? might return :CH2: PROBECONTROL MANUAL indicating that you can select various valid values for the probe connected to a particular channel.

## CH<x>:PROBEFunc:EXTAtten

This command is used to specify the input-output ratio, of external attenuation or gain, between the signal and the instrument input channels.

The channel is specified by x . The value of x can range from 1 through 4 .
The query form of this command returns the user-specified attenuation. Note that this command deals with an attenuation factor, not a gain factor, unlike $\mathrm{CH}<\mathrm{x}>$ :PRObe? (This command returns a value independent of the external attenuation). For example, if you specify a 20x attenuation factor for channel 1 , the commands return the following values (assuming that a 1 x probe is presently attached, since the external attenuation is used in combination with the probe attenuation):

```
CH1:PRObe:EXTA? 20.00E+0
CH1:PRObe? 1.0E+0
```

This command is equivalent to selecting Attenuation from the Vertical menu, and then either viewing or setting Ext Atten.

Group Vertical

Syntax CH<x>:PROBEFunc:EXTAtten <NR3> CH<x>: PROBEFunc:EXTAtten?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :PROBEFunc:EXTDBatten

Arguments <NR3> is the attenuation value, which is specified as a multiplier in the range from $1.00 \mathrm{E}-10$ to $1.00 \mathrm{E}+10$.

Examples CH1:PROBEFUNC:EXTATTEN 167.00E-3 specifies an external attenuation, which is connected between the user's input signal and the input of the probe attached to Channel 1.

CH2:PROBEFUNC:EXTATTEN? might return :CH2:PROBEFUNC:EXTATTEN $1.0000 \mathrm{E}+00$, indicating that the probe attached to Channel 2 is connected directly to the user's signal.

## CH<x>:PROBEFunc:EXTDBatten

Use this command to specify the input-output ratio (expressed in decibel units) of external attenuation or gain between the signal and the instrument input channels.

The channel is specified by x . The value of x can range from 1 through 4 .

The query form of this command returns the user-specified attenuation in decibels: $1 \mathrm{X}=0 \mathrm{~dB}, 10 \mathrm{X}=20 \mathrm{~dB}, 100 \mathrm{X}=40 \mathrm{~dB}$, and similar things.

This command is equivalent to selecting Attenuation from the Vertical menu, and then either viewing or setting Ext Att (dB).

Group Vertical

Syntax CH<x>: PROBEFunc:EXTDBatten <NR3>
CH<x>: PROBEFunc: EXTDBatten?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :PROBEFunc:EXTAtten

Arguments <NR3> is the attenuation value, which is specified in the range from -200.00 dB to 200.00 dB .

Examples CH3: PROBEFUNC: EXTDBATTEN 2.5 specifies an external 2.5 dB attenuator on Channel 3.

CH1:PROBEFUNC:EXTDBATTEN? might return
:CH1: PROBEFUNC: EXTDBATTEEN $2.5000 \mathrm{E}+00$, indicating that the attenuation for Channel 1 is 2.5 dB .

## CH<x>:PROBEFunc:EXTUnits

This command sets the unit of measurement for the external attenuator of the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4 . There is also a corresponding query that returns the user-specified unit of measurement for the external attenuator. Unless these units are set to the factory default string value of "None", they become the attenuated units of measurement for that channel. It is assumed that the probe connected to the specified channel is of the correct type to receive the output of the user's external transducer or network.

Group Vertical

Syntax CH<x>:PROBEFunc:EXTUnits <QString> $\mathrm{CH}<\mathrm{x}>$ : PROBEFunc:EXTUnits?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :PRObe:UNIts?

Arguments <QString> can contain a string of up to eight characters to indicate the attenuation unit of measurement for the specified channel. However, most instrument attenuators only display the first two characters.

Examples CH4:PROBEFUNC:EXTUNITS "Pa" sets the unit of measurement for the Channel 4 external attenuator.

CH2 : PROBEFUNC: EXTUNITS? might return : CH 2 : PROBEFUNC: EXTUNITS "Pa", indicating that the Channel 2 external attenuator units of measurement are Pascals.

## CH<x>:SCAle

This command sets or queries the vertical scale of the specified channel. The channel is specified by $x$. The value of $x$ can range from 1 through 4 . Sending this command is equivalent to selecting Vertical Setup from the Vertical menu and then viewing or setting the Scale.

Each waveform has a vertical scale parameter. For a signal with constant amplitude, increasing the Scale causes the waveform to be displayed smaller. Decreasing the scale causes the waveform to be displayed larger.

Scale affects all waveforms, but affects channel waveforms differently from other waveforms:

- For channel waveforms, this setting controls the vertical size of the acquisition window and the display scale. The range and resolution of scale values depends on the probe attached and any other external factors you have specified.
- For reference and math waveforms, this setting controls the display only, graphically scaling these waveforms and having no affect on the acquisition hardware.

Group Vertical

Syntax CH<x>:SCA7e <NR3>
CH<x>:SCATe?

Related Commands
$\mathrm{CH}<\mathrm{x}>$ :OFFSet, $\mathrm{CH}<\mathrm{x}>$ :POSition, $\mathrm{REF}<\mathrm{x}>$ :VERTical:SCAle, MATH $<\mathrm{x}>$ :VERTical:SCAle

Arguments <NR3> is the vertical channel scale in units per division.

Examples CH4:SCALE 100E-03 sets the Channel 4 scale to 100 mV per division.
CH2: SCALE? might return :CH2:SCALE $1.0000 \mathrm{E}+00$, indicating that the current scale setting of Channel 2 is 1 V per division.

## $\mathrm{CH}<\mathrm{x}>$ :TERmination

This command sets the connected/disconnected status of a $50 \Omega$ resistor, which can be connected between the specified channel's coupled input and instrument ground. The channel is specified by x . The value of x can range from 1 through 4. There is also a corresponding query that requests the termination parameter and translates this enumeration into one of the two float values. This command is equivalent to selecting Termination from the Vertical menu or toggling between termination values from the VERTICAL area of the front panel.

NOTE. The available arguments depend on the instrument and the attached accessories.

Group Vertical

Syntax CH<x>:TERmination <NR3> CH<x>:TERmination?

Arguments <NR3> specifies the channel input resistance, which can be specified as $50 \Omega$ or $1,000,000 \Omega$.

Examples CH4:TERMINATION 50.0E+0 establishes $50 \Omega$ impedance on Channel 1 .
CH2:TERMINATION? might return :CH2:TERMINATION 50.0E+0, indicating that Channel 2 is set to $50 \Omega$ impedance.

## CH <x>:THRESHold

This command sets or queries the comparable threshold for converting the analog signal to digital form for the channel specified by x . The value of x can range from 1 through 4.

Group Vertical

Syntax CH<x>:THRESHold <NR3>
CH<x>:THRESHold?

# Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :POSition, $\mathrm{CH}<\mathrm{x}>$ :SCAle D $<\mathrm{x}>$ :THRESHold, MATH $<\mathrm{x}>$ :THRESHold 

Arguments <NR3> specifies the analog threshold in volts.

Examples CH1:THRESHOLD 1 sets the threshold value of the channel CH 1 to 1 volt.
CH1:THRESHOLD? might return CH1:THRESHOLD 500.0000E-3, indicating that the threshold value set for the channel CH 1 is 0.5 volts.

## CH<x>:VTERm:BIAS

This command sets or queries the termination voltage for a channel (if control is available). $<\mathrm{x}>$ is the channel.

Group Vertical

Syntax CH<x>:VTERm:BIAS <NR3>
CH<x>:VTERm:BIAS?

Arguments <NR3> specifies the termination voltage.

Examples CH4:VTERm:BIAS 1.5 sets the termination voltage on CH 4 to 1.5 Volts.
CH2:VTERm:BIAS? might return CH2:VTERm:BIAS 0.0000, indicating that the termination voltage for CH 2 is set to 0 volts.

## CH<x>:VTERm:DUAL:A

This command sets or queries the termination voltage for probes with dual inputs that support settable termination voltage.

Group Vertical

Syntax CH<x>:VTERm:DUAL:A <NR3>
CH<x>:VTERm:DUAL:A?

Arguments <NR3> specifies the termination voltage.

Examples CH4:VTERm:DUAL:A 1.5 sets the termination voltage of the A input of the channel 4 probe to 1.5 Volts.

CH3:VTERm:DUAL:B? might return CH3:VTERM:DUAL:B 0.0000, indicating that the termination voltage for the B input of the probe plugged into the CH 3 input is set to 0 volts.

## CH<x>:VTERm:DUAL:B

This command sets or queries the termination voltage for probes with dual inputs that support settable termination voltage.

Group Vertical

Syntax CH<x>:VTERm:DUAL: B<NR3> CH<x>:VTERm:DUAL:B?

Arguments <NR3> specifies the termination voltage.

Examples CH3:VTERm:DUAL:A 0.5 sets the termination voltage of the A input of the channel 3 probe to 0.5 Volts.

CH3:VTERm:DUAL:B? might return CH3:VTERM:DUAL:B 0.0000, indicating that the termination voltage for the $B$ input of the probe plugged into the CH3 input is set to 0 volts.

## CLEAR (No Query Form)

This command clears acquisitions, measurements, and waveforms.

Group Miscellaneous

Syntax CLEAR \{ALL\}

Arguments All clears acquisitions, measurements, and waveforms.

Examples CLEAR ALL clears all acquisitions, measurements, and waveforms.

## *CLS (No Query Form)

This command (no query form) clears the following:

- Event Queue
- Standard Event Status Register
- Status Byte Register (except the MAV bit)

If the *CLS command immediately follows an <EOI>, the Output Queue and MAV bit (Status Byte Register bit 4) are also cleared. MAV indicates that information is in the output queue. The device clear (DCL) GPIB control message will clear the output queue and thus MAV. *CLS does not clear the output queue or MAV.
*CLS can suppress a Service Request that is to be generated by an *OPC. This will happen if a single sequence acquisition operation is still being processed when the *CLS command is executed.

Group Status and Error

Syntax *CLS

Related Commands DESE, *ESE, *ESR?, EVENT?, EVMsg?, *SRE, *STB?

Examples *CLS clears the instrument status data structures.

## CMDBatch

This command sets or queries the state of command batching. By batching commands, database transactions can be optimized, increasing command throughput. Also, batching allows for ALL commands in an individual batch to be order independent and accomplish the same result as if the commands were coupled.

The Batch state is persistent and will be saved across power cycles, but will not be saved and recalled as part of a setup. In a setup scenario, the factory initial value is enabled.

Group Miscellaneous

Syntax CMDBatch \{<NR1>OFF|ON\}
CMDBatch?

Arguments <NR1> = 0 turns command batching off; any other value turns command batching on.

OFF turns command batching off.
ON turns command batching on.

Examples CMDBATCHOFF disables command batching.
CMDBATCH? might return : CMDBATCH 1, indicating that command batching is turned on.

## COUnter (No Query Form)

This command is used for three separate purposes. DPO70000SX Series only. This command is optional.

First, the COUnter REFerence command takes the reference to be the last measured value when the command is received. After that, the displayed values are deltas from the reference value. In linear terms reference is just the offset.

Second, the COUnter CLEAR command zeroes both the measured and derived statistical values, and zeroes the number of acquisitions used to accumulate the statistics.

Third, the COUnter RESET command is only needed in the Trigger Source Frequency Application to recalculate the A->B Sequence Trig on Nth Event value. This is only necessary if the user has overridden the automatically calculated Trig on Nth Event value. The application automatically calculates the Trig on Nth Event value to achieve an acquisition update rate of about $1 / 3$ second, to both maximize the number of digits in the measured result, and keep the acquisition rate lively.

Group Trigger

Syntax COUnter <REFerence|CLEAR|RESet>

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments

Examples

REFerence takes the reference to be the last measured value when the command is received. After that, the displayed values are deltas from the reference value.

CLEAR zeroes both the measured and derived statistical values, and zeroes the number of acquisitions used to accumulate the statistics.

RESet recalculates the A->B Sequence Trig on Nth Event value.

COUNTER CLEAR takes the reference to be the last measured value when the command is received.

COUNTER REF takes the reference to be the last measured value when the command is received. .

COUNTER RESet recalculates the A->B Sequence Trig on Nth Event value.

## COUnter:DURation

Group Trigger

Syntax COUnter:DURation <nrl> Counter: DURation?

## Related Commands

COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter:
LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter:
SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter:

Arguments <nr1> is the time interval, in seconds, between log updates. The default is 60 seconds.

Examples COUNTER: DURATION 60 causes the log table to be updated every 30 seconds. COUNTER: DURATION? query may return a value between 1 and 3600 .

## COUnter:GAln

Sets or queries the Gain (scale) value for the Trigger Source Frequency or A-B Trigger Time Interval applications. When the time or frequency is measured, it is multiplied by the Gain before the value is displayed, used to calculate statistics, or logged in the table. Considered along with COUNT:REFerence <nr3>, this applies the linear relationship $\mathrm{y}=\mathrm{mx}+\mathrm{b}$, where b is the Reference (or offset) and m is the gain (or scale). The default gain is 1.0 . The gain may never be 0.0 . DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:GAIn <nr2> COUnter:GAIn?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments <nr2> is the Gain (scale) value for the Trigger Source Frequency or A-B Trigger Time Interval applications

Examples COUNTER:GAIN 2.0 multiplies all counter measurements by 2 .
COUNTER:GAIN? May return any positive real value greater than 0.0 and less than 1000.0.

## COUnter:LOGAction (No Query Form)

This command clears all data from the Log Table of the Trigger Source Frequency or A-B Trigger Time Interval Application. DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:LOGACtion <CLEAR>

# Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW 

## Arguments

CLEAR empties the log table.

Examples COUNTER: LOGACTION CLEAR removes all data from the log table.

## COUnter:LOGNumber

Sets or queries the parameter that controls the schedule for updating the Log Table of the Trigger Source Frequency or A-B Trigger Time Interval Application Data when the COUnter:UPDate is NUMBER. The number of acquisitions between log updates is set to the number specified in the argument of this command. DPO70000SX Series only. This command is optional.

Group Trigger<br>Syntax Counter:LOGNumber <nr1> COUnter:LOGNumber?<br>Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter:<br>LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments <nr1> is he number of acquisitions between log updates. The default is 100 acquisitions.

Examples COUNTER:LOGNUMBER 1000 set the number of acquisitions between log updates to 1000 .

COUNTER:LOGNUMBER? query may return a value between 1 and 10000 .

## COUnter:LOGTable

Sets or queries the parameter that enables/disables the Log Table of the Trigger Source Frequency or A-B Trigger Time Interval Application Data. When disabled, no $\log$ is kept. DPO70000SX Series only. This command is optional.

Group Trigger<br>Syntax COUnter:LOGTable <OFF|ON> counter:LOGTable?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments OFF disables use of the log table. ON enables use of the log table. The default is ON.

Examples COUNTER: LOGTABLE OFF disables use of the log table.
COUNTER: LOGTABLE? query may return a value of OFF or ON.

## COUnter:REFerence

Sets or queries the Reference (offset) value for the Trigger Source Frequency or A-B Trigger Time Interval applications. When the time or frequency is measured the offset is subtracted from the measured value before the value is displayed, used to calculate statistics, or logged in the table. Considered along with COUNT:GAIn <nr3>. this applies the linear relationship $\mathrm{y}=\mathrm{mx}+\mathrm{b}$, where b is the Reference (or offset) and m is the gain (or slope). This command may be used to zero the reference value (COUnter:REFerence 0.0), or to set it to any other value. The Reference can be taken automatically as the last measured value using the COUnter REF command (notice no semicolon here), and then queried to determine its value. DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:REFerence <nr3> Counter:REFerence?

## Related Commands

COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments <nr3> is the Reference (offset) value for the Trigger Source Frequency or A-B Trigger Time Interval applications.

Examples COUNTER:REFERENCE 0.0 sets the Reference (offset) value for the Trigger Source Frequency or A-B Trigger Time Interval applications to 0.0 .

COUNTER: REFERENCE? may return any positive real value within the range of possible measurement values.

## COUnter:RESULTs? (Query Only)

Queries the measured and derived values obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The measured quantity is value. The minimum, maximum, AVGmean, and Deviation are statistical values accumulated over the number of acquisitions (NUMber) taken at the time the command is given. All results are returned with the single query COUnter:RESULTs? Individual results are returned by other queries

Group Trigger

Syntax counter:RESULTs?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter: VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS? may return the set of results " 10.0000000005 GH"," $10.000000001 \mathrm{GHz} ", ~ " 10.00000008 \mathrm{GHz} ", ~ " 10.00000003 \mathrm{GHz} ", " 124.3$ mHz ", "1687".

## COUnter:RESULTs:AVGmean? (Query Only)

Queries the derived value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The AVGmean is a statistical value accumulated over the number of acquisitions (NUMber) taken at the time the command was given.

Group Trigger

Syntax COUnter:RESULTs:AVGmean?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter: VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:AVGMEAN? may return the specific measured result " 10.000000001 GHz ".

## COUnter:RESULTs:DEViation? (Query Only)

Queries the derived value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The Deviation is a statistical value accumulated over the number of acquisitions (NUMber) taken at the time the command was given.

Group Trigger

Syntax COUnter:RESULTs:DEViation?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter: VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:DEVIATION?may return the specific measured result " 10.000000001 GHz "

## COUnter:RESULTs:MAXimum? (Query Only)

Queries the derived value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The maximum is a statistical value accumulated over the number of acquisitions (NUMber) taken at the time the command was given.

Group Trigger

Syntax COUnter:RESULTs:MAXimum?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter: VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:MAXIMUM? may return the statistical result "10.000000001 GHz"

## COUnter:RESULTs:MINimum? (Query Only)

Queries the derived value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The minimum is a statistical value accumulated over the number of acquisitions ("NUMber") taken at the time the command was given.

Group Trigger

Syntax COUnter:RESULTS:MINimum?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter: VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:MINIMUM? may return the statistical result "10.000000001 GHz ".

## COUnter:RESULTs:NUMber? (Query Only)

Queries the derived value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The value is the number of acquisitions (NUMber) taken at the time the command was given.

Group Trigger

Syntax COUnter:RESULTs:NUMber?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter:
VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs:
AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs:
MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs:
NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:NUMBER? may return 1687 indicating the number of acquisitions used in the measurement.

## COUnter:RESULTs:VALue? (Query Only)

Queries the measured value obtained from the Trigger Source Frequency or A-B Trigger Time Interval Applications. The measured quantity is value.

Group Trigger

Syntax COUnter:RESULTs:VALue?

Related Commands COUnter:STAteCOUnter:TYPeCOUnter:SHOWMeasurementCOUnter:
VIEWCOUnter:REFerenceCOUnter:RESULTs?COUnter:RESULTs:
AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs:
MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs:
NUMber?COUnter:RESULTs:VALue?

Examples COUNTER:RESULTS:VALUE? may return the specific measured result "10.000000001 GHz".

## COUnter:SHOWLog

Sets or queries the parameter that controls the display of the Trigger Source Frequency or A-B Trigger Time Interval Application Data. The display of the data in the graticule area may be turned OFF or back ON as desired. A possible reason for turning it OFF is when the Log Table is enabled to record the data. DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:SHOWLog <OFF|ON> COUnter:SHOWLog?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments OFF disables the display of the frequency or time interval data. ON enables the display of the frequency or time interval data. The default is ON.

Examples COUNTER:SHOWLOG ON displays the Trigger Source Frequency or A-B Trigger Time Interval Application Data.

COUNTER:SHOWLOG? query may return OFF or ON.

## COUnter:SHOWMeasurement

Sets or queries the parameter that controls the display of the Trigger Source Frequency or A-B Trigger Time Interval Application Data. The display of the data in the graticule area may be turned OFF or back ON as desired. A possible reason for turning it OFF is when the Log Table is enabled to record the data. DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:SHOWMeasurement <OFF|ON> counter:SHOWMeasurement?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments OFF disables the display of the frequency or time interval data. ON enables the display of the frequency or time interval data. The default is ON.

Examples COUNTER:SHOWMEASUREMENT ON enables display of Trigger Source Frequency or A-B Trigger Time Interval application data.

COUNTER: SHOWMEASUREMENT? query may return OFF or ON.

## COUnter:STAte

Enables the Trigger Source Frequency or A-B Trigger Time Interval application, depending on the value of the COUnter:TYPe parameter. This command sets or queries the Counter State enumerated value (OFF/ON) used to enable/disable the display of frequency or time information in the graticule area or in the Results Table.

The Trigger Source Frequency Application uses trigger hardware, rather than the acquired waveform, to measure the frequency of the signal on the trigger source to a very high precision. Best results are obtained when the External Reference is tied between the instrument and the source of the trigger signal. As a result of using the trigger hardware, the measurement update rate is very fast, $1 / 3$ second by default. An A-Event Edge to B-Event Edge A->B Sequence must be used. Statistics are derived from the measured values: Minimum, Maximum, Average (mean), and Standard Deviation. The number of measurements made so far is also included. Note that long record lengths are NOT needed for this application, because the measurements are made from the trigger hardware, not from the acquired waveform. A Reference value may be taken by command or entered manually. When the Reference is non-zero, the measured value and the derived statistics are shown or queried as delta values from the Reference.

The A-B Trigger Time Interval Application also uses trigger hardware to measure the time between the A-Event and the B-Event in an A-B Sequence trigger. The A- and B-Events may be any combination of trigger types: Edge, Glitch, Width, etc. A Reference value may be taken by command or entered manually. When the Reference value is non-zero, the measured value is displayed or queried as a delta from this Reference.

For example, if the COUnter:TYPe parameter is set to FREQuency, the COUnter:STAte ON command causes the display of the frequency of the triggered channel signal, which is assumed to be an infinitely repeating clock. Along with the frequency value, the minimum, maximum, average (mean), and standard deviation of the frequency are also displayed. Finally, a reference value is displayed. The reference is 0.0 by default, but may be captured as the last measured value at any time using the COUnter REF command. When the reference value is nonzero, the other values are deltas from the reference value. The displayed information is typical of products generally referred to by the industry as "requency Counters. At the user's discretion, the COUnter:VIEW <PERiod | FREQuency> command can be used to view the information as the Frequency (Hz) or Period (seconds). The default view is Frequency.

As a second example, if the COUnter:TYPe parameter is set to TIME, the COUnter:STAte ON command causes the display of the Time interval from the Trigger A-Event to the Trigger B-Event. These events can be from any trigger types in an A->B Trigger Sequence. In this case only the Time and the Reference value are displayed. The COUnter REF command takes the Reference value as before, but in this case the units relate to Time (seconds).

DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter: STAte $\{<$ NR1>|OFF|ON $\}$
Counter: STAte?

## Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:VIEWCOUnter:RESULTs?COUnter: RESULTs:AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Arguments <NR1>, if 0 disables the counter function, if 1 enables the counter function.
OFF disables the counter function. The default value is OFF.
ON enables the counter function.

Examples COUNTER: STATE on enables the counter to display the count time or frequency. COUNTER: STATE? query may return OFF or ON.

## COUnter:TYPe

Group Trigger<br>Syntax COUnter:TYPe <TIME|FREQuency> COUnter:TYPe?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:VIEWCOUnter:RESULTs?COUnter: RESULTs:AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?

Arguments TIME sets the application type to frequency
FREQuency sets the application type to time interval. The default value is Frequency.

Examples COUNTER:TYPE FREQuency sets the counter type to frequency. COUNTER:TYPE? query may return FREQuency or TIME.

## COUnter:UPDate

Sets or queries the parameter that controls the schedule for updating the Log Table of the Trigger Source Frequency or A-B Trigger Time Interval Application Data. The schedule for logging the data may be set to occur automatically, after a given time interval has elapsed, or after a given number of acquisitions have occurred. The default is AUTO. DPO70000SX Series only. This command is optional.

Group Trigger

Syntax Counter:UPDate <AUTO|TIME|NUMBER> counter:UPDate?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter: LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter: SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter: TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs: AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs: MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs: NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments AUTO sets the data logging to automatic.
TIME sets the data logging to occur after a given time interval has elapsed.
NUMBER sets the data logging to occur after a given number of acquisitions have occurred.

Examples COUNTER:UPDATE AUTO sets the log table update schedule to automatic. COUNTER: UPDATE? query may return AUTO, TIME, or NUMBER.

## COUnter:VIEW

Sets or queries the View of the Counter Trigger Source Frequency Application Data. When the COUnter:TYPe is FREQuency, the data may be viewed as Frequency (Hz) or Time (seconds). This command does not apply to the A-B Time Interval Application (COUnter:TYPE TIME). DPO70000SX Series only. This command is optional.

Group Trigger

Syntax COUnter:VIEW <FREQuency|PERiod> counter:VIEW?

Related Commands COUnterCOUnter:DURationCOUnter:GAInCOUnter:LOGActionCOUnter:<br>LOGNumberCOUnter:LOGTableCOUnter:REFerenceCOUnter:<br>SHOWLogCOUnter:SHOWMeasurementCOUnter:STAteCOUnter:<br>TYPeCOUnter:UPDateCOUnter:RESULTs?COUnter:RESULTs:<br>AVGmean?COUnter:RESULTs:DEViation?COUnter:RESULTs:<br>MAXimum?COUnter:RESULTs:MINimum?COUnter:RESULTs:<br>NUMber?COUnter:RESULTs:VALue?COUnter:VIEW

Arguments FREQuency displays the count in Hertz.
PERiod displays the count in seconds.

Examples COUNTER:VIEW FREQuency displays the count in Hertz. COUNTER:VIEW? query may return FREQuency or PERiod.

## CQ<x>:THRESHold

NOTE. Not available on some models.

This command sets or queries the comparable threshold for converting the clock/qualifier signal to its digital form, where x is zero.

Group Digital

Syntax CQ<x>:THRESHold <NR3> CQ<x>:THRESHold?

Arguments <NR3> specifies the channel/qualifier threshold in volts.

Examples CQ0:THRESHOLD 0.5 sets the threshold value of the channel/qualifier CQ0 to 0.5 volt.

CQ0:THRESHOLD? might return CQ0:THRESHOLD 1.4000 , indicating that the threshold value set for the channel/qualifier CQ0 is 1.4 volts.

## CURSor?

This query-only command returns all of the current cursor settings.

Group Cursor

Syntax CURSor?

Examples CURSOR? might return the following as the current cursor settings:
:CURSOR:STATE 1;FUNCTION VBARS;LINESTYLE SOLID;MODE
INDEPENDENT;SOURCE1 CH1; SOURCE2 CH1;SCREEN:STYLE

```
LINES; :CURSOR:VBARS:UNITS SECONDS;POSITION1
-1.6000E-6;POSITION2 1.6000E-6; :CURSOR:HBARS:POSITION1

99.1000E+36; THETA2 99.1000E+36;XDELTA 0.0000;YDELTA 0.0000.
```

## CURSor:FUNCtion

Group Cursor

Syntax CURSor: FUNCtion \{OFF|hbArs|VBArs|SCREEN|WAVEform\} CURSor: FUNCtion?

Related Commands CURSor:STATE

Arguments
OFF removes the cursors from the display but does not change the cursor type. HBArs specifies horizontal bar cursors, which measure in vertical units.
VBArs specifies vertical bar cursors, which measure in horizontal units.
SCREEN specifies both horizontal and vertical bar cursors, which measure in horizontal and vertical units specified by the Cursor 1 and Cursor 2 Sources. Use these cursors to measure anywhere in the waveform display area.

WAVEform specifies paired or split cursors in YT display format for measuring waveform amplitude and time. In XY and XYZ format, these cursors indicate the amplitude positions of an XY pair (Ch1 vs Ch2 voltage, where Ch 1 is the X axis and Ch 2 is the Y axis) relative to the trigger.

## Examples CURSOR: FUNCTIONVBArs selects the vertical bar cursors type.

CURSOR:FUNCTION? might return :CURSor: FUNCtion HBArs, indicating that the horizontal bar cursors are currently selected.

## CURSor:HBArs? (Query Only)

This query-only command returns the current settings for the horizontal bar cursors.

Group Cursor

Syntax CURSor:HBArs?

Examples CURSOR:HBARS? might return the horizontal bar setting as :CURSOR:HBARS:POSITION1 320.0000E-03;POSITION2-320.0000E-03;UNITS BASE.

## CURSor:HBArs:DELTa? (Query Only)

This query-only command returns the vertical difference between the two horizontal bar cursors.

Group Cursor

Syntax CURSor:HBArs:DELTa?

Related Commands CURSor:HBArs:UNIts?

Returns A floating point value with an exponent.

Examples CURSOR:HBARS:DELTA? might return :CURSOR:HBARS:DELTA $5.0800 \mathrm{E}+00$, indicating that the voltage difference between the two cursors is 5.08 V .

## CURSor:HBArs:POSITION<x>

This command sets or queries the horizontal bar cursor position relative to ground, which is expressed in vertical units (usually volts). The cursor is specified by x , which can be 1 or 2 . This command is the equivalent to selecting Cursor Position from the Cursors menu, selecting the H Bars Cursor Type, and then viewing or editing the desired cursor position.

Group Cursor

```
Syntax CURSor:HBArs:POSITION<x> <NR3> CURSor: HBArs:POSITION \(<x>\) ?
Related Commands CURSor:FUNCtion
Arguments <NR3> specifies the cursor position relative to ground.
Examples CURSOR:HBARS: POSITION1 25.0E-3 positions Cursor 1 of the horizontal cursors at 25 mV .
CURSOR:HBARS:POSITION2? might return :CURSOR:HBARS:POSITION2
\(-64.0000 \mathrm{E}-03\), indicating that Cursor 2 of the horizontal bar cursors is at -64 mV .
```

## CURSor:HBArs:UNIts? (Query Only)

This query-only command returns the units for the horizontal bar cursors.
This query always returns BASE, indicating that the units for the horizontal bar cursors are those of the base waveform to which they were assigned.

Group Cursor

Syntax CURSor:HBArs:UNIts?

Examples CURSOR:HBARS:UNITS? always returns :CURSOR:HBARS:UNITS BASE indicating that the units for the horizontal bar cursors are base.

## CURSor:LINESTyle

This command sets or queries the cursors line style used when cursors are displayed.

Group Cursor

Syntax CURSor:LINESTyle \{DASHed|SDASHed|SOLID\} CURSor:LINESTyle?

Arguments DASHed displays the cursors as dashed lines.
SDASHed displays the cursors as solid-dashed lines.

SOLID displays the cursors as solid lines.

Examples CURSOR:LINESTYLESOLID displays the cursors as solid lines. CURSOR:LINESTYLE? might return :CURSOR:LINESTYLE DASHED, indicating that the cursors are displayed as dashed lines.

## CURSor:MODe

Group Cursor

Syntax CURSor:MODe \{TRACk|INDependent\} CURSor:MODe?

Arguments TRACk ties the navigational functionality of the two cursors together. For cursor 1 adjustments, this ties the movement of the two cursors together, however, cursor 2 continues to move independently of cursor 1 .

INDependent allows independent adjustment of the two cursors.

Examples CURSOR:MODE TRACK specifies that the cursor positions move in unison.
CURSOR:MODE? might return :CURSOR:MODE TRACK, indicating that the two cursors move in unison.

## CURSor:SCREEN:STYIe

This command sets or queries the cursor type for Screen mode.

Group Cursor

Syntax CURSor:SCREEN:STY7e \{LINE_X|LINES|X\}
CURSor:SCREEN:STYle?

Arguments LINE_X specifies the cursor style to be a line with superimposed X .
LINES specifies the cursor style to be a line.

X specifies the cursor style to be an X .

Examples CURSOR:SCREEN:STYLE LINES sets the cursor style to lines.
CURSOR:SCREEN:STYLE? might return :CURSOR:SCREEN:STYLE X, indicating that the style for screen cursors is X .

## CURSor:SCREEN:XPOSITION<x>

This command sets or queries the x position of the specified screen cursor. The cursor is specified by x , which can be 1 or 2 . If the cursor is not specified, it defaults to cursor 1 .

Group Cursor

Syntax CURSor:SCREEN:XPOSITION<x> <NR3> CURSOR:SCREEN:XPOSITION<x>?

Related Commands CURSor:SCREEN:YPOSITION $<\mathrm{x}>$

Arguments <NR3> specifies the x position of the specified screen cursor.

Examples CURSOR:SCREEN:XPOSITION1 15.0E-3 sets the x position of the screen Cursor 1 to 15 mV .

CURSOR:SCREEN:XPOSITION2? might return :CURSOR:SCREEN:XPOSITION2 $-64.0000 \mathrm{E}-03$ indicating that x position of the screen Cursor 2 is set to -64 mV .

## CURSor:SCREEN:YPOSITION<x>

This command sets or queries the y position of the specified screen cursor. The cursor is specified by x , which can be 1 or 2 . If the cursor is not specified, it defaults to cursor 1 .

Group Cursor

Syntax CURSor:SCREEN:YPOSITION<X> <NR3> CURSor:SCREEN:YPOSITION<x>?

Related Commands CURSor:SCREEN:XPOSITION $<\mathrm{x}>$

Arguments <NR3> specifies the y position of the specified screen cursor.

Examples CURSOR:SCREEN:YPOSITION1 25.0E-3 sets the y position of the screen Cursor 1 to 25 mV .

CURSOR:SCREEN:YPOSITION2? might return :CURSOR:SCREEN:YPOSITION2 $-53.0000 \mathrm{E}-03$ indicating that y position of the screen Cursor 2 is set to -53 mV .

## CURSor:SOUrce<x>

Group Cursor

Syntax CURSor:SOUrce<x>
\{CH1|CH2|CH3|CH4|MATH1|MATH2|MATH3|MATH4|REF1|REF1|REF3|REF4\}
CURSor:SOUrce<x>?

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ sets an input channel waveform as the cursor source. The valid channel waveform range is from 1 through 4.

MATH1-MATH4 sets a math waveform as the cursor source. The valid math waveform range is from 1 through 4.

REF1-REF4 sets a reference waveform as the cursor source. The valid reference waveform range is from 1 through 4.

Returns Any valid waveform.

Examples CURSOR:SOURCE 1 CH 2 sets the Cursor1 source to Channel 2.
CURSOR:SOURCE2? might return : CURSOR:SOURCE2 CH2 indicating that the Cursor2 source is Channel 2.

CURSOR: SOURCE? might return : CURSOR: SOURCE1 CH2, indicating that the Cursorl source is Channel 2. If you do not specify the cursor, the cursor 1 source is returned.

## CURSor:STATE

This command sets or queries the state of cursors. Note that setting the cursor state does not modify the cursor type.

This command is equivalent to pressing the CURSOR button on the front panel.

Group Cursor

Syntax CURSor:STATE $\{<$ NR1>|ON|OFF\}
CURSor:STATE?

Related Commands CURSor:FUNCtion

Arguments <NR1> = 0 disables the display cursors; any other value enables the display cursors.

ON displays the cursors.
OFF removes cursors from the display.

Examples CURSOR:STATE ON displays the cursors.
CURSOR:STATE? might return : CURSOR:STATE 1, indicating that the cursors are active on the display.

## CURSor:VBArs

This command sets or queries the current settings for the vertical bar cursors or forces them to snap to positions specified by the DATa:STARt and DATa:STOP commands.

Group Cursor

Syntax CURSor:VBArs SNAp CURSor:VBArs?

Related Commands DATa:STARt, DATa:STOP

Arguments SNAp forces the position of vertical bar cursor 1 and 2 to snap to the waveform record points specified by the DATa:STARt and DATa:STOP commands, respectively.

Examples CURSOR:VBARS SNAp forces vertical bar cursorl to the DATA:START position and vertical bar cursor 2 to the DATA:STOP position.

CURSOR:VBARS? might return the following vertical bar settings
:CURSOR:VBARS:UNITS SECONDS;POSITION1 1.0000E-06;POSITION2
$9.0000 \mathrm{E}-06$.

## CURSor:VBArs:DELTa? (Query Only)

This query-only command returns the horizontal difference between the two vertical bar cursors. The units are specified by the CURSor:VBArs:UNIts command. The position can appear in units of Base or 1/Base.

Group Cursor

Syntax CURSor:VBArs:DELTa?

Related Commands CURSor:VBArs:UNIts

Returns A floating point value with an exponent.

Examples CURSOR:VBARS:DELTA? might return : CURSOR:VBARS:DELTA 1.0640E+00, indicating that the time between the vertical bar cursors is 1.064 s .

## CURSor:VBArs:POSITION<x>

This command sets or queries the horizontal position for vertical bar cursors. The cursor is specified by x , which can be 1 or 2 . Values are with respect to trigger position or the zero reference point for the designated waveform (if horizontal units are not set to time). Use the CURSor:VBArs:UNIts command to specify units. The position can appear in units of base or $1 /$ base.

This command is the equivalent of selecting Cursor Setup from the Cursors menu, selecting V Bars Cursor Type, and then viewing or editing the desired cursor position.

Group Cursor

Syntax CURSor:VBArs:POSITION<x> <NR3> CURSOr:VBArs:POSITION<x>?

Related Commands CURSor:VBArs:UNIts

Arguments <NR3> specifies the cursor position.

Returns A floating point value with an exponent.

Examples CURSOR:VBARS: POSITION2 9.00E-6 positions the cursor2 vertical bar cursor at 9 ms .

CURSOR:VBARS: POSITION1? this command might return
:CURSOR:VBARS:POSITION1 1.0000E-06, indicating that the cursorl vertical bar is positioned at 1 ms .

## CURSor:VBArs:POS<x>

This command sets or queries the horizontal position for vertical bar cursors. The cursor is specified by x , which can be 1 or 2 . Values are with respect to trigger position or the zero reference point for the designated waveform (if horizontal units are not set to time). Use the CURSor:VBArs:UNIts command to specify units. The position can appear in units of base or $1 /$ base.

This command is the equivalent of selecting Cursor Setup from the Cursors menu, selecting V Bars Cursor Type, and then viewing or editing the desired cursor position.

Group Cursor

Syntax CURSor:VBArs:POS<x> <NR3> CURSor:VBArs:POS<x>?

Related Commands CURSor:VBArs:UNIts

Arguments <NR3> specifies the cursor position.

Returns A floating point value with an exponent.

Examples CURSOR:VBARS:POS2 9.00E-6 positions the cursor2 vertical bar cursor at 9 ms . CURSOR:VBARS: POS? this command might return :CURSOR:VBARS: POS1 $1.0000 \mathrm{E}-06$, indicating that the cursorl vertical bar is positioned at 1 ms .

## CURSor:VBArs:UNIts

This command sets or queries the units for the vertical bar cursors.

```
Group Cursor
Syntax CURSor:VBArs:UNIts \{SECOnds|HERtz\} CURSor:VBArs:UNIts?
```

Arguments SECOnds sets the units of the vertical bar cursors for the time domain (seconds). HERtz sets the units of the vertical bar cursors for the frequency domain (Hertz).

Returns A string for SECOnds or HERtz, depending on the current vertical bar cursor units.

Examples CURSOR:VBARS:UNITS HERTZ sets the units of the vertical bar cursors to 1/seconds.

CURSOR:VBARS:UNITS? might return :CURSOR:VBARS:UNITS SECONDS, indicating that the units for the vertical bar cursor are currently set to seconds.

## CURSor:WAVEform

Group Cursor

Syntax CURSor:WAVEform SNAp
CURSor:WAVEform?

Related Commands DATa:STARt, DATa:STOP

Arguments SNAp forces the position of waveform cursor 1 and 2 to snap to the waveform record points specified by the DATa:STARt and DATa:STOP commands, respectively.

Examples CURSOR:WAVEFORM SNAP forces waveform cursorl to the DATA: START position and waveform cursor 2 to the DATA:STOP position.
This command sets or queries the current settings for the waveform cursors or forces them to snap to positions specified by the DATa:STARt and DATa:STOP commands.
$\qquad$

CURSOR:WAVEFORM? might return the following waveform cursor settings :CURSOR:WAVEFORM:UNITS SECONDS;POSITION1 1.0000E-06;POSITION2 9.0000E-06.

## CURSor:WAVEform:HDELTA? (Query Only)

This query-only command returns the horizontal difference between the waveform cursors. This is the absolute value of the horizontal position of the first cursor minus the horizontal position of the second cursor. This is equivalent to the waveform delta-time readout value.

Group Cursor

Syntax CURSor:WAVEform:HDELTA?

Examples CURSOR:WAVEFORM:HDELTA? might return :CURSOR:WAVEFORM:HDELTA $1.03 \mathrm{E}-9$, indicating that the time between the waveform cursors is 1.03 ns .

## CURSor:WAVEform:HPOS<x>? (Query Only)

This query-only command returns the position of the specified waveform cursor. The cursor is specified by x , which can be 1 or 2 . This corresponds to the v 1 or v 2 (cursor 1 or cursor 2) cursor readout.
Group Cursor
Syntax CURSor:WAVEform:HPOS $<x>$ ?

Examples CURSOR:WAVEFORM:HPOS1? might return :CURSOR:WAVEFORM:HPOS2 0.247344970703 , indicating that cursor 2 is at 247.3 mV with respect to ground on the source waveform.

## CURSor:WAVEform:POSition<x>

This command sets or queries the position of a waveform cursor, which is constrained to be visible in the selected time base. (Use the CURSor:FUNCtion command to set the cursor function to Waveform.) The cursor is specified by x , which can be 1 or 2 . This is equivalent to setting a value in the Position control in the Cursor1 or Cursor2 sections of the Cursor Setup dialog box (when Waveform is selected in the Function section).

Group Cursor

Syntax CURSor:WAVEform:POSition<x> \{<NR3>\} CURSOr:WAVEform:POSition<x>?

Related Commands CURSor:FUNCtion

Arguments <NR3> specifies the cursor position measured relative to the time of the trigger point of the source waveform.

Examples CURSOR:WAVEFORM:POSITION2 9.00E-6 sets the waveform cursor 2 position to $9 \mu \mathrm{~s}$.

CURSOR:WAVEFORM:POSITION2? might return :CURSOR:WAVEFORM:POSITION2 51.0701402806E-009, indicating waveform cursor 2 is at 51.1 ns .

## CURSor:WAVEform:STYIe

This command sets or queries the cursor type for Waveform mode.

Group Cursor

Syntax CURSor:WAVEform:STY7e \{LINE_X|LINES|X\} CURSOr:WAVEform:STYle?

Arguments LINE_X specifies the cursor style to be a line with superimposed X . LINES specifies the cursor style to be a line.

X specifies the cursor style to be an X .

Examples CURSOR:WAVEFORM:STYLE LINES sets the cursor style to lines. CURSOR:WAVEFORM:STYLE? might return :CURSOR:WAVEFORM:STYLE X, indicating that the style for waveform cursors is X .

## CURSor:WAVEform:UNIts

This command sets or queries the units for waveform cursors.

Group Cursor

Syntax CURSor:WAVEform:UNIts BASe CURSor:WAVEform:UNIts?

Arguments BASe sets cursor units to base.

Examples CURSOR:WAVEFORM:UNITS BASe sets the waveform cursor units to base.
CURSOR:WAVEFORM:UNITS? might return :CURSOR:WAVEFORM:UNITS BASE, indicating that the units for waveform cursors are base.

## CURSor:WAVEform:VDELTA? (Query Only)

This query-only command returns the vertical difference between the waveform cursors. This is the absolute value of the vertical position of the first cursor minus the vertical position of the second cursor. This is equivalent to the waveform delta-voltage readout value.

Group Cursor

Syntax CURSor:WAVEform:VDELTA?

Examples CURSOR:WAVEFORM:VDELTA? might return :CURSOR:WAVEFORM:VDELTA
$1.06 \mathrm{E}-3$, indicating that the voltage between the waveform cursors is 1.06 mV .

## CURSor:XY? (Query Only)

This query-only command returns all of the XY cursor parameters.

NOTE. The values returned for all XY cursor readouts, that do not pertain to the current CURSOr: XY: READOUT setting, are returned as the IEEE representation of NAN (Not a Number): 99.1000E+36.

Group Cursor

Syntax CURSor:XY?

```
Examples CURSOR:XY? might return :CURSOR:XY:PRODDELTA
    99.1000E+36; PRODUCT1 99.1000E+36;PRODUCT2 99.1000E+36;READOUT
    RECTANGULAR;RADIUS1 99.1000E+36;RADIUS2 99.1000E+36;RATDELTA
    99.1000E+36; RATIO 199.1000E+36;RATIO2 99.1000E+36;RDELTA
    99.1000E+36;RECTX1 1.0000;RECTX2 1.0200;RECTY1
    360.0001E-6;RECTY2360.0001E-6; THDELTA 99.1000E+36;THETA1
    99.1000E+36;THETA2 99.1000E+36;XDELTA 20.0000E-3;YDELTA 0.0000.
```

## CURSor:XY:PRODDELta? (Query Only)

This query-only command returns the product of the difference between the cursors X positions and Y positions when the CURSor: XY : READOUT is set to PRODuct. The $\Delta \mathrm{X} \times \Delta \mathrm{Y}$ value is calculated as (Cursor $2 \mathrm{X}-$ Cursor 1 X$) \times$ (Cursor 2 Y - Cursor 1 Y ).

NOTE. This query is only valid when the CURSOr:XY: READOUT is set to PRODuct. If the readout is set other than product, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:PRODDELta?

Examples CURSOR:XY:PRODDELTA? might return :CURSOR:XY:PRODDELTA -24.9856, indicating that the $\Delta \mathrm{X} \times \Delta \mathrm{Y}$ value is -24.9856 VV .

## CURSor:XY:PRODUCT<x>? (Query Only)

This query-only command returns the product of the X and Y positions for the specified cursor when the CURSor: XY: READOUT is set to PRODuct. The cursor is specified by x , which can be 1 or 2 .

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to PRODuct. If the readout is set other than product, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:PRODUCT<x>?

Examples CURSOR:XY: PRODUCT1? might return :CURSOR:XY:PRODUCT1 806.4004E-3, indicating that the product of the X position times the Y position for Cursor 1 is 806.4004 mVV .

## CURSor:XY:RADIUS<x>? (Query Only)

This query-only command returns the radius of the specified cursor when the CURSor: XY: READOUT is set to POLARCoord. The cursor is specified by x , which can be 1 or 2 .

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to POLARCoord. If the readout is set other than polar coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E +36 .

Group Cursor

Syntax CURSor:XY:RADIUS<x>?

Examples CURSOR:XY:RADIUS2? might return :CURSOR:XY:RADIUS2 4.9600, indicating that the Cursor 2 radius is 4.9600 V .

## CURSor:XY:RATDELta? (Query Only)

This query-only command returns ratio of the difference between the cursors X position and Y position $(\Delta \mathrm{Y}, \Delta \mathrm{X})$ when the CURSor: XY : READOUT is set to RATio. The ratio is calculated as (Cursor $2 \mathrm{Y}-$ Cursor 1 Y$) \div($ Cursor $2 \mathrm{X}-$ Cursor 1 X ).

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to RATio. If the readout is set other than ratio, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:RATDELta?

Examples CURSOR:XY:RATDELTA? might return :CURSOR:XY:RATDELTA -1.0167, indicating that the $\Delta \mathrm{Y} / \Delta \mathrm{X}$ ratio is -1.0167 .

## CURSor:XY:RATIO<x>? (Query Only)

This query-only command returns ratio the of the X (horizontal) and Y (vertical) position for the specified cursor when the CURSor: XY: READOUT is set to RATio. The cursor is specified by x , which can be 1 or 2 . The ratio is calculated as $\mathrm{Y} \div \mathrm{X}$.

NOTE. This query is only valid when the CURSor:XY: READOUT is set to RATio. If the readout is set other than ratio, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:RATIO<x>?

Examples CURSOR:XY:RATIO1? might return :CURSOR:XY:RATIO1 $15.8730 \mathrm{E}-3$ indicating that the ratio of the X and Y positions for Cursor 1 is $15.8730 \mathrm{E}-3$.

## CURSor:XY:RDELta? (Query Only)

This query-only command returns the delta radius ( $\Delta \mathrm{r}$ ) value when the CURSOR:XY: READOUT is set to POLARCoord.

NOTE. This query is only valid when the CURSOR:XY: READOUT is set to POLARCoord. If the readout is set other than polar coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E +36 .

Group Cursor

Syntax CURSor:XY:RDELta?

Examples CURSOR:XY:RDELTA? might return :CURSOR:XY:RDELTA 6.9600, indicating that the difference between the cursors radius is 6.9600 V .

## CURSor:XY:READOUT

This command sets or queries the XY cursor readout (available when DISplay: FORMat is set to XY).

Group Cursor

Syntax CURSor:XY:READOUT \{RATio|RECTangular|POLARCoord|PRODuct\} CURSOR:XY:READOUT?

Related Commands DISplay:FORMat

Arguments POLARCoord displays the following values: $\mathrm{r} 1, \mathrm{r} 2, \Delta \mathrm{r}, \mathrm{q} 1, \mathrm{q} 2, \Delta \mathrm{q}, \mathrm{t} 1, \mathrm{t} 2, \Delta \mathrm{t}$. PRODuct displays the following values: $\mathrm{X} 1 \times \mathrm{Y} 1, \mathrm{X} 2 \times \mathrm{Y} 2, \Delta \mathrm{X} \times \Delta \mathrm{Y}, \mathrm{t} 1, \mathrm{t} 2, \Delta \mathrm{Dt}$. RATio displays the following values: $\mathrm{Y} 1, \mathrm{X} 1, \mathrm{Y} 2, \mathrm{X} 2, \Delta \mathrm{Y}, \mathrm{x} \Delta \mathrm{X}, \mathrm{t} 1, \mathrm{t} 2, \Delta \mathrm{t}$. RECTangu7ar displays the following values: $\mathrm{X} 1, \mathrm{X} 2, \Delta \mathrm{X}, \mathrm{Y} 1, \mathrm{Y} 2, \Delta \mathrm{Y}, \mathrm{t} 1, \mathrm{t} 2, \Delta \mathrm{t}$.

Examples CURSOR:XY: READOUT RECTangular sets the XY cursor readout to rectangular.
CURSOR:XY:READOUT? might return :CURSOR:XY:READOUT RECTANGULAR, indicating that the XY cursor readout is set to rectangular mode.

## CURSor:XY:RECTX<x>

This command sets or queries the X cursor position in rectangular coordinates. The cursor is specified by x , which can be 1 or 2 .

NOTE. This query is only valid when the CURSor:XY: READOUT is set to RECTangular. If the readout is set other than rectangular coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:RECTX<x> \{<NR3>\}
CURSor:XY:RECTX<X>?

Arguments <NR3> is the X position of the specified cursor in rectangular coordinates.

$$
\begin{array}{ll}
\text { Examples } & \text { CURSOR:XY:RECTX2 } 5.04 \text { sets the } X \text { position of Cursor } 2 \text { to } 5.04 \mathrm{~V} \text { in } \\
\text { rectangular coordinates. } \\
& \text { CURSOR:XY:RECTX1? might return :CURSOR:XY:RECTX1 } 5.1200 \text {, indicating } \\
\text { that the X position of Cursor } 1 \text { is set to } 5.1200 \text { in rectangular coordinates. }
\end{array}
$$

## CURSor:XY:RECTY<x>

This command sets or queries the Y cursor position in rectangular coordinates. The cursor is specified by x , which can be 1 or 2 .

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to RECTangular. If the readout is set to other than rectangular coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:RECTY<X> \{<NR3>\}
CURSor:XY:RECTY<x>?

Arguments <NR3> is the Y position of the specified cursor in rectangular coordinates.

Examples CURSOR:XY: RECTY1 2.5 sets the Y position of Cursor 1 to 2.5 V . CURSOR:XY:RECTY2? might return :CURSOR:XY:RECTY2 4.8800, indicating that the position of Cursor 2 in rectangular coordinates is 4.88 V .

## CURSor:XY:THDELta? (Query Only)

This query-only command returns the XY cursor angle delta in polar coordinates.

NOTE. This query is only valid when the CURSor:XY:READOUT is set to POLARCoord. If the readout is set other than polar coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E +36 .

Group Cursor

Syntax CURSor:XY:THDELta?

Examples CURSOR:XY:THDELTA? might return :CURSOR:XY:THDELTA 136.3748, indicating that the Dq XY cursor angle is 136.3748 degrees.

## CURSor:XY:THETA<x>? (Query Only)

This query-only command returns the XY cursor angle in polar coordinates. The cursor is specified by x , which can be 1 or 2 .

NOTE. This query is only valid when the CURSor:XY:READOUT is set to POLARCoord. If the readout is set other than polar coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:THETA<x>?

Examples CURSOR:XY:THETA2? might return :CURSOR:XY:THETA2 -89.0906, indicating that the Channel 2 XY cursor angle in polar coordinates is -89.0906 degrees.

## CURSor:XY:XDELta? (Query Only)

This query-only command returns the XY cursor X delta value in rectangular coordinates.

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to RECTangular. If the readout is set to other than rectangular coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E +36 .

Group Cursor

Syntax CURSor:XY:XDELta?

Examples CURSOR:XY:XDELTA? might return :CURSOR:XY:XDELTA $40.0000 \mathrm{E}-3$, indicating that the DX value is 40 mV .

## CURSor:XY:YDELta? (Query Only)

This query-only command returns the XY cursor Y delta value in rectangular coordinates.

NOTE. This query is only valid when the CURSOr:XY:READOUT is set to RECTangular. If the readout is set to other than rectangular coordinates, the IEEE representation of NAN (Not a Number) is returned: 99.1000E+36.

Group Cursor

Syntax CURSor:XY:YDELta?

Examples CURSOR:XY:YDELTA? might return :CURSOR:XY:YDELTA 40.0000E-6, indicating that the DY value is $40 \mu \mathrm{~V}$.

## CURVe

Group Waveform Transfer

```
Syntax CURVe
    CURVe {<Block>|<asc curve>}
    CURVe?
```

Related Commands DATa:DESTination, DATa:SOUrce, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre?, WFMInpre:BYT_Nr, WFMOutpre?, WFMInpre:NR_FR?, WFMOutpre:NR_FR?

Arguments <Block> is the waveform data in binary format. The waveform is formatted as: \#<x><yyy><data><newline>, where:
$<x>$ is the number of $y$ bytes. For example, if $<y y y>=500$, then $\langle x\rangle=3$ )

NOTE. $\langle x\rangle$ is hexadecimal format. The letters $A-F$ denote several $y$ bytes between 10 and 15 digits.
<yyy> is the number of bytes to transfer. If width is 1 , then all bytes on the bus are single data points. If width is 2 , then all bytes on the bus are 2 -byte pairs. If width is 4 , then all bytes on the bus are 4 -byte pairs. Use the WFMInpre:BYT_Nr command to set the width.
$<$ data $>$ is the curve data.
<newline> is a single byte new line character at the end of the data.
<asc curve> is the waveform data in ASCII format. The format for ASCII data is $\langle$ NR $1>[,<$ NR $1>\ldots]$, where each $<$ NR $1>$ represents a data point.

Examples CURVE <Block> sets the format of the waveform data, transferred to and from the instrument, to binary format.

CURVE? with ASCII encoding, start and stop of 1 and 10 respectively, and a width set to 1 might return : CURVE $61,62,61,60,60,-59,-59,-58,-58,-59$

NOTE. Curve data is transferred from the instrument asynchronously and, depending upon the length of the curve record, such transfers can require several seconds to complete. During this time, the instrument will not respond to user controls. You can interrupt these asynchronous data transfers by sending a device clear message to the instrument or by interrupting the query with another command or query. Verify that curve data is completely transferred.

It is recommended that you follow such queries with an *ESR? query and verify that the error bit returned and, if set, check the event queue to ascertain the reason for the error. If the error was caused by an interrupted query, then the asynchronous data transfer had not completed when the *ESR? query was sent. In this case, you might need increase your program's time-out value to ensure that all data is transferred and read.

## CURVENext? (Query Only)

This query-only command returns unique waveform data from the instrument. This query performs just like CURVe?, except multiple uses guarantee that the waveform returned is always a new acquisition since the previous CURVENext?. Note that if the instrument is acquiring waveform records at a slow rate (high resolution mode), you must configure the controller for long timeout thresholds. Data will not be transferred until a new waveform is acquired since the previous :CURVENext? response.

[^0]Group Waveform Transfer

Syntax CURVENext?

Related Commands
CURVe?, DATa:DESTination, DATa:SOUrce, DATa:STARt, DATa:STOP, WFMOutpre?

Examples CURVENEXT? This query with ASCII encoding, start and stop of 1 and 10 respectively, and a width set to 1 might return :CURVENEXT $61,62,61,60,60,-59,-59,-58,-58,-59$.

## CURVEStream

This query continuously transfers waveform data from the instrument as it is acquired. This command puts the instrument into a talk-only mode, allowing the controller to receive waveform records as fast as (and as soon as) they are acquired. Use the DATa:SOUrce command to specify the waveform sources. The command does the same thing as the CURVe command.

- Control of the instrument through the user interface or other external client is not possible while in streaming mode.
- The GPIB controller must take the instrument out of this continuous talking mode to terminate the query and allow other input sources to resume communication with the instrument. The following options are available to transition out of streaming curve mode: send a device clear over the bus or send another query to the instrument (a MEPE Query Interrupted error will occur, but the instrument will be placed back into its normal talk/listen mode).
- Turning the waveform screen display mode off (:DISplay:WAVEform OFF) will increase waveform throughput during streaming mode.
- While in streaming mode, two extreme conditions can occur. If the waveform records are being acquired slowly (high resolution), configure the controller for long time-out thresholds, as the data is not sent out until each complete record is acquired. If the waveform records are being acquired rapidly (low resolution), and the controller is not reading the data off the bus fast enough, the trigger rate is slowed to allow each waveform to be sent sequentially.

NOTE. This command does not work with Single Sequence.

Group Waveform Transfer

Syntax CURVEStream \{<Block>|<asc curve>\} CURVEStream?

Related Commands CURVe, DATa:DESTination, DATa:SOUrce, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre?, WFMInpre:BYT_Nr, WFMOutpre?, WFMInpre:NR_FR?, WFMOutpre:NR_FR?

Arguments
See the CURVe command.

Returns Waveform data in its native binary format. To save processing time, DATa:ENCdg FASTEST is set and waveform data is shipped in its raw native format.

## DATa

Group Waveform Transfer

Syntax DATa \{INIT|SNAp\}
DATa?

Related Commands CURVe, DATa:STARt, DATa:STOP, DATa:ENCdg, SAVe:WAVEform:
FILEFormat, WFMInpre:NR_FR?, WFMInpre:NR_Pt, WFMOutpre:NR_FR?, WFMOutpre:NR_Pt?

Arguments INIT initializes the waveform data parameters to their factory defaults.
SNAp sets DATa:STARt and DATa:STOP to match the current V Bar/Screen/Waveform cursor positions.

Examples DATA INIT initializes the waveform data parameters to their factory defaults.
DATA? might return :DATA:DESTINATION REF1;ENCDG RIBINARY;SOURCE CH1;START 1;STOP 1000;FRAMESTART 1;FRAMESTOP 1000.

## DATa:DESTination

This command sets or queries the reference memory location for storing waveform data that is transferred into the instrument by the CURVe command.

Group Waveform Transfer

Syntax DATa:DESTination REF<x> DATa:DESTination?

Related Commands CURVe

Arguments $\operatorname{REF}<x>$ is the reference where the waveform will be stored. The reference number is specified by x , which ranges from 1 through 4.

Examples DATA:DESTINATION? might return :DATA:DESTINATION REF3, indicating that reference 3 is the currently selected reference memory location for waveform data. DATA: DESTINATION REF1 indicates that incoming waveform data be stored in reference 1.

## DATa:ENCdg

Group Waveform Transfer<br>Syntax dATa:ENCdg<br>\{ASCIi|FAStest|RIBinary|RPBinary|FPBinary|SRIbinary |SRPbinary|SFPbinary\}<br>DATa: ENCdg?<br>Related Commands WFMOutpre:ENCdg, WFMOutpre:BN_Fmt, WFMOutpre:BYT_Or

Arguments a ASCIi specifies the ASCII representation of signed INT, FLOAT. If ASCII is the value, then :BN_Fmt and :BYT_Or are ignored.

- FAStest specifies that the data be sent in the fastest possible manner consistent with maintaining accuracy and is interpreted with respect to the first waveform specified in the DATA:SOUrce list.
:ENCdg will always be BIN, :BYT_Or will always be LSB, but :BN_Fmt and :BYT_Nr will depend on the first DATa:SOUrce waveform. :BN_Fmt will be RI unless the waveform is internally stored as a floating point number, in which case the FP format will be used.
- RIBinary specifies signed integer data point representation with the most significant byte transferred first.

When :BYT_Nr is 1, the range is from -128 through 127. When :BYT_Nr is 2 , the range is from $-32,768$ through 32,767 . When :BYT_Nr is 8 , then the waveform being queried is set to Fast Acquisition mode. Center screen is 0 (zero). The upper limit is the top of the screen and the lower limit is the bottom of the screen. This is the default argument.

- RPBinary specifies the positive integer data-point representation, with the most significant byte transferred first.

When :BYT_Nr is 1 , the range from 0 through 255 . When :BYT_Nr is 2, the range is from 0 to 65,535 . When : BYT_Nr is 8 , then the waveform being queried is set to Fast Acquisition mode. The center of the screen is 127 . The upper limit is the top of the screen and the lower limit is the bottom of the screen.

- FPBinary specifies the floating point $($ width $=4)$ data.

The range is from $-3.4 \times 10^{38}$ to $3.4 \times 10^{38}$. The center of the screen is 0 . The upper limit is the top of the screen and the lower limit is the bottom of the screen.

The FPBinary argument is only applicable to math waveforms or ref waveforms saved from math waveforms.

- SRIbinary is the same as RIBinary except that the byte order is swapped, meaning that the least significant byte is transferred first. This format is useful when transferring data to IBM compatible PCs.
- SRPbinary is the same as RPBinary except that the byte order is swapped, meaning that the least significant byte is transferred first. This format is useful when transferring data to PCs.
- SFPbinary specifies floating point data in IBM PC format. The SFPbinary argument only works on math waveforms or ref waveforms saved from math waveforms.

Table 2-44: DATa and WFMOutpre Parameter Settings
WFMOutpre Settings

|  | WFMOutpre Settings |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: |
| DATa:ENCdg Setting | $:$ ENCdg | :BN_Fmt | :BYT_Or | :BYT_NR |  |  |  |  |
| ASCii | ASC | N/A | N/A | $1,2,4,8$ |  |  |  |  |
| FAStest | BIN | RI/FP | MSB | $1,2,4$ |  |  |  |  |
| RIBinary | BIN | RI | MSB | $1,2,8$ |  |  |  |  |
| RPBinary | BIN | RP | MSB | $1,2,8$ |  |  |  |  |
| FPBinary | BIN | FP | MSB | 4 |  |  |  |  |
| SRIbinary | BIN | RI | LSB | $1,2,8$ |  |  |  |  |
| SRPbinary | BIN | RP | LSB | $1,2,8$ |  |  |  |  |
| SFPbinary | BIN | FP | LSB | 4 |  |  |  |  |

Examples DATA: ENCDG RPBinary sets the data encoding format to be a positive integer where the most significant byte is transferred first.

DATA:ENCDG? might return :DATa:ENCDG SRPBINARY for the format of the outgoing waveform data.

## DATa:FRAMESTARt

This command sets or queries the starting data frame for waveform transfers. This command allows for transferring a subset of frames of a FastFrame waveform from the instrument (CURVe? query). Any value set by this command is ignored when transferring waveform data to the instrument (CURVe command).

Group Waveform Transfer

Syntax DATa:FRAMESTARt <NR1>
DATa: FRAMESTARt?

Arguments <NR1> is the first data frame that is transferred, which ranges from 1 to the number of acquired frames. Data is transferred from <NR1> to DATa:FRAMESTOP or the number a acquired frames, whichever is less. If $<$ NR1 $>$ is greater than the number of acquired frames, then you will receive the last acquired frame. If no frames were acquired, then you receive the first frame which contains all nulls.

Returns The starting data frame for waveform transfer.

Examples DATa:FRAMESTARt 10 specifies that the waveform transfer will begin with frame 10 .

DATa:FRAMESTARt? might return :DATA:FRAMESTART 214 indicating the first waveform frame that will be transferred.

## DATa:FRAMESTOP

This command sets or queries the ending data frame for waveform transfers. This command allows for transferring a subset of frames of a FastFrame waveform from the instrument (CURVe? query). Any value set by this command is ignored when transferring waveform data to the instrument (CURVe command).

Group Waveform Transfer

Syntax DATa:FRAMESTOP <NR1> DATa:FRAMESTOP?

Arguments <NR1> is the last data frame that is transferred, which ranges from 1 to the number of acquired frames. If $<$ NR1 $>$ is greater than the number of acquired frames, then you will receive up to the number of acquired frames. If both DATA:FRAMESTART and DATA:FRAMESTOP are greater than the number of acquired frames, then you will receive the last acquired frame. If no frames were acquired, then you receive the first frame which contains all nulls.

DATA: FRAMESTART and DATA: FRAMESTOP are order independent. The smaller number is used as in CURVe and SAVe:WAVEform queries.

To always transfer complete waveforms, set DATA: FRAMESTART to 1 and DATA: FRAMESTOP to the maximum number of acquired frames, or larger.

Returns The last data frame that will be transferred.

## Examples DATa:FRAMESTOP 1500 specifies that the waveform transfer will stop with frame 1500.

DATa:FRAMESTOP? might return :DATA: FRAMESTOP 14900 indicating the last waveform frame that will be transferred.

## DATa:SOUrce

This command sets or queries the location of waveform data that is transferred from the instrument by the CURVe? Query.

Group Waveform Transfer

Syntax DATa:SOUrce <wfm>[<,><wfm>]
DATa: SOUrce?

Related Commands CURVe, DATa

Arguments $\quad<\mathrm{wfm}>$ is the location of the waveform data that will be transferred from the instrument to the controller. It can consist of $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>, \mathrm{REF}<\mathrm{x}>$, DIGITALALL. Note that digital data is transferred as 16 -bit data, with the least-significant bit representing D0, and the most-significant bit representing D15.
<wfm> can consist of the following:
$\mathrm{CH}<\mathrm{x}>$ selects the specified analog channel as the source.
MATH $<x>$ selects the specified reference waveform as the source.
REF $<x>$ selects the specified reference waveform as the source.
DIGITALALL selects digital waveforms as the source. The Digital data is transferred as 16 -bit data, with the least-significant bit representing D0, and the most-significant bit representing D15. The LSB always contains D0-D7 and MSB always contains D8-D15 data.

Examples DATA: SOURCE CH1 specifies that the CH1 waveforms will be transferred in the next CURVe? query.

DATA: SOURCE? might return : DATA: SOURCE REF3, indicating that the source for the waveform data which is transferred using a CURVe? query is reference 3 .

## DATa:STARt

This command sets or queries the starting data point for waveform transfer. This command allows for the transfer of partial waveforms to and from the instrument.

Group Waveform Transfer

Syntax DATa:STARt <NR1>
DATa:STARt?

Related Commands CURVe, DATa, DATa:STOP, WFMInpre:NR_Pt, WFMOutpre:NR_Pt?, WFMInpre:NR_FR?, WFMOutpre:NR_FR?

Arguments <NR1> is the first data point that will be transferred, which ranges from 1 to the record length. Data will be transferred from <NR1> to DATa: STOP or the record
length, whichever is less. If <NR1> is greater than the record length, the last data point in the record is transferred.

DATa:STARt and DATa:STOP are order independent. When DATa:STOP is greater than DATa: STARt, the values will be swapped internally for the CURVE? query.

## Examples

DATA: START 10 specifies that the waveform transfer will begin with data point 10 .
DATA: START? might return :DATA: START 214, indicating that data point 214 is the first waveform data point that will be transferred.

## DATa:STOP

This command sets or queries the last data point that will be transferred when using the CURVe? query. This command allows for the transfer of partial waveforms to the controller.

Changes to the record length value are not automatically reflected in the data:stop value. As record length is varied, the DATa: STOP value must be explicitly changed to ensure the entire record is transmitted. In other words, curve results will not automatically and correctly reflect increases in record length if the distance from DATa: STARt to DATa: STOP stays smaller than the increased record length.

NOTE. When using the CURVe command, DATa:STOP is ignored and WFMInpre:NR_Pt is used.

Group Waveform Transfer

Syntax DATa: STOP <NR1> DATa:STOP?

Related Commands CURVe, DATa, DATa:STARt, WFMInpre:NR_Pt, WFMOutpre:NR_Pt?, WFMInpre:NR_FR?, WFMOutpre:NR_FR?

Arguments <NR1> is the last data point that will be transferred, which ranges from 1 to the record length. If <NR1> is greater than the record length, then data will be transferred up to the record length. If both DATa:STARt and DATa:STOP are greater than the record length, the last data point in the record is returned.

DATa:STARt and DATa:STOP are order independent. When DATa:STOP is less than DATa:STARt, the values will be swapped internally for the CURVE? query.

If you always want to transfer complete waveforms, set DATa:STARt to 1 and DATa:STOP to the maximum record length, or larger.

Examples DATA: STOP 15000 specifies that the waveform transfer will stop at data point 15000.

DATA: STOP? might return :DATA: STOP 14900, indicating that 14900 is the last waveform data point that will be transferred.

## DATa:SYNCSOUrces

This command sets or queries if the data sync sources are on or off.

Group Waveform Transfer

Syntax DATa:SYNCSOUrces \{<NR1>|OFF|ON\}
DATa:SYNCSOUrces?

Arguments NR1 = 0 specifies that the data sync sources are not available; any other value specifies that the data sync sources are available.

OFF specifies that the data sync sources are not available.
ON specifies that the data sync sources are available.

Examples DATA: SYNCSOURCES ON sets the data sync sources are available.
DATA: SYNCSOURCES? might return DATA: SYNCSOURCES OFF, indicating that the data sync sources are not available.

DATE
This command sets or queries the date that the instrument can display. This command is equivalent to selecting Set Date \& Time from the Utilities menu and then setting the fields in the Date group box.

Group Miscellaneous

```
Syntax DATE <QString>
```

DATE?

## Related Commands

Arguments

Examples
DATE"2000-01-24" specifies that the date is set to January 24, 2000.
DATE? might return : DATE 2000-01-24, indicating the current date is set to January 24, 2000.

## *DDT

Group Miscellaneous

Syntax *DDT \{<Block>|<QString>\}
*DDT?

Related Commands

Arguments

Examples *DDT \#OACQUIRE: STATE RUN specifies that the acquisition system will be started each time a *TRG command is sent.

## DELEte:SETUp (No Query Form)

This command (no query form) changes the setup to reference the factory setup instead of the specific user setup slot. The content of the setup slot is unchanged, but the data will no longer be accessible to you.

This command is equivalent to selecting Delete from the File menu, and then clicking the specific setup you want to delete (user setups are shown as Setup-User and are ordered in the list from 1 through 10, if defined) or All Setups.

NOTE. The setup information cannot be recovered once it is deleted.

Group Save and Recall

Syntax DELEte:SETUp \{ALL|<NR1>\}

Related Commands *RCL, RECAll:SETUp, *RST, *SAV, SAVe:SETUp, *SDS

Arguments ALL deletes all the stored setups.
<NR1> specifies a setup storage location to delete. Setup storage location values range from 1 through 10 ; using an out-of-range value causes an error.

Examples DELETE: SETUP ALL deletes all stored setups. All ten storage locations are initialized to the factory default setup.

## DELEte:WAVEform (No Query Form)

This command (no query form) deletes one or all stored reference waveforms from memory.

This command is equivalent to selecting Delete from the File menu, and then choosing the reference waveform you want to delete; choosing All Refs deletes all of the reference waveforms.

Group Save and Recall

Syntax DELEte:WAVEform \{ALL|REF<x>\}

Related Commands RECAll:WAVEform, SAVe:WAVEform

# Arguments ALL specifies to delete all the stored reference waveforms. <br> $R E F<x>$ specifies to delete one of the reference memory locations. Reference memory location values range from 1 through 4. <br> <br> Examples <br> <br> Examples <br> DELETE:WAVEFORM ALL removes all waveforms stored in reference memory. DELETE:WAVEFORM REF2 removes the waveform stored at REF2. 

## DESE

Group Status and Error

Syntax DESE <NR1>
DESE?

Related Commands
*CLS, *ESE, *ESR?, EVENT?, EVMsg?, *SRE, *STB?

Arguments
<NR1> The binary bits of the DESER are set according to this value, which ranges from 1 through 255. For example, DESE 209 sets the DESER to the binary value 11010001 (that is, the most significant bit in the register is set to 1 , the next most significant bit to 1 , the next bit to 0 , etc.).

The power-on default for DESER is all bits set if *PSC is 1 . If *PSC is 0 , the DESER maintains the previous power cycle value through the current power cycle.

NOTE. Setting the DESER and ESER to the same value allows only those codes to be entered into the Event Queue and summarized on the ESB bit (bit 5) of the Status Byte Register. Use the *ESE command to set the ESER.

## Examples

DESE 209 sets the DESER to binary 11010001, which enables the PON, URQ, EXE and OPC bits.

DESE? might return :DESE 186, showing that the DESER contains the binary value 10111010 .

## DIAg:CONTROL:HALT

This command determines or queries whether the next execution of diagnostics looping will stop on the first diagnostic failure that occurs or will continue to loop on the selected set of diagnostic functions. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then enabling Halt on Fail.

Group Diagnostics

Syntax DIAg:CONTROL:HALT $\{<$ NR1>|ON|OFF $\}$
DIAg:CONTROL: HALT?

Related Commands DIAg:CONTROL:LOOP

Arguments <NR1>= 1 enables the halt function; any other value disables the halt function.
ON enables the halt function, causing the execution of diagnostics looping to halt at the first diagnostic failure that occurs.

OFF disables the halt looping function, allowing the instrument to continue to loop on the entire set of diagnostics, even if diagnostic failure occurs.

Examples DIAG:CONTROL: HALT ON enables the halt function, causing the execution of diagnostics looping to halt at the first diagnostic failure that occurs.

DIAG:CONTROL:HALT? might return :DIAG:CONTROL:HALT 0, indicating that the halt function is disabled.

## DIAg:CONTROL:LOOP

This command determines or queries whether the next execution of diagnostics executes once or continuously loops on the selected set of diagnostics (assuming the halt control is set to off using the DIAg:CONTROL:HALT command or that the halt control is set to ON but no failures occur). This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then enabling Loop Control.

Group Diagnostics

Syntax DIAg: CONTROL:LOOP \{<NR1>|ON|OFF\}
DIAg:CONTROL:LOOP?

## Related Commands

Arguments

Examples

DIAg:CONTROL:HALT, DIAg:STOP
<NR1> = 1 enables the loop function; any other value disables the loop function.
ON enables the loop function, causing the execution of diagnostics to continuously loop.

OFF disables the loop function, causing the instrument to execute the entire set of diagnostics once and then halt.

DIAG: CONTROL: LOOP ON enables the loop function.
DIAG:CONTROL:LOOP? might return :DIAG:CONTROL:LOOP 0, indicating that looping on diagnostics is disabled.

## DIAg:EXECUTE (No Query Form)

This command (no query form) starts the execution of the currently selected set of diagnostics. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then pressing Run.

```
    Group Diagnostics
    Syntax DIAg:EXECUTE
Related Commands DIAg:STATE
Examples DIAG: EXECUTE starts the execution of the entire set of diagnostics.
```

## DIAg:FAILURES:CLEAR

This command sets and queries the clearing of pass/fail information from data structures, not the Event Log, at the start of diagnostic tests.

Group Diagnostics

Syntax DIAg:FAILURES:CLEAR \{<NR1>|OFF|ON\}
DIAg:FAILURES:CLEAR?

Arguments <NR1> = 0 turns off the clearing the pass/fail information at the start of tests; any other value turns on the clearing of pass/fail information.

OFF does not clear pass/fail information at the start of tests.
ON clears pass/fail information from data structures, not the Event Log, at the start of tests.

Examples DIAG:FAILURES:CLEAR ON clears pass/fail information on the start of tests.
DIAG:FAILURES:CLEAR? might return DIAG:FAILURES:CLEAR1 indicating that pass/fail information will be cleared at the start of tests.

## DIAg:ITEM? (Query Only)

This query-only command returns the diagnostics settings. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu, and then reviewing the diagnostics settings.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

## Syntax DIAg:ITEM? <NR1> <br> Related Commands DIAg:ITEM:FAILURES?, DIAg:ITEM:NAMe?, DIAg:ITEM:RESULT?, DIAg:ITEM:SUBITEMS?

Arguments <NR1> sets the index item about which data will be returned, which ranges from 0 through 15.

Examples DIAG:ITEM? 2 might return :DIAG:ITEM 2,"Acquisition","Pass",0,8, indicating that the acquisition test passed and that there were 0 failures of the 8 subitems for that test.

## DIAg:ITEM:FAILURES? (Query Only)

This query-only command returns the total number of failures. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:ITEM:FAILURES? <NR1>

Related Commands DIAg:ITEM?, DIAg:ITEM:NAMe?, DIAg:ITEM:RESULT?, DIAg:ITEM: SUBITEMS?

Arguments <NR1> sets the index item about which data will be returned, which ranges from 0 through 15.

Examples DIAG:ITEM:FAILURES? 2 might return :DIAG:ITEM:FAILURES 2,0, indicating that there were 0 failures for item 2 .

## DIAg:ITEM:NAMe? (Query Only)

This query-only command returns the name of the selected menu item. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Subsystem, Area and Test settings.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:ITEM:NAMe? <NR1>

Related Commands DIAg:ITEM?, DIAg:ITEM:FAILURES?, DIAg:ITEM:RESULT?, DIAg:ITEM:SUBITEMS?

Arguments <NR1> sets the index item about which data will be returned, which ranges from 0 through 15.

Examples DIAG:ITEM:NAME? 2 might return :DIAG:ITEM:NAME 2,"Acquisition" indicating that the selected menu item (2) is Acquisition.

## DIAg:ITEM:RESULT? (Query Only)

This query-only command returns the result from the last execution of the item. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:ITEM:RESULT? <NR1>
$\begin{array}{ll}\text { Related Commands } & \text { DIAg:ITEM?, DIAg:ITEM:NAMe?, DIAg:ITEM:FAILURES?, } \\ & \text { DIAg:ITEM:SUBITEMS? }\end{array}$

Arguments <NR1> sets the index item about which data will be returned, which ranges from 0 through 15.

Examples DIAG:ITEM:RESULT? 2 might return :DIAG:ITEM:RESULT 2,"Pass", indicating that the item passed during the last execution.

DIAG:ITEM:RESULT? 2 might return :DIAG:ITEM:RESULT 2,"Fai1", indicating that the item failed during the last execution.

DIAG:ITEM: RESULT? 2 might return :DIAG:ITEM:RESULT 2," ", indicating that the item was not run.

## DIAg:ITEM:SUBITEMS? (Query Only)

This query-only command returns the number of subitems associated with the item. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu, choosing the Subsystem, Area or Test setting and then reviewing the resulting subitems.
This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:ITEM:SUBITEMS? <NR1>

Related Commands DIAg:ITEM?, DIAg:ITEM:NAMe?, DIAg:ITEM:FAILURES?, DIAg:ITEM:RESULT?

Arguments <NR1> sets the index item about which data will be returned, which ranges from 0 through 15.

Examples DIAG:ITEM:SUBITEMS? 2 might return :DIAG:ITEM:SUBITEMS 2,8, indicating that there are 8 subitems associated with the selected item.

## DIAg:LEVEL

Group Diagnostics

Syntax DIAg:LEVEL \{AREA|SUBSYS|TEST\}
DIAg:LEVEL?

Arguments AREA sets diagnostic testing to the area level.
SUBSYS sets diagnostic testing to the subsystem level.
TEST sets diagnostic testing to the test level.

Examples DIAG:LEVEL AREA sets the level of diagnostic test hierarchy to Area.
DIAG:LEVEL? might return :DIAG:LEVEL SUBSYSI, indicating that the current level of diagnostic test hierarchy is Subsys.

## DIAg:LOOPS? (Query Only)

This query-only command returns the number of times that the selected diagnostics set was completed during the last diagnostic execution. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Elapsed Loops.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:LOOPS?

Examples DIAG:LOOPS? might return :DIAG:LOOPS 5 indicating that the selected set of diagnostics was completed five times during the last diagnostic execution.

## DIAg:NAMe? (Query Only)

This query-only command returns the names of the subsystem, area, and test of the current diagnostic test. This command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg: NAMe?

Related Commands DIAg:NAMe:AREA?, DIAg:NAMe:SUBSYS?, DIAg:NAMe:TEST?

Examples DIAG:NAME? might return :DIAG:NAME:SUBSYS "Processor";AREA
"Memory";TEST"DRAMWalk1", indicating the subsystem name, area name, and test name of the currently selected diagnostic test.

## DIAg:NAMe:AREA? (Query Only)

This query-only command returns the selected area of the current diagnostic test. There are three levels of diagnostic test hierarchy: subsystem, area and test. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:NAMe:AREA?

Related Commands DIAg:NAMe?, DIAg:NAMe:SUBSYS?, DIAg:NAMe:TEST?

Examples DIAG:NAME:AREA? might return :DIAG:NAME:AREA "Memory" indicating the selected area name of the current diagnostic test.

## DIAg:NAMe:SUBSYS? (Query Only)

This query-only command returns the subsystem of the current diagnostic test. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg: NAMe:SUBSYS?

Related Commands DIAg:NAMe?, DIAg:NAMe:AREA?, DIAg:NAMe:TEST?

Examples DIAG:NAME:SUBSYS? might return :DIAG:NAME:SUBSYS "Acquisition", indicating the subsystem name of the current diagnostic test.

## DIAg:NAMe:TEST? (Query Only)

This query-only command returns the name of the current diagnostic test. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:NAMe:TEST?

Related Commands DIAg:NAMe?, DIAg:NAMe:AREA?, DIAg:NAMe:SUBSYS?

Examples DIAG:NAME:TEST? might return :DIAG:NAME:TEST
"diagDataFormatConf", indicating the test name of the current diagnostic test.

## DIAg:NUMITEMS? (Query Only)

This query-only command returns the number of items on the currently selected level of test hierarchy, which ranges from 1 through 15 . This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

## Syntax DIAg:NUMITEMS?

Examples DIAG:NUMITEMS? might return :DIAG: NUMITEMS 7, indicating the number of items on the currently selected level of test hierarchy.

## DIAg:RESults? (Query Only)

This query-only command returns an abbreviated status about the results of the last diagnostic (or test) execution. For a more explanatory status message, use the DIAg:RESults:VERBose? query. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:RESults?

Related Commands DIAg:RESults:VERBose?

Examples DIAG:RESULTS? might return :DIAG:RESULTS " 135 ", indicating the specific failure code of the first test failure that occurred.

DIAG:RESULTS? might return :DIAG:RESULTS "Pass", indicating that the last diagnostic test passed.

DIAG:RESULTS? might return :DIAG:RESULTS "*****", indicating that the diagnostic test was not run.

## DIAg:RESults:VERBose? (Query Only)

This query-only command returns a more explanatory message about the results of the last diagnostic (or test) execution than the DIAg: RESults? query. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

This query-only command can be issued while diagnostics are still in progress.

Group Diagnostics

Syntax DIAg:RESults:VERBose?

Related Commands DIAg:RESults?

Examples DIAG:RESULTS:VERBOSE? might return
:DIAG:RESULTS:VERBOSE "DIAG ABORTED, ERROR 15 in A2D-Dmux
1 interconnects".

## DIAg:SELect:ALL (No Query Form)

This command (no query form) selects all available diagnostics. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then choosing ALL from the Subsystem, Area and Test pull-down lists.

Group
Diagnostics

Syntax DIAg:SELect:ALL ALL

Related Commands
DIAg:NAMe:AREA?, DIAg:NAMe:SUBSYS?, DIAg:NAMe:TEST?, DIAg:EXECUTE

Arguments
ALL selects all available diagnostics.

Examples
DIAG: SELECT:ALL ALL selects all available diagnostics.

## DIAg:SELect:AREA

This command selects or queries an available diagnostic area. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then selecting an Area from the pull-down list.

NOTE. This command should be executed only if DIAg:LEVEL is currently set to AREA.

Group Diagnostics

Syntax DIAg:SELect:AREA <NR1> DIAg:SELect:AREA?

Related Commands DIAg:SELect:SUBSYS, DIAg:SELect:TEST, DIAg:SELect:LAST

Arguments <NR1> selects a diagnostic area by number, which can range from 0 (zero selects all) through 15 (as specified by DIAg:NUMITEMS?).

Examples DIAG:SELECT:AREA 1 selects Area 1 as the area to be diagnosed.
DIAG:SELECT:AREA? might return :DIAG:SELECT:AREA 0 , indicating that all areas are selected.

## DIAg:SELect:LAST

This command selects one or more diagnostic menu items to be executed via the DIAg:EXECUTE command. If you specify DIAg: LEVEL SUBSYS, then menu items come from this diagnostic level and are limited to the value returned by the DIAg: NUMITEMS? query. For example, if the return from the DIAg: NUMITEMS? query is :DIAG:NUMITEMS 5 , specifying DIAg:SELECT:SUBSYS 2 indicates that diagnostics will start from subsystem 2 and that you can specify a range from 2 through 5 for DIAg:SELect:LAST.

If you enter :DIAg:SELect:LAST 2, only subsystem 2 will be executed. DIAg:SELect:LAST 4, subsystems 2 through 4 will be executed.

Group Diagnostics

Syntax DIAg:SELect:LAST <NR1>
DIAg:SELect:LAST?

Related Commands DIAg:EXECUTE, DIAg:LEVEL, DIAg:NAMe:AREA?, DIAg:NAMe: SUBSYS?, DIAg:NAMe:TEST?, DIAg:NUMITEMS?, DIAg:SELect:SUBSYS

Arguments <NR1> selects an integer that identifies the number of the last item that will be executed when the DIAg:EXECUTE command is run.

Examples DIAG:SELECT:LAST 2 specifies that (based on the example in the description above) only subsystem 2 will be executed.

DIAG:SELECT:LAST? might return :DIAG:SELECT:LAST 5, indicating that 5 is the last item of a group of items from the current level of test hierarchy.

## DIAg:SELect:SUBSYS

This command selects or queries the available subsystem. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then choosing a Subsystem from the drop-down list.

Arguments <NR1> selects a subsystem by number, which can range from 0 (zero selects ALL) through 15 (as limited by the return from DIAg:NUMITEMS?).

Examples

## DIAg:SELect:TEST

This command selects or queries one of the available tests. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then choosing a Test from the drop-down list.

NOTE. This command should be executed only if DIAg:LEVEL is currently set to TEST.

Group Diagnostics

Syntax DIAg:SELect:TEST <NR1>
DIAg:SELect:TEST?

Related Commands
DIAg:SELect:AREA, DIAg:SELect:LAST, DIAg:SELect:SUBSYS

Arguments <NR1> selects a test by number, which can range from 0 (zero selects ALL) through 15 (as limited by the return from DIAg:NUMITEMS?).

Examples DIAG:SELECT:TEST 1 selects Test 1 as the test to be executed.
DIAG: SELECT:TEST? might return :DIAG:SELECT:TEST 0, indicating all tests have been selected.

## DIAg:STATE

Group Diagnostics

Syntax DIAg: STATE \{<NR1>|EXECUTE|ON|OFF\}
DIAg: STATE?

Related Commands TEST:STOP

Arguments <NR1> = 0 disables diagnostics capabilities and returns the instrument to a normal operating state; any other value enables diagnostics.

EXECUTE starts execution of the diagnostics.
ON puts the instrument into the state in which diagnostics can be run. This argument is thrown automatically if the DIAg:EXECUTE command is executed.

OFF disables diagnostics capabilities and returns the instrument to a normal operating state.

Examples DIAG: STATE OFF turns off diagnostics capabilities and returns the instrument to a normal operating state.

DIAG:STATE? might return :DIAG:STATE 0 , indicating that diagnostics are disabled.

## DIAg:STOP (No Query Form)

This command (no query form) causes diagnostics (or test) execution to terminate at the end of the next low-level test. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then clicking Abort.

Group Diagnostics

Syntax DIAg: STOP

Related Commands TEST:STOP

Examples DIAG: STOP terminates diagnostics (or test) execution at the end of the next low-level test.

## DISplay? (Query Only)

This query-only command returns the current Display settings. This command is equivalent to selecting Display Setup from the Display menu and then viewing the contents of each tab.

Group Display Control

Syntax DISplay?

| Examples | DISPLAY? might return :DISPLAY:CLOCK 1;COLOR:PALETTE:IMAGEVIEW |
| :---: | :---: |
|  | MONOGREEN; RECORDVIEW TEMPERATURE;USER:GRATICULE 165,50,15; CH1 180,50,100; CH2 300,50, 100; CH3 |
|  | 165,50,15; CH1 180,50,100; CH2 300,50,100; CH3 |
|  | 60,50,100; CH4 240,50,100;REF1 0,90,0; REF2 |
|  | 0,90,100;REF3 60,90,100;REF4 240,90,100;MATH1 |

|  | :DISPLAY:SCREENTEXT:LABEL8:NAME "";XPOS 100;YPOS 110; |
|  | DISPLAY:WAVEFORM 1. |

## DISplay:CLOCk

Group Display Control

Syntax DISplay:CLOCk \{<NR1>|ON|OFF\} DISplay:CLOCk?

Related Commands DATE, TIME

Arguments <NR1> = 0 disables display of date and time; any other value enables display of date and time.

ON enables display of date and time.
OFF disables display of date and time.

Examples DISPLAY: CLOCK ON enables display of date and time.
DISPLAY:CLOCK? might return :DISPLAY:CLOCK 1 indicating that the display of date and time is currently enabled.

## DISplay:COLOr? (Query Only)

This query-only command returns the settings from the PALETTE, MATHCOLOR and REFCOLOR commands. This is equivalent to selecting Colors from the Display menu.

Group Display Control<br>Syntax DISplay:COLOr?<br>Arguments None<br>Examples DISPLAY:COLOR? might return :DISPLAY:COLOR:PALETTE:IMAGEVIEW TEMPERATURE;RECORDVIEW NORMAL;USER:GRATICULE 165,50,15;CH1 180,50,100;CH2 300,50,100;CH3 60,50,100;CH4 240,50,100;REF1 0,90,0;REF2 0,90,100;REF3 60,90,100;REF4 240,90,100;MATH1 160,50,100;MATH2

40,60,100;MATH3 120,60,100;MATH4 195,50,100;HISTOGRAM
320,50,100;CARET 150,50,100;MASK 0,25,75;MASKHIGHLIGHT
140,50,100;:DISPLAY:COLOR:MATHCOLOR DEFAULT;REFCOLOR
DEFAULT indicating that the primary source waveform color is used for each math trace.

## DISplay:COLOr:MATHCOLOr

This command sets or queries the color to be used for math traces, either in the standard palette's nominal Math color, or according to the color of the source waveform. This command is equivalent to selecting Display Setup from the Display menu and then choosing the Colors tab.

Group Display Control<br>Syntax DISplay:COLOr:MATHCOLOr \{DEFAULT|INHERIT\} DISplay:COLOr:MATHCOLOr?<br>Related Commands DISplay:COLOr:PALEtte:IMAGEView, DISplay:COLOr:PALEtte:<br>RECORDView

Arguments DEFAULT sets color math traces in nominal palette math color, which is red.
INHERIT sets color math traces in the source waveform color. Math waveforms are drawn in the same color as their primary source waveform.

Examples DISPLAY:COLOR:MATHCOLORDEFAULT sets the color math traces in the nominal palette math color.

DISPLAY:COLOR:MATHCOLOR? might return :DISPLAY:COLOR:MATHCOLOR INHERIT, indicating that the primary source waveform color is used for each math trace.

## DISplay:COLOr:PALEtte:IMAGEView

This command sets or queries the color palette for all image view (DPO and $\mathrm{WfmDB})$ traces.

Group Display Control

```
Syntax DISplay:COLOr:PALEtte:IMAGEView \{NORMa1|MONOGREEN|MONOGRAY|TEMPErature|SPECTral|uSEr\} DISplay:COLOr:PALEtte:IMAGEView?
```

Arguments NORMa1 colors traces according to their channel. This is the default color palette. MONOGREEN colors traces green, emulating a traditional instrument color palette. MONOGRAY colors traces gray, emulating a monochrome instrument.

TEMPErature
All traces share a multicolored palette, where "intensity" is represented by hue; blue for least frequently hit, red for most frequently hit.

SPECTral.
All traces share a multicolored palette, where "intensity" is represented by hue; red for least frequently hit, blue for most frequently hit.

USEr.
All traces share a user-defined palette.

Examples DISPLAY:COLOR:PALETTE:IMAGEVIEWMONOGRAY sets the palette for all display types.

DISPLAY:COLOR:PALETTE:IMAGEVIEW? might return :DISPLAY:COLOR:PALETTE:IMAGEVIEW NORMAL, indicating that the Normal color palette is currently selected, which colors traces according to their channel.

## DISplay:COLOr:PALEtte:RECORDView

This command sets or queries the color palette for all record view (non image view) waveforms.

Group Display Control

Syntax DISplay:COLOr:PALEtte:RECORDView
\{NORMa1|MONOGREEN|MONOGRAY|TEMPErature|SPECTra1|USER\}
DISplay:COLOr:PALEtte:RECORDView?

Arguments NORMa 1 colors traces according to their channel. This is the default color palette. MONOGREEN colors traces green, emulating a traditional instrument color palette. MONOGRAY colors traces gray, emulating a monochrome instrument.

TEMPErature colors all traces using a multicolored palette, where "intensity" is represented by hue; blue for least frequently hit, red for most frequently hit. All traces share this palette.

SPECTra 1 colors all traces using a multicolored palette, where "intensity" is represented by hue; red for least frequently hit, blue for most frequently hit. All traces share this palette.

USEr colors all traces using a user-defined palette. All traces share this palette.

Examples DISPLAY:COLOR:PALETTE:RECORDVIEW MONOGRAY sets the palette for all display types.

DISPLAY:COLOR:PALETTE:RECORDVIEW? might return
:DISPLAY:COLOR:PALETTE:RECORDVIEW NORMAL, indicating that the Normal color palette is currently selected, which colors traces according to their channel.

## DISplay:COLOr:PALEtte:USEr

This command queries the color palette for group settings. It outputs settings from the DISPlay CARET, CH<x>, GRATICULE, HISTOGRAM, MASK, MASKHIGHLIGHT, MATH<x>, and REF $<x>$ commands.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr RESET
DISplay:COLOr:PALEtte:USEr?

Arguments RESET sets all user palettes to their default values.

| Examples | DISPLAY:COLOR:PALETTE:USER? might return |
| :--- | :--- |
|  | :DISPLAY:COLOR:PALETTE:USER:GRATICULE $165,50,15 ;$ CH1 |
|  | 180,50,100;CH2 300 50,100;CH3 60,50,100;CH4 240,50,100;REF1 |
|  | $0,90,0 ;$ REF2 0,90,100;REF3 60,90,100;REF4 240,90,100;MATH1 |
|  | 160,50,100;MATH2 40,60,100;MATH3 120,60,100;MATH4 |
|  | 195,50,100;HISTOGRAM $320,50,100 ;$ CARET $150,50,100 ;$ MASK |
|  | $0,25,75 ;$ MASKHIGHLIGHT $140,50,100$. |

## DISplay:COLOr:PALEtte:USEr:CARet

This command sets or queries the caret color for the user palette. It assigns the HUE, light, Saturation (HLS) triplet used for the caret color. The caret is the solid,
inverted delta positioned on the top graticule line, which indicates the trigger position within the waveform record.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:CARet <NR1>,<NR1>,<NR1> DISplay:COLOr:PALEtte:USEr:CARet?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:CARET 330,75,100 sets the caret color hue to 330 , the lightness to 75 , and the saturation to 100 .

DISPLAY:COLOR:PALETTE:USER:CARET? might return :DISPLAY:COLOR:PALETTE:USER:CARET 250, 85, 90, indicating that the color hue is set at 250 , the lightness is set to 85 , and the saturation is set to 90 .

## DISplay:COLOr:PALEtte:USEr:CH<x>

This command sets or queries the hue-lightness-saturation (HLS) triplet to be used for the specified channel color for the user palette. The channel is specified by x . The value of $x$ can range from 1 through 4 .

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:CH<x> <NR1>, <NR1>, <NR1> DISplay:COLOr:PALEtte:USEr:CH<x>?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:CH1 330,75,100 sets a user palette of hue $=330$, lightness $=75$, and saturation $=100$ for Channel 1 .

DISPLAY:COLOR:PALETTE:USER:CH2? might return :DISPLAY:COLOR:PALETTE:USER:CH2 325,65,100 indicating
that Channel 2 color for the user palette is set at 325 for hue, 65 for lightness, and 100 for saturation.

## DISplay:COLOr:PALEtte:USEr:GRAticule

This command sets or queries the user palette graticule color. It assigns the hue-lightness-saturation triplet to be used for the graticule color for the user palette.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:GRAticule <NR1>,<NR1>,<NR1> DISplay:COLOr:PALEtte:USEr:GRAticule?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:GRATICULE 330,75,100 sets the graticule color for the user palette.

DISPLAY:COLOR:PALETTE:USER:GRATICULE? might return :DISPLAY:COLOR:PALETTE:USER:GRATICULE $300,60,85$, indicating that the user palette graticule color is assigned a hue of 300 , a lightness of 60 , and a saturation of 85 .

## DISplay:COLOr:PALEtte:USEr:HIStogram

This command sets or queries the user palette histogram color. It assigns the hue-saturation-lightness (HLS) triplet to be used for the histogram color for the user palette.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:HIStogram <NR1>,<NR1>,<NR1> DISplay:COLOr:PALEtte:USEr:HIStogram?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:HISTOGRAM 330,75,100 sets the histogram color for the user palette.

DISPLAY:COLOR:PALETTE:USER:HISTOGRAM? might return :DISPLAY:COLOR:PALETTE:USER:HISTOGRAM 330,50,90, indicating that the user palette histogram color is assigned a hue of 330, a lightness of 50, and a saturation of 90 .

## DISplay:COLOr:PALEtte:USEr:MASK

This command sets or queries the user palette mask color. It assigns the hue-lightness-saturation (HLS) color for the mask color for the user palette.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:MASK <NR1>,<NR1>,<NR1> DISplay:COLOr:PALEtte:USEr:MASK?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:MASK 330,75,100 sets the mask color for the user palette.

DISPLAY:COLOR:PALETTE:USER:MASK? might return :DISPLAY:COLOR:PALETTE:USER:MASK 330,50,90, indicating that the user palette mask color is assigned a hue of 330, a lightness of 50, and a saturation of 90 .

## DISplay:COLOr:PALEtte:USEr:MASKHighlight

This command sets or queries the user palette mask hits color. It assigns the hue-lightness-saturation (HLS) triplet to be used for the mask highlight (mask hits) color for the user palette.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:MASKHigh1ight <NR1>, <NR1>, <NR1> DISplay:COLOr:PALEtte:USEr:MASKHigh1ight?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100 .
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:MASKHIGHLIGHT 330,75,100 sets the mask highlight (mask hits) color for the user palette.

DISPLAY:COLOR: PALETTE:USER:MASKHIGHLIGHT? might return :DISPLAY:COLOR:PALETTE:USER:MASK:HIGHLIGHT 325,65,100, indicating that the user palette mask highlight color is assigned a hue of 325 , a lightness of 65 , and a saturation of 100 .

## DISplay:COLOr:PALEtte:USEr:MATH<x>

This command sets or queries the user palette math colors. It assigns the hue-lightness-saturation (HLS) triplet to be used for the specified math waveform for the user palette. The math waveform is specified by x . The value of x can range from 1 through 4.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:MATH<x> <NR1>, <NR1>, <NR1> DISplay:COLOr:PALEtte:USEr:MATH<x>?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:MATH2 330,75,100 sets the color of the specified Math 2 waveform for the user palette.

DISPLAY:COLOR:PALETTE:USER:MATH2? might return :DISPLAY:COLOR:PALETTE:USER:MATH2 345,75,98, indicating that the user palette color of the Math 2 waveform is set to a hue of 345 , a lightness of 75 , and a saturation of 98 .

## DISplay:COLOr:PALEtte:USEr:REF<x>

This command sets or queries the user palette reference colors assigned to the reference waveforms. It assigns the hue-lightness-saturation (HLS) triplet to be used for the specified reference waveform color for the user palette. The reference waveform is specified by x . The value of x can range from 1 through 4 .

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:REF<x> <NR1>,<NR1>,<NR1> DISplay:COLOr:PALEtte:USEr:REF<x>?

Arguments <NR1> Hue. Range of 0 to 360 .
<NR1> Lightness. Range of 0 to 100.
<NR1> Saturation. Range of 0 to 100 .

Examples DISPLAY:COLOR:PALETTE:USER:REF1 330,75,100 sets the Reference 1 waveform color for the user palette.

DISPLAY:COLOR:PALETTE:USER:REF2? might return :DISPLAY:COLOR:PALETTE:USER:REF2 300,90,100, indicating that the user palette color for Reference 2 waveform is assigned a hue of 300, and lightness of 90 , and a saturation of 100 .

## DISplay:COLOr:PALEtte:USEr:WAVEform

This command sets or queries the user palette waveform colors. It assigns the hue-lightness-saturation (HLS) triplet to be used for the specified waveform for the user palette.

Group Display Control

Syntax DISplay:COLOr:PALEtte:USEr:WAVEform
\{HLS|SPECTral|TEMPErature\} DISplay:COLOr:PALEtte:USEr:WAVEform?

Arguments HLS sets the color of user waveforms to the hue, lightness, and saturation specified by the DISplay:COLOr:PALEtte:USEr:WAVEform commands.

SPECTral sets the color of user waveforms to spectral.
TEMPErature sets the color of user waveforms to temperature.

Examples DISPLAY:COLOR:PALETTE:USER:WAVEFORM SPECTRAL sets the user waveforms color palette to spectral.

DISPLAY:COLOR:PALETTE:USER:WAVEFORM? might return :DISPLAY:COLOR:PALETTE:USER:WAVEFORM TEMPERATURE, indicating that the color of user waveforms is set to temperature.

## DISplay:COLOr:REFCOLOr

This command sets or queries the color to be used for reference traces, either in the standard palette's nominal REF color or according to the color of the source waveform. This command is equivalent to selecting Display Setup from the Display menu and then choosing the Colors tab.

Group Display Control

Syntax DISplay:COLOr:REFCOLOr \{DEFAULT|INHERIT\}
DISplay:COLOr:REFCOLOr?

Related Commands DISplay:INTENSITy:WAVEform:IMAGEView, DISplay:INTENSITy: WAVEform:RECORDView

Arguments DEFAULT assigns color reference traces to the nominal palette reference color, which is off-white.

INHERIT assigns color reference traces to the source waveform color.

Examples DISPLAY:COLOR:REFCOLOR DEFAULT assigns color reference traces to the nominal palette reference color, which is off-white.

DISPLAY:COLOR:REFCOLOR? might return :DISPLAY:COLOR:REFCOLOR
INHERIT, indicating that source waveform color is used for reference traces.

## DISplay:DIGital:HElght

NOTE. Not available on some models.

This command sets or queries the height of the digital input waveform and the label associated with the channel.

Group Digital

```
Syntax DISplay:DIGital:HEIght \{SMA11|LARge|MEDium|XSMA11\}
DISplay:DIGital:HEIght?
```

Arguments SMA11 specifies the height of the digital input waveform and the label associated with the channel to small.

LARge specifies the height of the digital input waveform and the label associated with the channel to large.

MEDium specifies the height of the digital input waveform and the label associated with the channel to medium.

XSMA11 specifies the height of the digital input waveform and the label associated with the channel to extra small.

Examples DISPLAY:DIGITAL: HEIGHT MEDIUM sets the height of the digital input waveform and the label associated with the channel to MEDIUM.

DISPLAY:DIGITAL:HEIGHT? might return :DISPLAY:DIGITAL:HEIGHT SMALL, indicating that the height of the digital input waveform and the label associated with the channel is set to SMALL.

## DISplay:FILTer

This command sets or queries the type of interpolation to use for the display. Filtering only applies to normal-mode acquisition. The DISplay:FILTer command also provides selection for acquisition interpolation type. This command is equivalent to selecting Waveform Interpolation from the Display menu.

Group Display Control

Syntax DISplay:FILTer \{LINEAr|SINX\}
DISplay:FILTer?

Arguments LINEAR specifies linear interpolation, where acquired points are connected with straight lines.

SINX specifies $\sin (\mathrm{x}) / \mathrm{x}$ interpolation, where acquired points are fit to a curve.

Examples DISPLAY:FILTER SINX specifies sine-curve interpolation, when magnifying waveforms.

DISPLAY: FILTER? might return : DISPLAY: FILTER LINEAR, indicating that straight-line interpolation is specified for magnifying waveforms.

## DISplay:FORMat

Group Display Control

Syntax DISplay:FORMat \{YT|XY|XYZ\}
DISplay:FORMat?

Arguments YT sets the display to a voltage versus time format and is the default mode.
XY argument displays one waveform against another. The source pairs that make up an XY trace are predefined and are listed in the following table. Selecting one source causes its corresponding source to be implicitly selected, producing a single trace from the two input waveforms.

XYZ argument is available only for four-channel instruments. The argument combines channel 1 and channel 2 for X and Y coordinates and uses channel 3 to provide the intensity value for the sample. XYZ groups channels 1,2 and 3 to form a single trace. Other channel, math, and reference waveforms are turned off.

Table 2-45: XY Format Pairs

| X-Axis Source | Y-Axis Source |
| :--- | :--- |
| CH 1 | CH 2 |
| CH 3 | CH 4 |
| Ref 1 | Ref 2 |
| Ref 3 | Ref 4 |

## Examples <br> DISPLAY: FORMAT YT selects a voltage versus time format for the display.

DISPLAY: FORMAT? might return :DISPLAY: FORMAT XY is for the display format, indicating that the display is in the XY mode.

## DISplay:GRAticule

This command selects or queries the type of graticule that is displayed. This command is equivalent to selecting Graticule Style from the Display menu.

Group Display Control

Syntax DISplay:GRAticule
\{CROSSHair|FRAme|FUL1|GRId|IRE|NTSC|MV|PAL\}
DISplay:GRAticule?

Arguments CROSSHair specifies a frame and cross hairs.
FRAme specifies a frame only.
FUL1 specifies a frame, a grid and cross hairs.
GRId specifies a frame and grid only.
IRE specifies an IRE video graticule, and sets the vertical scale to 143 mV per division.

NTSC specifies an NTSC video graticule (same as the IRE graticule), and sets the vertical scale to 133 mV per division.

MV specifies an mV video graticule and sets the vertical scale to 133 mV per division. This graticule is used to measure PAL standard video signals.

PAL specifies a PAL video graticule (same as the mV graticule) and sets the vertical scale to 133 mV per division. This graticule is used to measure PAL standard video signals.

Examples DISPLAY:GRATICULE FRAME sets the graticule type to display the frame only. DISPLAY:GRATICULE? might return :DISPLAY:GRATICULE FULL, indicating that all graticule elements are selected.

## DISplay:INTENSITy? (Query Only)

This query-only command returns the waveform saturation level and screen saver settings. This command is equivalent to selecting Display Setup from the Display menu and choosing the Appearance tab.

Group Display Control

Syntax DISplay:INTENSITy?

Related Commands ,DISplay:INTENSITy:WAVEform:IMAGEView, DISplay:INTENSITy: WAVEform:RECORDView

Arguments None

```
Examples DISPLAY:INTENSITY? might return
:DISPLAY:INTENSITY:WAVEFORM:IMAGEVIEW 75.0000;RECORDVIEW
    10.0000;:DISPLAY:INTENSITY:AUTOBRIGHT 1.
```

## DISplay:INTENSITy:BACKLight

NOTE. Not available on some models.

This command sets or queries the waveform backlight intensity settings.

Group Display Control

Syntax DISplay:INTENSITy:BACKLight \{LOW|MEDium|HIGH\}
DISplay:INTENSITy:BACKLight?

Arguments LOW selects a low brightness level.
MEDium selects a moderate brightness level.
HIGH selects a full brightness level.

Examples DISPLAY:INTENSITY:BACKLIGHT LOW sets the waveform backlight to low brightness level.

DISPLAY:INTENSITY:BACKLIGHT? might return :DISPLAY:INTENSITY:BACKLIGHT HIGH, indicating that the waveform backlight is set to full brightness level.

## DISplay:INTENSITy:WAVEform:IMAGEView

This command sets or queries the saturation level for image view waveforms.

Group Display Control

Syntax DISplay:INTENSITy:WAVEform:IMAGEView <NR2> DISplay:INTENSITy:WAVEform:IMAGEView?

Related Commands DISplay:INTENSITy:WAVEform:RECORDView

Arguments <NR2> is the waveform saturation and ranges from 10 to 100 percent.

Examples DISPLAY:INTENSITY:WAVEFORM:IMAGEVIEW 100 sets the image view waveform saturation to 100 percent.

DISPLAY:INTENSITY:WAVEFORM:IMAGEVIEW? might return :DISPLAY:INTENSITY:WAVEFORM:IMAGEVIEW 60.0000, indicating that the saturation level of the image view waveforms is currently set to 60 percent.

## DISplay:INTENSITy:WAVEform:RECORDView

| Group | Display Control |
| :---: | :--- |
| Syntax | DISplay:INTENSITy:WAVEform:RECORDView <NR2> <br> DISplay:INTENSITy:WAVEform:RECORDVi ew? |
| Related Commands | DISplay:INTENSITy:WAVEform:IMAGEView |

## DISplay:PERSistence

This command sets or queries the persistence aspect of the display. This affects the display only and is equivalent to selecting Display Persistence from the Display menu.

Group Display Control

Syntax DISplay:PERSistence \{OFF|INFPersist|VARpersist\} DISplay:PERSistence?

Related Commands DISplay:VARpersist

Arguments
OFF disables the persistence aspect of the display.
INFPersist sets a display mode where any pixels, once touched by samples, remain set until cleared by a mode change.

VARPersist sets a display mode where set pixels are gradually dimmed.

Examples
DISPLAY: PERSISTENCE VARPERSIST sets the persistence aspect of the display to fade set pixels according to the time set in the DISplay:VARpersist command.

DISPLAY:PERSISTENCE? might return :DISPLAY:PERSISTENCE OFF, indicating that the persistence aspect of the display is disabled.

## DISplay:PERSistence:RESET (No Query Form)

This query-only command controls the clearing of persistence data. Persistence data includes all acquired waveform data.

This is equivalent to pressing the front panel 'Clear' button.

Group Display Control

Syntax DISplay:PERSistence:RESET

Related Commands

Examples DISPLAY: PERSISTENCE:RESET clears the display of persistence data.

## DISplay:SCREENTExt? (Query Only)

This query-only command returns all screen text settings.

Group Display Control

Syntax DISplay:SCREENTExt?

Related Commands DISplay:SCREENTExt:STATE, DISplay:SCREENTExt:LABel<x>?, DISplay:<br>SCREENTExt:LABel<x>:NAMe, DISplay:SCREENTExt:LABel<x>:XPOS, DISplay:SCREENTExt:LABel<x>:YPOS

| Examples | DISPLAY:SCREENTEXT? might reply: :DISPLAY:SCREENTEXT:STATE <br> 0:LABEL1:NAME "";xpOS 100:YPOS |
| :---: | :---: |
|  | 5;:DISPLAY:SCREENTEXT:LABEL2:NAME "";XPOS 100;YPOS |
|  | 20;:DISPLAY:SCREENTEXT:LABEL3:NAME ""; ${ }^{\text {a }}$ (XPOS $100 ;$ YPOS |
|  | 35;:DISPLAY:SCREENTEXT:LABEL4:NAME "";XPOS 100;YPOS |
|  | 50;:DISPLAY:SCREENTEXT:LABEL5:NAME "";XPOS 100;YPOS |
|  | 65;:DISPLAY:SCREENTEXT:LABEL6:NAME "";XPOS 100;YPOS |
|  | 80;:DISPLAY:SCREENTEXT:LABEL7:NAME "";XPOS 100;YPOS |
|  | 95;:DISPLAY:SCREENTEXT:LABEL8:NAME "";XPOS 100;YPOS 110 |

## DISplay:SCREENTExt:LABel<x>? (Query Only)

This query-only command returns the screen text setting for a given label. Specifically, it provides the name, horizontal position (XPOS), and vertical position (YPOS).

Group Display Control

Syntax DISplay:SCREENTExt:LABe1<x>?

Related Commands DISplay:SCREENTExt?, DISplay:SCREENTExt:STATE, DISplay: SCREENTExt:LABel<x>:NAMe, DISplay:SCREENTExt:LABel<x>:XPOS, DISplay:SCREENTExt:LABel<x>:YPOS

Examples DISPLAY:SCREENTEXT:LABEL3? might return :DISPLAY:SCREENTEXT:LABEL3:NAME "THIS IS SCREEN TEXT"; :XPOS 100 ; :YPOS 35 , indicating that the name of Label 3 is THIS IS SCREEN TEXT, and the label is position at 100 horizontally and at 35 vertically.

## DISplay:SCREENTExt:LABel<x>:FONTCOlor

This command sets or queries the screen text label font color. $\langle\mathrm{x}>$ is the label number, 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABel<x>:FONTCOlor <QString> DISplay:SCREENTExt:LABe1<x>:FONTCOlor?

Arguments <QString> argument is the font color to be displayed for a given label.

Examples DISPLAY:SCREENTEXT:LABEL1:FONTCOLOR 0240120 sets the Label 1 font color to 0240120 with Hue of 0 , Lightness of 240, and Saturation of 120.

DISPLAY:SCREENTEXT:LABEL3:FONTCO1OR? might return :DISPLAY:SCREENTEXT:LABEL3: FONTCO1OR 16711680, indicating that the font color of the Label 1 is set to 16711680 with Hue of 167, Lightness of 116, and Saturation of 80 .

## DISplay:SCREENTExt:LABel<x>:FONTNAme

This command sets or queries the screen text label font name. $\langle\mathrm{x}\rangle$ is the label number which ranges from 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABE]<x>:FONTNAme <QString> DISplay:SCREENTExt:LABel<x>:FONTNAme?

Arguments <QString> argument is the font name to be displayed for a given label.

```
Examples DISPLAY:SCREENTEXT:LABEL1:FONTNAME ARIAL sets the Label 1 font name to Arial.
DISPLAY:SCREENTEXT:LABEL1:FONTNAME? might return DISPLAY:SCREENTEXT:LABEL1:FONTNAME "Arial Narrow", indicating that the Label 1 font name is set to Arial Narrow.
```

## DISplay:SCREENTExt:LABel<x>:FONTSIze

This command sets or queries the screen text label font size. $<\mathrm{x}>$ is the label number which ranges from 1 through 8 .

Group Display Control

```
Syntax DISplay:SCREENTExt:LABel<x>:FONTSIze <NR1>
    DISplay:SCREENTExt:LABe1<x>:FONTSIze?
```

Arguments <NR1> is the font size to be displayed for a given label.

$$
\begin{array}{ll}
\text { Examples } & \text { DISPLAY:SCREENTEXT:LABEL1: FONTSIZE } 11 \text { sets the Label } 1 \text { font size to } 11 . \\
& \text { DISPLAY:SCREENTEXT:LABEL1:FONTSIZE? might return } \\
& \text { DISPLAY:SCREENTEXT:LABEL1:FONTSIZE } 9, \text { indicating that the } \\
& \text { Label } 1 \text { font size is set to } 9 .
\end{array}
$$

## DISplay:SCREENTExt:LABel<x>:FONTSTyle

This command sets or queries the screen text label font style. $\langle\mathrm{x}\rangle$ is the label number, 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABe1<x>:FONTSTy1e <QString> DISplay:SCREENTExt:LABe1<x>:FONTSTyle?

Arguments <QString> argument is the font style to be displayed for a given label.

Examples DISPLAY:SCREENTEXT:LABEL1:FONTSTYLE BOLD sets the Label 1 font style to BOLD.

DISPLAY:SCREENTEXT:LABEL1:FONTSTYLE? might return DISPLAY:SCREENTEXT:LABEL1:FONTSTYLE "Regular", indicating that the Label 1 font style is Regular.

## DISplay:SCREENTExt:LABel<x>:NAMe

This command sets the text to be displayed for a given label. The label is specified by $\langle x\rangle$. The value of $\langle x>$ can range from 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABel<x>:NAMe <QString> DISplay:SCREENTExt:LABe1<x>:NAMe?

Related Commands , DISplay:SCREENTExt:STATE, DISplay:SCREENTExt:LABel<x>:XPOS, DISplay:SCREENTExt:LABel<x>:YPOS

Arguments <QString> argument is the text to be displayed for a given label.

Examples DISPLAY:SCREENTEXT:LABEL2:NAME "THIS IS SCREEN TEXT" sets the screen text for Label 2 to THIS IS SCREEN TEXT.

DISPLAY:SCREENTEXT:LABEL2:NAME? might return
:DISPLAY:SCREENTEXT:LABEL2:NAME "MyWaveform", indicating that the Label 2 screen text is set to MyWaveform.

## DISplay:SCREENTExt:LABel<x>:STATE

This command sets the state to be displayed for a given label. $\langle\mathrm{x}\rangle$ is the label number, 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABe]<x>:STATE \{<NR1>|OFF|ON\}
DISplay:SCREENTExt:LABe1<x>:STATE?

Arguments OFF = the screen text does not display.
$\mathrm{ON}=$ the screen text displays.

Examples DISPLAY:SCREENTEXT:LABEL2:STATE ON sets the Label 2 screen text to display.

DISPLAY:SCREENTEXT:LABEL2:STATE? might return :DISPLAY:SCREENTEXT:LABEL2:STATE 1, indicating that the Label 2 screen text display is ON.

## DISplay:SCREENTExt:LABel<x>:XPOS

This command sets the horizontal position of a given screen text label. The label is specified by x . The value of x can range from 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABe1<x>:XPOS <NR1>

## Related Commands DISplay:SCREENTExt:STATE, DISplay:SCREENTExt:LABel<x>:NAMe,

 DISplay:SCREENTExt:LABel<x>:YPOSArguments <NR1> sets the horizontal position of the screen text label. The value can range from 0 to 500 .

Examples DISPLAY:SCREENTEXT:LABEL3:XPOS 100 sets the horizontal position of Label 3 to 100.

DISPLAY:SCREENTEXT:LABEL3:XPOS? might return :DISPLAY:SCREENTEXT:LABEL3:XPOS 250, indicating that the screen Label 3 is horizontally positioned to 250 .

## DISplay:SCREENTExt:LABel<x>:YPOS

This command sets the vertical position of a given label. The label is specified by $x$. The value of $x$ can range from 1 through 8 .

Group Display Control

Syntax DISplay:SCREENTExt:LABe1<x>:YPOS <NR1>

Related Commands DISplay:SCREENTExt:STATE, DISplay:SCREENTExt:LABel<x>:NAMe, DISplay:SCREENTExt:LABel<x>:XPOS

Arguments <NR1> sets the vertical position of the screen text label. The value can range from 0 to 385 .

Examples DISPLAY:SCREENTEXT:LABEL3:YPOS 100 sets the vertical position of Label 3 to 100 .

DISPLAY:SCREENTEXT:LABEL3:YPOS? might return
:DISPLAY:SCREENTEXT:LABEL3:YPOS 192, indicating that screen Label 3 is vertically positioned to 192 .

## DISplay:SCREENTExt:STATE

This command controls the display of screen text.

Group Display Control

Syntax DISplay:SCREENTExt:STATE \{<NR1>|ON|OFF\}

Related Commands
DISplay:SCREENTExt?, DISplay:SCREENTExt:LABel<x>?, DISplay: SCREENTExt:LABel $<x>$ :NAMe, DISplay:SCREENTExt:LABel $<x>$ :XPOS, DISplay:SCREENTExt:LABel $<x>: Y P O S$

Arguments

Examples
DISPLAY: SCREENTEXT: STATE ON turns the screen text display on.
DISPLAY:SCREENTEXT:STATE? might return :DISPLAY:SCREENTEXT: STATE 1 , indicating that the screen text is displayed.

## DISplay:SHOWREmote

## NOTE. Not available on some models.

This command sets or queries the state of the remote display feature and is equivalent to selecting Display Remote from the Display menu. The query form of this command returns ON (1) or OFF (0).

This feature allows you to view waveforms and other graticule data on a remote display using remote control software like VNC (Virtual Network Computing) or Symantec pcAnywhere.

Group Display Control

Syntax DISplay:SHOWREmote $\{<$ NR1>|ON|OFF $\}$
DISplay:SHOWREmote?

Arguments <NR1> = 0 disables remote display of waveform and other graticule data; any other value enables remote display of waveform and other graticule data.

ON enables the remote display of waveform and other graticule data.
OFF disables the remote display of waveform and other graticule data.

Examples DISPLAY:SHOWREMOTE ON enables remote display of waveform and other graticule data.

DISPLAY:SHOWREMOTE? might return :DISPLAY:SHOWREMOTE 1, indicating that the remote display of waveform and other graticule data is currently enabled.

## DISplay:STYle

Group Display Control

Syntax DISplay:STYle \{DOTs|INTENSIFied|VECtors\} DISplay:STY1e?

Arguments DOTs displays individual data points. New points immediately replace old ones.
INTENSIFied causes the display to show interpolated samples with dark spaces (Only the "real" samples are displayed).

VECtors connects adjacent data points. New points immediately replace old ones.
When FastAcq mode is enabled, intensified samples display as dots. However, turning off FastAcq mode causes the display style to snap back to its previous setting.

Examples DISPLAY:STYLE VECTORS sets the display to connect adjacent data points. DISPLAY:STYLE? might return :DISPLAY:STYLE INTENSIFIED, indicating that interpolated samples are not displayed.

## DISplay:TRIGBar

This command controls or queries the display of the trigger-level indicator bars. Indicator bars show where the trigger voltage level is set.

The instrument will only display the bar if the associated trigger source is also displayed. If both a main and a delayed trigger are displayed, then two bars will appear. One will accompany each source. If a logic trigger is selected, then multiple bars might appear. One will show the upper threshold and one will show the lower threshold. This command is equivalent to selecting Display Setup from the Display menu and then choosing the Objects tab.

Group Display Control

Syntax DISplay:TRIGBar \{OFF|SHORt|LONG\}
DISplay:TRIGBar?

Arguments

Examples

DISplay:TRIGT

Group Display Control

Syntax DISplay:TRIGT \{<NR1>|OFF|ON\}
DISplay:TRIGT?

Arguments
<NR1> = 0 disables the trigger T; any other value displays the trigger T.
OFF removes the trigger indicator T from the display.
ON displays a T at the trigger point.

## Examples DISPLAY:TRIGT OFF disables the trigger T.

DISPLAY:TRIGT? might return :DISPLAY:TRIGT 1 indicating that the trigger T is displayed.

## DISplay:VARpersist

Group Display Control

Syntax DISplay:VARpersist <NR3> DISplay:VARpersist?

## Related Commands DISplay:PERSistence

Arguments <NR3> indicates the persistence decay time and ranges from 0.5 to 100 .

Examples DISPLAY:VARPERSIST 5 sets the persistence decay time to 5 .
DISPLAY:VARPERSIST? might return :DISPLAY:VARPERSIST 3.0000E-01, indicating that persistence decay time is currently set to 0.300 .

## DISplay:WAVEform

This command controls or queries the display of acquisition and reference waveforms.

Group Display Control

Syntax DISplay:WAVEform \{<NR1>|OFF|ON\}
DISplay:WAVEform?

Arguments <NR1> $=0$ removes waveforms from the display; any other value displays the waveforms.

OFF removes the waveforms from the display.
ON displays waveforms on the display.

Examples DISPLAY:WAVEFORM OFF removes waveforms from the display.
DISPLAY:WAVEFORM? might return :DISPLAY:WAVEFORM 1, indicating that waveforms are displayed.

## $D<x>: L A B E L$

## NOTE. Not available on some models.

This command sets or queries the label that appears for the specified digital input on the display.

Group Digital

Syntax D<x>:LABEL <QString> D<x>:LABEL?

Related Commands

Arguments

Examples

## D<x>:POSition

## NOTE. Not available on some models.

This command sets or queries the position for the specified digital input.

Group Digital

Syntax D<x>:POSition <NR3> D<x>:POSition?

Related Commands $\quad \mathrm{D}<\mathrm{x}>$ :LABEL, $\mathrm{D}<\mathrm{x}>$ :THRESHold CH $<\mathrm{x}>$ :POSition, $\mathrm{D}<\mathrm{x}>$ :POSition, MATH $<\mathrm{x}>$ :VERTical:POSition

Arguments <NR3> specifies the position.

Examples D1: POSITION 2 sets the position for the digital input D1 to 2.3400 divisions. D1: POSITION? might return :D1: POSITION 3.3400, indicating that the position for the digital input D 1 is set to 3.34 divisions.

## D<x>:PROBE:ID:SERnumber? (Query Only)

NOTE. Not available on some models.

This command queries the serial number of the digital probe that provides the specified digital signal.

Group Digital

Syntax D<x>:PROBE:ID:SERnumber?

Related Commands $\quad \mathrm{D}<\mathrm{x}>$ :PROBE:ID:TYPe?

Examples D1:PROBE:ID:SERNUMBER? might return :D1:PROBE:ID:SERNUMBER "PQ009", indicating that the serial number of the digital probe that provides the specified digital signal D1 is set to PQ009.

## D<x>:PROBE:ID:TYPe? (Query Only)

NOTE. Not available on some models.

This command queries the type of digital probe that provides the specified digital signal.

Group Digital

Syntax D<x>:PROBE:ID:TYPe?

Related Commands $\mathrm{D}<\mathrm{x}>:$ PROBE:ID:SERnumber?

Examples D1:PROBE:ID:TYPE? might return :D1:PROBE:ID:TYPE "P6717", indicating that the type of digital probe which provides the specified digital signal D1 is P6717.

## D<x>:THRESHold

> NOTE. Not available on some models.

This command sets or queries the threshold level for the specified digital signal.

Group Digital

Syntax D<x>:THRESHold <NR3>
D<x>:THRESHold?

Related Commands $\mathrm{D}<\mathrm{x}>$ :LABEL, $\mathrm{D}<\mathrm{x}>$ :POSition,
MATH $<x>$ :THRESHold

Arguments <NR3> specifies the threshold level in volts.

Examples D5:THRESHOLD 1.5 sets the threshold for digital channel D5 to 1.5 volts.
D14:THRESHOLD? might return :D14:THRESHOLD 1.2500 indicating that the threshold level for the digital channel D14 is set to 1.25 volts.

## EMail (No Query Form)

This command (no query form) sends a test e-mail message or sets the current e-mail sent count to zero.

Group E-mail

Syntax EMail \{TESt|RESET\}

Arguments TESt argument sends a test e-mail message.
RESET argument sets the e-mail sent count to zero.

## Examples EMAILTEST

This command sends a test e-mail.
EMAILRESET resets the sent mail count to zero.

## EMail:ATTempts

Group E-mail

Syntax EMail:ATTempts <NR1> Email:ATTempts?

Arguments <NR1> can be 1 through 20. This number is the specified number of attempts that will be made to send e-mail to the SMTP server.

Examples EMAIL:ATTEMPTS 15 specifies that 15 attempts will be made to send the e-mail to the SMTP e-mail server.

EMAIL:ATTEMPTS? might return :EMAIL:ATTEMPTS 10, indicating that 10 attempts will be made to send the e-mail to the SMTP e-mail server.

## EMail:AUTHLogin

This command sets or queries the login name that will be used if the SMTP e-mail server requires one for authentication.

Group E-mail

Syntax EMail:AUTHLogin \{<QString>\}
EMail:AUTHLogin?

Arguments <QString> argument is a string that specifies the login name to be used with the SMTP e-mail server.

Examples EMAIL:AUTHLOGIN kentb specifies that kentb will be used as the login name with the SMTP e-mail server.

EMAIL:AUTHLOGIN? might return : EMAIL:AUTHLOGIN "bobk", indicating that bobk will be used as the login name used with the SMTP e-mail server.

## EMail:AUTHPassword (No Query Form)

This command (no query form) sets the password that will be used if the SMTP e-mail server requires one for authentication.

Group E-mail

Syntax EMail:AUTHPassword \{<QString>\}

Arguments <QString> argument is a string that specifies the password to be used with the SMTP e-mail server.

Examples EMAIL:AUTHPASSWORD "123xyz" specifies that $123 x y z$ will be used as the password with the SMTP e-mail server.

## EMail:COUNt? (Query Only)

This query only command returns the number of e-mails that have been sent since Email on Event was armed. The range of values returned can be from 0 to 50 .

Group E-mail

Syntax EMail:COUNt?

Examples EMAIL: COUNT? might return : EMAIL: COUNT 15, indicating that 15 e-mails have been sent since e-mail on event was armed.

## EMail:FROm

This command sets or queries the From line in the e-mail. The default for the From line is the instrument model and serial number.

Group E-mail

Syntax EMai1:FROm \{<QString>\}
EMail: FROm?

Arguments <QString> argument is a string that is placed in the From line of the e-mail. An example is "johnz".

Examples EMAIL:FROM "kentb" specifies that kentb will be placed in the From line of the e-mail.

EMAIL: FROM? might return : EMAIL:FROM "BOBK", indicating that bobk will appear in the From line of the e-mail.

## EMail:HOSTwanted

This command sets or queries the host name that will be used when e-mail is sent to the SMTP e-mail server if the DPO host name will not work.

Group E-mail

Syntax EMail:HOSTwanted \{<QString>\}
EMail:HOSTwanted?

Arguments <QString> argument is a string that specifies the host name to be used with the SMTP e-mail server if the default DPO host name will not work.

Examples EMAIL: HOSTWANTED "LazyEight" specifies that LazyEight will be used as the host name when sending e-mail to the SMTP e-mail server.
EMAIL:HOSTWANTED? might return :EMAIL:HOSTWANTED "LazyEight", indicating that LazyEight is the host name used with the SMTP e-mail server.

## EMail:IMAGe

This command sets or queries whether a screen image is included in e-mail. If this command is set to ON , the format and content of the screen image included is specified using the EXPort commands within the Hard Copy Command group.

Group E-mail

Syntax EMail:IMAGe \{<NR1>|ON|OFF|\}
EMail:IMAGe?

## Related Commands EXPort

Arguments

Examples

## EMail:MASK

Arguments

## Examples

 occurs.Group E-mail

This command sets or queries whether e-mail is sent when a mask test failure

Syntax EMail:MASK \{<NR1>|ON|OFF\}

```
EMail:MASK?
```

<NR1> = 0 disables sending e-mail when a mask test failure occurs; any other value enables sending e-mail when a mask test failure occurs.

ON argument enables sending e-mail when a mask test failure occurs.
OFF disables sending e-mail when a mask test failure occurs.

EMAIL:MASK 1 enables sending e-mail when a mask test failure occurs.
EMAIL:MASK? might return : EMAIL:MASK 0, indicating that e-mail will not be sent when a mask test failure occurs.

## EMail:MAXSize

This command sets or queries the maximum size (in megabytes) of e-mail that can be sent to the SMTP server.

Group E-mail

Syntax EMail:MAXSize $\{<$ NR1 $\rangle\}$
EMail:MAXSize?

Arguments
<NR1> can be 0 through 2000 (megabytes). This is the maximum size of each e-mail that can be sent to the SMTP server.

Examples EMAIL:MAXSIZE 5 sets the maximum size of each e-mail enclosure to 5 megabytes of data.

EMAIL:MAXSIZE? might return :EMAIL:MAXSIZE 10, indicating that each e-mail sent to the SMTP server can contain up to 10 megabytes of data.

## EMail:MEASUrement

Group E-mail

Syntax EMail:MEASUrement \{<NR1>|ON|OFF\} EMai1:MEASUrement?

Arguments <NR1> = 0 disables the inclusion of measurement data in the e-mail; any other value enables including measurement data in the e-mail.

ON enables the inclusion of measurement data in e-mail.
OFF disables the inclusion of measurement data in e-mail.

Examples EMAIL:MEASUREMENT 1 enables the inclusion of measurement data in e-mail.
EMAIL:MEASUREMENT? might return :EMAIL:MEASUREMENT 0, indicating that measurement data is not included in the e-mail.

## EMail:NUMEMails

This command sets or queries the number of e-mails you can send when Email on Event is armed, from 1 to 50 . This limit is to restrict e-mail floods.

Group E-mail

Syntax email:numemails \{<NR1>\}
EMail: NUMEMails?

Related Commands EMail

Arguments

Examples

## EMail:SMTPPort

Group E-mail

Syntax EMail:SMTPPort \{<NR1>\}
EMail:SMTPPort?

Arguments

Examples
EMAIL: SMTPPORT 55 specifies that the SMTP e-mail server will communicate on TCPIP port 55.

EMAIL:SMTPPORT? might return :EMAIL:SMTPPORT 10, indicating that TCPIP port 10 will be used to communicate with the SMTP e-mail server.

## EMail:SMTPServer

This command sets or queries the address of the SMTP mail server.

Group E-mail

Syntax EMail:SMTPServer <QString> EMail:SMTPServer?

Arguments <QString> argument is the address of the SMTP mail server that will handle the mail service request. For example, "smtp.tek.com".

Examples EMAIL:SMTPSERVER "smtp.tek.com" sets the SMTP mail server to smtp.tek.com. This will be the mail server used for mail service requests.

EMAIL:SMTPSERVER? might return :EMAIL:SMTPSERVER "SMTP.TEK.COM", indicating that the SMTP mail server is set to SMTP.tek.com.

## EMail:STATUS? (Query Only)

This query only command returns the status of the last e-mail you attempted to send.

Group E-mail

Syntax EMail:STATUS?

Returns The status might be one of the following strings:

- PASS - indicates that the last e-mail message sent was successful or that no email message was attempted.
- FAIL - indicates that the last e-mail message attempted was not sent.
- SEND - indicates that an e-mail message is currently being sent.
- HOST_FAIL - indicates that the instrument failed to connect to the SMTP server.
- CONNECTION_FAIL - indicates that the SMTP server refused the connection.

Examples EMAIL:STATUS? might return :EMAIL:STATUS FAIL, indicating that the e-mail failed to be sent.

## EMail:TIMEOut

This command sets or queries the global timeout in seconds. The default is 30 seconds. You use this timeout for socket connections and might need to change it from the default on some networks.

Group E-mail

```
Syntax EMail:TIMEOut <NR1>
EMail:TIMEOut?
```

Arguments <NR1> argument is the global timeout in seconds. The value for NR1 can be 0 through 500 .

Examples EMAIL:TIMEOUT 60 that 60 seconds will be used for network connection timeouts.

EMAIL:TIMEOUT? might return :EMAIL:TIMEOUT 30, indicating that the default of 30 seconds is set for network connection timeouts.

## EMail:TO

This command sets or queries the address of the recipient(s) of an e-mail.

Group E-mail

Syntax EMail:TO <QString>
EMail:TO?

Arguments <QString> argument is the e-mail address of the recipient (or recipients). Multiple addresses are separated with semicolons (;). For example, "johndoe@tek.com;billsmith@tek.com" specifies that both johndoe and billsmith at tek.com will receive e-mail when the event occurs. The length of this string is limited to 252 characters.

Examples EMAIL:TO "johndoe@tek.com" will send e-mail to johndoe@tek.com when the event occurs.

EMAIL:TO? might return :EMAIL:TO "bi11smi11@tek.com", indicating that the billsmith@tek.com will receive e-mail when the event occurs.

## EMail:TRIGger

This command sets or queries whether e-mail is sent when a trigger occurs. The e-mail is sent after the acquisition is complete.

Group E-mail

Syntax EMail:TRIGger $\{<$ NR1 $>\mid$ ON|OFF $\}$
EMail:TRIGger?

Arguments <NR1> = 0 disables sending e-mail when a trigger occurs; any other value enables sending e-mail when a trigger occurs.
ON argument enables sending e-mail when a trigger occurs.
OFF disables sending e-mail when a trigger occurs.

Examples EMAIL:TRIGGER 1 enables sending e-mail when a trigger occurs.
EMAIL:TRIGGER? might return :EMAIL:TRIGGER 0 , indicating that e-mail will not be sent when a trigger occurs.

## EMail:WAVEform

This command sets or queries whether waveform data is included in e-mail. The waveforms to be included, the start and stop points (and, or, frames for Fast Frame mode), and the data formats are specified by the DATa and WFMOutpre? commands within the Waveform Transfer Command group.

Group E-mail

Syntax EMail:WAVEform \{<NR1>|ON|OFF\} EMail:WAVEform?

Arguments <NR1> = 0 disables the inclusion of waveform data in the e-mail; any other value enables including waveform data in the e-mail.

ON enables the inclusion of waveform data in e-mail.
OFF disables the inclusion of waveform data in e-mail.

Examples EMAIL:WAVEFORM 1 enables the inclusion of waveform data in e-mail.
EMAIL:WAVEFORM? might return :EMAIL:WAVEFORM 0, indicating that waveform data is not included in the e-mail.

## ERRORDetector:ALERT

This command sets or queries the error detector alert.

Group Error Detector

Syntax ERRORDetector:ALERT \{ON|OFF|<NR1>\}
ERRORDetector:ALERT?

Arguments $\quad \mathrm{ON}$ turns on the error detector alert.
OFF turns off the error detector alert.
<NR1> = 0 disables the alert; any other value enables the alert.

Examples ERRORDETECTOR:ALERT? might return :ERRORDETECTOR:ALERT OFF indicating the error detector alert is off.

## ERRORDetector:ALIGNCHARacter? (Query Only)

This command queries all of the align character values. Align characters must be defined for all test types, and those characters must appear in the signal test pattern. The Align character may be in symbolic or bit string form

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNCHARacter?

Examples ERRORDETECTOR:ALIGNCHARACTER? might return :ERRORDETECTOR:ALIGNCHARACTER:SYMBOL "K28.5"; PLUS"1100000101"; MINUS"0011111010"; to indicate that the symbolic K28.5 Align Character is also represented by the RD+ bit string value is 1100000101 and the RD- align character bit string value 0011111010.

## ERRORDetector:ALIGNCHARacter:MINus? (Query Only)

This command queries the RD- align character bit string value. Reception of this character by the instrument causes the receiver to align to the 10-bit character boundary.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNCHARacter:MINus?

Examples ERRORDETECTOR:ALIGNCHARACTER:MINUS?? might return ERRORDETECTOR:ALIGNCHARACTER:MINUS "0011111010", indicating that the RD- align bit string value is "0011111010".

## ERRORDetector:ALIGNCHARacter:PLUS? (Query Only)

This command queries the RD+ align character bit string value. Reception of the align character by the instrument aligns the receiver to the 10 -bit character boundary.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNCHARacter:PLUS??
$\begin{array}{ll}\text { Examples } & \text { ERRORDETECTOR:ALIGNCHARACTER:PLUS?? might return } \\ & \text { ERRORDETECTOR:ALIGNCHARACTER:PLUS " } 1100000101 \text { ", indicating that the } \\ & \text { RD+ align character value is } 1100000101 .\end{array}$

## ERRORDetector:ALIGNCHARacter:SYMBOL

This command sets or queries the symbolic align character value. Reception of the align character by the instrument aligns the receiver to the 10 -bit character boundary.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNCHARacter:SYMBOL <QString> ERRORDetector:ALIGNCHARacter:SYMBOL?

Arguments <QString> is a quoted string representing a symbolic character, e.g., "K28.5".

Examples ERRORDETECTOR:ALIGNCHARACTER:SYMBOL "K28.5" sets that the symbolic align character to "K28.5".

ERRORDETECTOR:ALIGNCHARACTER:SYMBOL? might return
ERRORDETECTOR:ALIGNCHARACTER:SYMBOL "K28.5", indicating that the symbolic align character value is K28.5.

## ERRORDetector:ALIGNPRIMitive? (Query Only)

This command queries all of the align primitive values, including its state ( $\mathrm{ON}=1 / \mathrm{OFF}=0$ ), the length four array of symbolic character values, and the RD+ and RD- .length four arrays of bit string values.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive?

Examples ERRORDETECTOR:ALIGNPRIMITIVE? might return
ERRORDETECTOR:ALIGNPRIMITIVE:STATE 1;SYMBOL1 "K28.5";SYMBOL2
"D10.2";SYMBOL3 "D10.2";SYMBOL4 "D27.3";PLUS1
"1100000101"; PLUS2 "0101010101";PLUS3 "0101010101";PLUS4 "0010011100";MINUS1 "0011111010";MINUS2 "0101010101";MINUS3 "0101010101";MINUS4 "1101100011"

## ERRORDetector:ALIGNPRIMitive:MINUS? (Query Only)

This command queries the RD- align primitive bit string values.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive:MINUS?

Examples ERRORDETECTOR:ALIGNPRIMITIVE:MINUS? might return ERRORDETECTOR:ALIGNPRIMITIVE:MINUS "001111010"

## ERRORDetector:ALIGNPRIMitive:MINus<x>? (Query Only)

This command queries the RD- align primitive bit string values.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive:MINus<x>?

Examples ERRORDetector:ALIGNPRIMitive:MINus1? might return :ERRORDETECTOR:ALIGNPRIMITIVE:MINUS1 "0011111010".

ERRORDetector:ALIGNPRIMitive:MINus2? might return
:ERRORDETECTOR:ALIGNPRIMITIVE:MINUS2 "0101010101".

## ERRORDetector:ALIGNPRIMitive:PLUS? (Query Only)

This command queries the four RD+ align primitive bit string values.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive:PLUS?

Examples ERRORDETECTOR:ALIGNPRIMITIVE:PLUS? might return "1100000101". ERRORDETECTOR:ALIGNPRIMITIVE:PLUS? might return :ERRORDETECTOR:ALIGNPRIMITIVE:PLUS "1100000101", indicating the first align primitive bit string is set to that bit string value.

## ERRORDetector:ALIGNPRIMitive:PLUS<x>? (Query Only)

This command queries the align primitive plus value.
Group Error Detector
Syntax ERRORDetector:ALIGNPRIMitive:PLUS<x>?

## Related Commands

Examples ERRORDetector:ALIGNPRIMitive:PLUS1? might return
:ERRORDETECTOR:ALIGNPRIMITIVE:PLUS1 "1100000101" indicating the first align primitive plus1 value is "1100000101".

## ERRORDetector:ALIGNPRIMitive:STATE

This command sets or queries the status of the RD- align primitive option.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive:STATE \{<NR1>|OFF|ON\} ERRORDetector:ALIGNPRIMitive:STATE?

Arguments ON enables the align primitive option.
OFF disables the align primitive option.
<NR1> $=0$ disables the align primitive option; any other value enables the option

Examples ERRORDETECTOR:ALIGNPRIMITIVE: STATE ON enables the RD- align primitive option.

ERRORDETECTOR:ALIGNPRIMITIVE:STATE? might return ERRORDETECTOR:ALIGNPRIMITIVE:STATE ON, indicating that the align primitive option is enabled.

## ERRORDetector:ALIGNPRIMitive:SYMBOLS

Sets or queries the four align primitive symbols. You can set one or more symbols with the command, but they must be done in order. The query returns all four symbols.

NOTE. Not available on some models.

Group Error Detector

## Syntax ERRORDetector:ALIGNPRIMitive:SYMBOLS ERRORDetector:ALIGNPRIMitive:SYMBOLS?

Arguments <Qstring> is a quoted string representing one of the four align primitive symbols, such as "K28.5". You can set one or more of the symbols with a single command, but the symbols must be set in order.

Examples ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOLS
"K28.5","D10.2","D10.2","D27.3" sets the four align primitive symbols.
ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOLS "K28.5","D10.2","D10.2" sets the only the first three align primitive symbols.

ERRORDETECTOR:ALIGNPRIMITIVE: SYMBOLS? might return : ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOLS "K28.5","D10.2","D10.2","D27.3", indicating the four symbols comprising the align primitive.

## ERRORDetector:ALIGNPRIMitive:SYMBOL<x>

Sets or queries the align primitive symbol. The individual symbolic array elements may be accessed through SYMbol1, SYMBol2, etc.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ALIGNPRIMitive:SYMBOL<x> <QString> ERRORDetector:ALIGNPRIMitive:SYMBOL<x>?

Arguments <QString> is a quoted string representing the symbolic align primitive symbols such as K28.5.

Examples ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOL "K28.5" sets the first symbolic align primitive symbol to K28.5.

ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOL2 "D10.2" sets the second align primitive symbol.

ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOL? might return :ERRORDETECTOR:ALIGNPRIMITIVE:SYMBOL "K28.5", indicating that the first symbolic align primitive symbol is set to K28.5.

## ERRORDetector:BIT:LENgth

This command sets or queries the signal test pattern length in bits for non-USB bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:LENgth <NR1> ERRORDetector:BIT:LENgth?

Arguments <NR1> indicates the bit length of the signal test pattern.

Examples ERRORDETECTOR:BIT:LENGTH 800 sets the signal test pattern length to 800 . ERRORDETECTOR:BIT:LENGTH? might return :ERRORDETECTOR:BIT:LENGTH 800 , indicating that the signal test pattern length is 800 .

## ERRORDetector:BIT:SYNCPATtern? (Query Only)

This command queries all of the sync pattern forms and associated settings for non-USB bit error testing. The SYNCPATtern consists of one to four symbolic 10 -bit 8B10B characters and their matching RD+ and RD- bit string equivalents. It is required for all non-USB bit error testing. This sequence of 8 B 10 B characters must actually occur and be unique in the signal test pattern sent to the oscilloscope for error detection to work correctly. The SyncPattern has a symbolic form ("K28.5"), an RD+ and RD- bit string form ("0011111010"), and an as-used bit string form. The actual form used depends on the SyncPattern:Disparity and SyncPattern:Advanced settings. When Advanced is Off, the disparity setting determines the disparity of the first (leftmost) syncpattern element, and the others alternate disparity. When Advanced is On, the Disparity is set for each SyncPattern element.

Group Error Detector

Syntax ERRORDetector:BIT:SYNCPATtern?

Examples ERRORDETECTOR:BIT:SYNCPATTERN?? might return ERRORDETECTOR:BIT:SYNCPATTERN '"0011010100110100110100110101001101001100" ; "D12.0", "D11.4", "D12.0", "D1
indicating that the $10-, 20-, 30$-, or 40 -bit sync pattern (bit string form) in use is " 0011010100110100110100110101001101001100 ", the symbolic four-character syncpattern (D12.0, D1.4, D12.0, D11.3), the RD+ and RD- bit string versions of the same four characters, the Disparity settings for each sycn pattern element, and the advanced enable control (which allows each character to have its own disparity setting), which is off in this example. These parameters can be queried separately using PI commands that follow.

## ERRORDetector:BIT:SYNCPATtern:ADVanced

This command sets or queries the SYNCPATtern:ADVanced setting. When Advanced is ON, the Disparity of each SYNCPATtern element is controlled individually. When Advanced is off, the SYNCPATtern: DISParity alternates based on the DISParity of the first element.

Group Error Detector

Syntax ERRORDetector:BIT:SYNCPATtern:ADVanced \{<NR1>|OFF|ON\}
ERRORDetector:BIT:SYNCPATtern:ADVanced?

Arguments ON allows the Disparity of each SYNCPATtern element to be controlled individually

OFF alternates the SYNCPATtern: DISParity based on the DISParity of the first element.
<NR1> = 0 disables the advanced sync pattern; any other value enables the advanced sync pattern.

Examples ERRORDETECTOR:BIT:SYNCPATTERN:ADVANCED? might return ERRORDETECTOR:BIT:SYNCPATTERN:ADVanced OFF;
indicating the Advanced (Disparity feature) is OFF.

## ERRORDetector:BIT:SYNCPATtern:BITString

This command queries the $10-, 20$-, 30 -, or 40 -bit sync pattern in bit string form.

```
Group Error Detector
Syntax ERRORDetector:BIT:SYNCPATtern:BITString<QString>
    ERRORDetector:BIT:SYNCPATtern:BITString?
```

```
Arguments <QString> is the bit string.
Examples ERRORDETECTOR:BIT:SYNCPATTERN:BITSTRING? might
        return ERRORDETECTOR:BIT:SYNCPATTERN:BITSTRING
        "0011010100110100110100110101001101001100"; indicating
        the (max 40-bit) sync pattern in bit string form. The sync pattern should always
        be given in multiples of 10 bits.
```

## ERRORDetector:BIT:SYNCPATtern:DISParity<x>

Sets or queries the four sync pattern Disparity elements, when the SYNCpat:ADVanced is ON. When Advanced is off, the DISParity alternates based on the DISParity of the first element.

Group Error Detector

Syntax ERRORDetector:BIT:SYNCPATtern:DISParity<x> \{RDPLUS | RDMINUS\}
ERRORDetector:BIT:SYNCPATtern:DISParity<x>?

Arguments RDPLUS sets the sync pattern disparity element to RDPLUS. RDMINUS sets the sync pattern disparity element to RDMINUS.

Examples ERRORDETECTOR:BIT:SYNCPATTERN:DISParity? might return ERRORDETECTOR:BIT:SYNCPATTERN:DISPARITY RDPLUS, RDMINUS, RDPLUS, RDMINUS;
indicating the values of the four sync pattern Disparity elements. The PI array syntax is used to access the elements individually (ERRORDetector:BIT:SYNCPATtern:DISParity2 RDPLUS, ERRORDetector:BIT:SYNCPATtern:DISParity3 RDMINUS, etc.).

## ERRORDetector:BIT:SYNCPATtern:MINus<x>? (Query Only)

This command queries the four RD- bit string sync pattern elements.

Group Error Detector

Syntax ERRORDetector:BIT:SYNCPATtern:MINus<x>?

```
Examples ERRORDETECTOR:BIT:SYNCPATTERN:MINUS? might
return ERRORDETECTOR:BIT:SYNCPATTERN:MINUS
"0011011011","1101001101","0011011011","1101001100"; indicating
the values for the RD- bit string sync pattern elements. An element may be queried as " X " to indicating "don't care." The PI array syntax is used to access the elements individually (ERRORDetector:BIT:SYNCPATtern:MINUS1, ERRORDetector:BIT:SYNCPATtern:MINUS2, etc.).
```

## ERRORDetector:BIT:SYNCPATtern:PLUS<x>? (Query Only)

This command queries the four RD+ bit string sync pattern elements.

```
    Group Error Detector
    Syntax ERRORDetector:BIT:SYNCPATtern:PLUS<x>?
Examples ERRORDETECTOR:BIT:SYNCPATTERN:PLUS? might
    return ERRORDETECTOR:BIT:SYNCPATTERN:PLUS
    "0011010100","1101000010","0011010100","1101000011"; indicating
    the values for the RD+ bit string sync pattern elements. An element may be
    queried as " }\textrm{X}\mathrm{ " indicating "don't care." The PI array syntax is used to access
    the elements individually (ERRORDetector:BIT:SYNCPATtern:PLUS1?,
    ERRORDetector:BIT:SYNCPATtern:PLUS2?, etc.).
```

## ERRORDetector:BIT:SYNCPATtern:SYMBOLS

Sets or queries the four sync pattern symbols. You can set one or more symbols with the command, but they must be done in order. The query returns all four symbols. A symbol may be set or queried as " $X$ " to indicate "don't care."

Group Error Detector

Syntax ERRORDetector:BIT:SYNCPATtern:SYMBOLS <Qstring> ERRORDetector:BIT:SYNCPATtern:SYMBOLS?

Arguments <Qstring> is a string representing one or more symbols.

Examples ERRORDETECTOR:BIT:SYNCPATTERN:SYMBOLS? might return ERRORDETECTOR:BIT:SYNCPATTERN:SYMBOLS
"D12.0","D11.4","D12.0","D11.3"; indicating the four symbols comprising the sync pattern.

## ERRORDetector:BIT:SYNCPATtern:SYMBOL<x>

This command sets or queries the four symbolic sync pattern elements.

| Group | Error Detector |
| :---: | :--- |
| Syntax |  |
|  | ERRORDetector:BIT:SYNCPATtern:SYMBOL<x> <Qstring> |
|  |  |
|  |  |
| ERRORDetector:BIT:SYNCPATtern:SYMBOL<x>? |  |

indicating the values for the symbolic sync pattern elements. An element may be set or queried as X to indicate don't care. The PI array syntax is used (SYMBol1, SYmbol2, etc.).

## ERRORDetector:BIT:TEST (No Query Form)

This command initiates and terminates bit error testing for the arguments START and STOP. It zeroes bit error test results for the argument CLEAR. Also copies the test pattern from the signal to memory for the argument LEARN. It re-synchronizes the recovered clock for argument SYNC.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST <LEARN|START|STOP|CLEAR|SYNC>

Arguments LEARN copies the test pattern from the signal to the hardware template memory.
START initiates bit error counting of bit errors and duration.
STOP terminates bit error counting of bit errors and duration.
CLEAR zeroes the bit error count, duration, and bit error rate.
SYNC resynchronizes the recovered clock.

Examples ERRORDETECTOR:BIT:TEST LEARN copies the test pattern from the signal to the hardware template memory.

## ERRORDetector:BIT:TEST:COUNt? (Query Only)

This command queries the bit error count for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:COUNt?

Examples ERRORDETECTOR:BIT:TEST:COUNT? might return
:ERRORDetector:BIT:TEST:COUNT 10, indicating that
the bit error count for bit error testing is 10 .

## ERRORDetector:BIT:TEST:DURATION? (Query Only)

This command queries the elapsed duration (in units of bits) tested for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:DURATION?

Examples ERRORDETECTOR:BIT:TEST:DURATION? might return
ERRORDetector:BIT:TEST:DURATION 7612, indicating that the elapsed duration (in units of bits) for bit error testing is 7612.

## ERRORDetector:BIT:TEST:MAXALIGNS? (Query Only)

This command queries the maximum consecutive SATA align primitives or USB skip order sets for bit error testing. The maximum number of align primitives is a design parameter of the bus standard.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:MAXALIGNS?

Examples ERRORDETECTOR:BIT:TEST:MAXALIGNS? might return :ERRORDETECTOR:BIT:TEST:MAXALIGNS 3, indicating that the maximum consecutive SATA align primitives or USB skip order sets encountered for bit error testing is 3 .

## ERRORDetector:BIT:TEST:RATE? (Query Only)

This command queries the calculated bit error rate for bit error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:RATE?

Examples ERRORDETECTOR:BIT:TEST:RATE? might return :ERRORDETECTOR:BIT:TEST:RATE 1.389e-13, indicating that the calculated bit error rate for bit error testing is $1.389 \mathrm{e}-13$.

## ERRORDetector:BIT:TEST:RESults? (Query Only)

This command queries all of the results for bit error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:RESults?

Returns COUNT which is the bit error count (number of bad bits).

DURATION which is the elapsed duration (number of bits tested).
RATE which is the calculated bit error rate.
MAXALIGNS which is the maximum consecutive aligns encountered.
SECONDS which is the elapsed time in seconds.
TIME which is the elapsed duration time in Days, Hours, Minutes, and Seconds.

Examples ERRORDETECTOR:BIT:TEST:RESULTS? might return
:ERRORDETECTOR:BIT:TEST:RESULTS 2,100000000000,0.2
$\mathrm{e}-12,3,15,0,0,0,15$, indicating that the bit error count is 2 , elapsed duration is 100000000000 , calculated bit error rate is $0.2 \mathrm{e}-12$, maximum consecutive aligns encountered is 3 , elapsed time is 15 seconds, and the elapsed time is 0 days, 0 hours, 0 minutes, and 15 seconds for bit error testing.

## ERRORDetector:BIT:TEST:SECOnds? (Query Only)

This command queries the elapsed time in seconds for bit error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:SECOnds?

Examples ERRORDETECTOR:BIT:TEST:SECONDS? might return
:ERRORDETECTOR:BIT:TEST:SECONDS 30, indicating that the elapsed time is 30 seconds.

## ERRORDetector:BIT:TEST:STATUS? (Query Only)

This command queries all of the bit error test status bits.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS?

Returns COUNTING or NOT_COUNTING for START status for bit error testing.
LOCKED or NOT_LOCKED for LOCK status for bit error testing.
SYNC or NOT_SYNC for SYNC status for bit error testing.
SIGNAL or NO_SIGNAL for SIGNAL status for bit error testing.
MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS? might
return :ERRORDETECTOR:BIT:TEST:STATUS
STOPPED;LOCKED;NOT_SYNC;NO_SIGNAL;MAX_AP_OK, indicating that the bits error status are STOPPED, LOCKED, NOT_SYNC, NO_SIGNAL, and MAX_AP_OK.

## ERRORDetector:BIT:TEST:STATUS:LOCK? (Query Only)

This command queries the LOCK status for bit error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS:LOCK?

Returns LOCKED or NOT_LOCKED for LOCK status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS:LOCK? might return :ERRORDETECTOR:BIT:TEST:STATUS:LOCK LOCKED, indicating that the recovered clock reference signal is LOCKED.

## ERRORDetector:BIT:TEST:STATUS:MAX_AP? (Query Only)

This command queries the MAX_AP status for bit error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS:MAX_AP?

Returns MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS:MAX_AP? might return : ERRORDETECTOR:BIT:TEST:STATUS:MAX_AP MAX_AP_OK, indicating that the status of MAX_AP is ok.

## ERRORDetector:BIT:TEST:STATUS:SIGNAL? (Query Only)

This command queries the SIGNAL status for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS:SIGNAL?

Returns SIGNAL or NO_SIGNAL for SIGNAL status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS:SIGNAL? might return :ERRORDETECTOR:BIT:TEST:STATUS:SIGNAL SIGNAL, indicating that the signal is connected for bit error testing.

## ERRORDetector:BIT:TEST:STATUS:START? (Query Only)

This command queries the START status for bit error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS:START?

Returns COUNTING or NOT_COUNTING for START status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS:START? might return :ERRORDETECTOR:BIT:TEST:STATUS:START COUNTING, indicating that the bit error comparisons are being made.

## ERRORDetector:BIT:TEST:STATUS:SYNC? (Query Only)

This command queries the SYNC status for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:STATUS:SYNC?

Returns SYNC or NOT_SYNC for SYNC status for bit error testing.

Examples ERRORDETECTOR:BIT:TEST:STATUS:SYNC? might return :ERRORDETECTOR:BIT:TEST:STATUS:SYNC NOT_SYNC, indicating the status of the SYNC for bit error testing.

## ERRORDetector:BIT:TEST:TIME? (Query Only)

This command queries the elapsed time (in days, hours, minutes, and seconds) for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:TIME?

Examples ERRORDETECTOR:BIT:TEST:TIME? might return :ERRORDETECTOR:BIT:TEST:TIME $0,0,3,14$, indicating that the elapsed time is 0 days, 0 hours, 3 minutes, and 14 seconds for bit error testing.

## ERRORDetector:BIT:TEST:TIME:DAYS? (Query Only)

This command queries the elapsed time days component for bit error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:TIME:DAYS?

Examples ERRORDETECTOR:BIT:TEST:TIME:DAYS? might return
:ERRORDETECTOR:BIT:TEST:TIME:DAYS 0, indicating that the elapsed time days component is 0 for bit error testing.

## ERRORDetector:BIT:TEST:TIME:HOURS? (Query Only)

This command queries the elapsed time hours component for bit error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:TIME:HOURS?

Examples ERRORDETECTOR:BIT:TEST:TIME:HOURS? might return :ERRORDETECTOR:BIT:TEST:TIME:HOURS 0, indicating that the elapsed time hours component is 0 for bit error testing.

## ERRORDetector:BIT:TEST:TIME:MINUTES? (Query Only)

This command queries the elapsed time minutes component for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:TIME:MINUTES?

Examples ERRORDETECTOR:BIT:TEST:TIME:MINUTES? might return :ERRORDETECTOR:BIT:TEST:TIME:MINUTES 0, indicating that the elapsed time minutes component is 0 for bit error testing.

## ERRORDetector:BIT:TEST:TIME:SECOnds? (Query Only)

This command queries the elapsed time seconds component for bit error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BIT:TEST:TIME:SECOnds?

Examples ERRORDETECTOR:BIT:TEST:TIME:SECONDS? might return :ERRORDETECTOR:BIT:TEST:TIME:SECONDS 20, indicating that the elapsed time seconds component for bit error testing is 20 .

## ERRORDetector:BITRate

This command sets or queries error detector bitrate enumeration for error detection. There are two bitrate enumerations for each standard: 1) The standard bitrate, say RATE6000, meaning $6.0 \mathrm{~Gb} / \mathrm{s}$, for SATA Gen3; and 2) Custom. When Custom is selected, the ERRORDetector:BITRATE:VALUE must also be set to the specific desired bitrate, say $6.1 \mathrm{~Gb} / \mathrm{s}$.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BITRate \{RATECustom:CUSTOM
|RATE312000000:RATE312 |RATE1250000000:RATE1250
|RATE1500000000:RATE1500 |RATE2125000000:RATE2125
|RATE2500000000:RATE2500 |RATE3000000000:RATE3000
|RATE3125000000:RATE3125 |RATE4250000000:RATE4250
|RATE5000000000:RATE5000 |RATE6000000000:RATE6000
| RATE6250000000:RATE6250\}
ERRORDetector:BITRate?

Arguments RATE. . . :RATE . . . sets the error detector bit rate to the specified value.

RATEcustom:CUSTOM allows you to set a custom bit rate using the :ERRORDETECTOR:BITRATE:VALUE command.

Examples ERRORDETECTOR:BITRATE RATE6000 sets the error detector bit rate to $6.0 \mathrm{~Gb} / \mathrm{s}$.
ERRORDETECTOR:BITRATE? might return :ERRORDETECTOR:BITRATE RATE6000 indicating the bitrate is set to $6.0000 \mathrm{E}+9$.

## ERRORDetector:BITRate:VALue

This command sets or queries error detector custom bitrate value for error detection. To set the custom value, you must also set ERRORDetector:BITTRATE to CUSTOM. The bitrate range is nominally $1.25 \mathrm{~Gb} / \mathrm{s}$ to $6.25 \mathrm{~Gb} / \mathrm{s}$. Special coding also allows the custom bitrate to range from $200 \mathrm{Mb} / \mathrm{s}$ to $350 \mathrm{Mb} / \mathrm{s}$ for PRBS7 and PRBS9 only.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:BITRate:VALue <NR3> ERRORDetector:BITRate:VALue?

Arguments <NR3> is the custom bit rate value.

Examples ERRORDETECTOR:BITRATE:VALUE $6.5 \mathrm{E}+9$ set the custom bitrate value to 6.5 Gb/s.

ERRORDETECTOR:BITRATE:VALUE? might return
:ERRORDETECTOR:BITRATE:VALUE $6.0000 \mathrm{E}+9$ indicating the bitrate value is set to $6.0000 \mathrm{E}+9$.

## ERRORDetector:CHANnel

Sets or queries error detector channel selection.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHANne1 \{CH1 | CH2 | CH3 | CH4\} ERRORDetector:CHANne1?

Arguments CHx is the error detector channel selection.

Examples ERRORDETECTOR:CHANNEL CH1 sets the error detector channel to CH1.
ERRORDETECTOR:CHANNEL? might return :ERRORDETECTOR:CHANNEL CH1 indicating the error detector channel is set to CH 1 .

## ERRORDetector:CHARacter? (Query Only)

This command queries all character error settings, status, and results.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter?

Examples ERRORDETECTOR:CHARACTER? might return
:ERRORDETECTOR:CHARACTER:TEST:STATUS:START STOPPED;LOCK
NOT_LOCKED;SIGNAL NO_SIGNAL;MAX_AP MAX_AP_OK;
:ERRORDETECTOR:CHARACTER:TEST:TIME:DAYS 0;HOURS 0;MINUTES
3 ;SECONDS 0 , indicating that the test is stopped, not locked, there is no signal, MAX_AP is ok, and the test time is 3 minutes.

## ERRORDetector:CHARacter:TEST (No Query Form)

This command initiates and terminates character error testing for the argument START and STOP. Zeroes the character error results for the argument CLEAR. Re-synchronizes the recovered clock when the argument is SYNC.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST <START|STOP|CLEAR|SYNC>

Arguments START initiates character error testing.
STOP terminates character error testing.

CLEAR zeroes the character error count, duration, and error rate. SYNC re-synchronizes the recovered clock.

## Examples <br> ERRORDETECTOR:CHARACTER:TEST START initiates character error testing.

## ERRORDetector:CHARacter:TEST:COUNt? (Query Only)

This command queries the number of illegal characters in the signal for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:COUNt?

Examples ERRORDETECTOR:CHARACTER:TEST:COUNT? might return :ERRORDETECTOR:CHARACTER:TEST:COUNT 0 , indicating that the number of illegal characters in the signal for character error testing is 0 .

## ERRORDetector:CHARacter:TEST:DISPCOUNT? (Query Only)

This command queries the number of disparity errors in the signal for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:DISPCOUNT?

Examples ERRORDETECTOR:CHARACTER:TEST:DISPCOUNT? might return :ERRORDETECTOR:CHARACTER:TEST:DISPCOUNT 0, indicating that the number of disparity errors in the signal for character error testing is 0 .

## ERRORDetector:CHARacter:TEST:DISPRATE? (Query Only)

This command queries the calculated disparity error rate for character error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:DISPRATE?

Examples ERRORDETECTOR:CHARACTER:TEST:DISPRATE? might return :ERRORDETECTOR:CHARACTER:TEST:DISPRATE 0.0000 , indicating that the calculated disparity error rate for character error testing is 0.0000 .

## ERRORDetector:CHARacter:TEST:DURATION? (Query Only)

This command queries the elapsed duration in units of characters tested.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:DURATION?

Examples ERRORDETECTOR:CHARACTER:TEST:DURATION? might return
:ERRORDETECTOR:CHARACTER:TEST:DURATION 2876, indicating that the elapsed duration in units of characters tested is 2876.

## ERRORDetector:CHARacter:TEST:MAXALIGNS? (Query Only)

This command queries the maximum consecutive aligns encountered for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:MAXALIGNS?

Examples ERRORDETECTOR:CHARACTER:TEST:MAXALIGNS? might return :ERRORDETECTOR:CHARACTER:TEST:MAXALIGNS 2, indicating that the maximum consecutive aligns encountered for character error testing is 2 .

## ERRORDetector:CHARacter:TEST:RATE? (Query Only)

This command queries the calculated illegal character error rate for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:RATE?

Examples ERRORDETECTOR:CHARACTER:TEST:RATE? might return :ERRORDETECTOR:CHARACTER:TEST:RATE 0.00000 , indicating that the calculated illegal character error rate for character error testing is 0.0000 .

## ERRORDetector:CHARacter:TEST:RESults? (Query Only)

This command queries all of the character error test results.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:RESults?

Returns COUNT is the number of illegal characters in the signal. DURATION is the elapsed duration in units of characters tested. RATE is the calculated illegal character error rate.

MAXALIGNS is the maximum consecutive aligns encountered.
DISPCOUNT is the number of disparity errors in the signal.

DISPRATE is the calculated disparity error rate.
SECONDS is the elapsed duration time in seconds.
TIME is the elapsed duration time in DD:HH:MM:SS.

Examples
ERRORDETECTOR:CHARACTER:TEST:RESULTS? might
return : ERRORDETECTOR:CHARACTER:TEST:RESULTS
$0,2365,0.0000,2,2,0.0000,16,0,0,2,16 . .$, indicating that the number of illegal characters in the signal is 0 , elapsed duration in units of characters tested is 2365, calculated illegal character error rate is 0.0000 , maximum consecutive aligns encountered is 2 , number of disparity errors in the signal is 2 , calculated disparity error rate is 0.0000 , elapsed duration time in seconds is 16 , and the elapsed duration time is 0 days, 0 hours, 2 minutes, and 16 seconds.

## ERRORDetector:CHARacter:TEST:SECOnds? (Query Only)

This command queries the results of the elapsed time (in seconds) for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:SECOnds?

Examples ERRORDETECTOR:CHARACTER:TEST:SECONDS? might return
:ERRORDETECTOR:CHARACTER:TEST:SECONDS 30, indicating that elapsed time for character error testing is 30 seconds.

## ERRORDetector:CHARacter:TEST:STATUS? (Query Only)

This command queries all the character error test status.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:STATUS?

Returns COUNTING or NOT_COUNTING for START status for character error test. LOCKED or NOT_LOCKED for LOCK status for character error test. SIGNAL or NO_SIGNAL for SIGNAL status for character error test. MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for character error test.

Examples ERRORDETECTOR:CHARACTER:TEST:STATUS? might return :ERRORDETECTOR:CHARACTER:TEST:STATUS STOPPED;LOCKED;NO_SIGNAL;MAX_AP_OK, indicating that the status for character error test are STOPPED, LOCKED, NO_SIGNAL, and MAX_AP_OK.

## ERRORDetector:CHARacter:TEST:STATUS:LOCK? (Query Only)

This command queries the LOCK status for the character error test.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:STATUS:LOCK?

Returns LOCKED or NOT_LOCKED for LOCK status for the character error test.

Examples ERRORDETECTOR:CHARACTER:TEST:STATUS:LOCK? might return :ERRORDETECTOR:CHARACTER:TEST:STATUS:LOCK LOCKED, indicating that the recovered clock reference signal is LOCKED for error test.

## ERRORDetector:CHARacter:TEST:STATUS:MAX_AP? (Query Only)

This command queries the MAX_AP status for the character error test.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:STATUS:MAX_AP?

Returns MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for character error test.

Examples ERRORDETECTOR:CHARACTER:TEST:STATUS:MAX_AP? might return :ERRORDETECTOR:CHARACTER:TEST:STATUS:MAX_AP MAX_AP_OK, indicating that the MAX_AP status is ok for character error test.

## ERRORDetector:CHARacter:TEST:STATUS:SIGNAL? (Query Only)

This command queries the SIGNAL status for the character error test.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:STATUS:SIGNAL?

Returns SIGNAL or NO_SIGNAL for SIGNAL status for character error test.

Examples ERRORDETECTOR:CHARACTER:TEST:STATUS:SIGNAL? might return :ERRORDETECTOR:CHARACTER:TEST:STATUS:SIGNAL SIGNAL, indicating that the signal is connected for character error test.

## ERRORDetector:CHARacter:TEST:STATUS:START? (Query Only)

This command queries the START status for character error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:STATUS:START?

Returns COUNTING or NOT_COUNTING for START status for character error test.

Examples ERRORDETECTOR:CHARACTER:TEST:STATUS:START? might return :ERRORDETECTOR:CHARACTER:TEST:STATUS:START COUNTING, indicating that the character error comparisons are being made.

## ERRORDetector:CHARacter:TEST:TIME? (Query Only)

This command queries the elapsed time (in days, hours, minutes, and seconds) for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:TIME?

Examples ERRORDETECTOR:CHARACTER:TEST:TIME? might return
:ERRORDETECTOR:CHARACTER:TEST:TIME $0,0,2,14$, indicating that the elapsed time is 0 days, 0 hours, 2 hours, and 14 seconds for character error testing.

## ERRORDetector:CHARacter:TEST:TIME:DAYS? (Query Only)

This command queries the elapsed time days component for character error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:TIME:DAYS?

Examples ERRORDETECTOR:CHARACTER:TEST:TIME:DAYS? might return
:ERRORDETECTOR:CHARACTER:TEST:TIME:DAYS 0, indicating that the elapsed time days component for character error testing is 0 .

## ERRORDetector:CHARacter:TEST:TIME:HOURS? (Query Only)

This command queries the elapsed time hours component for character error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:TIME:HOURS?

Examples ERRORDETECTOR:CHARACTER:TEST:TIME:HOURS? might return :ERRORDETECTOR:CHARACTER:TEST:TIME:HOURS 0, indicating that the elapsed time hours component for character error testing is 0 .

## ERRORDetector:CHARacter:TEST:TIME:MINUTES? (Query Only)

This command queries the elapsed time minutes component for character error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:TIME:MINUTES?

Examples ERRORDETECTOR:CHARACTER:TEST:TIME:MINUTES? might return :ERRORDETECTOR:CHARACTER:TEST:TIME:MINUTES 0, indicating that the elapsed time minutes component for character error testing is 0 .

## ERRORDetector:CHARacter:TEST:TIME:SECOnds? (Query Only)

This command queries the elapsed time seconds component for character error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:CHARacter:TEST:TIME:SECOnds?

Examples ERRORDETECTOR:CHARACTER:TEST:TIME:SECONDS? might return :ERRORDETECTOR:CHARACTER:TEST:TIME:SECONDS 25, indicating that the elapsed time seconds component for character error testing is 25.

## ERRORDetector:DURATION:COUNt

This command sets or queries the test duration count as the number of bits, frames, symbols, or characters to be tested for error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:COUNt <NR1> ERRORDetector:DURATION:COUNt?

Arguments <NR1> indicates the number of bits, frame, symbols, or characters to be tested for the test duration count.

Supports 48bit values. The bit ranges from 0 to 00 x 7 FFFFFFFFFFF. A value of -1 , which is the default value, indicates count forever.

Examples ERRORDETECTOR:DURATION: COUNT 100000000000 sets the test duration count for error testing to 100000000000 .

ERRORDETECTOR:DURATION: COUNT? might return : ERRORDETECTOR:DURATION:COUNT 100000000000, indicates that the test duration count for error testing is set to 100000000000 .

## ERRORDetector:DURATION:SECOnds

This command sets or queries the test duration in seconds.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:SECOnds <NR1> ERRORDetector:DURATION:SECOnds?

Arguments <NR1> is the test duration in seconds.

Examples ERRORDETECTOR:DURATION: SECONDS 30 sets the test duration to 30 seconds.
ERRORDETECTOR:DURATION:SECONDS? might return
: ERRORDETECTOR:DURATION:SECONDS 30, indicating that the test duration is 30 seconds.

## ERRORDetector:DURATION:TIME

This command sets or queries the test duration time in days, hours, minutes, and seconds.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:TIME <NR1> ERRORDetector:DURATION:TIME?

Arguments <NR1> is the test duration time in days, hours, minutes, and seconds. It is in the format <DD, HH, MM, SS>

Examples ERRORDETECTOR:DURATION:TIME $02,12,59,30$ sets the test duration time to 2 days, 12 hours, 59 minutes, and 30 seconds.

ERRORDETECTOR:DURATION:TIME? might return :ERRORDETECTOR:DURATION:TIME $02,12,59,30$, indicating that the test duration time is two days, 12 hours, 59 minutes, and 30 seconds.

## ERRORDetector:DURATION:TIME:DAYS

This command sets or queries the test duration time days component.
NOTE. Not available on some models.

Group Error Detector
$\begin{array}{ll}\text { Syntax } & \text { ERRORDetector:DURATION:TIME:DAYS <NR1> } \\ & \text { ERRORDetector:DURATION:TIME:DAYS? }\end{array}$ ERRORDetector:DURATION:TIME:DAYS?

Arguments <NR1> is a number for the test duration time days component.

Examples ERRORDETECTOR:DURATION:TIME:DAYS 1 sets the test duration time days component for error testing to 1.

ERRORDETECTOR:DURATION:TIME:DAYS? might return :ERRORDETECTOR:DURATION:TIME:DAYS 02, indicating that the test duration time days component is set to 2 .

## ERRORDetector:DURATION:TIME:HOURS

This command sets or queries the test duration time hours component.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:TIME:HOURS <NR1>
ERRORDetector:DURATION:TIME:HOURS?

Arguments <NR1> is a number for the test duration time hours component.

Examples ERRORDETECTOR:DURATION:TIME:HOURS 5 sets the test duration time for error testing to five hours.

ERRORDETECTOR:DURATION:TIME:HOURS? might return
:ERRORDETECTOR:DURATION:TIME:HOURS 05, indicating that the test duration time hours component is set to 5 .

## ERRORDetector:DURATION:TIME:MINUTES

This command sets or queries the test duration time minutes component for error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:TIME:MINUTES <NR1> ERRORDetector:DURATION:TIME:MINUTES?

Arguments <NR1> is a number for the test duration time minutes component.

Examples ERRORDETECTOR:DURATION:TIME:MINUTES 5 sets the test duration time minutes component for error testing to 5 .

ERRORDETECTOR:DURATION:TIME:MINUTES? might return :ERRORDETECTOR:DURATION:TIME:MINUTES 05, indicating that the test duration time minutes component is set to 5 .

## ERRORDetector:DURATION:TIME:SECOnds

This command sets or queries the test duration time seconds component for error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:DURATION:TIME:SECOnds <NR1> ERRORDetector:DURATION:TIME:SECOnds?

Arguments <NR1> is a number for the test duration time seconds component.

Examples ERRORDETECTOR:DURATION:TIME:SECONDS 25 sets the test duration time component for error testing to 25 .

ERRORDETECTOR:DURATION:TIME:SECONDS? might return :ERRORDETECTOR:DURATION:TIME:SECONDS 25, indicating that the test duration time seconds component is set to 25 .

## ERRORDetector:ERRORLIMIT

This command sets or queries the error limit value to use when STOPWHEN is ERROR.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:ERRORLIMIT <NR1>
ERRORDetector:ERRORLIMIT?

Arguments <NR1> is the maximum number of errors.

Examples ERRORDETECTOR:ERRORLIMIT 2 sets the error limit value to 2.
ERRORDETECTOR:ERRORLIMIT? might return :ERRORDETECTOR:ERRORLIMIT 1 , indicating that the error limit value is 1 .

## ERRORDetector:FILE:RECAll (No Query Form)

This command initiates a file recall of error detector parameters from a text file. Argument is the file name.

The setup files are supplied with the instrument. You can also create your own setup files. The setup for the USB CP0_SKP signal test pattern is supplied in "C:\Users\Public\Tektronix\TekScope\ErrorDetector\}
UsbCP0_SKPsymbolErrorSetup.txt".

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FILE:RECA11 <fileName>

Arguments <fileName> is the file name and file location. The default location is "C:\Users $\backslash$ Public $\backslash$ Tektronix $\backslash$ TekScope $\backslash$ ErrorDetector" and the setup file is in TXT format.

Examples ERRORDETECTOR:FILE:RECALL
"C:\Users\Public\Tektronix\TekScope\ErrorDetector\ SataFrameComplianceFrameErrorSetup.txt" recalls the error detector parameters from the setup file "SataFrameComplianceFrameErrorSetup.txt".

## ERRORDetector:FILE:SAVe (No Query Form)

This command initiates a file save of error detector parameters to a text file. Argument is the file name.

The setup files are supplied with the instrument. You can also save your own setup files. For example, the setup for the USB CP0_SKP signal test pattern is supplied in "C:\Users\Public\Tektronix $\backslash$ TekScope $\backslash$ ErrorDetector\} UsbCP0_SKPsymbolErrorSetup.txt".

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FILE:SAVe <fileName>

Arguments <filename> is the file name and file location. The default location is "C:\Users\Public\Tektronix $\backslash$ TekScope\ErrorDetector" and the setup file is in TXT format.

Examples ERRORDETECTOR:FILE:SAVE
"C: \Users $\backslash$ Public $\backslash$ Tektronix $\backslash$ TekScope $\backslash$ ErrorDetector MySataFrameComplianceFrameErrorSetup.txt"
saves the error detector parameters to the setup file
"MySataFrameComplianceFrameErrorSetup.txt".

## ERRORDetector:FONTSIze

Sets or queries error detector font size selection. Currently, the font size only applied the error detector UI control window.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector: FONTSIze \{DEFAULT | LARGE | XLARGE ERRORDetector: FONTSIze?

Arguments DEFAULT sets the font size to the default size.
LARGE sets the font size to large.
XLARGE sets the font size to extra large.

## Examples ERRORDETECTOR:FONTSIZE XLARGE sets the error detector font size to extra large.

ERRORDETECTOR:FONTSIZE? might return :ERRORDETECTOR:FONTSIZE
LARGE indicating the error detector is using the large font size.

## ERRORDetector:FRAME? (Query Only)

This command queries all frame error settings, status, and results.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector: FRAME?

Examples ERRORDETECTOR:FRAME? might return :ERRORDETECTOR:FRAME:SOF
"00111110101011011110110011101100"; EOF
"00111110101011011010101110101011"; INITIALCRCVALUE 1379029042;TEST:STATUS:START STOPPED;LOCK NOT_LOCKED;SIGNAL NO_SIGNAL; MAX_AP MAX_AP_OK, indicating the start of frame is 00111110101011011110110011101100 , the end of frame is 00111110101011011010101110101011 , the initial CRC value is 1379029042 , the test is stopped, not locked, there is no signal, MAX_AP is ok.

## ERRORDetector:FRAme:EOF

This command sets or queries the End of Frame for frame error testing.

NOTE. Not available on some models.

Group Error Detector

```
Syntax ERRORDetector:FRAme:EOF <Qstring>
    ERRORDetector:FRAme:EOF?
```

Arguments <Qstring> is a quoted string representing a 32-bit pattern.

Examples ERRORDETECTOR:FRAME:EOF "00111110101011011010101110101011" sets the end of frame to "00111110101011011010101110101011".

ERRORDETECTOR:FRAME:EOF? might return ERRORDETECTOR:FRAME:EOF "00111110101011011010101110101011", indicating that the end of frame is "00111110101011011010101110101011".

## ERRORDetector:FRAme:INITIALCRCVALue

This command sets or queries the initial CRC value for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:INITIALCRCVALue <NR1> ERRORDetector:FRAme:INITIALCRCVALue?

Arguments <NR1> is a value defined by the selected standard.

| Examples | ERRORDETECTOR: FRAME:INITIALCRCVALUE 1379029042 sets the CRC value to 1379029042 . |
| :---: | :---: |
|  | ERRORDETECTOR:FRAME:INITIALCRCVALUE? might return |
|  | :ERRORDETECTOR:FRAME:INITIALCRCVALUE 1379029042, indicating that the initial CRC value is set to 1379029042 , the SATA default. |

## ERRORDetector:FRAme:SOF

This command sets or queries the Start of Frame for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:SOF <Qstring> ERRORDetector:FRAme:SOF?

Arguments <Qstring> is a quoted string representing a 32-bit pattern.

Examples ERRORDETECTOR:FRAME:SOF "00111110101011011110110011101100" sets the start of frame.

ERRORDETECTOR:FRAME:SOF? might return :ERRORDETECTOR:FRAME:SOF " 00111110101011011110110011101100 ", indicating that the start of frame is set to "00111110101011011010101110101011".

## ERRORDetector:FRAme:TEST

This command and query initiates and terminates frame error testing for the arguments START and STOP. Zeroes the frame error results for the argument CLEAR. Re-synchronizes the recovered clock for the argument SYNC.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST <START|STOP|CLEAR|SYNC> ERRORDetector:FRAme:TEST ?

Arguments START initiates the frame error test counting of errors and duration.
STOP terminates the frame error test counting of frame errors and duration.
CLEAR zeroes the frame error test count, duration, and rate.
SYNC re-synchronizes the recovered clock.

Examples ERRORDETECTOR:FRAME:TEST START initiates the frame error test counting.
ERRORDETECTOR:FRAME:TEST? might return :ERRORDETECTOR:FRAME:TEST STOPPED; LOCKED;SIGNAL;MAX_AP_OK;0;0;0;14, indicating that the signal is stopped and locked for frame error testing. The status of MAX_AP is ok and the elapsed duration is 14 seconds.

## ERRORDetector:FRAme:TEST:BADCHARS? (Query Only)

This command queries the illegal character count for frame error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:BADCHARS?

Examples ERRORDETECTOR:FRAME:TEST:BADCHARS? might return :ERRORDETECTOR:FRAME:TEST:BADCHARS 0, indicating that the illegal character count for the frame error test is 0 .

## ERRORDetector:FRAme:TEST:COUNt? (Query Only)

This command queries the test error count for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:COUNt?

Examples ERRORDETECTOR:FRAME:TEST:COUNT? might return :ERRORDETECTOR:FRAME:TEST:COUNT 0, indicating that the test error count for the frame error testing is 0 .

## ERRORDetector:FRAme:TEST:DISParity? (Query Only)

This command queries the disparity error count for frame error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:DISParity?

Examples ERRORDETECTOR:FRAME:TEST:DISPARITY? might return :ERRORDETECTOR:FRAME:TEST:DISPARITY 0 , indicating that the disparity error count for the frame error test is 0 .

## ERRORDetector:FRAme:TEST:DURATION? (Query Only)

This command queries the elapsed duration in number of frames.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:DURATION?

```
Examples ERRORDETECTOR:FRAME:TEST:DURATION? might return
:ERRORDETECTOR:FRAME:TEST:DURATION 4253659, indicating
that the elapsed duration is 4253659 frames.
```

## ERRORDetector:FRAme:TEST:MAXALIGNS? (Query Only)

This command queries the result of the maximum consecutive aligns encountered for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:MAXALIGNS?

Examples ERRORDETECTOR:FRAME:TEST:MAXALIGNS? might return :ERRORDETECTOR:FRAME:TEST:MAXALIGNS 4, indicating that the maximum consecutive aligns encountered for frame error test is 4.

## ERRORDetector:FRAme:TEST:RATE? (Query Only)

This command queries the calculated frame error rate.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:RATE?

Examples ERRORDETECTOR:FRAME:TEST:RATE? might return :ERRORDETECTOR:FRAME:TEST:RATE 0.0000 , indicating that the calculated frame error rate is 0.0000 .

## ERRORDetector:FRAme:TEST:RESults? (Query Only)

This command queries all the results for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:RESults?

Returns COUNT is the frame error count (number of bad frames). DURATION is the elapsed duration in units of frames tested.

RATE is the calculated frame error rate.
MAXALIGNS is the maximum consecutive aligns encountered.
BADCHARS is the illegal character count.
DISPARITY is the disparity error count.
SECONDS is the elapsed duration time in seconds.
TIME is the elapsed duration time in DD:HH:MM:SS.

Examples ERRORDETECTOR:FRAME:TEST:RESULTS? might
return :ERRORDETECTOR:FRAME:TEST:RESULTS
$0,4253659,0.0000,4,0,0,171,0,0,2,51$, indicating that the error count is four, error duration is 4253659 , error rate is 0.0000 , error maximum consecutive aligns is 4 , illegal character count is 0 , disparity error count is 0 , elapsed duration time is 171 seconds, and elapsed duration time is 0 days, 0 hours, 2 minutes, and 51 seconds.

## ERRORDetector:FRAme:TEST:SECOnds? (Query Only)

This command queries the result of elapsed duration in seconds for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:SECOnds?

Examples ERRORDETECTOR:FRAME:TEST:SECONDS? might return
:ERRORDETECTOR:FRAME:TEST:SECONDS 20, indicating that the elapsed duration is 20 seconds for frame error testing.

## ERRORDetector:FRAme:TEST:STATUS? (Query Only)

This command queries all of the status for frame error status.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:STATUS?

Returns COUNTING or NOT_COUNTING for START status for frame error test.
LOCKED or NOT_LOCKED for LOCK status for frame error test.
SIGNAL or NO_SIGNAL for SIGNAL status for frame error test.
MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for frame error test.

Examples ERRORDETECTOR:FRAME:TEST:STATUS? might return :ERRORDETECTOR:FRAME:TEST:STATUS STOPPED;LOCKED;NO_SIGNAL;MAX_AP_OK, indicating that the frame error status is STOPPED, LOCKED, NO_SIGNAL, and MAX_AP_OK.

## ERRORDetector:FRAme:TEST:STATUS:LOCK? (Query Only)

This command queries the LOCK status for the frame error test.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:STATUS:LOCK?

Returns
LOCKED or NOT_LOCKED for LOCK status for frame error test.

Examples ERRORDETECTOR:FRAME:TEST:STATUS:LOCK? might return : ERRORDETECTOR:FRAME:TEST:STATUS:LOCK LOCKED, indicating that the frame is LOCKED for the error test.

## ERRORDetector:FRAme:TEST:STATUS:MAX_AP? (Query Only)

This command queries the MAX AP status for the frame error test.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:STATUS:MAX_AP?

Returns MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for frame error test.

Examples ERRORDETECTOR:FRAME:TEST:STATUS:MAX_AP? might return :ERRORDETECTOR:FRAME:TEST:STATUS:MAX_AP MAX_AP_OK, indicating that the MAX_AP status is ok for the frame error test.

## ERRORDetector:FRAme:TEST:STATUS:SIGNAL? (Query Only)

This command queries the SIGNAL status for the frame error test.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:STATUS:SIGNAL?

Returns SIGNAL or NO_SIGNAL for SIGNAL status for frame error test.

Examples ERRORDETECTOR:FRAME:TEST:STATUS:SIGNAL? might return :ERRORDETECTOR:FRAME:TEST:STATUS:SIGNAL SIGNAL, indicating that signal is connected for the frame error test. NO_SIGNAL would indicate the lack of the signal.

## ERRORDetector:FRAme:TEST:STATUS:START? (Query Only)

This command returns the START status for frame error tests.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:STATUS:START?

Returns COUNTING or NOT_COUNTING for START status for frame error test.

Examples ERRORDETECTOR:FRAME:TEST:STATUS:START? might return : ERRORDETECTOR:FRAME:TEST:STATUS:START COUNTING, indicating that the START status is COUNTING.

## ERRORDetector:FRAme:TEST:TIME? (Query Only)

This command queries the elapsed time (in days, hours, minutes, and seconds) for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:TIME?

Examples ERRORDETECTOR:FRAME:TEST:TIME? might return
:ERRORDETECTOR:FRAME:TEST:TIME $0,0,0,14$, indicating that the elapsed time is 0 days, 0 hours, 0 minutes, and 14 seconds for frame error testing.

## ERRORDetector:FRAme:TEST:TIME:DAYS? (Query Only)

This command queries the elapsed time days component for frame error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:TIME:DAYS?

$$
\begin{array}{ll}
\text { Examples } & \text { ERRORDETECTOR:FRAME:TEST:TIME:DAYS? might return } \\
& \text { :ERRORDETECTOR:FRAME:TEST:TIME:DAYS 0, indicating that the } \\
& \text { elapsed time days component is } 0 \text { for frame error testing. }
\end{array}
$$

## ERRORDetector:FRAme:TEST:TIME:HOURS? (Query Only)

This command queries the elapsed time hours component for frame error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:TIME:HOURS?

Examples ERRORDETECTOR:FRAME:TEST:TIME:HOURS? might return
:ERRORDETECTOR:FRAME:TEST:TIME:HOURS 0, indicating that the elapsed time hours component is 0 for frame error testing.

## ERRORDetector:FRAme:TEST:TIME:MINUTES? (Query Only)

This command queries the elapsed time minutes component for frame error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:TIME:MINUTES?

Examples ERRORDETECTOR:FRAME:TEST:TIME:MINUTES? might return
:ERRORDETECTOR:FRAME:TEST:TIME:MINUTES 0 , indicating that the elapsed time minutes component is 0 for frame error testing.

## ERRORDetector:FRAme:TEST:TIME:SECOnds? (Query Only)

This command queries the elapsed time seconds component for frame error testing.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:FRAme:TEST:TIME:SECOnds?

Examples ERRORDETECTOR:FRAME:TEST:TIME:SECONDS? might return :ERRORDETECTOR:FRAME:TEST:TIME:SECONDS 25, indicating that the elapsed time seconds component is 25 for frame error testing.

## ERRORDetector:MAXALIGNS

This command sets or queries the maximum consecutive align primitives before a MAX_AP_FAIL error is reported.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:MAXALIGNS <NR1> ERRORDetector:MAXALIGNS?

Arguments <NR1> is a integer. The limit values are 0 to 63 and the default is 8 .

Examples ERRORDETECTOR:MAXALIGNS 6 sets the maximum consecutive align primitives to 6 before an error occurs. Exceeding the maximum limit sets the MAX_AP_FAIL status error.

ERRORDETECTOR:MAXALIGNS? might return :ERRORDETECTOR:MAXALIGNS 11 , indicating that the maximum consecutive align primitives is 11 before an error occurs. Exceeding the maximum limit sets the MAX_AP_FAIL status error.

## ERRORDetector:PATTERNNAME

This command sets or queries the pattern name stored in the setup file. Setting this name has no functional effect on the instrument, but is a handy reminder to humans as to which setup is in effect.

## NOTE. Not available on some models.

Group Error Detector

```
Syntax ERRORDetector:PATTERNNAME <Qstring>
ERRORDetector: PATTERNNAME?
```

Arguments <Qstring> is a quoted string representing a pattern name.

Examples ERRORDETECTOR:PATTERNNAME "FrameComp" sets the pattern name to FrameComp.

ERRORDETECTOR:PATTERNNAME? might return
:ERRORDETECTOR:PATTERNNAME "FrameComp", indicating that the pattern name is FrameComp. When a setup file is saved or recalled, the pattern name is displayed on the user interface or program interface.

## ERRORDetector:PREset

This command sets or queries error detector font preset selection. A number of preset setups are selected by this parameter to cover the more common cases. The preset names attempt to indicate the standard, signal pattern, and test type employed. The bit rate appropriate for the standard is used. The text files containing the preset setups are located in the C:\Users\Public\Tektronix\TekScope\ErrorDetector directory on WIN7.

You may select CUSTOM as a preset value, and save or recall your own custom setups. You may want to recall one of the standard preset setups, modify some of the parameters, and then save it as a custom setup for recall at a later time. This same behavior is supported on the error detector User Interface. The SATA3_FRAME preset expects the SATA3 Compliance Pattern. USB3_SYMBOL preset expects the USB3 standard CP0_SKP signal. You can set a PATTERNNAME for each setup.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector: PREset \{SATA1_CJTPAT_BIT | SATA2_CJTPAT_BIT | SATA3_CJTPAT_BIT | SATA3_FRAME | SATA3_CHAR | SATA3_HFTP_BIT | SATA3_LBP_BIT | SATA3_LFTP_BIT | SATA3_MFTP_BIT | USB3_SYMBOL | USB3_CHAR | PCIE1_COMP_BIT | PCIE2_COMP_BIT | ANY_CJTPAT_BIT | ANY_CJTPAT_CHAR | CUSTOM\}

Arguments Arguments are the file names of preset setups.

Examples ERRORDETECTOR:PRESET USB3_CHAR uses the USB3_CHAR preset.
ERRORDETECTOR:PRESET? might return :ERRORDETECTOR:PRESET
SATA3_CJTPAT_BIT indicating the error detector is using the SATA3_CJTPAT_BIT presets.

## ERRORDetector:PREset:APPLY (No Query Form)

This command causes selected preset setup to be applied. Until this command is received by the instrument, the selected preset has not been applied. This mimics the user interface operation, which allows window shopping various preset setups, without actually applying them to the instrument setup.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:PREset:APPLY

## Examples ERRORDETECTOR:PRESET:APPLY applies the selected preset.

## ERRORDetector:SAVEIMAGE

Sets or queries error detector Save Image control. When set to ON, a screen shot will be made when the error detector detects an error (because detecting an error triggers the scope).

The images are saved in the C:\Users $<$ yourName> $\backslash$ Tektronix $\backslash$ TekScope\SaveOnTrigger directory. A default limit of 10 screen shots prevents overflowing your disk drive should the error detector sense massive errors, such as when you disconnect the signal. If you also set the SendEmail parameter to ON, the saved image (screen shot) will be emailed to the recipient (set elsewhere in the trigger PI). SaveImage is an alternate way of setting the Save on Trigger actions defined elsewhere in the PI.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SAVEIMAGE \{OFF | ON\}

Arguments OFF turns off the save image feature.
ON turns on the save image feature.

Examples ERRORDETECTOR:SAVEIMAGE ON turns the save image feature on.
ERRORDETECTOR:SAVEIMAGE? might return
:ERRORDETECTOR:SAVEIMAGE OFF indicating that the error detector save image feature is off.

## ERRORDetector:SAVEWFM

This command sets or queries error detector Save Waveform (WFM) control. When set to ON, a waveform object will be made when the error detector detects an error (because detecting an error triggers the instrument).

The waveforms are saved in the
C:\Users $<$ yourName $>\backslash$ Tektronix $\backslash$ TekScope $\backslash$ SaveOnTrigger directory. A default limit of 10 screen shots prevents overflowing your disk drive should the error detector sense massive errors, such as when you disconnect the signal.

If you also set the SendEmail parameter to ON, the saved waveform (wfm object) is emailed to the recipient (set elsewhere in the trigger PI) as an attachedment. SaveImage is an alternate way of setting the Save on Trigger actions defined elsewhere in the PI.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SAVEWFM \{OFF | ON\}
ERRORDetector:SAVEWFM?

Arguments OFF turns off the error detector save waveform feature.
ON turns on the error detector save waveform feature.

Examples ERRORDETECTOR:SAVEWFM ON turns on the error detector save waveform feature.
ERRORDETECTOR:SAVEWFM? might return :ERRORDETECTOR:SAVEWFM
OFF indicating that the error detector save waveform feature is off.

## ERRORDetector:SCRAMBLED

This command sets or queries the status of the error detection data scrambling option.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SCRAMBLED \{ON|OFF\}
ERRORDetector:SCRAMBLED?

Arguments $\quad \mathrm{ON}$ enables the error detection data scrambling option. This is the default option. OFF disables the error detection data scrambling option.

Examples ERRORDETECTOR:SCRAMBLED ON specifies that the error detection data scrambling option is enabled.

ERRORDETECTOR:SCRAMBLED? might return :TRIGGER:A:SERIAL:ERRORDETECTOR:SCRAMBLED ON, indicating that the error detection data scrambling option is enabled.

## ERRORDetector:SENDEMAIL

This command sets or queries error detector Send Email control. When set to ON, a email will be sent to the recipient, defined elsewhere in the PI, when the error detector detects an error (because detecting an error triggers the instrument). The default number of emails sent is 1 , so that you do not overflow your inbox.

If you also set the SaveImage or SaveWfm parameters to ON, the email will contain these items. Send Email is an alternate way of setting the E-mail on Trigger actions defined elsewhere in the PI.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SENDEMAIL \{OFF | ON\}
ERRORDetector:SENDEMAIL?

| Arguments | OFF disables the send email feature. |
| :--- | :--- |
| ON enables the send email feature. |  |
| Examples | ERRORDETECTOR: SENDEMAIL ON enables the error detector send mail feature |
|  | ERRORDETECTOR: SENDEMAIL? might return |
|  | :ERRORDETECTOR:SENDEMAIL OFF indicating that the error detector send |
|  | email feature is off. |

## ERRORDetector:SIGnaltype

This command sets or queries error detector Signal Type control. Setting the signal type establishes the bit rate appropriate for the standard, as well as establishing the testing algorithm. Custom bit rates may be used as well. See the ERRORDetector:BITRATE and ERRORDetector:BITRATE:VALue commands.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SIGnaltype \{SATAGEN1 | SATAGEN2 | SATAGEN3 | USB3 | PCIEGEN1 | PCIEGEN2 | ANY8B10B | PRBS7 | PRBS9\} ERRORDetector:SIGnaltype?

Arguments Sets the error detector signal type to the specified signal.

Examples ERRORDETECTOR:SIGNALTYPE USB3 sets the signal type to USB3.
ERRORDETECTOR:SIGNALTYPE? might return
:ERRORDETECTOR:SIGNALTYPE SATAGEN3 indicating that the error detector signal type is set to SATAGEN3.

## ERRORDetector:SKIPSETPRIMitive:MINus<x>? (Query Only)

Queries the RD- skip order set array of bit string values. The PI array elements may be accessed individual via MINUS1, MINUS2, MINUS3.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SKIPSETPRIMitive:MINus<x>?

Examples ERRORDetector:SKIPSETPRIMitive:MINus? might return :ERRORDETECTOR:SKIPSETPRIMITIVE:MINUS "0011111010".

## ERRORDetector:SKIPSETPRIMitive:PLUS<x>? (Query Only)

Queries the skip order RD+ array of bit string values. The PI array elements may be accessed individual via PLUS1, PLUS2, PLUS3, and PLUS4.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SKIPSETPRIMitive:PLUS<x>?

Examples ERRORDetector:SKIPSETPRIMitive:MINus? might return :ERRORDETECTOR:SKIPSETPRIMITIVE:PLUS, " 1100000101 " indicating the first RD+ skip order bit string element is "1100000101".

## ERRORDetector:SKIPSETPRIMitive:STATE

This command sets or queries the state (ON/OFF) of the skip order set primitive.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SKIPSETPRIMitive:STATE \{ON|OFF|<NR1>\} ERRORDetector:SKIPSETPRIMitive:STATE?

Arguments ON enables the skip order set primitive.
OFF disables the skip order set primitive.
<NR1> = 0 disables the skip order set primitive; any other value enables the skip order set primitive.

Examples ERRORDETECTOR:SKIPSETPRIMITIVE:STATE ON, enables the skip order set primitive.

ERRORDETECTOR:SKIPSETPRIMITIVE:STATE? might return : ERRORDETECTOR:SKIPSETPRIMITIVE: STATE ON, indicating that the skip order set option is enabled.

## ERRORDetector:SKIPSETPRIMitive:SYMBOLS

Sets or queries the skip order set values in symbolic form. You can set one or more symbols with the command, but they must be done in order. The query returns all four symbols. A symbol may be set or queried as " X " to indicate "don't care."

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SKIPSETPRIMItive:SYMBOLS <Qstring> \{<Qstring>\} ERRORDetector:SKIPSETPRIMitive:SYMBOLS?

Arguments <Qstring> is a quoted strings representing the symbol, such as "K28.5".

Examples ERRORDETECTOR:SKIPSETPRIMITIVE:SYMBOLS "K28.5". sets the first skip order set symbol to K28.5.

ERRORDETECTOR:SKIPSETPRIMITIVE:SYMBOLS "K28.5","D10.2". sets the first and second skip order set symbols to K28.5 and D10.2, respectively.

```
ERRORDETECTOR:SKIPSETPRIMITIVE:SYMBOLS? might
return :ERRORDETECTOR:SKIPSETPRIMITIVE:SYMBOLS ,
"K28.5","K28.5","K28.5","D10.2". indicating the four symbols
comprising the skip order set.
```

## ERRORDetector:SKIPSETPRIMitive:SYMBOL<x>

Sets or queries the skip order set symbolic characters. The PI array syntax may be used to access the individual elements (SYMBOL1, SYMBOL2, etc.). For example, a skip set symbolic value may be "K28.5," or "X" to indicate "don't care."

NOTE. Not available on some models.

Group Error Detector

```
Syntax ERRORDetector:SKIPSETPRIMitive:SYMBOL<x> <Qstring>
\{<Qstring>\}
ERRORDetector:SKIPSETPRIMitive:SYMBOL<x>?
```

Arguments <Qstring> is a quoted string representing the skip set primitive symbol, for example "K28.5".

Examples ERRORDetector:SKIPSETPRIMitive:SYMBOL "K28.5" sets the first skip order set symbol to K28.5.

ERRORDetector:SKIPSETPRIMitive:SYMBOL1 "K28.5" also sets the first skip order set symbol to K28.5.

ERRORDetector:SKIPSETPRIMitive:SYMBOL2 "D10.2" sets the second skip order set symbol to D10.2.

ERRORDetector:SKIPSETPRIMitive:SYMBOL? might return :ERRORDETECTOR:SKIPSETPRIMITIVE:SYMBOL "K28.5". indicating the first symbol comprising the skip order set.

## ERRORDetector:SSC

This command sets or queries the status of the spread spectrum clock tracking option.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SSC \{ON|OFF\}
ERRORDetector:SSC?

Arguments
ON enables spread spectrum clock tracking. For error detector, the spread spectrum clock tracking should always be turned on.

OFF disables spread spectrum clock tracking. For serial trigger, the spread spectrum clock tracking is turned off.

Examples ERRORDETECTOR:SSC ON enables spread spectrum clock tracking option. ERRORDETECTOR:SSC? might return :ERRORDETECTOR:SSC ON, indicating that spread spectrum clock tracking is enabled.

## ERRORDetector:STANdard

This command sets or queries the standard selection for error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:STANdard <LIST> ERRORDetector:STANdard?

Arguments <LIST> is the supported standard. The supported standards are SATA, USB, PCIE, ANY8B10B, PRBS7, and PRBS9.

Examples ERRORDETECTOR:STANDARD SATA sets the standard to SATA.
ERRORDETECTOR:STANDARD? might return : ERRORDETECTOR:STANDARD SATA, indicating that the selected standard is SATA.

## ERRORDetector:STATE

This command sets or queries the status of the error option. STATE must be ON to use the error detector feature.

Group Error Detector

Syntax ERRORDetector:STATE \{<NR1>|OFF|ON\} ERRORDetector: STATE?

Arguments ON enables the software error detector feature.
OFF disables the software error detector feature. This is the default. <NR1> = 0 disables the error detector; any other value enables the error detector.

## Examples ERRORDETECTOR: STATE ON enables the error detector option. ERRORDETECTOR:STATE? might return :ERRORDETECTOR:STATE OFF, indicating that the error detector option is disabled.

## ERRORDetector:STATus? (Query Only)

Queries only the "most significant" or "summary" status of the error detector. All of the status flags for each test type may be obtained from the ERRORdetector:<TESTTYPE $>$ :TEST:STATUS commands.

LOCK refers to the recovered clock. Signal refers to the cable carrying the signal to the scope. SYNC refers to bit error tests that require a sync pattern. STOPPED/COUNTING refer to whether the error detector is testing for errors. MAX_AP refers to whether the error detector has detected the maximum consecutive Align (or SkipSets) Primitives as specified in the ERRORDetector:<TESTTYPE $>$ MAXALIGNS command

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:STATus?

Returns LOCKED | NOT_LOCKED | SIGNAL | NO_SIGNAL | SYNC | NOT_SYNC | STOPPED | COUNTING | MAX_AP_OK | MAX_AP_FAIL

Examples ERRORDETECTOR:STATUS? might return :ERRORDETECTOR:STATUS NOT_SYNC indicating the status of the error detector is not synced.

## ERRORDetector:STOPWHEN

This command sets or queries the stopping condition. The test can be stopped when the count, time, or number of errors elapses. If the STOPWHEN value is MANUAL, the test runs until a TEST STOP command is received.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:STOPWHEN <MANUAL|COUNT|TIME|ERROR> ERRORDetector:STOPWHEN?

Arguments MANUAL indicates that the test must be stopped by issuing a TEST STOP command. This is the default.

COUNT stops the test when DURATION: COUNT comparisons are made. The comparisons can be bit, frame, symbol, or character as appropriate for the TEST:TYPE.

TIME stops the test when DURATION:TIME elapses.
ERROR stops the test when the number of errors $\geq$ ERRORLIMIT.

Examples ERRORDETECTOR: STOPWHEN MANUAL requires the stop test action to stop the test.
ERRORDETECTOR:STOPWHEN? might return : ERRORDETECTOR: STOPWHEN MANUAL, indicating that the stop test action must be used to stop the test.

## ERRORDetector:SYMBOL? (Query Only)

This command queries all symbol error settings, status, and results.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL?

Examples ERRORDETECTOR:SYMBOL? might return
:ERRORDETECTOR:SYMBOL:TEST:STATUS:START STOPPED;LOCK
NOT_LOCKED;SIGNAL NO_SIGNAL;MAX_AP MAX_AP_OK;
:ERRORDETECTOR:SYMBOL:TEST:TIME:DAYS 0;HOURS 0;MINUTES
3 ;SECONDS 0 , that the test is stopped, not locked, there is no signal, MAX_AP is ok, and the test time is 3 minutes.

## ERRORDetector:SYMBOL:TEST

This command initiates and terminates symbol error testing for the arguments START and STOP. Zeroes the symbol error results for the argument CLEAR. Re-synchronizes the recovered clock for the argument SYNC. This command also queries all of the symbol test settings and results for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST <START|STOP|CLEAR> ERRORDetector:SYMBOL:TEST?

Arguments START initiates symbol and bit error testing.
STOP terminates symbol and bit error testing.
CLEAR zeroes the symbol and bit error counts, duration, bit error rate, and symbol error rate.

SYNC re-synchronizes the recovered clock.

Examples ERRORDETECTOR:SYMBOL:TEST START initiates symbol and bit error testing.
ERRORDETECTOR:SYMBOL:TEST? might
return :ERRORDETECTOR:SYMBOL:TEST
STOPPED;LOCKED;SIGNAL;MAX_AP_OK;0,0,0,14, indicating that the signal is stopped and locked for symbol and bit error testing. The status of MAX_AP is ok and the elapsed duration is 0 days, 0 hours, 0 minutes, and 14 seconds.

## ERRORDetector:SYMBOL:TEST:BADCHARS? (Query Only)

This command queries the illegal character count for symbol error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:BADCHARS?

Examples ERRORDETECTOR:SYMBOL:TEST:BADCHARS? might return :ERRORDETECTOR:SYMBOL:TEST:BADCHARS 0 , indicating that the illegal character count for the symbol error test is 0 .

## ERRORDetector:SYMBOL:TEST:BITCOUNT? (Query Only)

This command queries the bit error count (number of bad bits) for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:BITCOUNT?

Examples ERRORDETECTOR:SYMBOL:TEST:BITCOUNT? might return
:ERRORDETECTOR:SYMBOL:TEST:BITCOUNT 0, indicating that the bit error count for the symbol error test is 0 .

## ERRORDetector:SYMBOL:TEST:BITDURATION? (Query Only)

This command queries the elapsed duration in units of bits tested for symbol error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:BITDURATION?

Examples ERRORDETECTOR:SYMBOL:TEST:BITDURATION? might return
:ERRORDETECTOR:SYMBOL:TEST:BITDURATION 24, indicating that the elapsed duration tested for the symbol error test is 24 bits.

## ERRORDetector:SYMBOL:TEST:BITRate? (Query Only)

This command queries the calculated bit error rate for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:BITRate?

Examples ERRORDETECTOR:SYMBOL:TEST:BITRATE? might return :ERRORDETECTOR:SYMBOL:TEST:BITRATE 0.0000 , indicating that the calculated bit error rate for symbol error testing is 0.0000 .

## ERRORDetector:SYMBOL:TEST:COUNt? (Query Only)

This command queries the symbol error count for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:COUNt?

Examples ERRORDETECTOR:SYMBOL:TEST:COUNT? might return :ERRORDETECTOR:SYMBOL:TEST:COUNT 0, indicating that the symbol error count is 0 .

## ERRORDetector:SYMBOL:TEST:DISParity? (Query Only)

This command queries the disparity error count for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:DISParity?

Examples ERRORDETECTOR:SYMBOL:TEST:DISPARITY? might return :ERRORDETECTOR:SYMBOL:TEST:DISPARITY 0, indicating that the disparity error count for the symbol error test is 0 .

## ERRORDetector:SYMBOL:TEST:DURATION? (Query Only)

This command queries the elapsed duration (in units of symbols) for symbol error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:DURATION?

Examples ERRORDETECTOR:SYMBOL:TEST:DURATION? might return :ERRORDETECTOR:SYMBOL:TEST:DURATION 12634, indicating that the elapsed duration in units of symbols for the symbol error test is 12634 .

## ERRORDetector:SYMBOL:TEST:MAXALIGNS? (Query Only)

This command queries the maximum consecutive skip order sets encountered for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:MAXALIGNS?

Examples ERRORDETECTOR:SYMBOL:TEST:MAXALIGNS? might return :ERRORDETECTOR:SYMBOL:TEST:MAXALIGNS 3, indicating that the maximum consecutive skip order sets encountered for the symbol error test is 3 .

## ERRORDetector:SYMBOL:TEST:RATE? (Query Only)

This command queries the calculated symbol error rate for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:RATE?

Examples ERRORDETECTOR:SYMBOL:TEST:RATE? might return
:ERRORDETECTOR:SYMBol:TEST:RATE 0.0000 , indicating that the calculated symbol error rate tested is 0.0000 .

## ERRORDetector:SYMBOL:TEST:RESults? (Query Only)

This command queries all of the results for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:RESults?

Returns COUNT is the symbol error count (number of bad 10-bit symbols). DURATION is the elapsed duration in units of symbols tested.

RATE is the calculated symbol error rate.
MAXALIGNS is the maximum consecutive skipsets encountered.
BADCHARS is the illegal character count.
DISPARITY is the disparity error count.
BITCOUNT is the USB bit error count (number of bad bits).
BITDURATION is the elapsed duration in units of bits tested.
BITRATE is the calculated USB bit error rate.
SECONDS is the elapsed duration time in seconds.
TIME is the elapsed duration time in DD:HH:MM:SS.

Examples ERRORDETECTOR:SYMBOL:TEST:RESULTS? might return :ERRORDETECTOR:SYMBOL:TEST:RESULTS 0, 12657, 0.0000, $3,0,0,0,0.0000,0,0,1,20$, indicating that the error count is 0 , elapsed duration is 12657 , error rate is 0.0000 , maximum consecutive skipsets encountered is 3 , illegal character count is 0 , disparity error count is 0 , USB bit error count is 0 , elapsed duration is 36 , calculated USB bit error rate is 0.0000 , elapsed duration time is 10 seconds, and elapsed duration time is 0 days, 0 hours, 10 minutes, and 20 seconds.

## ERRORDetector:SYMBOL:TEST:SECOnds? (Query Only)

This command queries the elapsed duration time (in seconds) for symbol error testing.

## NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:SECOnds?

Examples ERRORDETECTOR:SYMBOL:TEST:SECONDS? might return
:ERRORDETECTOR:SYMBOL:TEST:SECONDS 45, indicating that the elapsed duration time for symbol error testing is 45 seconds.

## ERRORDetector:SYMBOL:TEST:STATUS? (Query Only)

This command queries all of the status for the symbol error test.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:STATUS?

Returns COUNTING or NOT_COUNTING for START status for character error test. LOCKED or NOT_LOCKED for LOCK status for character error test.

SIGNAL or NO_SIGNAL for SIGNAL status for character error test.
MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for character error test.

Examples ERRORDETECTOR:SYMBOL:TEST:STATUS? might return :ERRORDETECTOR:SYMBOL:TEST:STATUS STOPPED; LOCKED;NO_SIGNAL;MAX_AP_OK, indicating that all of the status for the symbol error test are STOPPED, LOCKED, NO_SIGNAL, and MAX_AP_OK.

## ERRORDetector:SYMBOL:TEST:STATUS:LOCK? (Query Only)

This command queries the LOCK status for the symbol error test.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:STATUS:LOCK?

Returns LOCKED or NOT_LOCKED for LOCK status for character error test.

$$
\begin{aligned}
\text { Examples } & \text { ERRORDETECTOR:SYMBOL:TEST:STATUS:LOCK? might return } \\
& \text { :ERRORDETECTOR:SYMBOL:TEST:STATUS:LOCK LOCKED, indicating that the } \\
& \text { recovered reference clock is LOCKED for the symbol error test. }
\end{aligned}
$$

## ERRORDetector:SYMBOL:TEST:STATUS:MAX_AP? (Query Only)

This command queries the MAX_AP status for the symbol error test.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:STATUS:MAX_AP?

Returns MAX_AP_OK or MAX_AP_FAIL for MAX_AP status for character error test.
$\begin{array}{ll}\text { Examples } & \text { ERRORDETECTOR:SYMBOL:TEST:STATUS:MAX_AP? might return } \\ & \text { : ERRORDETECTOR:SYMBOL:TEST:STATUS:MAX_AP MAX_AP_OK, indicating } \\ & \text { that the MAX_AP status is ok for the symbol error test. }\end{array}$

ERRORDetector:SYMBOL:TEST:STATUS:SIGNAL? (Query Only)
This command queries the SIGNAL status for the symbol error test.
NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:STATUS:SIGNAL?

Returns SIGNAL or NO_SIGNAL for SIGNAL status for character error test.

Examples ERRORDETECTOR:SYMBOL:TEST:STATUS:SIGNAL? might return :ERRORDETECTOR:SYMBOL:TEST:STATUS:SIGNAL SIGNAL, indicating that the signal is connected for the symbol error test.

## ERRORDetector:SYMBOL:TEST:STATUS:START? (Query Only)

This command queries the START status for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:STATUS:START?

Returns COUNTING or NOT_COUNTING for START status for character error test.

Examples ERRORDETECTOR:SYMBOL:TEST:STATUS:START? might return :ERRORDETECTOR:SYMBOL:TEST:STATUS:START COUNTING, indicating that the symbol error test is comparing symbols and counting any errors that occur.

## ERRORDetector:SYMBOL:TEST:TIME? (Query Only)

This command queries the elapsed time (in days, hours, minutes, and seconds) for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:TIME?

Examples ERRORDETECTOR:SYMBOL:TEST:TIME? might return :ERRORDETECTOR:SYMBOL:TEST:TIME $0,0,0,14$, indicating that the elapsed time is 0 days, 0 hours, 0 minutes, and 14 seconds for symbol error testing.

## ERRORDetector:SYMBOL:TEST:TIME:DAYS? (Query Only)

This command queries the elapsed time days component for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:TIME:DAYS?

Examples ERRORDETECTOR:SYMBOL:TEST:TIME:DAYS? might return :ERRORDETECTOR:SYMBOL:TEST:TIME:DAYS 0, indicating that the elapsed time days component is 0 for symbol error testing.

## ERRORDetector:SYMBOL:TEST:TIME:HOURS? (Query Only)

This command queries the elapsed time hours component for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:TIME:HOURS?

Examples ERRORDETECTOR:SYMBOL:TEST:TIME:HOURS? might return :ERRORDETECTOR:SYMBOL:TEST:TIME:HOURS 0, indicating that the elapsed time hours component is 0 for symbol error testing.

## ERRORDetector:SYMBOL:TEST:TIME:MINUTES? (Query Only)

This command queries the elapsed time minutes component for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:TIME:MINUTES?

Examples ERRORDETECTOR:SYMBOL:TEST:TIME:MINUTES? might return :ERRORDETECTOR:SYMBOL:TEST:TIME:MINUTES 0 , indicating that the elapsed time minutes component is 0 for symbol error testing.

## ERRORDetector:SYMBOL:TEST:TIME:SECOnds? (Query Only)

This command queries the elapsed time seconds component for symbol error testing.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:SYMBOL:TEST:TIME:SECOnds?

Examples ERRORDETECTOR:SYMBOL:TEST:TIME:SECONDS? might return
:ERRORDETECTOR:SYMBOL:TEST:TIME:SECONDS 25, indicating that the elapsed time seconds component is 25 for symbol error testing.

## ERRORDetector:TIMEformat

This command sets or queries error detector Elapsed Time Format as DDHHMMSS or Seconds.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:TIMEformat \{DDHHMMSS | SECONDS\}
ERRORDetector:TIMEformat?

Arguments DDHHMMSS sets the time format to days, hours, minutes, and seconds.
SECONDS sets the error detector time format to seconds

## Examples ERRORDETECTOR:TIMEFORMAT SECONDS sets the error detector time format to seconds. <br> ERRORDETECTOR:TIMEFORMAT? might return :ERRORDETECTOR:TIMEFORMAT DDHHMMSS indicating the error detector time format is set to days, hours, minutes, and seconds.

## ERRORDetector:TYPe

This command sets or queries the error detector type.

NOTE. Not available on some models.

Group Error Detector

Syntax ERRORDetector:TYPe \{BIT|FRAME|SYMBOL|CHARACTER|PRBS7|PRBS9\} ERRORDetector:TYPe?

Arguments BIT sets the error detector type to bit.
FRAME sets the error detector type to frame.
SYMBOL sets the error detector type to symbol.
CHARACTER sets the error detector type to character.
PRBS7 sets the error detector type to PRBS7.
PRBS9 sets the error detector type to PRBS9.

Examples ERRORDETECTOR:TYPE BIT sets the error detector type to bit.
ERRORDETECTOR:TYPE? might return :ERRORDETECTOR:TYPE BIT, indicating that the error detector type is bit.

## *ESE

This command sets and queries the bits in the Event Status Enable Register (ESER). The ESER prevents events from being reported to the Status Byte Register (STB). For a more detailed discussion of the use of these registers, see Registers.

Group Status and Error

Syntax *ESE <NR1>
*ESE?

Related Commands *CLS, DESE, *ESR?, EVENT?, EVMsg?, *SRE, *STB?

Arguments <NR1> specifies the binary bits of the ESER according to this value, which ranges from 0 through 255.

The power-on default for the ESER is 0 if *PSC is 1 . If *PSC is 0 , the ESER maintains the previous power cycle value through the current power cycle.

NOTE. Setting the DESER and the ESER to the same values allows only those codes to be entered into the Event Queue and summarized on the ESB bit (bit 5) of the Status Byte Register. Use the DESE command to set the DESER.

## Examples

*ESE 209 sets the ESER to binary 11010001, which enables the PON, URQ, EXE, and OPC bits.
*ESE? might return 186, showing that the ESER contains DESE the binary value 10111010 .

## *ESR? (Query Only)

Group
This query-only command returns the contents of the Standard Event Status Register (SESR). *ESR? also clears the SESR (since reading the SESR clears it). For a more detailed discussion of the use of these registers, see Registers.

Syntax *ESR?

Related Commands

Examples

EVENT? (Query Only)
This query-only command returns an event code from the Event Queue that provides information about the results of the last *ESR? read. EVENT? also removes the returned value from the Event Queue.

Group Status and Error

Syntax EVENT?

Related Commands

Examples

ALLEv?, *CLS, DESE, *ESE, *ESR?, EVMsg?, *SRE, *STB?

EVMsg? (Query Only)

Group Status and Error

Syntax EVMsg?

Related Commands
ALLEv?
*CLS, DESE, *ESE, *ESR?, EVENT?, *SRE, *STB?

Returns The event code and message in the following format:
$<$ Event Code $><$ Comma $><$ QString $>[<$ Event
Code $><$ Comma $><$ QString $>$...]<QString $>:$ := <Message $>$;[<Command $>$ ]
where $<$ Command $>$ is the command that caused the error and may be returned when a command error is detected by the instrument. As much of the command will be returned as possible without exceeding the 60 character limit of the $<$ Message $>$ and $<$ Command $>$ string combined. The command string is right-justified.

Examples EVMSG? might return :EVMSG 110,"Command header error".

## EVQty? (Query Only)

Group Status and Error

Syntax EVQty?

Related Commands

Examples

EXPort

Group Hard Copy

Syntax EXPort STARt
EXPort?

Arguments STARt initiates the export.

Examples EXPORT START initiates export to the file specified file by EXPort: FILEName.
EXPORT? returns the export formatting and file path. The query might return :EXPORT:FILENAME "untitled"; FORMAT BMP;IMAGE NORMAL; PALETTE COLOR;VIEW FULLSCREEN "C\TekScope\Screen Captures $\backslash$ hcFILE.BMP".

## EXPort:FILEName

Group Hard Copy

Syntax EXPort:FILEName <file path> EXPort:FILEName?

Related Commands HARDCopy

Arguments <file path> specifies that the hard copy is sent to the named file. <file path> is a quoted string that defines the file name and path. Input the file path using the form $<$ drive $>:<$ dir $>/<$ filename $>$. $<$ drive $>$ and one or more <dir>s are optional. The file path cannot exceed 128 characters. If you do not specify the path with <drive>: and one or more $<$ dir $>\mathrm{s}$, the default location is "C:\Users\Public\Tektronix\TekScope\Screen Captures". While filename extensions are not required, they are highly recommended.

Examples EXPORT:FILENAME "TEK.BMP" sets TEK.BMP as the selected file name. The next export will be sent to this file in the default hard copy directory.

EXPORT:FILENAME? might return : EXPORT:FILENAME
"C:\Users\Public\Tektronix\TekScope\Screen Captures\TEK.BMP" as the selected file.

## EXPort:FORMat

This command sets or queries the image format for exporting waveforms to a file.

Group Hard Copy

Syntax EXPort: FORMat \{BMP|JPEG|PCX|PNG|TIFF\}
EXPort:FORMat?

Arguments BMP specifies BMP image format.
JPEG specifies JPEG image format.
PCX specifies PCX image format.
PNG specifies PNG image format.
TIFF specifies TIFF image format.

Examples EXPORT: FORMAT BMP sets the export format to BMP.
EXPORT:FORMAT? might return : EXPORT:FORMAT JPEG, indicating that waveforms will be exported in the JPEG format.

## EXPort:PALEtte

This command sets or queries the export color palette.

Group Hard Copy

Syntax

Arguments

Examples

## EXPort:READOuts

Group Hard Copy

Syntax EXPort:READOuts \{OFFGRAticule|ONGRAticule\} EXPort:READOuts?

Arguments

Examples
EXPORT:READOUTS OFFGRATICULE places the readouts off the graticule area.
EXPORT:READOUTS? might return :EXPORT READOUTS ONGRATICULE, indicating the readout on the graticule area for export.

## EXPort:VIEW

OFFGRATICULE places the readouts off the graticule area. ONGRATICULE places the readouts on the graticule area for export.

This command sets or queries the area of the screen to be exported.

Group Hard Copy

Syntax EXPort:VIEW \{FULLSCREEN|GRAticu7e|FULLNOmenu\} EXPort:VIEW?

Arguments FULLSCREEN displays both the graticule and menu areas of the screen. GRAticule displays only the graticule area of the screen.

FULLNOmenu displays the full screen but hides any menus or toolbars.

Examples EXPORT:VIEW FULLSCREEN sets the exported view area to Full Screen.
EXPORT:VIEW? might return : EXPORT:VIEW GRATICULE, indicating that only the graticule area of the screen will be exported.

## FACtory (No Query Form)

 This command (no query form) resets the instrument to its factory default settings. This command is equivalent to pressing the DEFAULT SETUP button located on the instrument front panel or selecting Recall Default Setup from the File menu.This command resets the instrument settings to factory defaults:

- Clears the Event Status Enable Register.
- Clears the Service Request Enable Register.
- Sets the Device Event Status Enable Register to 255.
- Sets the Power On Status Clear Flag to TRUE.
- Purges all defined aliases.
- Sets the macro defined by *DDT to a "zero-length field".
- Clears the pending operation flag and associated operations.

This command does not reset the following:

- The state of the GPIB (IEEE Std 488.1-1987) interface.
- The selected GPIB address.
- Calibration data that affects device specifications.
- Protected user data.
- Stored settings.
- The current password (if you set one).

Group Save and Recall

Syntax FACtory

Related Commands *PSC, *RCL, RECAll:SETUp, *RST, *SAV, SAVe:SETUp

Arguments None

Examples FACTORY resets the instrument to its factory default settings.

## FASTAcq? (Query Only)

This query-only command returns the state of Fast Acquisitions. This command is equivalent to pressing the FASTACQ button on the front panel.

Group Acquisition

Syntax FASTAcq?

Examples FASTACQ? might return the following string for the current acquisition parameters: :FASTACQ:STATE 0.

## FASTAcq:HIACQRATE

This command sets or queries the state of FastAcq optimization for capturing signal details with a higher sample rate.

Group Acquisition

Syntax FASTAcq:HIACQRATE \{<NR1>|OFF|ON\}
FASTAcq:HIACQRATE?

Arguments <NR1> = 0 sets FastAcq optimization for capturing signal details with a higher sample rate; any other value sets FastAcq optimization for capturing rare events with more acquisitions.

OFF sets FastAcq optimization for capturing signal details with a higher sample rate.

ON sets FastAcq optimization for capturing rare events with more acquisitions.

Examples FASTACQ: HIACQRATE ON sets optimizes FastAcq for capturing rare events with more acquisitions.

FASTACQ: HIACQRATE? might return :FASTACQ:HIACQRATE 0, indicating that the FastAcq is optimized for capturing signal details with a higher sample rate.

## FASTAcq:STATE

This command sets or queries the state of Fast Acquisitions. This command is equivalent to the FASTACQ button on the front panel.

Group Acquisition

Syntax FASTAcq:STATE $\{<$ NR1>|ON|OFF $\}$ FASTACq: STATE?

Arguments <NR1> = 0 disables Fast Acquisitions mode; any other value enables Fast Acquisitions mode.
oN enables Fast Acquisitions mode.
OFF disables Fast Acquisitions mode.

Examples FASTACQ: STATE ON enables the Fast Acquisitions mode.
FASTACQ: STATE? might return : FASTACQ: STATE 1, indicating that Fast Acquisitions mode is currently active.

## FILESystem? (Query Only)

# This query-only command returns the directory listing of the current working directory. This query is the same as the FILESystem:DIR? query. 

Group File System

Syntax FILESystem?

Related Commands FILESystem:COPy, FILESystem:CWD, FILESystem:DELEte, FILESystem: DIR?, FILESystem:PRInt, FILESystem:READFile, FILESystem:REName, FILESystem:WRITEFile

Arguments None.

Examples FILESYSTEM? might return :FILESYSTEM:DIR, ".","..","myFile.txt","myWaveform.wfm".

## FILESystem:COPy (No Query Form)

This command (no query form) copies a named file to a new file. The new file might be in a totally separate directory than the old file. You can only copy one file at a time using this command. Wild card characters are not allowed.

Group File System<br>Syntax FILESystem:COPy \{<source file path>,<destination file path>\}

Related Commands FILESystem:CWD, FILESystem:DELEte

Arguments <source file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.
<destination file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

Examples FILESYSTEM:COPY "C:\MYDIR\TEK00001.SET", "C:\ANOTHERDIR\COPYOFTEK001.SET" copies the file named TEK00001.SET, located in the MYDIR directory on the C drive to a file named COPYOFTEK001.SET in the ANOTHERDIR directory on the C drive.

## FILESystem:CWD

This command sets or queries the current working directory for FILESystem GPIB commands. The default working directory is "C:\Users\Public\Tektronix\TekScope". Anytime that you use this command to change the directory, the directory that you specify is retained as the current working directory until you either change the directory or you delete the directory. If you delete the current working directory, the instrument resets current working directory to the default directory (C:IUsers\Public\Tektronix\TekScope) the next time the instrument is powered on or the next time you execute a file system command. The current working directory is retained between power cycles.

This command supports the permutations of file and directory names that are supported by Microsoft Windows:

- Relative path names; for example, ". $\backslash$ Temp"
- Absolute path names; for example, "C:\Windows\System"
- Implied relative path names; for example "newfile.text" becomes "C:\Users $\backslash$ Public $\backslash$ Tektronix $\backslash$ TekScope\newfile.txt" if the current working directory is "C:\Users\Public\Tektronix $\backslash$ TekScope"

Group File System

Syntax FILESystem:CWD \{<new working directory path>\}

Arguments <new working directory path> is a quoted string that defines the current working; a directory name can be up to 128 characters.

Examples FILESYSTEM:CWD "C:\Users\Public\Tektronix\TekScope\Screen Captures" sets the current working directory to Screen Captures.

FILESYSTEM:CWD? might return :FILESYSTEM:CWD
"C:\Users\Pub1ic\Tektronix\TekScope\Waveforms", indicating that the current working directory is set to Waveforms.

## FILESystem:DELEte (No Query Form)

This command (no query form) deletes a named file. It does not delete directories. Use the FILESystem:RMDir command to delete a directory.

Group File System<br>Syntax FILESystem:DELEte <file path><br>Related Commands FILESystem:COPy, FILESystem:CWD, FILESystem:RMDir

Arguments <file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

Examples FILESYSTEM:DELETE "NOT_MINE.SET" deletes the file named NOT_MINE.SET from the current working directory.

## FILESystem:DIR? (Query Only)

This query-only command returns a comma separated list of quoted strings. Each string contains the name of a file or directory in the current working directory.

Group File System

Syntax FILESystem:DIR?

Related Commands FILESystem:CWD, FILESystem:MKDir

Arguments None

Examples FILESYSTEM:DIR? returns a list of files and directories in the current working directory.

## FILESystem:MKDir (No Query Form)

This command (no query form) creates a new directory.

Group File System

Syntax FILESystem:MKDir <directory path>

Related Commands FILESystem:CWD, FILESystem:DIR?

Arguments <directory path> is a quoted string that specifies the directory to create.

Examples FILESYSTEM:MKDIR "C:\NewDirectory" creates the directory named NewDirectory at the root of the C drive.

These two commands create the directory MyNewSubDirectory within the existing directory MyDirectory at the root of the C drive:

FILESYSTEM:CWD "C:\MyDirectory"; FILESYSTEM:MKDIR
"MyNewSubDirectory"
This, of course, assumes that $C: \$ MyDirectory already existed and was not a read-only directory.

## FILESystem:PRInt (No Query Form)

This command (no query form) prints a named file to a named port. This command is the same as the FILESystem:READFile command.

This command is not IEEE 488.2 compliant for the following reasons:

- The command produces output on the 488.2 bus. Queries, not commands, are the only message units that should produce output on the 488.2 bus. Errors might not be recognized if they occur while data is being output in response to this command. This will be evident if a command is sent to the instrument before all of the data generated by this command is read. In such cases, you should send a device clear message to the instrument.
- The command does not use a standard 488.2 output format. The closest defined format is the indefinite format of ARBITRARY BLOCK PROGRAM DATA encoding. However, this command output omits the initial ' $\# 0^{\prime}$ characters needed for that format.
- Newlines, ASCII value 10, can be included in the output data. Output on the bus can be terminated by newlines. The output of this command is only terminated by <EOI>.

Group File System

Syntax FILESystem:PRInt <filepath>, GPIb

Related Commands FILESystem:CWD, FILESystem:READFile

Arguments <file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

GPIb specifies that the hard copy is sent out of the GPIB port. GPIb is the only port allowed for this command.

Examples FILESYSTEM:PRINT "C:\TEK00000.IBM",GPIB sends the file named TEK00000.IBM out of the GPIB port.

## FILESystem:READFile (No Query Form)

This command (no query form) prints a named file to a named port. It is identical to the FILESystem:PRInt command.

This command is not IEEE 488.2 compliant for the following reasons:

- The command produces output on the 488.2 bus. Queries, not commands, are the only message units that should produce output on the 488.2 bus. Errors might not be recognized if they occur while data is being output in response to this command. This will be evident if a command is sent to the instrument before all of the data generated by this command is read. In such cases, you should send a device clear message to the instrument.
- The command does not use a standard 488.2 output format. The closest defined format is the indefinite format of ARBITRARY BLOCK PROGRAM DATA encoding. However, this command output omits the initial ' $\# 0$ ' characters needed for that format.
- Newlines, ASCII value 10, can be included in the output data. Output on the bus can be terminated by newlines. The output of this command is only terminated by <EOI>.

Group File System

Syntax FILESystem:READFile <filepath>

Related Commands FILESystem:CWD, FILESystem:PRInt

Arguments <file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

Examples FILESYSTEM:READFILE "C:\TEK00000.IBM" sends the file named TEK00000.IBM out of the GPIB port.

## FILESystem:REName (No Query Form)

This command (no query form) assigns a new name to an existing file.

Group File System

Syntax FILESystem:REName <old file path>, <new file path>

Related Commands FILESystem:CWD

Arguments <old file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.
<new file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

Examples FILESYSTEM:RENAME "C:\TEK00000.SET","C:\MYSETTING.SET" gives the file named TEK 00000 .SET the new name of MYSETTING.SET. The file remains in the root directory on the C drive.

## FILESystem:RMDir (No Query Form)

This command (no query form) deletes a named directory. The directory cannot contain any files. If there are files in the directory, they must first be deleted. The directory must not be a read-only directory.

Group File System

Syntax FILESystem:RMDir <directory path>

Related Commands FILESystem:CWD

Arguments <directory path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.

Examples FILESYSTEM:RMDIR "C:\01dDirectory" removes the directory named OldDirectory from the root of the C drive.

## FILESystem:WRITEFile (No Query Form)

This command (no query form) copies the block data from the GPIB port to a named file.

Group File System

Syntax FILESystem:WRITEFile <file path>,<data>

Related Commands FILESystem:CWD

Arguments <file path> is a quoted string that defines the file name and path. If the file path is within the current working directory, you need only specify the file name.
<data> can be either DEFINITE LENGTH or INDEFINITE LENGTH ARBITRARY BLOCK PROGRAM DATA encoding as described in IEEE 488.2.

Examples FILESYSTEM:WRITEFILE "C:\SomeNewFile.txt",\#221 1.23 2.54 8.22 -1.22 <EOI> creates a file named "SomeNewFile.txt" on the root of the C drive, containing the string of 21 characters " $1.232 .548 .22-1.22$ ". This is an example of using the definite length arbitrary block.

FILESYSTEM:WRITEFILE "C:\SomeNewFile.txt",\#0 This is a test<NL+EOI> creates a file named "SomeNewFile.txt" on the root of the C drive, containing the string "This is a test." This is an example of using the indefinite length arbitrary block. The newline character ( $0 x 0 \mathrm{a}$ ) is required.

FILESYSTEM:WRITEFILE "C:\SomeNewFile.txt",\#221 1.23 2.54 8.22 $-1.22<N L+E O I>$ creates a file named "SomeNewFile.txt" on the root of the C drive, containing the string of 21 characters " $1.232 .548 .22-1.22$ ". Because the data argument is indefinite format arbitrary block program data, it can contain any 8 -bit values, including newline characters (hexadecimal 0a). The fact that newline characters are allowed makes this command deviate from the strictest interpretation of the IEEE488.2 specification.

## FPANel:PRESS (No Query Form)

This command turns off the displayed menu. It turns off everything except warning messages.

NOTE. This command is only available on MSO/DPO5000/B Series instruments.

Group Miscellaneous

Syntax FPANe1:PRESS <menuoff>

Arguments menuoff turns off the menu.

Examples FPANEL: PRESS menuoff turns of the displayed menu.

## HARDCopy

This command sends a copy of the screen display to the port specified by HARDCOPy:PORT. This command is equivalent to pressing the PRINT button on the front panel. When printing to a file, the file format can be BMP, JPG, PNG, PCX or TIFF. The format of the saved screen capture is set by the EXPORT: FORMAT command. The file format setting is persistent, and will not be affected by a default setup or *RST command sent to the instrument.

The HARDCopy query returns the port and file path.

Group Hard Copy

Syntax HARDCopy STARt
HARDCopy?

Related Commands *WAI, *CLS, EXPort:FORMat

Arguments STARt initiates a screen copy to a file or the default system printer, as specified by the :HARDCopy:PORT selection. The default system printer is set within the Windows operating system. If you need information about how to set the default system printer, refer to Microsoft Windows online help.

NOTE. Use the *WAI command between HARDCopy STARt commands to ensure that the first hard copy is complete before starting another.

## Examples HARDCOPY START initiates a screen copy to a file or the default system printer,

 as specified by the :HARDCopy:PORT selection.HARDCOPY? returns the hard copy file path and the selected
port. The query might return : HARDCOPY: FILENAME
"C:\Users\Pub7ic\Tektronix\TekScope\Screen Captures $\backslash$ hcFILE.BMP"; PORT FILE.

## HARDCopy:FILEName

This command sets or queries the file that will be sent hardcopy data on the next HARDCopy command (if the HARDCopy: PORT is set to FILE).

Group Hard Copy

Syntax HARDCopy:FILEName <file path> HARDCopy: FILEName?

Related Commands

Arguments

Examples

## HARDCopy:LAYout

Group Hard Copy

Arguments

## HARDCopy:PALEtte

Syntax HARDCopy:LAYout \{PORTRait|LANdscape\}
HARDCopy:LAYout?

PORTRait orients the screen image vertically on the printed page.
LANDscape orients the screen image horizontally on the printed page.

Examples HARDCOPY:LAYOUT LANDSCAPE sets the hard copy page orientation to Landscape. HARDCOPY:LAYOUT? might return : HARDCOPY: LAYOUT PORTRAIT, indicating that the hard copy page orientation is set to portrait.
This command sets or queries the page orientation for hard copy. "C:\Users \Public\Tektronix\TekScope\Screen Captures\TEK.BMP" as the selected file.
hardcopy: filename "TEK" sets TEK as the selected file name. The next hard copy will be sent to this file in the default hard copy directory, if the : HARDCOPy: PORT selection is FILE.
HARDCOPY: FILENAME? might return :HARDCOPY:FILENAME

This command sets or queries the hard copy color palette.

Group Hard Copy

Syntax HARDCopy: PALEtte \{COLOr|BLACKANDWhite|INKSaver\} HARDCopy:PALEtte?

Arguments coLor argument sets the hard copy output to color.
BLACKANDwhite argument sets the hard copy output to black and white.
INKSaver argument sets the hard copy output to save ink.

Examples HARDCOPY: PALETTE COLOR sets the hard copy output to Color.
HARDCOPY:PALETTE? might return :HARDCOPY:PALETTE BLACKANDWHITE, indicating that the output for hard copy will be in black and white.

## HARDCopy:PORT

Group Hard Copy

Syntax HARDCopy: PORT \{FILE|PRINTER\}
HARDCOPY: PORT?

Related Commands HARDCopy, HARDCopy:FILEName

Arguments FILE argument specifies that the hard copy is stored in the file specified in the HARDCopy:FILEName command.
PRINTER argument specifies that the hard copy is sent to the printer specified in the Print dialog box.

Examples HARDCOPY: PORT FILE specifies that the hard copy is stored in the file specified in the HARDCopy:FILEName command.

HARDCOPY: PORT? might return : HARDCOPY: PORT FILE indicating that hard copies are sent to the specified file.

The following commands sequence lets you to specify an inksaver data hard copy is stored in a file:
*RST
HARDCOPY: PORT FILE
HARDCOPY: PALETTE INKSAVER
HARDCOPY:FILENAME "FILE_INKSAVER"
HARDCOPY START
The following commands sequence lets you to specify a color data hard copy is stored in a file:

HARDCOPY: PALETTE COLOR
HARDCOPY:FILENAME :FILE COLOR"
HARDCOPY START
Both files will be the same since they are directed to a file. If they were directed to a printer then the printouts would be different.

## HARDCopy:READOuts

This command sets or queries the area on a hard copy where the readout appears. This command is equivalent to selecting Page Setup from the File menu and setting the Readouts Below Graticule in the control window.

Group Hard Copy

Syntax HARDCopy:READOuts \{OFFGRAticule|ONGRAticule\} HARDCopy: READOuts?

OFFGRATICULE places the readouts off the graticule area.
ONGRATICULE places the readouts on the graticule area on hardcopies.

## HARDCopy:VIEW

This command sets or queries the area of the screen to be hard copied.

Group Hard Copy

Syntax HARDCopy:VIEW \{FULLSCREEN|GRAticu7e|FULLNOmenu\}
HARDCopy:VIEW?

Arguments FULLSCREEN sets the area to be hard copied to both the graticule and menu areas of the screen.

GRAticule sets the area to be hard copied to only the graticule area of the screen.
FULLNOmenu sets the area to be hard copied to full screen but hides any menus or toolbars.

## Examples HARDCOPY:VIEW FULLSCREEN sets the hard copy area to Full Screen.

HARDCOPY:VIEW? might return : HARDCOPY:VIEW GRATICULE, indicating that only the graticule area of the screen will be hard copied.

## HDR

Group Miscellaneous

Syntax $\underset{\substack{\text { HDR } \\ \text { HDR? }}}{\text { \{<NR1>|OFF|ON }\}}$

Related Commands HEADer, VERBose

Arguments <NR1> $=0$ sets the Response Header Enable State to false; any other value sets this state to true, which causes the instrument to send headers on query responses.

OfF sets the Response Header Enable State to false. This causes the instrument to omit headers on query responses, so that only the argument is returned.
on sets the Response Header Enable State to true. This causes the instrument to include headers on applicable query responses. You can then use the query response as a command.

Examples HDR OFF specifies that the instrument omits headers on query responses, so that only the argument is returned.

HDR? might return : HEADER 1, indicating that the instrument is including headers on applicable query responses.

This command sets or queries the Response Header Enable State that causes the instrument to either include or omit headers on query responses.

NOTE. This command does not affect IEEE Std 488.2-1987 Common Commands (those starting with an asterisk); these commands never return headers. This command does make a corresponding change in the Response Header Enable State of the opposite interface (physical or virtual GPIB interface). Refer to Introduction for more information.

Group Miscellaneous

Syntax HEADer \{<NR1>|OFF|ON\}
HEADer?

Related Commands HDR, VERBose

Arguments <NR1> = 0 sets the Response Header Enable State to false; any other value sets this state to true.

OFF sets the Response Header Enable State to false. This causes the instrument to omit headers on query responses, so that only the argument is returned.

ON sets the Response Header Enable State to true. This causes the instrument to include headers on applicable query responses. You can then use the query response as a command.

Examples HEADER OFF specifies that the instrument omits headers on query responses, so that only the argument is returned.

HEADER? might return : HEADER 1, indicating that the instrument is including headers on applicable query responses.

## HIStogram? (Query Only)

This query-only command returns all histogram parameters; it queries the state of all histogram parameters that the user can set. This command is equivalent to selecting Waveform Histograms from the Measure menu.

Group Histogram

Syntax HIStogram?<br>Related Commands MEASUrement:METHod<br>Examples HISTOGRAM? might return the histogram parameters as :HISTOGRAM: BOXPCNT 30.0000,25.1000,70.0000,75.2000;DISPLAY LINEAR;STATE 1;FUNCTION VERTICAL;SIZE 2.0000 ;SOURCE CH1.

## HIStogram:BOX

Group Histogram

Syntax HIStogram:BOX <NR3>,<NR3>, <NR3>, <NR3> HIStogram:BOX?

Related Commands HIStogram:BOXPcnt

Arguments <NR3> specifies the left position of the histogram box in source waveform coordinates.
<NR3> specifies the top position of the histogram box in source waveform coordinates.
<NR3> specifies the right position of the histogram box in source waveform coordinates.
<NR3> specifies the bottom position of the histogram box in source waveform coordinates.

Examples HISTOGRAM: BOX $1 \mathrm{E}-9,0.250,2 \mathrm{E}-9,0.500$ defines the coordinates of the histogram box in source waveform coordinates.

HISTOGRAM: BOX? might return :HISTOGRAM:BOX $1.0000 \mathrm{E}-09,0.2500$, $2.0000 \mathrm{E}-09,0.5000$, which identifies the coordinates of the histogram box in source waveform coordinates.

## HIStogram:BOXPcnt

This command defines or queries the left, top, right, and bottom positions of the histogram box in percentage coordinates. The upper left has the value 0,0 and the lower right has the value 100,100 . Any value outside the range of 0 to 100 is clipped. This command is similar to the HIStogram:BOX command except that this command uses percentage coordinates to define the boundaries of the histogram box.

NOTE. This command implicitly clears the histogram count and statistics for the histogram and histogram source data when HIStogram:STATE is turned on.

Group Histogram

Syntax HIStogram:BOXPCnt <NR2>, <NR2>, <NR2>, <NR2> HIStogram:BOXPcnt?

Related Commands HIStogram:BOX

Arguments <NR2> specifies the left position of the histogram box in percentage coordinates. The default value is 30.0 .
<NR2> specifies the top position of the histogram box in percentage coordinates. The default value is 25.1 .
<NR2> specifies the right position of the histogram box in percentage coordinates. The default value is 70.0 .
<NR2> specifies the bottom position of the histogram box in percentage coordinates. The default value is 75.2 .

## Examples HISTOGRAM: BOXPCNT $30.0,25.0,70.0,75.0$ sets the left boundary of the

 histogram box to $30 \%$ of the graticule ( 3 divisions from the left edge); the top boundary to $25 \%$ of the graticule $(0.25 \times 8=2.0$ divisions from the top edge); the right boundary to $70 \%$ of the graticule ( 7 divisions from the left edge); and the bottom boundary to $75 \%$ of the graticule $(0.75 \times 8=6.0$ divisions from the top edge).HISTOGRAM: BOXPCNT? might return : HISTOGRAM: BOXPCNT
30.0000, 25.1000, 70.0000,75.2000.

## HIStogram:COUNt (No Query Form)

This command (no query form) clears the count and statistics for the histogram and the histogram source data. If the histogram is on, then counting restarts. This command is equivalent selecting Waveform Histograms from the Measure menu and then clicking the Reset button.

Group Histogram

Syntax HIStogram:COUNt RESET

Related Commands HIStogram:BOX, HIStogram:BOXPcnt

Examples HISTOGRAM: COUNT RESET clears the count and statistics for the histogram and the histogram source data.

## HIStogram:DATa? (Query Only)

This query-only command returns an ASCII comma-separated list of histogram data numbers. This command returns 252 values for vertical histograms and 1000 values for horizontal histograms. The first and last value are not displayed, and are used for over range and under range tracking.

NOTE. You must set the histogram state to ON before sending this query or the system will generate an error indicating: "Source waveform is not active".

The Histogram:DATa? query corresponds to the Histogram Data (CSV) controls included in the instrument user interface. To find these controls, select either Edit $>$ Copy $>$ Setup $>$ Measurements tab or the File $>$ Save As $>$ Histogram button.

This command returns only histogram data values separated by commas on a single line. The CSV file created by the user interface actions indicated above, writes out a line for each histogram data point, and contains the time relative to the trigger, a comma, and the histogram value.

Group Histogram

Syntax HIStogram:DATa?

Related Commands

\end{aligned}
$$

## HIStogram:DISplay

Group Histogram

Syntax HIStogram:DISplay \{OFF|LOG|LINEAr\} HIStogram:DISplay?

Related Commands HIStogram:MODe, HIStogram:STATE

Arguments <OFF> disables the histogram display but allows histogram data to accumulate. This argument provides for backward compatibility with older DPO Series instruments; it does not affect a change in the display scaling of the histogram. When queried, HIStogram:DISplay? will return OFF if the histogram state or mode is disabled using the HIStogram:MODe or HIStogram:STATE commands.
<LOG> sets the histogram display to logarithmic scaling.
<LINEAr> sets the histogram display to linear scaling. This is the default setting.

Examples HISTOGRAM:DISPLAY LOG sets the histogram scaling to be the log count of each histogram bin.

HISTOGRAM:DISPLAY? might return :HISTOGRAM:DISPLAY LOG, indicating that the current histogram display scaling is the log count of each histogram bin.

## HIStogram:FUNCtion

This command either selects the type of histogram to create or returns the current histogram type. This command is equivalent to selecting Waveform Histogram from the Measure menu and then choosing either Horizontal or Vertical from the Histogram Mode group box.

Group Histogram

Syntax HIStogram:FUNCtion \{HORizontal|VERTical\} HIStogram: FUNCtion?

Related Commands HIStogram:MODe, HIStogram:STATE

Arguments HORizontal displays a horizontally positioned histogram that shows time distribution.

VERTical displays a vertically positioned histogram that shows a voltage distribution (or another distribution such as amperes).

Examples HISTOGRAM: FUNCTION HORIZONTAL sets the histogram mode to the horizontal display mode.

HISTOGRAM: FUNCTION? might return :HISTOGRAM:FUNCTION VERTICAL, indicating that the vertical display mode is selected for the histogram.

## HIStogram:MODe

This command selects the type of histogram to create or disables the histogram display. The query form either returns the current histogram type or that histogram display is disabled. This command is equivalent to selecting Waveform Histogram from the Measure menu and then choosing from the Histogram Mode group box.

HIStogram:MODe is functionally equivalent to the HIStogram:FUNCtion and HIStogram:STATE commands and is included for backward compatibility purposes.

Group Histogram

Syntax HIStogram:MODe \{HORizontal|VERTical|OFF\} HIStogram:MODe?

Related Commands HIStogram:FUNCtion, HIStogram:STATE, HIStogram:DISplay

Arguments HORizontal enables a horizontally positioned histogram that shows time distribution.

VERTica1 enables a vertically positioned histogram that shows a voltage distribution (or another distribution such as amperes).

OFF disables collection of the histogram measurement.

Examples HISTOGRAM:MODE HORIZONTAL sets the type of histogram created to horizontal, which displays a horizontally positioned histogram that shows time distribution.

HISTOGRAM:MODE? might return :HISTOGRAM:MODE OFF, indicating that histogram display is disabled.

## HIStogram:SIZe

Group Histogram

Syntax HIStogram:SIZe <NR3>
HIStogram:SIZe?

Related Commands HIStogram:DISplay

Arguments <NR3> specifies the histogram size. The value can vary from 0.1 to 8.0 divisions in HORizontal mode and from 0.1 to 10.0 divisions in VERTical mode. Resolution is to the nearest pixel.

Examples HISTOGRAM:SIZE 2.0 sets the size of the histogram to 2.0 divisions.
HISTOGRAM:SIZE? might return :HISTOGRAM:SIZE 2.0000E+01, indicates the histogram size is set to 2.0 divisions.

## HIStogram:SOUrce

This command sets or queries which source will be compared against the histogram box when the histogram testing is enabled. This is equivalent to selecting Waveform Histograms from the Measure menu and then choosing the desired waveform source. The waveform need not be displayed for histograms to run. You might want the channel displays disabled so you can see a full-screen histogram and not have waveform data confuse the display.

Group Histogram

Syntax HIStogram:SOUrce $\{C H<x>\mid$ MATH $<x>\mid$ REF $<x>\}$ HIStogram: Source?

Related Commands HIStogram:DISplay

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ selects a channel waveform as the source for the histogram. The x variable can be expressed as an integer ranging from 1 through 4.
$\mathrm{MATH}<\mathrm{x}>$ selects a math waveform as the source for the histogram. The x variable can be expressed as an integer ranging from 1 through 4.
$R E F<x>$ selects a reference waveform as the source for the histogram. The $x$ variable can be expressed as an integer ranging from 1 through 4.

Examples HISTOGRAM: SOURCE CH1 enables the Channel 1 waveform to be compared against the histogram box. The default time base, Main, is used for the histogram display.

HISTOGRAM: SOURCE? might return :HISTOGRAM: SOURCE CH1, indicating that the waveform for Channel 1 is the source for the histogram.

## HIStogram:STATE

This command sets or queries whether the histogram calculations are enabled. This is equivalent to selecting Waveform Histograms from the Measure menu.

Group Histogram

Syntax HIStogram:STATE $\{<N R 1>|O N| O F F\}$ HIStogram: STATE?

Related Commands HIStogram:MODe, MEASUrement:METHod

Arguments <NR1> = 0 disables histogram calculations; any other value enables histogram calculations.
<ON> enables histogram calculations.
<OFF> disables the histogram calculations.

Examples HISTOGRAM: STATE ON enables histogram calculations.
HISTOGRAM:STATE? might return :HISTOGRAM:STATE 0 , indicating that histogram calculations are currently disabled.

## HORizontal? (Query Only)

This query-only command returns all settings for the horizontal commands.

Group Horizontal

Syntax HORizontal?

Examples HORIZONTAL? might return the following horizontal settings
:HORIZONTAL:DELAY:MODE 0;POSITION 50.0000;TIME
0.00000000000;:HORIZONTAL:MAIN:INTERPRATIO
1.0000;POSITION 50.0000;UNITS:STRING "s";:HORIZONTAL:ROLL AUTO;MODE AUTO;MODE:AUTO:LIMITRECORDLEN 200000;:HORIZONTAL:MODE:RECORDLENGTH 1000;SAMPLERATE $40.0000 \mathrm{E}+9$; SCAL.

## HORizontal:ACQDURATION? (Query Only)

This query returns the timebase duration.

Group Horizontal

Syntax HORizontal:ACQDURATION?

Returns <NR3> returns the duration of the acquisition.

Examples HORIZONTAL:ACQDURATION? might return :HORIZONTAL:ACQDURATION $5.0 \mathrm{E}-9$, indicating the acquisition duration is 5.0 us.

## HORizontal:ACQLENGTH? (Query Only)

This query returns the record length.

Group Horizontal

Syntax HORizontal:ACQLENGTH?

Returns <NR1> returns the record length.

Examples HORIZONTAL:ACQLENGTH? might return :HORIZONTAL:ACQLENGTH 50000, indicating the acquisition record length is 50000 points.

## HORizontal:DIGital:MAGnivu:POSition? (Query Only)

NOTE. Not available on some models.

This command queries the horizontal position of the trigger in percent, within the MagniVu digital acquisition.

The MagniVu digital acquisition always includes the trigger. When the trigger position is adjusted near the edges of the display, the horizontal position of the MagniVu acquisition is adjusted to keep as much of the MagniVu acquisition in the display region as possible.

Group Horizontal

Syntax HORizontal:DIGital:MAGnivu:POSition?

Returns <NR3> specifies the horizontal position.

Examples HORIZONTAL:DIGITAL:MAGNIVU:POSITION? might return :HORIZONTAL:DIGITAL:MAGNIVU:POSITION 50.0, indicating that the horizontal position of the MagniVu digital acquisition is 50.0.

## HORizontal:DIGital:RECOrdlength? (Query Only)

NOTE. Not available on some models.

NOTE. The HORizonta7:DIGital:SAMPLERate? returns the sample rate of the currently selected digital acquisition (either the Main values or the MagniVu values), depending on the ACQuire:MAGnivu setting.

This command queries the record length of the digital acquisition.

Group Horizontal

Syntax HORizontal:DIGital:RECOrdlength?

Related Commands HORizontal:DIGital:SAMPLERate?

## Examples HORIZONTAL:DIGITAL:RECORDLENGTH? might return

 :HORIZONTAL:DIGITAL:RECORDLENGTH 125000, indicating that the record length of the horizontal digital acquisition is set to 125000 .
## HORizontal:DIGital:RECOrdlength:MAGnivu? (Query Only)

NOTE. Not available on some models.

This command queries the record length of the MagniVu digital acquisition.

Group Horizontal

Syntax HORizontal:DIGital:RECOrdlength:MAGnivu?

Returns <NR1> returns the record length.

Examples HORIZONTAL:DIGITAL:RECORDLENGTH:MAGNIVU? might return :HORIZONTAL:DIGITAL:RECORDLENGTH:MAGNIVU 10880, indicating that the record length of the MagniVu digital acquisition is 10880.

## HORizontal:DIGital:RECOrdlength:MAIn? (Query Only)

This command queries the record length of the main digital acquisition. This is the non-MagniVu, long record length acquisition.

Group Horizontal

Syntax HORizontal:DIGital:RECOrdlength:MAIn?

Returns <NR1> returns the record length.

Examples HORIZONTAL:DIGITAL:RECORDLENGTH:MAIN? might return :HORIZONTAL:DIGITAL:RECORDLENGTH:MAIN 2500, indicating that the record length of the main digital acquisition is 2500 .

## HORizontal:DIGital:SAMPLERate? (Query Only)

NOTE. Not available on some models.

This command queries the sample rate of the digital acquisition.

NOTE. In the MSO/DPO5000/B Series instruments, the HORizonta 7:DIGita 1:SAMPLERate? returns the sample rate of the currently selected digital acquisition (either the Main values or the MagniVu values, depending on the ACQuire:MAGnivu setting.

Group Horizontal

Syntax HORizontal:DIGital:SAMPLERate?

Related Commands HORizontal:DIGital:RECOrdlength?

Examples HORIZONTAL:DIGITAL:SAMPLERATE? might return
:HORIZONTAL:DIGITAL:SAMPLERATE $62.5000 \mathrm{E}+6$, indicating that the sample rate of the horizontal digital acquisition is set to $62.5000 \mathrm{E}+6$.

## HORizontal:DIGital:SAMPLERate:MAGnivu? (Query Only)

NOTE. Not available on some models.

This command queries the sample rate of the MagniVu digital acquisition.

Group Horizontal

Syntax HORizontal:DIGital:SAMPLERate:MAGnivu?

Returns <NR3> specifies the sample rate.

Examples HORIZONTAL:DIGITAL:SAMPLERATE:MAGNIVU? might return :HORIZONTAL:DIGITAL:SAMPLERATE:MAGNIVU 16.5e9, indicating that the sample rate of the MagniVu digital acquisition is 16.5 e 9 .

## HORizontal:DIGital:SAMPLERate:MAIn? (Query Only)

NOTE. Not available on some models.

This command queries the sample rate of the MagniVu digital acquisition.

```
    Group Horizontal
    Syntax HORizontal:DIGital:SAMPLERate:MAIn?
    Returns <NR3> returns the sample rate.
Examples HORIZONTAL:DIGITAL:SAMPLERATE:MAIN? might return
    :HORIZONTAL:DIGITAL:SAMPLERATE:MAIN 500e6, indicating that
    the sample rate of the MagniVu digital acquisition is 500e6.
```

## HORizontal:DIVisions? (Query Only)

This query-only command returns the number of graticule divisions over which the waveform is displayed.

Group Horizontal

Syntax HORizontal:DIVisions?

Examples HORIZONTAL:DIVISIONS? might return :HORIZONTAL:DIVISIONS 10.0000, indicating that the waveform is displayed across ten division.

## HORizontal:FASTframe? (Query Only)

This query-only command returns all of the settings for the horizontal FastFrame commands.

Group Horizontal

Syntax HORizontal:FASTframe?

Examples HORIZONTAL:FASTFRAME? might return :HORIZONTAL:FASTFRAME:STATE 1;READOUTS 0;SUMFRAME NONE;MULTIPLEFRAMES:MODE OVERLAY;FRAMESTART:CH1 1;CH2 1;CH3 1;CH4 1;MATH1 1;MATH2 1;MATH3 1;MATH4 1;REF1 1;REF2 1;REF3 1;REF4 1;:HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:NUMFRAMES:CH1 2;CH2 2;CH3 2;CH4 2;MATH1 2;MATH2 2;MATH3 2;MATH4 2;REF1 2;REF2 2;REF3 2;REF4 2;:HORIZONTAL:FASTFRAME:LENGTH 500;COUNT 2;SELECTED:CH1 2;CH2 2;CH3 2;CH4 2;MATH1 2;MATH2 2;MATH3 2;MATH4 2;REF1 2;REF2 2;REF3 2;REF4 2;:HORIZONTAL:FASTFRAME:REF:SOURCE CH4;FRAME 1;:HORIZONTAL:FASTFRAME:TRACK ALL.

## HORizontal:FASTframe:COUNt

This command sets or queries FastFrame frame count. This command is equivalent to selecting Fast Frame Setup from the Horiz/Acq menu and entering a value in the Frame Count box. FastFrame captures a series of triggered acquisitions with minimal intervening time.

Group Horizontal

Syntax HORizontal:FASTframe:COUNt <NR1> HORizontal:FASTframe:COUNt?

Related Commands HORizontal:MODE:RECOrdlength

Arguments <NR1> indicates the number of frames to acquire.

Examples HORIZONTAL: FASTFRAME:COUNT 2 sets up FastFrame mode to acquire two frames (segments) of data.

HORIZONTAL: FASTFRAME:COUNT? might return :HORIZONTAL: FASTFRAME:COUNT 4, indicating that FastFrame mode is currently set to acquire 4 frames of data.

## HORizontal:FASTframe:MAXFRames? (Query Only)

This query only command returns the maximum number of FastFrame frames which can be acquired at the current frame length.

Group Horizontal

Syntax HORizontal:FASTframe:MAXFRames?

Examples hORIZONTAL:FASTFRAME:MAXFRAMES? might return :HORIZONTAL:
FASTFRAME: MAXFRAMES 3 , indicating that the maximum number of FastFrame frames which can be acquired at the current frame length is 3 .

## HORizontal:FASTframe:MULtipleframes:FRAMESTart:<wfm>

This command sets or queries the start frame number on the specified waveform for the FastFrame multiple frames feature. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<x>$, and $\operatorname{REF}<x>$. The value of $x$ can be an integer ranging from 1 through 4. The multiple frames feature supports displaying multiple frames in an overlaid manner.

Group Horizontal

Syntax HORizontal:FASTframe:MULtipleframes:FRAMESTart:<wfm> <NR1> HORizontal : FASTframe:MULtipleframes: FRAMESTart: <wfm>?

Related Commands

HORizontal:FASTframe:MULtipleframes:NUMFRames:<wfm>, HORizontal: FASTframe:MULtipleframes:MODe, HORizontal:FASTframe:COUNt

Arguments <NR1> specifies the start frame number on the specified waveform.

Examples HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:FRAMESTART:CH1 3 sets the start frame number to frame 3 on Channel 1.

HORIZONTAL: FASTFRAME:MULTIPLEFRAMES: FRAMESTART:CH1? might return : HORIZONTAL:FASTFRAME:MULTIFRAMES:FRAMESTART:CH1 3, indicating that the start frame number is frame 3 for Channel 1.

## HORizontal:FASTframe:MULtipleframes:MODe

This command sets or queries the mode for the FastFrame multiple frames feature. This feature displays multiple frames in an overlaid manner.

Group Horizontal

Syntax HORizontal:FASTframe:MULtipleframes:MODe
\{OFF|OVER1ay|ONLYOVER1ay\}
HORizontal:FASTframe:MULtipleframes:MODe?

Related Commands
HORizontal:FASTframe:MULtipleframes:FRAMESTart:<wfm>, HORizontal:FASTframe:MULtipleframes:NUMFRames:<wfm>, HORizontal:FASTframe:COUNt

Arguments OFF turns off the multiple frames mode.
OVER 1 ay sets the multiple frames mode to overlay.

Examples HORIZONTAL: FASTFRAME:MULTIPLEFRAMES:MODE OFF turns off the multiple frames mode.

HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:MODE? might return :HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:MODE OFF, indicating that the multiple frames mode is off.

## HORizontal:FASTframe:MULtipleframes:NUMFRames:<wfm>

This command sets or queries the number of frames on the specified waveform for the FastFrame multiple frames feature. The multiple frames feature supports displaying multiple frames in an overlaid manner.

Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$ and $\mathrm{REF}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4.

Group Horizontal

Syntax HORizontal:FASTframe:MULtipleframes:NUMFRames:<wfm> <NR1>
HORizontal:FASTframe:MULtipleframes:NUMFRames:<wfm>?

Related Commands HORizontal:FASTframe:MULtipleframes:FRAMESTart:<wfm>, HORizontal: FASTframe:MULtipleframes:MODe, HORizontal:FASTframe:COUNt

Arguments <NR1> represents the number of frames on the specified waveform.

Examples HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:NUMFRAMES:CH1 3 sets the number of frames to 3 on Channel 1.

HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:NUMFRAMES:CH1? might return :HORIZONTAL:FASTFRAME:MULTIPLEFRAMES:NUMFRAMES:CH1 1, indicating that the number of frames on Channel 1 is 3 .

## HORizontal:FASTframe:REF:FRAme

This command sets or queries the FastFrame reference frame number. The Reference Frame number is used to calculate time differences for each frame and displays those differences in the graticule. This command is equivalent to selecting FastFrame Setup in the Horiz/Acq menu and entering a value in the Time Stamps/Frame box.

Group Horizontal

Syntax HORizontal:FASTframe:REF:FRAme <NR1> HORizontal:FASTframe:REF:FRAme?

Related Commands HORizontal:FASTframe:REF:SOUrce, HORizontal:FASTframe: TIMEStamp:DELTa:<wfm>?, HORizontal:FASTframe:TIMEStamp:REF?, HORizontal:FASTframe:TRACk

Arguments <NR1> specifies the FastFrame reference frame.

Examples HORIZONTAL:FASTFRAME:REF:FRAME 2 sets the FastFrame reference frame to 2.

HORIZONTAL:FASTFRAME:REF:FRAME? might return : HORIZONTAL: FASTFRAME:REF:FRAME 3, indicating that the FastFrame reference frame is currently set to 3 .

## HORizontal:FASTframe:REF:SOUrce

This command sets or queries FastFrame Reference waveform source. This is equivalent to selecting FastFrame Setup from the Horiz/Acq menu and choosing the reference source.

Group Horizontal

Syntax HORizontal:FASTframe:REF:SOUrce <wfm> HORizontal:FASTframe:REF:SOUrce?

Related Commands HORizontal:FASTframe:REF:FRAme, HORizontal:FASTframe:
TIMEStamp:DELTa:<wfm>?, HORizontal:FASTframe:TIMEStamp:REF?, HORizontal:FASTframe:TRACk

Arguments <wfm> specifies the FastFrame Reference waveform source. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$ and MATH $<\mathrm{x}>$ The x variable can be expressed as an integer ranging from 1 through 4.

Examples HORIZONTAL:FASTFRAME:REF: SOURCE CH2 sets the horizontal FastFrame waveform reference source to Channel 2.

HORIZONTAL:FASTFRAME:REF:SOURCE? might return :HORIZONTAL:FASTFRAME:REF:SOURCE CH2, indicating that the FastFrame waveform source is currently set to Channel 2.

## HORizontal:FASTframe:SELECTED:CH<x>

This command sets or queries the FastFrame selected frame number on the specified waveform.

Group Horizontal

Syntax HORizontal:FASTframe:SELECTED:CH<x> <NRF> HORizontal:FASTframe:SELECTED: CH<x>?

Arguments <NRF> is the selected frame number.

$$
\begin{array}{ll}
\text { Examples } & \text { HORIZONTAL: FASTFRAME:SELECTED:CH1 } 5 \text { selects frame } 5 \text { on Channel } 1 . \\
& \text { HORIZONTAL:FASTFRAME:SELECTED:CH1? might return } \\
& \text { :HORIZONTAL:FASTFRAME:SELECTED:CH1 } 5 \text {, indicating frame } 5 \\
& \text { on Channel } 1 \text { is selected. }
\end{array}
$$

## HORizontal:FASTframe:SELECTED:MATH<x>

This command sets or queries the FastFrame selected frame number on the specified waveform.

Group Horizontal

Syntax HORizontal:FASTframe:SELECTED:MATH<x> <NRF> HORizontal:FASTframe:SELECTED:MATH<x>?

Arguments <NRF> is the selected frame number.

Examples HORIZONTAL:FASTFRAME:SELECTED:MATH2 4 selects frame 4 on Math 2 waveform.

HORIZONTAL: FASTFRAME: SELECTED:MATH1? might return :HORIZONTAL: FASTFRAME:SELECTED:MATH1 5, indicating that frame 5 on Math 1 waveform is selected.

## HORizontal:FASTframe:SELECTED:REF<x>

This command sets or queries the FastFrame selected frame number on the specified waveform.

Group Horizontal

Syntax HORizontal:FASTframe:SELECTED:REF<x> <NRF> HORizontal:FASTframe:SELECTED:REF<x>?

Arguments <NRF> is the selected frame number.

Examples HORIZONTAL:FASTFRAME:SELECTED:REF1 1 selects frame 1 on Reference 1 waveform.

HORIZONTAL:FASTFRAME:SELECTED:REF1? might return : HORIZONTAL:FASTFRAME:SELECTED:REF1 25, indicating frame 25 on Reference 1 waveform is the selected frame.

## HORizontal:FASTframe:SELECTED:SOUrce

This command sets or queries the FastFrame source waveform. This is equivalent to selecting FastFrame Setup from the Horiz/Acq menu, and then choosing the waveform source. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$ and $\mathrm{MATH}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4.

Group Horizontal

Syntax HORizontal:FASTframe:SELECTED:SOUrce <NR1> HORizontal:FASTframe:SELECTED:SOUrce?

Related Commands HORizontal:FASTframe:TRACk, HORizontal:FASTframe:TIMEStamp:DELTa: <wfm>?, HORizontal:FASTframe:TIMEStamp:REF?

Arguments <NR1> specifies the selected frame number on the specified waveform.

Examples HORIZONTAL:FASTFRAME:SELECTED:SOURCE CH2 sets the FastFrame source to Channel 2.

HORIZONTAL:FASTFRAME:SELECTED:SOURCE? might return :HORIZONTAL:FASTFRAME:SELECTED:SOURCE CH1, indicating that the selected source is Channel 1.

## HORizontal:FASTframe:SEQuence

This command sets or queries the FastFrame single-sequence mode stop condition.

Group Horizontal

Syntax HORizontal:FASTframe:SEQuence \{FIRst|LAST\}
HORizontal:FASTframe:SEQuence?

Arguments FIRst sets single sequence to stop after n frames.
LAST sets single sequence to stop manually.

Examples HORIZONTAL:FASTFRAME:SEQUENCE First sets single-sequence mode to stop after n frames.

HORIZONTAL:FASTFRAME:SEQUENCE? might return
:HORIZONTAL:FASTFRAME:SEQUENCE LAST, indicating the FastFrame single-sequence mode is stop manually.

## HORizontal:FASTframe:SINGLEFramemath

This command sets or queries FastFrame single frame math.

Group Horizontal

Syntax HORizontal:FASTframe:SINGLEFramemath \{<NR1>|OFF|ON\} HORizontal:FASTframe:SINGLEFramemath?

Arguments <NR1> = 0 disables the function; any other value enables it. OFF disables the function. ON enables the function.

Examples HORizontal:FASTframe:SINGLEFramemath ON turns single frame math on.
HORizonta1:FASTframe:SINGLEFramemath? might return :HORIZONTAL:FASTFRAME:SINGLEFRAMEMATH 0 , indicating that single frame math is off.

## HORizontal:FASTframe:SIXteenbit

This command sets or queries FastFrame sixteen bit.

Group Horizontal

Syntax HORizontal:FASTframe:SIXteenbit \{<NR1>|OFF|ON\} HORizontal: FASTframe:SIXteenbit?

Arguments <NR1> = 0 disables the function; any other value enables it.
OFF disables the function. When OFF, fastframe data is 8 bit.
ON enables the function. When ON and when the summary frame is average, the data for the averaged summary frame is 16 bit.

Examples HORizontal:FASTframe:SIXteenbit 0 disables FastFrame sixteen bit.
HORizontal:FASTframe:SIXteenbit? might return :HORIZONTAL:FASTFRAME:SIXTEENBIT 1, indicating that FastFrame sixteen bit is on.

## HORizontal:FASTframe:STATE

This command sets or queries the state of FastFrame acquisition. This is equivalent to setting FastFrame to On in the FastFrame Setup menu. FastFrame lets users capture a series of triggered acquisitions with minimal time between them.

The digitizing instrument in FastFrame mode is ready to accept a continuous burst of triggers 400 ms after the controller sends the ACQuire:STATE RUN command.

Group Horizontal

Syntax HORizontal:FASTframe:STATE $\{<N R 1>|O N| O F F\}$ HORizontal:FASTframe: STATE?

## Related Commands ACQuire:STATE

Arguments <NR1> = 0 turns off horizontal FastFrame; any other value turns on horizontal FastFrame.
<ON> turns on horizontal FastFrame.
<OFF> turns off horizontal FastFrame.

Examples HORIZONTAL:FASTFRAME: STATE ON turns on horizontal FastFrame.
HORIZONTAL:FASTFRAME:STATE? might return
: HORIZONTAL: FASTFRAME:STATE 0, indicating that the current state of FastFrame is off.

## HORizontal:FASTframe:SUMFrame

This command sets or queries the summary frame mode. When ENVelope is selected, the last frame in a FastFrame acquisition is an envelope of all the prior frames in the acquisition. When AVErage is selected, the last frame is replaced with a frame that is the computed average of all the prior frames in the acquisition. For the summary frame control to be active, the number of frames must be two or greater.

Group Horizontal

Syntax HORizontal:FASTframe:SUMFrame \{NONe|AVErage|ENVelope\} HORizontal:FASTframe: SUMFrame?

Arguments NONE turns off the summary mode for FastFrame. This is the default setting.
AVErage argument displays the last frame in a FastFrame acquisition as a frame that is the computed average of all the prior frames in the acquisition.

ENVelope argument displays the last frame in a FastFrame acquisition as an envelope of all the prior frames in the acquisition.

Examples HORIZONTAL:FASTFRAME: SUMFRAME NONE turns off the summary frame feature. HORIZONTAL:FASTFRAME:SUMFRAME? might return
:HORIZONTAL: FASTFRAME: SUMFRAME AVERAGE, indicating that the summary mode for FastFRame is set to AVERAGE and will display the last frame in the acquisition as the average of all the prior frames in the acquisition.

## HORizontal:FASTframe:TIMEStamp:ALL:<wfm>? (Query Only)

This query-only command returns the frame number and time stamp for each frame between requested frames, inclusive, within the specified waveform. Argument order is unimportant. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$ and $R E F<x>$. The $x$ variable can be expressed as an integer ranging from 1 through 4.

The format of the output is as follows:

## DD MON YYYY HH:MM:SS.xxx xxx xxx xxx

- DD MON YYYY is day, month, and year
- HH:MM:SS is hours, minutes, and seconds
- . xxx xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizontal:FASTframe:TIMEStamp:ALL:<wfm>? <NR1>, <NR1>

Arguments <NR1> specifies the selected "from" frame number within the specified waveform. <NR1> specifies the selected "to" frame number within the specified waveform.

Examples HORIZONTAL:FASTFRAME:TIMESTAMP:ALL:CH2? 4,1 might return :HORIZONTAL:FASTFRAME:TIMESTAMP:ALL:CH1 4,1,"02 Mar 2000 20:10:54.542 037272620 " This is the list of time stamps from frame 1 through frame 4 on Channel 1.

## HORizontal:FASTframe:TIMEStamp:BETWeen:<wfm>? (Query Only)

This query-only command returns the relative trigger for the delta time between the specified frames, within the specified waveform. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$ and $\mathrm{REF}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4.

The format of the delta time output is as follows:

## HH:MM:SS.xxx xxx xxx xxx

- HH:MM:SS is hours, minutes, and seconds
- . xxx xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizonta1:FASTframe:TIMEStamp:BETWeen:<wfm>? <NR1>, <NR1>

Arguments <NR1> specifies the selected "from" frame number within the specified waveform. <NR1> specifies the selected "to" frame number within the specified waveform.

Examples HORIZONTAL:FASTFRAME:TIMESTAMP:BETWEEN:CH1? 5,2 might return :HORIZONTAL:FASTFRAME:TIMESTAMP:BETWEEN:CH1 5,2,"00:00:00.010 000540 624". This is the delta of Channel 1's Time Stamp frame 5 - Time Stamp frame 2 (TS[5]-TS[2]).

## HORizontal:FASTframe:TIMEStamp:DELTa:<wfm>? (Query Only)

This query-only command returns the relative time between the triggers of the FastFrame Selected and the FastFrame Reference, within the specified waveform. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$, and $\mathrm{REF}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4.

The format of the output is as follows:
HH:MM:SS.xxx xxx xxx xxx

- HH:MM:SS is hours, minutes, and seconds
- . xxx xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizontal:FASTframe:TIMEStamp:DELTa:<wfm>?

Examples horizontal:FASTRAME:TIMESTAMP:DELTA:CH1? might return :HORIZONTAL:FASTFRAME:TIMESTAMP:DELTA:CH1 "00:00:00.006 000 306 556" This is the delta time stamp of FastFrame Selected Frame on Channel 1 - FastFrame Reference Frame (TS[C1 Selected]-TS[Reference]).

## HORizontal:FASTframe:TIMEStamp:FRAMe:<wfm>? (Query Only)

This query-only command returns the absolute trigger date and time for the specified frame and waveform. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$ and $\operatorname{REF}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4 .

The format of the output is as follows:
DD MON YYYY HH:MM:SS.xxx xxx xxx xxx

- DD MON YYYY is day, month, and year
- HH:MM:SS is hours, minutes, and seconds
- . xxx xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizontal:FASTframe:TIMEStamp:FRAMe:<wfm>? <NR1>

Arguments <NR1> is the frame number for which the timestamp will be returned on the specified waveform.

```
Examples HORIZONTAL:FASTFRAME:TIMESTAMP:FRAME:CH1? 10 might return
:HORIZONTAL:FASTFRAME:TIMESTAMP:FRAME:CH1 10,"O2 Mar 2000
20:10:54.536 036 928 432" which is the time stamp of Channel 1, frame 10.
```

## HORizontal:FASTframe:TIMEStamp:REF? (Query Only)

This query-only command returns the absolute trigger date and time for FastFrame reference.

The format of the output is as follows:
DD MON YYYY HH:MM:SS.xxx xxx xxx xxx

- DD MON YYYY is day, month, and year
- HH:MM:SS is hours, minutes, and seconds
- . xxx xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizontal:FASTframe:TIMEStamp:REF?

Related Commands HORizontal:FASTframe:REF:FRAme, HORizontal:FASTframe:REF:SOUrce
$\begin{array}{ll}\text { Examples } & \text { HORIZONTAL:FASTFRAME:TIMESTAMP:REF? might return } \\ & \text { :HORIZONTAL:FASTFRAME:TIMESTAMP:REF "02 Mar 2000 } \\ & \text { 20:10:54.533 } 036838 \text { 784". This is the time stamp of FastFrame Reference. }\end{array}$

## HORizontal:FASTframe:TIMEStamp:SELECTED:<wfm>? (Query Only)

This query-only command returns the absolute trigger date and time for the FastFrame Selected, within the specified waveform. Valid waveforms include $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$ and $\mathrm{REF}<\mathrm{x}>$. The x variable can be expressed as an integer ranging from 1 through 4.

The format of the output is as follows:
DD MON YYYY HH:MM:SS.xxx xxx xxx xxx

- DD MON YYYY is day, month, and year
- HH:MM:SS is hours, minutes, and seconds
- . $x x x$ xxx xxx xxx is fractions of a second to picoseconds

Group Horizontal

Syntax HORizontal:FASTframe:TIMEStamp:SELECTED:<wfm>?

Related Commands HORizontal:FASTframe:SELECTED:SOUrce

Examples HORIZONTAL:FASTFRAME:TIMESTAMP:SELECTED:REF1? might return :HORIZONTAL:FASTFRAME:TIMESTAMP:SELECTED:REF1 "02 MAR 2000 20:10:54:539 037145 340'. This is the time stamp of FastFrame Selected on Reference 1 waveform.

## HORizontal:FASTframe:TRACk

This command sets up or queries the state of FastFrame tracking feature. This command is equivalent to selecting FastFrame Setup from the Horiz/Acq menu and then clicking the desired Frame Tracking state.

When FastFrame Track is set to "live", the channel and math waveforms are locked together. Adjusting a channel waveform also adjusts a related math waveform. All reference waveforms are also locked together but they are separate from channel and math waveforms.

For example, when you set the Selected Frame Source Ch1 to Frame 3, then Selected Frame Ch2, Ch3, Ch4, Math1, Math2, Math3 and Math4 are also set to Frame 3.

When you set the Selected Frame Source Ref1 to Frame 2, then Selected Frame Ref2, Ref3 and Ref4 are also set to Frame 2. If the Frame Tracking is set to Live, changing Selected Frame Ch1 will not affect the Selected Frame Ref1 frame of the Reference Frame setting.

When FastFrame Track is set to "all", the channel, math and reference waveforms are locked together. Adjusting a channel waveform also adjusts the related math and reference waveforms.

For example, when you set the Selected Frame Source Ch1 to Frame 3, then Selected Frame Ch2, Ch3, Ch4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3 and Ref4 are also set to Frame 3.

Group Horizontal

Syntax HORizontal:FASTframe:TRACk \{LIVE|ALL\}
HORizontal:FASTframe:TRACk?

Related Commands HORizontal:FASTframe:REF:FRAme, HORizontal:FASTframe:REF:SOUrce, HORizontal:FASTframe:SELECTED:SOUrce

Arguments LIVE sets FastFrame Track to Live.
ALL sets FastFrame Track to All.

Examples HORIZONTAL: FASTFRAME:TRACK LIVE sets FastFrame Track to live.
HORIZONTAL:FASTFRAME:TRACK? might return
:HORIZONTAL:FASTFRAME:TRACK ALL, indicating that all FastFrame Selected Frames and the FastFrame Reference will be locked together.

## HORizontal:FASTframe:XZEro:ALL:CH<x>? (Query Only)

This command queries the time from the trigger to the trigger sample of the specified frames on the specified channel.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:ALL:CH<x>? <NR1>,<NR1>

Arguments <NR1> specifies the first and last frame of a range of frames.

Examples HORIZONTAL:FASTFRAME:XZERO:ALL:CH1? 1,4 might return :HORIZONTAL:FASTFRAME:XZERO:ALL:CH1 1,4,"1:
2.5265E-009","2: 3.9010e-010","3: 3.8285E-009","4: $1.3237 \mathrm{E}-009$ ", giving the first 4 XZERO times for Channel 1.

## HORizontal:FASTframe:XZEro:ALL:REF<x>? (Query Only)

This command queries the time from the trigger to the trigger sample of the specified frames on the specified reference.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:ALL:REF<x>? <NR1>,<NR1>

Arguments <NR1> specifies the first and last frame of a range of frames.

```
Examples HORIZONTAL:FASTFRAME:XZERO:ALL:REF1? 1,3 might
return :HORIZONTAL:FASTFRAME:XZERO:ALL:REF1 1,3,"1:
2.5265E-009","2: 3.9010E-010","3: 3.8285E-009", giving the first
3XZERO times for Reference 1.
```

## HORizontal:FASTframe:XZEro:FRAme:CH<x>? (Query Only)

This command queries the time from the trigger to the trigger sample of the specified frame on the specified channel.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:FRAme:CH<x>? <NR1>

Arguments <NR1> specifies a frame on the specified channel.

Examples horizontal:FASTFRAME:XZERO:FRAME:CH1? 3 might return :HORIZONTAL:FASTFRAME:XZERO:FRAME:CH1 3,3.8285E-9, indicating the time from the trigger to the start of frame 3 on Channel 1 is 3.83 ns .

## HORizontal:FASTframe:XZEro:FRAme:REF<x>? (Query Only)

This command queries the time from the trigger to the trigger sample of the specified frame on the specified reference.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:FRAme:REF<x>? <NR1>

Arguments <NR1> specifies a frame on the specified reference.

Examples horizontal:FASTFRAME:XZERO:FRAME:REF1? 3 might return :HORIZONTAL:FASTFRAME:XZERO:FRAME:REF1 3,3.8285E-9, indicating the time from the trigger to the start of frame 3 on Reference 1 is 3.83 ns .

## HORizontal:FASTframe:XZEro:REF? (Query Only)

This command sets or queries the time from the trigger to the trigger sample on the reference waveform.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:REF?

Examples horizontal:FASTFRAME:XZERO:REF1? might return :HORIZONTAL:FASTFRAME:XZERO:REF 35.1000E-12, indicating that the Reference 1 waveform trigger sample occurred 35.1 ps after the trigger.

## HORizontal:FASTframe:XZEro:SELECTED:CH<x>? (Query Only)

This command sets or queries the time from the trigger to the trigger sample on the selected channel. $\mathrm{CH}<\mathrm{x}>$ can be $\mathrm{CH} 1, \mathrm{CH} 2, \mathrm{CH} 3$, or CH 4 .

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:SELECTED:CH<x>?

Examples HORIZONTAL:FASTFRAME:XZERO:SELECTED:CH1? might return :HORIZONTAL:FASTFRAME:XZERO:SELECTED:CH1 35.1000E-12, indicating that the selected Channel 1 trigger sample occurred 35.1 ps after the trigger.

## HORizontal:FASTframe:XZEro:SELECTED:REF<x>? (Query Only)

This command sets or queries the time from the trigger to the trigger sample on the selected reference waveform. $\mathrm{REF}<\mathrm{x}>$ can be REF1, REF2, REF3, or REF4.

Group Horizontal

Syntax HORizontal:FASTframe:XZEro:SELECTED:REF<x>?

Examples hORIZONTAL:FASTFRAME:XZERO:SELECTED:REF1? might return :HORIZONTAL:FASTFRAME:XZERO:SELECTED:REF1 35.1000E-12, indicating that the selected Reference 1 waveform trigger sample occurred 35.1 ps after the trigger.

## HORizontal:MAIn? (Query Only)

This query-only command returns the time per division of the time base. This command is equivalent to selecting Position/Scale from the Horiz/Acq menu.

Group Horizontal

Syntax HORizontal:MAIn?

Related Commands HORizontal:MODE:SCAle

Examples HORIZONTAL:MAIN? might return :HORIZONTAL:MAIN:INTERPRATIO 1.0000;SCALE 40.0000E-9;POSITION 50.0000;SAMPLERATE 1.2500E+9;UNITS:STRING "s".

## HORizontal[:MAIn]:DELay:MODe

This command sets or queries the time base trigger delay mode. This command is equivalent to choosing Delay Mode On from the Horiz/Acq menu.

Group Horizontal

Syntax HORizontal[:MAIn]:DELay:MODe \{<NR1>|ON|OFF\}
HORizontal[:MAIn]:DELay:MODe?

Related Commands HORizontal[:MAIn]:DELay:TIMe

Arguments <NR1> = 0 disables the time base trigger delay mode, any other value enables the time base trigger delay mode.

ON enables the time base trigger delay mode.
OFF disables the time base trigger delay mode.

Examples HORIZONTAL:DELAY:MODE ON enables the time base trigger delay mode.
HORIZONTAL:DELAY:MODE? might return :HORIZONTAL:DELAY:MODE 1, indicating that the time base trigger delay mode is currently enabled.

## HORizontal[:MAIn]:DELay:POSition

This command sets or queries the time base position when Horizontal Delay Mode is turned on. This command is equivalent to selecting Horizontal/Acquisition Setup from the Horiz/Acq menu and then entering a Ref Point value.

Group Horizontal

Syntax HORizontal[:MAIn]:DELay:POSition <NR3> HORizontal[:MAIn]:DELay:POSition?

Related Commands HORizontal[:MAIn]:DELay:TIMe

Arguments $<N R 3>$ is from 0 to $\approx 100$ and is the percentage of the waveform that is displayed left of the center graticule.

NOTE. The upper limit of the waveform position is slightly limited by a value that is determined from the record length (upper limit $=100-1$ record length).

Examples HORIZONTAL:DELAY: POSITION $5 \mathrm{E}+1$ sets the time base trigger delay position to 50 percent.

HORIZONTAL:DELAY:POSITION? might return :HORIZONTAL:DELAY:POSITION $5.0000 \mathrm{E}+01$, indicating that the time base trigger delay position is currently set to 50 percent.

## HORizontal[:MAIn]:DELay:TIMe

This command sets or queries the time base trigger delay time. This command is equivalent to selecting Position/Scale from the Horiz/Acq menu and choosing a value for Horiz Delay.

Group Horizontal

Syntax HORizontal[:MAIn]:DELay:TIMe <NR3> HORizontal[:MAIn]:DELay:TIMe?

Related Commands HORizontal[:MAIn]:DELay:MODe, HORizontal[:MAIn]:DELay:POSition

Arguments <NR3> specifies the time base trigger delay time setting, typically represented in seconds.

Examples HORIZONTAL:DELAY:TIME $5.0 \mathrm{E}-3$ sets the time base trigger delay time to 5 ms .
HORIZONTAL: DELAY:TIME? might return :HORIZONTAL:DELAY:TIME $5.0000 \mathrm{E}-05$, indicating that the time delay setting is $5 \mu \mathrm{~s}$.

## HORizontal:MAIn:INTERPRatio? (Query Only)

This query-only command returns the Horizontal Main time base interpolation ratio. The ratio is useful for calculating the maximum sampling rate when users request sampling rates that are faster than the maximum rate specified by the acquisition hardware.

The default maximum sampling rate as specified by the acquisition hardware is 1 .
An interpolation ratio other than 1 means that displayed and retrieved waveforms contain additional points that are derived through interpolation. At such times, the retrieved waveform data is actually 16 -bit data. You should set the data width accordingly.

Group Horizontal

Syntax HORizontal:MAIn:INTERPRatio?

Examples HORIZONTAL:MAIN:INTERPRATIO? might return
:HORIZONTAL:MAIN:INTERPRATIO 10.0.

## HORizontal[:MAIn]:POSition

Group Horizontal

Syntax HORizontal[:MAIn]:POSition <NR3> HORizontal[:MAIn]:POSition?

Related Commands HORizontal[:MAIn]:DELay:MODe

Arguments <NR3> argument can range from 0 to $\approx 100$ and is the percentage of the waveform that is displayed left of the center graticule.

NOTE. The upper limit of the waveform position is slightly limited by a value that is determined from the record length (upper limit $=100-1$ record length).

Examples HORIZONTAL:MAIN:POSITION 5.000E +01 sets the horizontal position of the waveform such that 10 percent of the waveform is to the left of center of the screen.

HORIZONTAL:MAIN: POSITION? might return :HORIZONTAL:MAIN: POSITION $5.0000 \mathrm{E}+01$, indicating that the horizontal position of the waveform on the screen is currently set to 50 percent.

## HORizontal:MAln:UNIts

This command sets or queries the units for the horizontal time base. It is equivalent to setting the HORizontal:MAIn:UNIts:STRing.

Group Horizontal<br>Syntax HORizontal:MAIn:UNIts <QString> HORizontal:MAIn:UNIts?<br>Related Commands HORizontal:MAIn:UNIts:STRing

Arguments <QString> is the time base units string.

Examples HORIZONTAL:MAIN:UNITS "LUM" sets the time base multiplier to 5.5, the units to lumens and the time base units offset to 2.9.

HORIZONTAL:MAIN:UNITS? might return
:HORIZONTAL:MAIN:UNITS:STRING "lum".

## HORizontal:MAIn:UNIts:STRing

This command sets or queries the units string for the horizontal time base.

Group Horizontal

Syntax HORizontal:MAIn:UNIts:STRing <QString>
HORizontal:MAIn:UNIts:STRing?

## Related Commands

Arguments

Examples

HORizontal:MODE

Group Horizontal

Syntax HORizontal:MODE \{AUTO|CONStant|MANual\}
HORizontal:MODE?

## Related Commands

Arguments
HORizontal:MODE:AUTO:LIMITrecordlen, HORizontal:MODE:
RECOrdlength, HORizontal:MODE:SAMPLERate, HORizontal:MODE:SCAle

AUTO selects the automatic horizontal model. Auto mode attempts to keep record length constant as you change the time per division setting. Record length is read only.

CONSTANT selects the constant horizontal model. Constant mode attempts to keep sample rate constant as you change the time per division setting. Record length is read only.

MANUAL selects the manual horizontal model. Manual mode lets you change sample mode and record length. Time per division or Horizontal scale is read only.

## Examples

HORIZONTAL: MODE AUTO sets the horizontal mode to auto.
HORIZONTAL:MODE? might return :HORIZONTAL:MODE MANUAL, indicating that the horizontal mode is manual.

## HORizontal:MODE:AUTO:LIMITrecordlen

This command sets or queries the record length limit used by the auto horizontal mode.

Group Horizontal

Syntax HORizontal:MODE:AUTO:LIMITrecordlen <NR1> HORizontal:MODE:AUTO:LIMITrecordlen?

Arguments <NR1> is the record length limit in samples.

Examples HORIZONTAL:MODE:AUTO:LIMITRECORDLEN 1000 sets the record length limit to 1000 samples.

HORIZONTAL:MODE:AUTO:LIMITRECORDLEN? might return :HORIZONTAL:MODE:AUTO:LIMITRECORDLEN 1000000, indicating that the record length limit is set to $1,000,000$ samples.

## HORizontal:MODE:RECOrdlength

This command sets or queries the record length.

Group Horizontal

Syntax HORizontal:MODE:RECOrdlength <NR1> HORizontal:MODE:RECOrdlength?

Arguments <NR1> is the record length in samples. Manual mode lets you change the record length, while the record length is read only for Auto and Constant mode.

Examples HORIZONTAL:MODE:RECORDLENGTH 1000 sets the record length to 1000 samples.

HORIZONTAL:MODE:RECORDLENGTH? might return
:HORIZONTAL:MODE:RECORDLENGTH 1000000, indicating that the record length is set to $1,000,000$ samples

## HORizontal:MODE:SAMPLERate

This command sets or queries the sample rate.

Group Horizontal

Syntax HORizontal:MODE:SAMPLERate <NR1> HORizontal:MODE:SAMPLERate?

Arguments <NR1> is the sample rate in samples per second.
$\begin{array}{ll}\text { Examples } & \text { HORIZONTAL:MODE:SAMPLERATE } 1 e 6 \text { sets the sample rate to } 1 \text { million samples } \\ \text { per second. } \\ & \text { HORIZONTAL:MODE:SAMPLERATE? might return } \\ & \text { :HORIZONTAL:MODE:SAMPLERATE } 5.0000 \mathrm{E}+6 \text {, indicating that the sample rate } \\ & \text { is set to } 5 \text { million samples per second. }\end{array}$

## HORizontal:MODE:SCAle

This command sets or queries the horizontal scale.

Group Horizontal

Syntax HORizontal:MODE:SCAle <NR1>
HORizontal:MODE:SCAle?

Arguments <NR1> is the horizontal scale in seconds per division. The horizontal scale is read only for Manual mode.

Examples HORIZONTAL:MODE:SCALE 2e-9 sets the horizontal scale to 2 ns per division.
HORIZONTAL:MODE:SCALE? might return :HORIZONTAL:MODE:SCALE $20.0000 \mathrm{E}-6$, indicating that the horizontal scale is set to $10 \mu$ s per division.

This command either positions the waveform horizontally on the display or returns its horizontal position on the display. When Horizontal Delay Mode is turned off, this command is equivalent to adjusting the HORIZONTAL POSITION knob on the front panel.

Group Horizontal

Syntax HORizonta1:POSition <NR3> HORizontal: POSition?

Related Commands HORizontal[:MAIn]:DELay:MODe

Arguments $<N R 3>$ is from 0 to $\approx 100$ and is the position of the trigger point on the screen $(0=$ left edge, $100=$ right edge).

NOTE. The upper limit of the trigger position is slightly limited by a value that is determined from the record length (upper limit $=100-1 /$ record length).

Examples HORIZONTAL: POSITION 10 sets the trigger position of the waveform such that $10 \%$ of the display is to the left of the trigger position.

HORIZONTAL: POSITION? might return : HORIZONTAL: POSITION $5.0000 \mathrm{E}+01$ indicates the trigger point displayed on the screen.

This command sets or queries the Roll Mode status. Use Roll Mode when you want to view data at very slow sweep speeds. It is useful for observing data samples on the screen as they occur. This command is equivalent to selecting Horizontal/Acquisition Setup from the Horiz/Acq menu, selecting the Acquisition tab, and setting the Roll Mode to Auto or Off.

Group Horizontal

Syntax HORizontal:ROLL \{AUTO|OFF|ON\}
HORizontal: ROLL?

Arguments AUTO enables Roll Mode, if the time/division is set appropriately.
OFF disables Roll Mode.
ON enables Roll Mode, if the time/division is set appropriately.

Examples HORIZONTAL: ROLL ON enables Roll Mode.
HORIZONTAL: ROLL? might return :HORIZONTAL: ROLL OFF, indicating that the Roll Mode is disabled.

## HORizontal:TIMEStamp:CH<x>? (Query Only)

This query returns the horizontal timebase for the channel. The channel is specified by x . The value of x can range from 1 through 4 .

Group Horizontal

Syntax HORizontal:TIMEStamp:CH<x>?

Examples HORIZONTAL:TIMESTAMP:CH1? might return :HORIZONTAL:TIMESTAMP:CH1 "timestamp not available", indicating that the timebase for the Channel 1 is not available.

## HORizontal:TIMEStamp:REF<x>? (Query Only)

This query returns the horizontal timebase for the reference waveform. The reference is specified by x . The value of x can range from 1 through 4 .

Group Horizontal

Syntax HORizontal:TIMEStamp:REF<x>?

Examples HORIZONTAL:TIMESTAMP:REF1? might return
:HORIZONTAL:TIMESTAMP:REF1 "timestamp not available", indicating that the timebase for the Reference 1 waveform is not available.

## ID? (Query Only)

This query-only command returns identifying information about the instrument and related firmware.

Group Miscellaneous

Syntax ID?

Related Commands *IDN?

Examples ID? might return :ID TEK/DPO7104,CF:91.1CT,FV:4.0.0, indicating that the instrument model number is set to TEK/DPO7104, configured format is set to CF:91.1CT, and firmware version number is set to FV:4.0.0.

## *IDN? (Query Only)

This query-only command returns the instrument identification code.

```
Group Miscellaneous
Syntax *IDN?
Related Commands ID?
Examples *IDN? might return :*IDN TEKTRONIX,DPO7104,10000001,CF:91.1CT FV:01.00.912, , indicating the instrument model number, serial number, configured number, and firmware version number.
```

## IDNMultiscope? (Query Only)

This query returns instrument data on all MultiScope instruments. If the query is not run on the master instrument, data returned indicates that the instrument is running as a StandAlone Master. DPO70000SX Series only.

Group Miscellaneous

Syntax IDNMultiscope?

Examples IDNMULTISCOPE?? might return TEKTRONIX_Mu7tiScope_[2],DP073304SX_KR100017,DPO73304SX_KR100019,CF: FV:7.1.91.

## IDNMultiscope:A? (Query Only)

This query returns the *IDN? response for the Master instrument. If the query is not run on the master instrument, data returned indicates that the instrument is running as a StandAlone Master. DPO70000SX Series only.

Group Miscellaneous

Syntax IDNMultiscope:A?

Examples IDNMULTISCOPE:A?? might return TEKTRONIX_Master,DP073304SX,KR100017,CF:91.1CT FV:7.1.91.

## IDNMultiscope:B? (Query Only)

This query returns the *IDN? response for Extension 1. If the query is not run on the master instrument, data returned indicates that the instrument is running as a StandAlone Master. DPO70000SX Series only.

Group Miscellaneous

Syntax IDNMultiscope:B?

Examples IDNMULTISCOPE:B?? might return
TEKTRONIX_Ext_1,DPO73304SX,KR100019,CF:91.1CT FV:7.1.91.

## IDNMultiscope:C? (Query Only)

This query returns the *IDN? response for Extension 2. If the query is not run on the master instrument, data returned indicates that the instrument is running as a StandAlone Master. DPO70000SX Series only.

Group Miscellaneous

Syntax IDNMultiscope:C?

Examples IDNMULTISCOPE:C?? might return TEKTRONIX_Ext_2,DPO73304Sx, KR100020,CF:91.1CT FV:7.1.91.

IDNMultiscope:D? (Query Only)
This query returns the *IDN? response for Extension 3. If the query is not run on the master instrument, data returned indicates that the instrument is running as a StandAlone Master. DPO70000SX Series only.

Group Miscellaneous

Syntax IDNMultiscope:D?

Examples IDNMULTISCOPE:D?? might return TEKTRONIX_Ext_3,DPO73304SX,KR100021,CF:91.1CT FV:7.1.91.

## LIMit? (Query Only)

This query-only command returns all settings for the Limit commands.
NOTE. The command works only if the LT Limit Test option is enabled.

```
Group Limit Test
Syntax LIMit?
Examples LIMIT? might return :LIMIT:BEEP 0;COMPARE:CH1 NONE;CH2
NONE;CH3 NONE;CH4 NONE;REF1 NONE;REF2 NONE;REF3
NONE; REF4 NONE;MATH1 NONE;MATH2 NONE;MATH3 NONE;MATH4
NONE;:LIMIT:HARDCOPY 0;STATE 0;TEMPLATE:DESTINATION
REF1;SOURCE CH2;TOLERANCE:HORIZONTAL 40.0000E-3;VERTICAL
40.0000E-3;:LIMIT:SRQ 0;STOPONVIOLATION 0;SAVEWFM
0;SAVEWFM:FILENAME "C:/TekScope/waveforms/";:LIMIT:LOG
0;EMAIL 0;HIGHLIGHTHITS 1;LOCK 1.
```

## LIMit:BEEP

This command causes the instrument to beep when the waveform data exceeds the limits set in the limit test (LIMit: STATE must be on).

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit: BEEP \{<NR1>|OFF|ON\}
LIMit:BEEP?

## Related Commands LIMit:STATE

Arguments <NR1> = 0 disables the beep; any other value enables the beep. OFF disables the beep.

ON enables the beep.

Examples LIMIT: BEEPON causes a beep when any waveform data exceeds the limits specified in the limit test.

LIMIT: BEEP? might return :LIMIT: BEEP 0, indicating that the instrument will not beep when waveform data exceeds the limits specified in the limit test.

## LIMit:COMpare (No Query Form)

This command resets the Limit Test comparison template.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit: COMpare \{RESet\}

Arguments RESet resets the Limit template to "None."

Examples LIMIT: COMPARE RESET sets the Limit template to None.

## LIMit:COMpare:CH<x>

This command sets or queries the template against which to compare the waveform acquired from the channel specified by x . The template can be a waveform saved in any of the reference locations (REF1 through REF4) or none.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

```
Syntax LIMit:COMpare:CH<x> {NONe|REF<x>}
LIMit:COMpare:CH<x>?
```

Arguments NONe turns off template testing for the channel specified by $\mathrm{CH}<\mathrm{x}>$.
REF $<x>$ selects which channel waveform to use as the template against which to compare the waveforms acquired by the specified channel ( $\mathrm{CH}<\mathrm{x}>$ ).

Examples LIMIT: COMPARE:CH1 REF1 specifies REF1 as the template waveform against which to compare waveforms acquired using Channel 1.

LIMIT:COMPARE:CH2? might return :LIMIT:COMPARE:CH2 REF4, indicating that the waveform acquired by Channel 2 is compared to the template waveform stored in REF4.

## LIMit:COMpare:MATH<x>

This command sets or queries the template against which to compare the math waveform specified by x , which can be 1 through 4 . The template can be a waveform saved in any of the reference locations (REF1 through REF4) or none.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:COMpare:MATH $<x>$ \{NONe|REF $<x>\}$
LIMit: COMpare: MATH<x>?

Arguments NONe argument turns off template testing for the math waveform specified by MATH $<x>$.

REF $<x>$ argument selects which reference waveform to use as the template against which to compare the math waveform specified by MATH $<x>$.

Examples LIMIT:COMPARE:MATH1 REF1 specifies REF1 as the template waveform against which to compare the Math 1 waveform.

LIMIT:COMPARE:MATH2? might return :LIMIT:COMPARE:MATH2 REF4, indicating that the Math 2 waveform is compared to the template waveform stored in REF4.

## LIMit:COMpare:REF<x>

This command sets or queries the template against which to compare the reference waveform specified by $x$, which can be 1 through 4 . The template can be a waveform saved in any of the reference locations (REF1 through REF4) or none.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:COMpare:REF<x> \{NONe|REF<x>\}
LIMit: COMpare:REF<x>?

Arguments NONe argument turns off template testing for the reference waveform specified by $\mathrm{REF}<\mathrm{x}>$.

REF $<x>$ argument selects which reference waveform to use as the template against which to compare the reference waveform specified by $\operatorname{REF}\langle x>$.

Examples LIMIT:COMPARE: REF2 REF1 specifies REF2 as the template waveform against which to compare Reference 1.

LIMIT:COMPARE:REF2? might return :LIMIT:COMPARE:REF2 REF4, indicating that the Reference 4 waveform is compared to the template waveform stored in REF2.

## LIMit:EMail

This command sets or queries whether an e-mail is generated when the source waveform data exceeds the limits specified for the limit test.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit: EMail \{<NR1>|OFF|ON\}
LIMit: EMail?

Arguments <NR1> = 0 disables the e-mail feature so that when the source waveform data exceeds the limits set by the limit test, an e-mail is not generated; any other value enables the e-mail feature so that when the source waveform data exceeds the
limits set by the limit test, an e-mail is generated. For queries, a 0 is returned if the e-mail feature is off; a 1 is returned if the e-mail feature is on.

OFF disables generating an e-mail when the source waveform exceeds the test limits.

ON enables generating an e-mail when the source waveform exceeds the test limits.

Examples LIMIT: EMAIL1 enables the e-mail feature so that when the source waveform data exceeds the limits set by the limit test, an e-mail is generated.
LIMIT: EMAIL? might return :LIMIT: EMAIL 0, indicating that the e-mail feature is disabled and that an e-mail will not be generated when the source waveform exceeds the limits of the limit test.

## LIMit:HARDCopy

This command sets or queries whether a hard copy operation is executed on the waveform when any waveform data exceeds the limit set in the limit test. LIMit:STATE must be set to ON for the hard copy operation to execute. The hard copy operation uses the port and prints in the format and layout specified by the HARDCopy commands.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:HARDCopy \{<NR1>|OFF|ON\}
LIMit:HARDCopy?

Related Commands HARDCopy:FILEName, HARDCopy:PORT, LIMit:STATE

Arguments <NR1> = 0 disables the hard copy operation; any other value turns on the hard copy operation for the waveform when any waveform data exceeds the limits set by the limit test. For queries, a 0 is returned if the hard copy operation is off; a 1 is returned if the hard copy operation is on.

OFF disables the hard copy operation.
ON turns on the hard copy operation for the waveform when any waveform data exceeds the limits set by the limit test.

Examples LIMIT:HARDCOPY ON specifies that the hard copy operation will occur for the waveform when any waveform data exceeds the limits specified in the limit test.

LIMIT: HARDCOPY? might return : LIMIT: HARDCOPY 0 , indicating that the hard copy operation is disabled.

## LIMit:HIGHLIGHTHits

This command sets or queries whether violation highlighting occurs when limit testing is active, and, if the RESET argument is set, clears the highlighting.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:HIGHLIGHTHits \{<NR1>|OFF|ON\}
LIMit:HIGHLIGHTHits?

Arguments <NR1> = 0 disables the violation highlighting when limit testing is active; any other value enables the violation highlighting feature when limit testing is active. For queries, a 0 is returned if the violation highlighting feature is off; a 1 is returned if the violation highlighting feature is on.

OFF disables violation highlighting when limit testing is active.
ON enables violation highlighting when limit testing is active.

Examples LIMIT:HIGHLIGHTHITS 1 enables the violation highlighting when the limit testing is active.

LIMIT:HIGHLIGHTHITS? might return :LIMIT:HIGHLIGHTHITS 0 , indicating that the violation highlighting feature is disabled.

## LIMit:HIGHLIGHTHits:RESet (No Query Form)

This command resets the hits highlighting for limit testing.
NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:HIGHLIGHTHits:RESet

Examples LIMIT:HIGHLIGHTHITS:RESET resets the violation highlighting displayed while limit testing.

## LIMit:LOCk

This command sets or queries whether vertical scaling and positioning affect both source and template for template comparison pairs.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:LOCk \{<NR1>|OFF|ON\}
LIMit:LOCk?

Arguments <NR1> = 0 disables the lock feature; any other value enables the lock feature. For queries, a 0 is returned if the lock feature is off; a 1 is returned if the lock feature is on.

OFF disables the lock feature.
ON enables the lock feature.

Examples LIMIT:LOCK ON enables the lock feature so that vertical scaling and positioning affect both the source and the template for template comparison pairs.

LIMIT:LOCK? might return :LIMIT:LOCK 0, indicating that the lock feature is disabled.

## LIMit:LOG

This command sets or queries whether a $\log$ file is saved when the source waveform data exceeds the test limits.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:LOG \{<NR1>|OFF|ON\}
LIMit:LOG?

Arguments <NR1> = 0 disables the save log file feature so that when the source waveform data exceeds the limits set by the limit test, a log file is not saved; any other value enables the save log file feature so that when the source waveform data exceeds the limits set by the limit test, a log file is saved. For queries, a 0 is returned if the save $\log$ file feature is off; a 1 is returned if the save log file feature is on.

OFF disables saving a $\log$ file when the source waveform exceeds the test limits. ON enables saving a log file when the source waveform exceeds the test limits.

## Examples

## LIMit:SAVEWFM

LIMIT: LOG 1 enables the save $\log$ file feature so that when the source waveform data exceeds the limits set by the limit test, a $\log$ file is saved.

LIMIT: LOG? might return : LIMIT: LOG 0 , indicating that the save $\log$ file feature is disabled and that a log file will not be saved when the source waveform exceeds the limits of the limit test.

This command sets or queries whether the source waveform is saved when the source waveform data exceeds the test limits.

## NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:SAVEWFM \{<NR1>|OFF|ON $\}$
LIMit:SAVEWFM?

Arguments
<NR1> = 0 disables the save waveform feature so that when the source waveform data exceeds the limits set by the limit test, the source waveform is not saved; any other value enables the save waveform feature so that when the source waveform data exceeds the limits set by the limit test, the source waveform is saved. For queries, a 0 is returned if the save waveform feature is off; a 1 is returned if the save waveform feature is on.

OFF disables saving the source waveform when it exceeds the test limits.
ON enables saving the source waveform when it exceeds the test limits.

Examples LIMIT:SAVEWFM 1 enables the save waveform feature so that when the source waveform data exceeds the limits set by the limit test, the source waveform is saved.

LIMIT:SAVEWFM? might return :LIMIT:SAVEWFM 0, indicating that the save waveform feature is disabled and that the source waveform will not be saved when it exceeds the limits of the limit test.

## LIMit:SAVEWFM:FILEName

This command sets or queries the path where waveforms or log files will be saved when the waveform data exceeds the limits set by the limit test.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:SAVEWFM:FILEName <QString> LIMit:SAVEWFM:FILEName?

Arguments <QString> argument is a string containing the path of where the waveform will be saved.

Examples LIMIT:SAVEWFM:FILENAME "C:/TekScope/waveforms" sets the path where a waveform will be saved when it exceeds the limits of the limit test.

LIMIT:SAVEWFM: FILENAME? might return : LIMIT: SAVEWFM: FILENAME "C:/TekScope/waveforms", indicating the path were the waveform will be saved when it exceeds the limits of the limit test.

## LIMit:SRQ

This command sets or queries whether a Service Request Interrupt (SRQ) is generated when the waveform data falls outside of the test limits.

## NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:SRQ \{<NR1>|OFF|ON\}
LIMit:SRQ?

Arguments <NR1> = 0 disables sending an SRQ when the waveform data falls outside of the limits set by the limit test; any other value enables generation of an SRQ when the waveform data falls outside of the limits set by the limit test. For queries, a 0 is returned if SRQ is off; a 1 is returned if the SRQ is on.

OFF disables generation of an SRQ when the waveform data falls outside of the limits set by the limit test.

ON enables generation of an SRQ when the waveform data falls outside of the limits set by the limit test. If an SRQ is generated, the instrument sends the status event "Limit testing failed."

Examples LIMIT:SRQ 1 specifies that an SRQ will be generated when the waveform data falls outside of the limits set by the limit test. If an SRQ is generated, an status event of "Limit testing failed" is output.

LIMIT:SRQ? might return :LIMIT:SRQ 0, indicating that an SRQ will not be generated when the waveform data falls outside of the limits set by the limit test.

## LIMit:STATE

This command sets limit testing on or off or queries whether limit testing is in effect.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:STATE \{<NR1>|OFF|ON\}
LIMit: STATE?

Arguments <NR1> = 0 disables the limit testing operation; any other value turns on limit testing of waveforms. For queries, a 0 is returned if limit testing is off; a 1 is returned if the limit testing is on.

OFF disables limit testing.
ON turns on limit testing of waveforms.

Examples LIMIT: STATE ON specifies that limit testing of waveforms is on.
LIMIT:STATE? might return :LIMIT:STATE 0, indicating that the limit testing of waveforms is off.

## LIMit:STATus? (Query Only)

This command queries the state of limit testing.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:STATus?

Examples LIMIT:STATUS? might return :LIMIT:STATUS PASS, indicating that the limit test is passing.

## LIMit:STOPOnviolation

This command sets or queries whether acquisitions are stopped when the waveform data exceeds the test limits.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:STOPOnviolation \{<NR1>|OFF|ON\}
LIMit:STOPOnviolation?

Arguments <NR1> = 0 disables the stop on violation feature; any other value enables the stop on violation feature so that when the waveform data exceeds the limits set by the limit test, acquisitions are stopped. For queries, a 0 is returned if the stop on violation feature is off; a 1 is returned if the stop on violation feature is on.

OFF disables the stop on violation feature.
ON enables the stop on violation feature so that when the waveform data exceeds the limits set by the limit test, acquisitions are stopped.

Examples LIMIT:STOPONVIOLATION 1 enables the stop on violation feature so that when the waveform data exceeds the limits set by the limit test, acquisitions are stopped. LIMIT: STOPONVIOLATION? might return :LIMIT:STOPONVIOLATION 0 , indicating that the stop on violation feature is disabled.

## LIMit:TEMPlate:DESTination

This command sets or queries the destination reference waveform that the LIMit:TEMPlate:STORe command will use.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:TEMPlate:DESTination \{REF1|REF2|REF3|REF4\}
LIMit:TEMPlate:DESTination?

Arguments $\quad \mathrm{REF}<\mathrm{x}>$ specifies the reference waveform destination in which the template waveform is to be stored.

Examples LIMIT:TEMPLATE:DESTINATION REF2 specifies that the template waveform referred to with the LIMit:TEMPlate:STORe command is stored as the REF2 waveform.

LIMIT:TEMPLATE:DESTINATION? might return :LIMIT:TEMPLATE: DESTINATION REF3, indicating the REF3 waveform is used to store the template waveform referred to with the LIMit:TEMPlate:STORe command.

## LIMit:TEMPlate:SOUrce

This command sets or queries the channel, math waveform, or reference waveform that the LIMit:TEMPlate:STORe command will use.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:TEMPlate:Source
\{CH1|CH2|CH3|CH4|MATH1|MATH2|MATH3|MATH4|REF1|REF2|REF3|REF4\}
LIMit:TEMPlate: Source?

Arguments $\mathrm{CH} 1-\mathrm{CH} 4$ specifies the channel used by the LIMit:TEMPlate:STORe command. MATH1-MATH4 specifies the math waveform used by the LIMit:TEMPlate:STORe command.

REF1-REF4 specifies the reference waveform used by the LIMit:TEMPlate:STORe command.

Examples LIMIT:TEMPLATE: SOURCE CH2 specifies that the template waveform for limit tests is the waveform currently acquired using Channel 2.

LIMIT:TEMPLATE:SOURCE? might return :LIMIT:TEMPLATE:SOURCE MATH3, indicating that the template waveform for limit tests is the waveform currently stored as the Math 3 waveform.

## LIMit:TEMPlate:STORe (No Query Form)

This command (no query form) saves the specified source waveform to the specified reference or file name.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:TEMPlate:STORe <wfm>, \{REF<x>|<file path>\}

Arguments <wfm> specifies the waveform that will be saved as the template. The source of the waveform can be $\mathrm{CH}<\mathrm{x}>$ (where x is 1 through 4 for four channel instruments), MATH $<x>$, or Ref $<x>$ (where $x$ is 1 through 4).
$R E F<x>$ specifies a reference location in which the template waveform will be stored. The reference waveform specified by x , which can be 1 through 4 .
<file path> specifies a file path where the template waveform will be stored. This argument is a quoted string.

Examples LIMIT:TEMPLATE:STORE CH3,REF1 creates a template reference waveform, REF1, using Channel 3 as its source.

LIMIT:TEMPLATE:STORE CH1,"TEMPLATE.WFM" creates a template reference waveform, template.wfm, using Channel 1 as the source.

## LIMit:TEMPlate:TOLerance:HORizontal

This command sets or queries the amount in units of horizontal divisions, by which the source waveform is varied horizontally when creating the destination waveform.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:TEMPlate:TOLerance:HORizontal <NR3>
LIMit:TEMPlate:TOLerance:HORizontal?

Arguments <NR3> is the amount in horizontal divisions, by which the current source waveform is allowed to deviate from the template waveform without exceeding the limits set in the limit test. The range is 0 to 5 divisions.

Examples LIMIT:TEMPLATE:TOLERANCE:HORIZONTAL 1.0 specifies that the current waveform is close enough to the template waveform if it is within $\pm 1.0$ horizontal division.

LIMIT:TEMPLATE:TOLERANCE:HORIZONTAL? might return
:LIMIT:TEMPLATE:TOLERANCE:HORIZONTAL 2.0, indicating that the current waveform is close enough to the template waveform if it is within $\pm 2.0$ horizontal divisions.

## LIMit:TEMPlate:TOLerance:VERTical

This command sets or queries the amount in units of vertical divisions, by which the source waveform is varied vertically when creating the destination waveform.

NOTE. The command works only if the LT Limit Test option is enabled.

Group Limit Test

Syntax LIMit:TEMP7ate:TOLerance:VERTical <NR3>
LIMit:TEMPlate:TOLerance:VERTical?

Arguments <NR3> is the amount in vertical divisions, by which the current source waveform is allowed to deviate from the template waveform without exceeding the limits set in the limit test. The range is 0 to 5 divisions.

Examples LIMIT:TEMPLATE:TOLERANCE:VERTICAL 1.0 specifies that the current waveform is close enough to the template waveform if it is within $\pm 1.0$ vertical division.

LIMIT:TEMPLATE:TOLERANCE:VERTICAL? might return
:LIMIT:TEMPLATE:TOLERANCE:VERTICAL 2.0, indicating that the current waveform is close enough to the template waveform if it is within $\pm 2.0$ vertical divisions.

## LINKTRaining:ARMscope

This 70KSX command sets or queries the ARMscope setting of the Link Training application on the 70 KSX family of scopes. The default argument value is OFF. To use the Link Training application, the State argument must first be set to ON. With the DUT Lane "powered down" (flat-line), you then Arm the scope for single-step capture using this command. When you subsequently initiate Link Training on the DUT ("power-up" the lane), the Control Channel data and digitized waveforms are captured by the scope.

At a minimum, to capture the Link Training data into a Results Table, both the LINKTTRaining:STAte ON and LINKTRaining:ARMscope ON commands must be issued, in that order. When Link Training is initiated on the DUT lane, the Results Table data and digitized waveforms will be captured. You may select other Link Training settings using the related commands shown below to control those features.

Initiating Link Training on the DUT is a DUT-dependent operation that is usually accomplished by a (serial or other bus) command to the DUT to power-up the Lane under test. Sometimes, it can be as simple as un-plugging and re-plugging the signal connector for the lane.

Note that it is not necessary to set the ARMscope to OFF as this is done automatically by the system.

To summarize, the minimum sequence of events to capture 100G Ethernet KR4 from Default Setup is :LINKTRaining:STATE ON
:LINKTRaining:ARMscope ON
Initiate Link Training on the Lane under test on the DUT.
The Results Table and Waveforms are captured on the scope.
To repeat the experiment, all you have to do is power-down the lane on the DUT, re-issue the ARMscope command, and power-up the lane on the DUT again.

Link Training is only available on the 70KSX oscilloscopes.

Group Link Training

Syntax LINKTRaining:ARMscope <OFF | ON>
LINKTRaining:ARMscope?

Arguments OFF indicates ARMscope is OFF.
ON indicates ARMscope is ON.

Examples LINKTRAINING:ARMSCOPEON sets Link Training ARMscope to ON.
LINKTRAINING: ARMSCOPE? might return the ARMscope as ON.

## LINKTRaining:DECOde

This 70KSX command sets or queries the Decode setting of the Link Training application. The default argument value is ON, which decodes the Control Channel information on the waveform display. Other system decode parameters optionally allow the Control Channel Hex Decode to be expanded to also include bit-level decode. The only plausible reason to turn off decoding is to save time when you are capturing a very long record using TRIGgeron FIRst_frame or LASt_frame. With TRIGgeron ALL_frames, the overhead for decoding is very small.

Link Training is only available on the 70KSX family of oscilloscopes.

Group Link Training

Syntax LINKTRaining:DECOde <OFF | ON>
LINKTRaining:DECOde?

Arguments OFF indicates decode is OFF.
ON indicates decode is ON.

Examples LINKTRAINING: DECODE ON sets Link Training Decode to ON.
LINKTRAINING: DECODE OFF sets Link Training Decode to OFF.
LINKTRAINING: DECODE? may return the value ON.

## LINKTRaining:LANE

This command sets or queries the activation of the individual communications lanes under test. The defaults are Lane1 ON, and Lane2 OFF. It is taken as given that Lane1 uses oscilloscope Ch1 and Ch3, Lane2 uses oscilloscope Ch 2 and Ch 4 (to maximize sample rate). ATI DPO70000SX oscilloscopes only support Lane 1 (on Ch1 and Ch 3 ). $<\mathrm{X}>$ is the lane number and can be 1 or 2 .

One or two lanes may be tested on a single 4-channel DPO70000SX oscilloscope. To test up to 4 lanes simultaneously, two oscilloscopes running in Standalone mode may be used. This is necessary because the Time-Sync Standalone mode does not support independent triggering by multiple oscilloscopes. The associated Link Training Arm PI command or UI button, may be used to arm each oscilloscope individually. When the Link Training signal is generated by the devices under test, the individual oscilloscopes will each trigger, capturing the waveforms on their respective displays and the protocol information in their respective Results Tables.

Note that each Lane requires two oscilloscope channels, because the lanes are bi-directional (Full Duplex).

Link Training is available on DPO70000SX oscilloscopes only.

Group Link Training

Syntax LINKTRaining:LANE<X> \{<NR1>|OFF|ON\}
LINKTRaining:LANE?

Related Commands :LINKTRaining:STAte, :LINKTRaining:STANdard, :LINKTRaining:MARK, :LINKTRaining:DECOde, :LINKTRaining:TRIGgeron, :LINKTRaining:ARMscope

Arguments <NR1> = 0 disables the specified lane; any other value enables the specified lane. OFF disables the specified lane.

ON enables the specified lane.

Examples LINKTRAINING:LANE1 ON sets Link Training Lane1 to ON
LINKTRAINING: LANE1 OFF sets Link Training Lane1 to OFF
LINKTRAINING: LANE2 ON sets Link Training Lane2 to ON
LINKTRAINING: LANE2 OFF sets Link Training Lane2 to OFF
LINKTRAINING:LANE1? may return :LINKTRAINING:LANE1 ON indicating LANe1 is ON.

LINKTRAINING:LANE2? may return :LINKTRAINING:LANE2 OFF indicating LANE2 is OFF.

## LINKTRaining:MARK

This command sets or queries the Mark setting of the Link Training application. The default argument value is FRAme, which marks the Frame Marker. When the argument is set to CONtrol, the frame Control Channel information is marked ( 32 cells of differential-Manchester-encoded request/response data). When the argument is TRAining, the PRBS Training Data is marked.

Marking the PRBS Training Data is useful for giving you the beginning/ending of the Training Data section of the frame when you want to use cursor-gated DPOJET measurements.

Link Training is only available on the 70KSX family of oscilloscopes.

Group Link Training

Syntax LINKTRaining:MARK <FRAme | CONtrol | TRAining>

Related Commands :LINKTRaining:STAte, :LINKTRaining:STANdard, :LINKTRaining:LANE1, :LINKTRaining:LANE2, :LINKTRaining:LANE3, :LINKTRaining:LANE4, :LINKTRaining:DECOde, :LINKTRaining:TRIGgeron, :LINKTRaining:ARMscope

Arguments FRAme sets Link Training MARK to FRAME.
CONtrol sets Link Training MARK to CONTROL.
TRAining sets Link Training MARK to TRAINING.

Examples LINKTRAINING: MARK sets Link Training MARK to FRAME.
LINKTRAINING:MARK sets Link Training MARK to CONTROL.
LINKTRAINING:MARK sets Link Training MARK to TRAINING.
LINKTRAINING: MARK? may return the value FRAME.

## LINKTRaining:STANdard

This DPO70000SX command sets or queries the communication standard for the Link Training application on DPO70000SX oscilloscopes. The default argument value is Ethernet_100G_KR4. Link Training is only available on the DPO70000SX family of oscilloscopes.

Group Link Training

```
Syntax LINKTRaining:STANdard <Ethernet_100G_KR4 |
Ethernet_100G_CR4>
LINKTRaining: STANdard?
```

Related Commands :LINKTRaining:STAte, :LINKTRaining:LANE1, :LINKTRaining:LANE2, :LINKTRaining:LANE3, :LINKTRaining:LANE4, :LINKTRaining:MARK, :LINKTRaining:DECOde, :LINKTRaining:TRIGgeron, :LINKTRaining:ARMscope

Arguments Ethernet_100G_KR4 sets Link Training Standard to Ethernet_100G_KR4. Ethernet_100G_CR4 sets Link Training Standard to Ethernet_100G_CR4.

Examples LINKTRAINING: STANDARD Ethernet_100G_KR4 sets Link Training Standard as Ethernet_100G_KR4.

LINKTRAINING: STANDARD? may return the Standard as Ethernet_100G_KR4.

## LINKTRaining:STAte

This DPO70000SX command sets or queries the state of the Link Training application on the DPO70000SX family of oscilloscopes. The default argument value is OFF. To use the Link Training application, the State argument must first be set to ON.

At a minimum, to capture the Link Training data into a Results Table, the LINKTRaining:ARMscope ON command also must be issued after the Link Training State is ON. Once the State is ON and the ARMscope is ON, the Link Training Results Table data will be captured when Link Training is initiated on the DUT.

Initiating Link Training on the DUT is a DUT-dependent operation that is usually accomplished by a (serial or other bus) command to the DUT to power-up the Lane under test. Sometimes, it can be as simple as un-plugging and re-plugging the signal connector for the lane.

To summarize, the minimum sequence of events to capture 100G Ethernet KR4 from Default Setup is
:LINKTRaining:STATE ON
:LINKTRaining:ARMscope ON
Initiate Link Training on the Lane under test on the DUT.
The Results Table and Waveforms are captured on the scope.
Link Training is only available on the DPO70000SX oscilloscopes.

Group Link Training

Syntax LINKTRaining:STAte <OFF | ON><br>LINKTRaining: STAte?<br>Related Commands :LINKTRaining:STANdard, :LINKTRaining:LANE1, :LINKTRaining:LANE2, :LINKTRaining:LANE3, :LINKTRaining:LANE4, :LINKTRaining:MARK, :LINKTRaining:DECOde, :LINKTRaining:TRIGgeron, :LINKTRaining:ARMscope<br>Arguments OFF sets Link Training State to OFF.<br>ON sets Link Training State to ON.<br>Examples LINKTRAINING: STATE ON sets Link Training State to ON.<br>LINKTRAINING: STATE OFF sets Link Training State to OFF.<br>LINKTRAINING: STATE might return the State as ON.

## LINKTRaining:TRIGgeron

This DPO70000SX command sets or queries the TriggerOn setting of the Link Training application. The default argument value is ALL_FRAMES, which attempts to trigger the scope whenever any Frame Control Channel contains new (changed) data values to capture FastFrame record waveforms.

When the TriggerOn argument is FIRST_FRAME or LAST_FRAME, a single record waveform is captured, and the user may select the record length and horizontal position, among other settings, for this waveform.

When the TriggerOn argument is ALL_FRAMES, FastFrame records are captured containing the decoded and marked Control Channel information. The user may select the FastFrame Length and maximum number of Frames ( $<512$ at this writing).

Note that the Results Table captures all of the Control Channel data on both scope channels of a given lane, no matter what the TriggerOn argument value is chosen, because the data is captured by hardware in real-time (" $100 \%$ live"). This means that the data in the Results Table is derived directly from the signal, not from the digitized waveform (that would be decoding, and we do that where possible).

However, only some of the Control Channel values in the Results Table will be backed with Waveforms on the display, because the Frames may arrive faster than the Acquisition System can capture and store the FastFrame waveforms, or because the Link Training process takes more time, up to 500 ms , than can be captured in a single long record at any reasonable sample rate. When rows in the Results Table are not backed by an acquired waveform on the display, three asterisks ( ${ }^{(* *)}$ ) are shown in the Frame column.

Remember, all of the Control Channel data is captured in the Results Table for all three Triggeron settings. So, you should rely on the data in the Results Table, using the waveform decoding as confirmation.

Don't forget that you can use cursor-gated DPOJET measurements to analyze the marked waveforms that are captured. The cursor positioning is made easier if you set the Link Training Marks to be TRAining to delineate the PRBS Training Data section of the Frames. Then you can use the extents of the MARK to better position the cursors for the measurements.

Link Training is only available on the DPO70000SX family of oscilloscopes.

Group Link Training

Syntax LINKTRaining:TRIGgeron <FIRst_frame | LASt_frame | ALL_frames>

Arguments FIRst_frame sets Link Training TRIGgeron to FIRst_frame LASt_frame sets Link Training TRIGgeron to LASt_frame
ALL_frames sets Link Training TRIGgeron to ALL_frames

Examples LINKTRAINING:TRIGGERON ALL_frames sets Link Training TRIGgeron to ALL_frames.

LINKTRAINING: TRIGGERON FIRst_frame sets Link Training TRIGgeron to FIRst_frame.

LINKTRAINING:TRIGGERON LASt_frame Ssets Link Training TRIGgeron to LASt_frame.

LINKTRAINING:TRIGGERON? may return the values FIRst_frame, LASt_frame, or ALL_frames.

## LOCk

This command enables or disables all front panel buttons and knobs, including the touch screen. There is no front panel equivalent.

Group Miscellaneous

Syntax LOCk \{ALL|NONe\} Lock?

## Related Commands UNLock

## Arguments ALL disables all front panel controls. <br> NONe enables all front panel controls. This is equivalent to the UNLock ALL command. <br> If the instrument is in the Remote With Lockout State (RWLS), the LOCk NONe command has no effect. For more information, see the ANSI/IEEE Std 488.1-1987 Standard Digital Interface for Programmable Instrumentation, section 2.8.3 on RL State Descriptions.

## Examples LOCK ALL locks the front panel controls.

LOCK? might return : LOCK NONE, indicating that the front panel controls are enabled by this command.

This query-only command returns the commands that list the instrument settings (except for configuration information for the calibration values), allowing you to record or "learn" the current instrument settings. You can use these commands to return the instrument to the state it was in when you made the *LRN? query. This command is identical to the SET? Command.

Group Miscellaneous

Syntax *LRN?

Related Commands SET?

```
Examples *LRN? might return the following response: :ACQUIRE:STOPAFTER
RUNSTOP;STATE 1;MODE SAMPLE;NUMENV 10;NUMAVG
16;NUMSAMPLES 16000;SAMPLINGMODE IT;:FASTACQ:STATE
0;:APPLICATION:GPKNOB1:ACTIVE 0;:APPLICATION:GPKNOB2:ACTIVE

```

## MARK

This commands moves to the next or previous reference mark, or it queries the current mark setup.

Group Search and Mark

Syntax MARK \{NEXT|PREVious\} MARK?

Arguments NEXT moves to the next reference mark on the right. PREVious moves to the next reference mark on the left.

Examples MARK NEXT moves to the next reference mark on the right.
MARK? might return :MARK:SELECTED:STATE 1;START 64.4000;FOCUS 64.4000;ZOOM:POSITION 64.4000;SCALE -3.1416;:MARK:SELECTED:END 64.4000;SOURCE CH1;OWNER SEARCH1;MARKSINCOLUMN 1;LABEL "+Edge: 1eve $1=420.32 \mathrm{mV} " ;$ MARK:FREE 1011;TOTAL 13, which is the current mark setup.

## MARK:CREATE (No Query Form)

This command creates a mark on a specified waveform or all waveforms in a column.

Group Search and Mark

Syntax MARK:CREATE $\{C H<x>\mid$ MATH $<x>\mid$ REF $<x>\mid$ COLUMN $\}$

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ creates the mark on a channel waveform, where $<\mathrm{x}>$ is the channel number and can be $1,2,3$, or 4 .

MATH $<x>$ creates the mark on the math waveform, where $<x>$ is the channel number and can be $1,2,3$, or 4 .
$\operatorname{REF}<\mathrm{x}>$ creates the mark on a reference waveform, where $\langle\mathrm{x}\rangle$ is the reference waveform number can be $1,2,3$, or 4 .

COLUMN creates marks on all waveforms in the current zoom pixel column.

Examples MARK: CREATE CH1 creates a mark on Channel 1.

## MARK:DELEte (No Query Form)

This command deletes a mark on a particular waveform, all waveforms in a column, the selected mark, or all marks.

Group Search and Mark

Syntax MARK:DELEte $\{C H<x>\mid$ MATH $<x>\mid$ SELECTED $\mid$ REF $<x>|A L L| C O L U M N\}$

Arguments $\quad \mathrm{CH}<\mathrm{x}\rangle$ deletes the mark on a channel waveform, where $\langle\mathrm{x}\rangle$ is the channel number and can be $1,2,3$, or 4 .

MATH $<x>$ deletes the mark on the math waveform, where $\langle x\rangle$ is the channel number and can be $1,2,3$, or 4 .

SELECTED deletes the mark on the selected waveform.
$\operatorname{REF}<\mathrm{x}>$ deletes the mark on a reference waveform, where $<\mathrm{x}>$ is the reference waveform number and can be $1,2,3$, or 4 .

ALL deletes all marks on all waveforms.
COLUMN deletes marks on all waveforms in the current zoom pixel column.

Examples MARK: DELETE CH1 deletes the mark on the Channel 1 waveform.

## MARK:FREE? (Query Only)

This query-only command returns how many user marks are available for use.

Group Search and Mark

Syntax MARK: FREE?

Examples MARK:FREE? might return :MARK: FREE 1011, indicating there are 1,011 user marks available for use.

## MARK:SELECTED:END? (Query Only)

This query-only command returns the end of the selected mark, 0 to $100 \%$ of the waveform.

Group Search and Mark

Syntax MARK:SELECTED:END?

Examples MARK:SELECTED:END? might return :MARK:SELECTED:END 93.0000, indicating that the selected mark is at $93 \%$ of the waveform.

## MARK:SELECTED:FOCUS? (Query Only)

This query-only command returns the focus of the selected mark, 0 to $100 \%$ of the waveform.

Group Search and Mark

Syntax MARK:SELECTED:FOCUS?

Examples MARK:SELECTED:FOCUS? might return :MARK:SELECTED:FOCUS 50.0000, indicating that the selected mark is at $50 \%$ of the waveform.

## MARK:SELECTED:LABel

This command sets or queries the label for the selected mark.

Group Search and Mark

Syntax MARK:SELECTED:LABe1 <QString> MARK:SELECTED:LABe1?

Arguments <QString> is the quoted string label for the mark.

Examples MARK:SELECTED:LABEL "Test 42.3" sets the selected mark to a User mark and changes the mark description to Test 42.3.

MARK:SELECTED:LABEL? might return :MARK:SELECTED:LABEL "+Edge: leve $7=420.32 \mathrm{mv}$ ", indicating that the label description for the selected mark is +Edge: level $=420.32 \mathrm{mV}$.

## MARK:SELECTED:MARKSINCOLumn? (Query Only)

This query-only command returns the number of marks in the current zoom pixel column.

Group Search and Mark

Syntax MARK:SELECTED:MARKSINCOLumn?

Arguments MARK:SELECTED:MARKSINCOLUMN? might return
:MARK:SELECTED:MARKSINCOLUMN 1, indicating there is 1 mark in the pixel column.

## MARK:SELECTED:OWNer? (Query Only)

This query-only command returns the owner of the selected mark.

Group Search and Mark

Syntax MARK:SELECTED:OWNer?

Examples MARK:SELECTED:OWNER? might return: :MARK:SELECTED:OWNER SEARCH1, indicating that the selected mark is a Search1 mark.

## MARK:SELECTED:SOUrce? (Query Only)

This query-only command returns the source waveform for the selected mark.

Group Search and Mark

Syntax MARK:SELECTED:SOUrce?

Examples MARK:SELECTED:SOURCE? might return :MARK:SELECTED:SOURCE CH2, indicating that Channel 2 is the selected mark source.

## MARK:SELECTED:STARt? (Query Only)

This query-only command returns the starting point of the selected mark, 0 to $100 \%$ of the waveform.

Group Search and Mark

Syntax MARK:SELECTED:STARt?

Examples MARK:SELECTED:START? might return :MARK:SELECTED:START 5.8000, indicating that the selected mark start location is $5.8 \%$ of the waveform.

## MARK:SELECTED:STATE

This command sets or queries the on or off state of the selected mark. The selected mark is at or near the center of the display. If you push the Set/Clear button, this mark will disappear.

Group Search and Mark

Syntax MARK:SELECTED:STATE $\{<N R 1>|O F F| O N\}$
MARK:SELECTED:STATE?

Arguments <NR1> = 0 disables the selected mark; any other value enables the selected mark. For queries, a 0 is returned if the selected mark state is off; a 1 is returned if the selected mark state is on.

OFF argument disables selected mark.
ON argument enables the selected mark.

Examples MARK:SELECTED:STATE ON turns the selected mark state on.
MARK:SELECTED:STATE? might return :MARK:SELECTED:STATE 0, indicating the selected mark stare is off.

## MARK:SELECTED:ZOOm:POSition? (Query Only)

This query-only command returns the position of the selected mark, of the zoom overview window. If the return value is less than zero then the zoom scale will not be changed when Next or Prev makes this the selected mark.

Group Search and Mark

Syntax MARK:SELECTED:ZOOm:POSition?

Examples MARK:SELECTED:ZOOM:POSITION? might return :MARK:SELECTED:ZOOM:POSITION 27.7000, indicating that the position is $27.7 \%$.

## MARK:SELECTED:ZOOm:SCAle? (Query Only)

This query-only command returns the scale of the selected mark of the zoom overview window. The returned value might be $<0$ (for example from Search), which means that the zoom scale will not be changed when Next or Prev makes this the selected mark.

Group Search and Mark

Syntax MARK:SELECTED:ZOOm:SCATe?

Examples MARK:SELECTED:ZOOM:SCALE? might return :MARK:SELECTED:ZOOM:SCA1E 5.0 , indicating that the zoom scale value 5.0 will be used when a mark is the selected mark.

## MARK:TOTal? (Query Only)

This query-only command returns how many marks are currently in use.

Group Search and Mark

Syntax MARK:TOTa1?

Examples MARK:TOTAL? might return :MARK:TOTAL 210, indicating that 210 marks are in use.

## MASK? (Query Only)

This query-only command returns the states of all settable mask parameters.

Group Mask

Syntax MASK?

Examples MASK? might return the following response. :MASK:FILTER 0;AUTOADJUST 0;AUTOADJUST:HDELTA 10;VDELTA 10;:MASK:AUTOSET:AUTOADJUST $1 ;$ HPOS 1 ;HSCALE 1 ;MODE MANUAL; OFFSETADJ $1 ;$ TRIGGER 1 ;VPOS 1 ;VSCALE 1;STANDARD NONE;USER:ONE $0.0000 ;$ ZERO 0.0000 ;TYPE NORMALIZED;:MASK:SOURCE CH1;COUNT:FAILURES 0;HITS 0;SEG1:.

## MASK:AUTOAdjust

This command optimizes or queries the signal position within the mask to minimize hits. It sets a mode so that the MASK: SOURCE waveform is compared against the mask and is shifted up, down, left, or right to minimize the hits.

Group Mask

Syntax MASK:AUTOAdjust \{<NR1>|OFF|ON\}
MASK:AUTOAdjust?

Arguments <NR1> = 0 disables the autoadjust function; any other value enables it.
ON enables the autoadjust function.
OFF disables the autoadjust function.

Examples MASK:AUTOADJUST ON enables the autoadjust function.
MASK:AUTOADJUST? might return :MASK:AUTOADJUST 1, indicating that the autoadjust function is enabled.

## MASK:AUTOAdjust:HDELTA

This command sets or returns how far autofit searches horizontally.
Autofit moves the waveform vertically and/or horizontally to reduce the number of hits within a given mask. If infinite or variable persistence is enabled, these
movements will clear any persistent data. If Autofit makes frequent adjustments, there might be very little or even no persistent data displayed.

Group Mask

Syntax MASK:AUTOAdjust:HDELTA \{<NR3>\}
MASK:AUTOAdjust:HDELTA?

Arguments <NR3> is a floating point number that represents a percent of a division.

Examples MASK:AUTOADJUST:HDELTA 0.6 sets the horizontal autofit search to 0.6 division. MASK:AUTOADJUST:HDELTA? might return :MASK:AUTOADJUST:HDELTA 2, indicating that the horizontal autofit search is set to 2 divisions.

## MASK:AUTOAdjust:VDELTA

This command sets or returns how far autofit searches vertically.
Autofit moves the waveform vertically and/or horizontally to reduce the number of hits within a given mask. If infinite or variable persistence is enabled, these movements will clear any persistent data. If Autofit makes frequent adjustments, there might be very little or even no persistent data displayed.

Group Mask

Syntax MASK:AUTOAdjust:VDELTA \{<NR3>\}
MASK:AUTOAdjust:VDELTA?

Arguments <NR3> is a floating point number that represents a percent of a division.

Examples MASK:AUTOADJUST:VDELTA 0.6 sets the vertical autofit search to 0.6 of a division.

MASK:AUTOADJUST:VDELTA? might return :MASK:AUTOADJUST:VDELTA 2, indicating that the vertical autofit search is set to 2 divisions.

## MASK:AUTOSet:AUTOAdjust

> NOTE. The command works only if the Option MTM is enabled.

This command sets or returns whether the instrument settings are automatically matched to signal characteristics and specific mask requirements. It controls what happens at the end of a mask autoset. If ON, the horz/vert auto adjustment is run ONCE to potentially improve the result of mask autoset.

This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:AUTOAdjust \{<NR1>|OFF|ON\} MASK:AUTOSet:AUTOAdjust?

Arguments <NR1> = 0 disables the autoset:autoadjust function; any other value enables it. ON enables the autoset:autoadjust function. OFF disables the autoset:autoadjust function.

Examples MASK:AUTOSET:AUTOADJUST ON enables the autoset autoadjust function.
MASK:AUTOSET:AUTOADJUST? might return :MASK:AUTOSET:AUTOADJUST 1, indicating that the autoset:autoadjust function is enabled.

## MASK:AUTOSet:HPOS

This command controls whether the autoset algorithm will attempt to change the horizontal position of the signal while attempting to do a mask autoset. The default is ON.

This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:HPOS \{<NR1>|OFF|ON\}
MASK:AUTOSet:HPOS?

Arguments <NR1> = 0 disables the autoset:hpos function; any other value disables enables it. ON enables the autoset:hpos function.

OFF disables the autoset:hpos function.

Examples MASK:AUTOSET:HPOS ON enables the autoset:hpos function.
MASK:AUTOSET:HPOS? might return :MASK:AUTOSET:HPOS 1, indicating that the autoset:hpos function is enabled.

## MASK:AUTOSet:HSCAle

This command controls whether the autoset algorithm will attempt to change the horizontal scale while attempting a mask autoset.

This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet: HSCATe \{<NR1>|OFF|ON\}
MASK:AUTOSet:HSCATe?

Arguments <NR1> = 0 disables the autoset:hscale function; any other value enables it.
ON enables the autoset:hscale function.
OFF disables the autoset:hscale function.

Examples MASK:AUTOSET:HSCALE ON enables the autoset:hscale function.
MASK:AUTOSET:HSCALE? might return :MASK:AUTOSET:HSCALE 1, indicating that the autoset:hscale function is enabled.

## MASK:AUTOSet:MODe

This command controls whether a mask autoset will be automatically done after a standard mask is selected. The autoset will never happen if the standard mask is selected from GPIB, since a "SET?" sent back to the oscilloscope should not perform a mask autoset.

The default value is: manual.
This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

```
Syntax MASK:AUTOSet:MODe \{MANual|AUTO\}
MASK:AUTOSet:MODe?
```

Arguments MANual mask autoset is set manually. AUTO mask autoset is set automatically.

Examples MASK:AUTOSET:MODE AUTO sets the mask autoset manually.
MASK:AUTOSET:MODE? might return :MASK:AUTOSET:MODE MANUAL, indicating that the mask autoset is set manually.

## MASK:AUTOSet:OFFSETAdj

This command sets mask autoset not to enforce the rule that, for pulse standards, require 0 V to be in a certain place in the mask. Instead, mask autoset will attempt to measure the DC offset in the signal and use oscilloscope offset or position controls to compensate for the DC offset in the signal.

This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:OFFSETAdj \{<NR1>|OFF|ON\} MASK:AUTOSet:OFFSETAdj?

Arguments <NR1> = 0 disables the autoset:offsetadj function; any other value enables it. ON enables the autoset:offsetadj function.

OFF disables the autoset:offsetadj function.

Examples MASK:AUTOSET:OFFSETADJ ON enables the autoset:offsetadj function.
MASK:AUTOSET:OFFSETADJ? might return :MASK:AUTOSET:OFFSETADJ 1, indicating that the autoset:offsetadj function is enabled.

## MASK:AUTOSet:STANdard

NOTE. The command works only if the Option MTM is enabled.

This command selects the standard mask in a mask autoset.
This command, like all the MASK : AUTOSET commands, affects only an autoset on a standard mask, not the general instrument autoset function.

## Examples MASK:AUTOSET: STANDARD E1COAX selects the E1 Coax standard mask. <br> MASK:AUTOSET:STANDARD? might return :MASK:AUTOSET:STANDARD E1COAX, indicating that the E1 Coax mask is selected as the current mask standard.

## MASK:AUTOSet:TRIGger

This command specifies whether a mask AUTOSet affects the trigger level. Other trigger settings such as type of trigger are not changed by autoset. The default is ON.

This command, like all the mask autoset commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:TRIGger $\{<$ NR1 $>\mid$ OFF|ON $\}$ MASK:AUTOSet:TRIGger?

Arguments <NR1> = 0 disables the autoset:trigger function; any other value enables it. ON enables the autoset:trigger function.

OFF disables the autoset:trigger function.

## Examples MASK:AUTOSET:TRIGGER ON enables the autoset:trigger function. <br> MASK:AUTOSET:TRIGGER? might return :MASK:AUTOSET:TRIGGER 1, indicating that the autoset: trigger function is enabled.

## MASK:AUTOSet:USER:ONE

This command sets or queries the level 1 value used by autoset for user masks.

Group Mask<br>Syntax MASK:AUTOSet:USER:ONE <NR3> MASK:AUTOSet:USER:ONE?<br>Related Commands MASK:AUTOSet:USER:TYPe, MASK:AUTOSet:USER:ZERo<br>Arguments <NR3> sets the level 1 value used by autoset for user masks.<br>Examples MASK:AUTOSET:USER:ONE 1 sets the autoset for 1 in user masks is 1.0 volts.<br>MASK:AUTOSET:USER:ONE? might return :MASK:AUTOSET:USER:ON 0.0000, indicating that the autoset is using 0.0 volts for 1 in user masks.

## MASK:AUTOSet:USER:TYPe

This command sets or queries how autoset scales a mask.

Group Mask

Syntax MASK:AUTOSet:USER:TYPe \{ABSolute|NORMALIZed\}
MASK:AUTOSet:USER:TYPe?

## Related Commands MASK:AUTOSet:USER:ONE, MASK:AUTOSet:USER:ZERo

Arguments ABSOLUTE tells autoset to use the values supplied by MASK:AUTOSet:USER: ONE and MASK:AUTOSet:USER:ZERo for the one and zero of the mask. NORMALIZED tells autoset to determine the mask one and zero by looking at the mask.

Examples MASK:AUTOSET:USER:TYPE NORMALIZED sets the autoset scales in a mask to normalize.

MASK:AUTOSET:USER:TYPE? might return :MASK:AUTOSET:USER:TYPE NORMALIZED, indicating that the autoset is set to normalize scales in a mask.

## MASK:AUTOSet:USER:ZERo

## NOTE. The command works only if the Option MTM is enabled.

This command sets or queries the level 0 used by autoset for user masks.
\(\left.$$
\begin{array}{cl}\text { Group } & \text { Mask } \\
\text { Syntax } & \begin{array}{l}\text { MASK:AUTOSet:USER:ZERO <NR3> } \\
\text { MASK:AUTOSet:USER:ZERo? }\end{array}
$$ <br>

Related Commands \& MASK:AUTOSet:USER:TYPe, MASK:AUTOSet:USER:ONE\end{array}\right]\)| Arguments<NR3> sets the zero level that autoset uses for user masks. |
| :--- |
| ExamplesMASK:AUTOSET:USER:ZERO 1.000 sets the autoset for zero in user masks to <br> scales in a mask to normalize. |

MASK:AUTOSET:USER:ZERO? might return :MASK:AUTOSET:USER:ZERO 0.0000 , indicating that the autoset is using 0.0 volts for zero in user masks.

## MASK:AUTOSet:VPOS

This command controls whether the mask autoset algorithm will affect the vertical position (or offset) of the signal while attempting to autoset. The default is ON.

This command, like all the mask autoset commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:VPOS \{<NR1>|OFF|ON\}
MASK:AUTOSet:VPOS?

Arguments <NR1> = 0 disables the autoset:vpos function; any other value enables it.
ON enables the autoset:vpos function.
OFF disables the autoset:vpos function.

Examples MASK:AUTOSET:VPOS ON enables the autoset:vpos function.
MASK:AUTOSET:VPOS? might return :MASK:AUTOSET:VPOS 0.0000, indicating that the autoset:vpos function is disabled.

## MASK:AUTOSet:VSCAle

## NOTE. The command works only if the Option MTM is enabled.

This command controls whether the mask autoset algorithm will affect the vertical scale while attempting to autoset.

This command, like all the mask autoset commands, affects only an autoset on a standard mask, not the general instrument autoset function.

Group Mask

Syntax MASK:AUTOSet:VSCATe \{<NR1>|OFF|ON\} MASK:AUTOSet:VSCATe?

Arguments <NR1> = 0 disables the autoset:vscale function; any other value enables it. ON enables the autoset:vscale function.

OFF disables the autoset:vscale function.

Examples MASK:AUTOSET:VSCALE ON enables the autoset:vscale function.
MASK:AUTOSET:VSCALE? might return :MASK:AUTOSET:VSCALE 0.0000, indicating that the autoset:vcale function is disabled.

## MASK:COPy:USER (No Query Form)

This command copies the currently displayed mask to the user mask.

Group Mask

Syntax MASK:COPy:USER

Examples MASK:COPY:USER copies the current mask to the user mask.

## MASK:COUNt (No Query Form)

NOTE. The command works only if the Option MTM is enabled.

This command resets to zero the number of hits for all mask segments on the specified source.

This is equivalent to pressing the front panel 'Clear' button.

Group Mask

Syntax MASK:COUNt RESET

Arguments RESET sets to zero the number of hits for all mask segments on the specified source.

Examples MASK: COUNT resets to zero the number of hits for all mask segments on the specified source.

## MASK:COUNt:FAILURES? (Query Only)

This query-only command returns the number of pass/fail tests that have failed. The default is 0 . Pass/fail testing must be enabled.

Group Mask

Syntax MASK:COUNt:FAILURES?

Returns <NR1>

Examples MASK:COUNT:FAILURES? might return :MASK:COUNT:FAILURES 0, showing that no tests have failed.

## MASK:COUNt:HITS? (Query Only)

NOTE. The command works only if the Option MTM is enabled.

This query-only command returns the number of hits on all mask segments. Hit counting must be turned on.

Group Mask

Syntax MASK:COUNt:HITS?

Returns <NR1>

Examples MASK:COUNT:HITS? might return :MASK:COUNT:HITS 0, showing there were no hits from any source on any mask segments.

## MASK:COUNt:SEG<m>:HITS? (Query Only)

This query-only command returns the number of hits in mask segment $<\mathrm{m}>$. Hit counting must be turned on.
$m$ is the mask segment number.

Group Mask

Syntax MASK:COUNt:SEG<m>:HITS?

Returns <NR1> returns the number of hits in the mask segment.

Examples MASK:COUNT:SEG1:HITS? might return :MASK:COUNT:SEG1:HITS 0, showing that there have been no hits.

## MASK:COUNt:STATE

This command sets or queries the mask hits count state; it controls whether mask counting is being done. MASK:DISplay must be ON to enable MASK : COUNT: STATE to count mask violations.

Group Mask

Syntax MASK:COUNt:STATE \{<NR1>|OFF|ON\}
MASK:COUNt:STATE?

Arguments S123hi456va
<NR1> = 0 turns off mask hit counting, and other values turn on mask hit counting.
ON turns on mask counting.
OFF turns off mask counting. This is the default state.

Examples MASK:COUNT: STATE ON turns on mask hit counting.
MASK:COUNT:STATE? might return :MASK:COUNT:STATE 1, indicating that the mask counting is on.

## MASK:COUNt:TESTS? (Query Only)

This query-only command returns the number of pass/fail tests that have occurred.

```
Group Mask
Syntax MASK:COUNt:TESTS?
Returns <NR1>
```

Examples MASK:COUNT:TESTS? might return :MASK:COUNT:TESTS 50, showing 50 tests have occurred.

## MASK:COUNt:TOTal? (Query Only)

This query-only command returns the sum of all hits in all mask segments. This command is the same as MASK:COUNT:HITS? and is kept for compatibility with other Tektronix instruments.

Group Mask

Syntax MASK:COUNt:TOTa1?

Returns <NR1>

Examples MASK:COUNT:TOTAL? might return :MASK:COUNT:TOTAL 50, showing 50 hits have occurred.

## MASK:COUNt:VIOLATIONS? (Query Only)

This query-only command returns the number of test violations that have occurred in the current pass/fail test. A test violation occurs when any part of a waveform falls within any mask segment. The default is 0 .

Group Mask<br>Syntax MASK:COUNt:VIOLATIONS?<br>Related Commands MASK:COUNt:TESTS?, MASK:COUNt:TOTal?, MASK:COUNt:<br>WAVEFORMS?, MASK:TESt:REPeat<br>Returns <NR1><br>Examples MASK:COUNT:VIOLATIONS? might return :MASK:COUNT:VIOLATIONS 50, showing that 50 test violations have occurred.

## MASK:COUNt:WAVEFORMS? (Query Only)

This query-only command returns the number of waveforms that have been acquired and processed during pass/fail testing.

```
Group Mask
Syntax MASK:COUNt:WAVEFORMS?
Related Commands MASK:COUNt:TESTS?, MASK:COUNt:TOTal?, MASK:COUNt: VIOLATIONS?
Returns <NR1>
Examples MASK:COUNT:WAVEFORMS? might return :MASK:COUNT:WAVEFORMS 1000, showing that 1,000 waveforms have been acquired and processed.
```

## MASK:DISplay

This command sets or queries whether defined masks are displayed on the screen. This is useful for temporarily turning off user-defined masks without deleting them. It is also useful for removing a standard mask from the screen, but leaving it as the selected standard. Mask counting, mask testing, and mask autoset are unavailable if the mask display is Off. The default is On.

Group Mask

Syntax MASK:DISplay \{<NR1>|OFF|ON\}
MASK:DISplay?

Arguments <NR1> = 0 removes the masks from the display; any other value shows the masks on the display.

ON shows the masks on the display. This is the default value.
OFF removes the masks from the display.

Examples MASK:DISPLAY ON sets the display to show the defined masks.
MASK:DISPLAY? might return :MASK:DISPLAY 1, indicating that the defined masks on the screen are displayed.

## MASK:FILTer

This command sets or returns whether the selected digital filter will be run on the waveform data. The filter simulates optical hardware. That is, it simulates different hardware for each of several different optical standards.

The digital filter runs on OC1, OC3, OC12, OC48, FC133, FC266, FC531, FC1063, FC2125Draft, Gigabit Ethernet, Infiniband $2.5 \mathrm{~Gb}, 1394 \mathrm{~b}, 393 \mathrm{Mb}$, $786.43 \mathrm{Mb}, 1.572 \mathrm{~Gb}$

Group Mask

Syntax MASK:FILTer \{<NR1>|OFF|ON\}
MASK:FILTer?

Related Commands ACQuire:MODe

Arguments <NR1> = 0 disables the digital filter; any other value enables it.
OFF disables the digital filter.
ON enables the digital filter.

Examples MASK:FILTERON enables the digital filter.
MASK:FILTER? might return :MASK:FILTER 1, indicating that the selected digital filter will be run on the waveform data.

## MASK:HIGHLIGHTHits

This command sets or returns whether hits in a mask are highlighted in different colors than other waveform data. The default is On.

Group Mask

Syntax MASK:HIGHLIGHTHits \{<NR1>|OFF|ON\} MASK:HIGHLIGHTHits?

Arguments <NR1> = 0 disables the mask:highlighthits function; any other value enables it. OFF disables the mask:highlighthits function.

ON enables the mask:highlighthits function.

Examples MASK:HIGHLIGHTHITS ON enables the mask highlighthits function.
MASK:HIGHLIGHTHITS? might return :MASK:HIGHLIGHTHITS 1, indicating that the mask:highlighthits function is enabled.

## MASK:INVert

This command controls whether the mask is drawn inverted. It has no effect if this mask cannot be inverted. The default is Off (Positive).

Group Mask

Syntax MASK:INVert \{<NR1>|OFF|ON\}

Arguments <NR1> = 0 disables the mask:invert function; any other value enables it.
off Positive
ON Negative

Examples MASK:INVERTON enables the mask invert function.
MASK:INVERT? might return :MASK:INVERT 1, indicating that the mask is drawn inverted.

## MASK:LOCk

Group Mask

Syntax MASK:LOCk \{<NR1>|OFF|ON\}
MASK:LOCk?

Arguments <NR1> = 0 turns off mask lock to waveform and any other value turns on mask lock to waveform.

OFF turns off mask lock to waveform.

ON turns on mask lock to waveform.

Examples MASK:LOCK ON turns on mask lock to waveform.
MASK:LOCK? might return :MASK:LOCK 1, indicating that the mask lock to waveform mode is enabled.

## MASK:MARgin:PERCent

This command sets or queries the mask margin percentage. If you set a positive mask margin percentage, the polygon expands and the mask test will be more difficult to pass due to the expanded test area. If you set a negative mask margin percentage, the polygon shrinks and the mask test will be easier to pass due to the smaller area.

Group Mask

Syntax MASK:MARgin:PERCent <NR3>
MASK:MARgin:PERCent?

Arguments <NR3> values range from -50.0 to +50.0 . The default is 5 .

Examples MASK:MARGIN:PERCENT 25 sets the mask margin percentage to 25 .
MASK:MARGIN:PERCENT? might return :MASK:MARGIN:PERCENT $1.00000000000 \mathrm{E}+001$, indicating that the mask margin is set to $10 \%$.

## MASK:MARgin:STATE

This command sets or returns the state of the mask margins.

Group Mask

Syntax MASK:MARgin:STATE \{<NR1>|OFF|ON\}
MASK:MARgin:STATE?

Arguments <NR1> = 0 turns off mask margins; any other integer turns on the selected mask margins.

OFF turns off mask margins. The currently displayed margined mask is erased and the original mask is displayed.

ON turns on mask margins.

Examples MASK:MARGIN:STATE ON turns on mask margins.
MASK:MARGIN:STATE? might return :MASK:MARGIN:STATE 1, indicating that the mask margins are on.

## MASK:MASKPRE:AMPlitude

This command sets or returns the current mask's nominal pulse amplitude in volts. The query form of this command returns the nominal pulse amplitude of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:AMP1itude <NR3> MASK:MASKPRE:AMPlitude?

Related Commands MASK:MASKPRE:VSCAle

Arguments <NR3> is a floating number that sets the nominal pulse amplitude in volts.

Examples MASK:MASKPRE:AMPLITUDE 2.4 sets the current mask nominal pulse amplitude to 2.4 volts.

MASK:MASKPRE:AMPLITUDE? might return :MASK:MASKPRE:AMPLITUDE 1, indicating that the current mask's nominal pulse amplitude is set to 1.0 V .

## MASK:MASKPRE:HSCAle

This command sets or returns the nominal timing resolution used to draw the mask in time/division. The query form of this command returns the nominal timing resolution of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:HSCAle <NR3> MASK:MASKPRE:HSCAle?

## Related Commands MASK:MASKPRE:HTRIGPOS

Arguments <NR3> is a floating point number that sets the mask drawing timing resolution.

Examples MASK:MASKPRE:HSCALE 40E-9 sets the nominal timing resolution used to draw the mask pulse shape to 40 nanoseconds per division.

MASK:MASKPRE:HSCALE? might return :MASK:MASKPRE:HSCALE 1, indicating that the current mask's nominal timing resolution is to 1 nanosecond per divisions.

## MASK:MASKPRE:HTRIGPOS

This command sets or returns the nominal trigger position (pulse leading edge) used to draw the mask as a fraction of the display width. The query form of this command returns the nominal trigger position of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask<br>Syntax MASK:MASKPRE:HTRIGPOS <NR3> MASK:MASKPRE:HTRIGPOS?<br>Related Commands MASK:MASKPRE:HSCAle

Arguments <NR3> is a floating point number in the range of 0.0 to 1.0 that sets the trigger points as a fraction of the display width, referenced from the left edge of the graticule. The number 0.0 represents the left edge.

Examples MASK:MASKPRE:HTRIGPOS 0.6 sets the current mask nominal pulse leading edge position to the sixth horizontal graticule division.

MASK:MASKPRE:HTRIGPOS? might return :MASK:MASKPRE:HTRIGPOS 0.8, indicating that the trigger position is set to eight horizontal graticule divisions.

## MASK:MASKPRE:PATTERNBITS

This command sets or returns the number of bits used for serial trigger for the User mask standard. For example, DS1 requires six bits: four leading zeros, a one, and a trailing zero. The query form of this command returns the serial bit value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:PATTERNBITS <NR1>
MASK:MASKPRE:PATTERNBITS?

Related Commands MASK:MASKPRE:PRESAMPBITS

Arguments <NR1> is an integer that sets the number of bits.

Examples MASK:MASKPRE: PATTERNBITS 6 sets the current mask number of serial pattern bits to 6 .

MASK:MASKPRE:PATTERNBITS? might return :MASK:MASKPRE:PATTERNBITS 8 , indicating that the number of bits for serial trigger of the user mask standard is set to 8 .

## MASK:MASKPRE:PRESAMPBITS

This command sets or returns the number of bits before the (isolated one) pulse leading edge in the serial trigger pass/fail testing. For example, DS1 has four leading zeros. The query form of this command returns the presample bit value of the displayed mask. The set form of this command only affects the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:PRESAMPBITS <NR1> MASK:MASKPRE:PRESAMPBITS?

Related Commands MASK:MASKPRE:PATTERNBITS

Arguments <NR1> is an integer that sets the number of bits before the trigger pulse.

Examples MASK:MASKPRE: PRESAMPBITS 4 sets the current mask number of bits before the trigger pulse to 4.

MASK:MASKPRE: PRESAMPBITS? might return :MASK:MASKPRE:PRESAMPBITS 8 , indicating that the presample bit value of the displayed mask is set to 8 .

## MASK:MASKPRE:RECOrdlength

This command sets or returns the nominal record length for pulse mask testing. The query form of this command returns the record length value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:RECOrdlength <NR1> MASK:MASKPRE:RECOrdlength?

Arguments <NR1> is an integer number that sets the record length.

Examples MASK:MASKPRE:RECORDLENGTH 500 sets the current mask record length to 500 points.

MASK:MASKPRE:RECORDLENGTH? might return
:MASK:MASKPRE:RECORDLENGTH 400, indicating that the nominal record length for pulse mask testing is set to 400 .

## MASK:MASKPRE:TRIGTOSAMP

This command sets or returns the time in seconds, from the (leading edge) trigger position to the pulse bit sampling position. The query form of this command returns the time value of the displayed mask. The set form of this command only affects the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:TRIGTOSAMP <NR3> MASK:MASKPRE:TRIGTOSAMP?

Related Commands MASK:MASKPRE:WIDth

Arguments <NR3> is the floating point number that sets the time to the pulse bit sampling position.

Examples MASK:MASKPRE:TRIGTOSAMP 162E-9 sets the current mask time from the (leading edge) trigger position to the pulse bit sampling position to 162 nanoseconds.

MASK:MASKPRE:TRIGTOSAMP? might return :MASK:MASKPRE:TRIGTOSAMP 100 , indicating that the time value of the displayed mask is set to 100 nanoseconds.

## MASK:MASKPRE:VOFFSet

This command sets or returns the nominal vertical offset in volts, used to vertically offset the input channels. The query form of this command returns the offset value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:VOFFSet <NR3> MASK:MASKPRE:VOFFSet?

Related Commands MASK:MASKPRE:VPOS, MASK:MASKPRE:VSCAle

Arguments <NR3> is a floating point number that sets the nominal vertical offset in volts.

Examples MASK:MASKPRE:VOFFSET 0.0 sets the current mask nominal vertical offset to 0.0 volts.

MASK:MASKPRE:VOFFSET? might return :MASK:MASKPREVOFFSET 1.0000, indicating that the offset value of the displayed mask is set to 1.0 volts.

## MASK:MASKPRE:VPOS

This command sets or returns the nominal vertical position, control in divisions, used to vertically position the input channels. The query form of this command returns the vertical position value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:VPOS <NR3>
MASK:MASKPRE:VPOS?

Related Commands MASK:MASKPRE:VOFFSet, MASK:MASKPRE:VSCAle

Arguments <NR3> is a floating point number that sets the nominal vertical position control in divisions.

Examples MASK:MASKPRE:VPOS -0.8 sets the current mask nominal vertical position to -0.8 divisions.

MASK:MASKPRE:VPOS? might return :MASK:MASKPRE:VPOS 1.0000, indicating that the vertical position value of the displayed mask is set to 1.0 divisions.

## MASK:MASKPRE:VSCAle

This command sets or returns the nominal vertical scale in volts per division, used to vertically scale the input channels. The query form of this command returns the vertical scale value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:VSCATe <NR3> MASK:MASKPRE:VSCATe?

Related Commands MASK:MASKPRE:VOFFSet, MASK:MASKPRE:VPOS

Arguments <NR3> is a floating point number that sets the nominal bit width in seconds.

Examples MASK:MASKPRE:VSCALE 200E-3 sets the current mask nominal vertical scale to 200 millivolts per division.

MASK:MASKPRE:VSCALE? might return :MASK:MASKPRE:VSCALE $400.0000 \mathrm{E}-3$, indicating that the vertical position value of the displayed mask is set to 400 millivolts per division.

## MASK:MASKPRE:WIDth

This command sets or returns the nominal bit width in seconds. The query form of this command returns the bit width value of the displayed mask. The set form of this command affects only the current (displayed) mask.

Group Mask

Syntax MASK:MASKPRE:WIDth <NR3> MASK:MASKPRE:WIDth?

## Related Commands MASK:MASKPRE:TRIGTOSAMP

Arguments <NR3> is a floating point number that sets the nominal bit width in seconds. This number is the time of one bit of data where bit width $=1 /($ data rate of the signal $)$.

Examples MASK:MASKPRE:WIDTH 648E-9 sets the current mask nominal bit width to 648 nanoseconds ( 1.544 Mbits/second).

MASK:MASKPRE:WIDTH? might return :MASK:MASKPRE:WIDTH 500.0000E-9, indicating that the bit width value of the displayed mask is set to 500 nanoseconds.

## MASK:POLarity

This command sets or returns the input waveform polarity for the pass/fail test. It controls whether to test positive pulse, negative pulse, or both during pass/fail testing. This command only applies when MASK:TESt:STATE is on.

Group Mask

Syntax MASK:POLarity \{BOTh|NEGAtive|POSITIVe\} MASK: POLarity?

## Related Commands MASK:TESt:STATE

Arguments BOTh enables testing for both positive and negative pulses. The instrument tests positive pulses on the mask:source waveform until $1 / 2$ of the waveform is tested. Then the instrument inverts the mask and performs the remaining tests.

NEGAtive enables testing on negative pulses.
POSITIVe enables testing on positive pulses. This is the default.

Examples MASK: POLARITY BOTH sets pass/fail to test both positive (normal) and negative (inverted) waveforms.

MASK: POLARITY? might return :MASK: POLARITY POSITIVE, indicating that the input waveform polarity for the pass/fail test is set to positive.

## MASK:SEG<m> (No Query Form)

This command deletes the specified mask segment from the current mask. $m$ is an integer that specifies the mask segment number to delete from the current mask.

Group Mask

Syntax MASK:SEG<m> DELEte

Arguments DELETE removes the specified mask segment from the mask.

Examples MASK:SEG3 DELETE deletes mask segment three from the current mask.

## MASK:SEG<m>:NR_Pt? (Query Only)

This query-only command returns the number of points that make up the specified mask segment of the current mask. Each mask point consists of an X-Y pair of coordinates.
m is an integer number that specifies a mask segment number of the current mask.

## MASK:SEG<m>:POINTS

This command sets or returns the X-Y user coordinates of all points in the current mask segment. The set form defines new points in the current mask, replacing any existing points in the current mask segment; it sets or returns the vertices for a particular segment in the current mask.
$m$ is an integer that specifies the current mask segment number.

Group Mask

Syntax MASK:SEG<m>: POINTS <NR3>, <NR3>[,<NR3>, <NR3>] MASK: SEG<m>: POINTS?

Arguments <NR3> refers to the coordinates of one of the vertices in the Current mask. Each pair of numbers represents the horizontal and vertical coordinates of a mask segment vertex. The pairs must be listed in a counterclockwise order. If the vertical or horizontal scale or position is changed after this command and then the query form of this command is issued, the value returned from the instrument will not be the same. If just one pair is input, it is ignored and the current mask segment is marked as undefined. The default is no points in the current mask segment.

Examples MASK:SEG2:POINTS -2.3E-9, 44E-3, -2.5E-9, 47E-3, 1.2E-9, $44 \mathrm{E}-3$ defines the points in current mask segment 2 .

MASK:SEG2:POINTS? might return :MASK:SEG2:POINTS 0.0000, 0.0000, indicating that the $\mathrm{X}-\mathrm{Y}$ user coordinates of all points in the Current mask segment are set to 0,0 .

## MASK:SOUrce

This command sets or reports which source will be compared against the mask(s) when counting is turned on; it controls which trace to use in mask counting. It also affects mask autoset and how triggering is set up when you select the mask.

```
Group Mask
Syntax MASK:SOUrce {CH[1-4]|MATH[1-4]|REF[1-4]}
MASK:SOUrce?
```

Arguments $\quad \mathrm{CH}<1-4>$ selects a channel waveform to be compared against the specified mask. The range for is 1 through 4.

MATH $<1-4>$ selects a math waveform to be compared against the specified mask. The range for is 1 through 4.

REF $<1-4>$ selects a reference waveform to be compared against the specified mask. The range is 1 through 4 .

Examples MASK: SOURCE CH1 enables CH1 to be compared against the mask. Since a timebase is not specified, the default, Main, is used.

MASK:SOURCE? might return :MASK:SOURCE CH1,MAIN, indicating that the Channel 1 waveform will be compared against the mask using the Main timebase.

MASK:STANdard
This command deletes the existing mask (if any) and sets the selected standard mask. If MASK:COUNt:STATE is ON, mask counting starts immediately. The query form of this command returns the current mask standard.

NOTE. There are several available mask standards that require a higher bandwidth than permitted for some instruments. In such cases, a warning is posted to the standard event system upon selection of any of these standards. To ensure that the mask you select is fully supported by the instrument, always check the event status register after selecting a mask standard.

The following warning event is posted if the mask exceeds the instrument bandwidth: 2318,"Consider system bandwidth when testing at this bit rate."

Conditions This command is only valid for instruments with Option MTH or MTM installed.

```

Examples MASK:STANDARD E1COAX selects the E1 Coax standard mask.
MASK:STANDARD? might return :MASK:STANDARD E1COAX, indicating that the E1 Coax mask is selected as the current mask standard.

## MASK:STOPOnviolation

This command sets or returns the stop on violation setting. When enabled, this command stops waveform acquisitions on the first occurrence of a waveform violation. MASK:DISplay must be ON for the instrument to detect violations.

Group Mask

Syntax MASK:STOPOnviolation \{<NR1>|OFF|ON\} MASK: STOPOnviolation?

Arguments <NR1> = 0 turns off stop on violation; any other value turns on stop on violation. OFF turns off mask test stop on violation.

ON stops waveform acquisition on the first occurrence of a mask violation.

Examples MASK:STOPONVIOLATION ON sets the instrument to stop waveform acquisition on the first occurrence of a waveform violation.

MASK: STOPONVIOLATION? might return :MASK:STOPONVIOLATION ON, indicating that the stops waveform acquisitions on the first occurrence of a waveform violation is enabled.

## MASK:TESt:AUX:COMPLetion

This command sets or returns the test:aux on pass/fail test completion mode. When enabled, this command causes the instrument to provide a TTL signal at the Aux:Out port when the mask pass/fail status changes to 'Failing'.

Group Mask

Syntax MASK:TESt:AUX:COMPLetion \{<NR1>|OFF|ON\}
MASK:TESt:AUX:COMPLetion?

Arguments <NR1> = 0 disables the mask:test:aux:completion function; any other value enables it.

OFF turns off the pass/fail mask:test:aux on completion.
ON turns on the pass/fail mask:test:aux on completion.
$\begin{array}{ll}\text { Examples } & \text { MASK:TEST:AUX:COMPLETION ON turns on the pass/fail test on completion. } \\ & \text { MASK:TEST:AUX: COMPLETION? might return :MASK:TEST:AUX:COMPLETION } \\ & \text { ON, indicating that the test:aux on pass/fail test completion mode is turned on. }\end{array}$

## MASK:TESt:AUX:FAILure

This command sets or returns the test: aux status on pass/fail test failure mode. When enabled, this command causes the instrument to provide a TTL signal at the AuxOut port when the pass/fail status changes to 'Failing'.

Group Mask

Syntax MASK:TESt:AUX:FAILure \{<NR1>|OFF|ON\}
MASK:TESt:AUX:FAILure?

Arguments <NR1> = 0 disables the mask:test:aux:failure function; any other value enables it. OFF turns off the pass/fail mask:test:aux on failure. This is the default.

ON turns on the pass/fail mask:test:aux on failure.

Examples MASK:TEST:AUX:FAILURE ON turns on the pass/fail test on failure.
MASK:TEST:AUX:FAILURE? might return :MASK:TEST:AUX:FAILURE ON, indicating that the pass/fail mask:test:aux on failure is turned on.

## MASK:TESt:BEEP:COMPLetion

This command sets or returns the beep on pass/fail test completion mode. When enabled, this command causes the instrument to emit a tone when the mask pass/fail test completes.

Group Mask

Syntax MASK:TESt:BEEP:COMPLetion \{<NR1>|OFF|ON\}
MASK:TESt:BEEP:COMPLetion?

Arguments <NR1> = 0 turns off the pass/fail beep on completion, any other integer turns on the pass/fail beep on completion.

OFF turns off the pass/fail beep on completion.

ON turns on the pass/fail beep on completion.

Examples MASK:TEST:BEEP:COMPLETION ON turns on pass/fail beep on completion.
MASK:TEST:BEEP:COMPLETION? might return :MASK:TEST:BEEP:COMPLETION ON, indicating that the pass/fail beep on completion is turned on.

## MASK:TESt:BEEP:FAILure

This command sets or returns the beep status on pass/fail test failure mode. When enabled, this command causes the instrument to emit a tone when the pass/fail status changes to 'Failing'.

Group Mask

Syntax MASK:TESt:BEEP:FAILure \{<NR1>|OFF|ON\}
MASK:TESt:BEEP:FAILure?

Arguments <NR1> = 0 turns off the pass/fail beep on failure, and any other integer turns on the pass/fail beep on failure.

OFF turns off the pass/fail beep on failure. This is the default.
ON turns on the pass/fail beep on failure.

Examples MASK:TEST:BEEP:FAILURE OFF turns off the pass/fail beep on failure.
MASK:TEST:BEEP:FAILURE? might return :MASK:TEST:BEEP:FAILURE ON, indicating that the pass/fail beep on failure is turned on.

## MASK:TESt:DELay

This command sets or returns the amount of time in seconds, to wait after starting pass/fail testing to evaluate waveforms. This is useful if the test system requires 'settling' time before evaluating waveforms.

Group Mask

Syntax MASK:TESt:DELay <NR3> MASK:TESt:DELay?

Arguments <NR3> is a floating point number that specifies the amount of time in seconds, to delay the start of the pass/fail test.

Examples MASK:TEST:DELAY 2.5 delays waveform evaluation by 2.5 seconds after the start of pass/fail testing.

MASK:TEST:DELAY? might return :MASK:TEST:DELAY 5, indicating that the amount of time to wait after starting pass/fail testing to evaluate waveforms is set to 5 seconds.

## MASK:TESt:HARDCopy

This command sets or returns the hard copy in pass/fail failure mode. When enabled, this command causes the instrument to generate a screen hard copy, to the default printer using the current instrument hard copy settings, as soon as the pass/fail status changes to 'Failing'.

Group Mask

Syntax MASK:TESt:HARDCopy \{<NR1>|OFF|ON\}
MASK:TESt:HARDCopy?

Arguments <NR1> = 0 turns off generate hard copy on failure, and any other value turns on generate hard copy on failure.

OFF turns off generate hard copy on failure.
ON turns on generate hard copy on failure.

Examples MASK:TEST:HARDCOPY ON turns on generate hard copy on failure.
MASK:TEST:HARDCOPY? might return :MASK:TEST:HARDCOPY ON, indicating that the generate hard copy on failure is turned on.

## MASK:TESt:LOG:FAILure

This command sets or returns the $\log$ status on pass/fail test failure mode. When enabled, this command causes the instrument to log the current date and time to a file when the pass/fail status changes to 'Failing'. The file name is determined from the current date and time. The user cannot change this name.

Group Mask

Syntax MASK:TESt:LOG:FAILure $\{<$ NR1>|OFF|ON $\}$ MASK:TESt:LOG:FAILure?

## Related Commands MASK:TESt:SAVEWFM:FILEName

Arguments <NR1> = 0 turns off the pass/fail log on failure, and any other integer turns on the pass/fail log on failure.

OFF turns off the pass/fail $\log$ on failure. This is the default.
ON turns on the pass/fail log on failure.

Examples MASK:TEST:LOG:FAILURE OFF turns off the pass/fail log on failure.
MASK:TEST:LOG:FAILURE? might return :MASK:TEST:LOG:FAILURE ON, indicating that the pass/fail $\log$ on failure is turned on.

## MASK:TESt:REPeat

This command sets or returns the repeat pass/fail test on completion mode. When enabled, this command repeats the pass/fail test cycle at the completion of the previous test cycle.

Group Mask

Syntax MASK:TESt:REPeat \{<NR1>|OFF|ON\}
MASK:TESt:REPeat?

Related Commands MASK:COUNt:VIOLATIONS?

Arguments <NR1> = 0 turns off repeat on completion, and any other integer turns on repeat on completion.

OFF turns off repeat on completion.
ON turns on repeat on completion.

Examples MASK:TEST: REPEAT ON causes the instrument to continuously repeat the pass/fail test.

MASK:TEST:REPEAT? might return :MASK:TEST:REPEAT ON, indicating that the repeat pass/fail test on completion is turned on.

## MASK:TESt:SAMple

This command sets or returns the minimum number of waveform database (WfmDB) points the instrument can acquire before it stops a single sequence acquisition or stops running a mask test.

Hint: a bigger sample size can allow a greater throughput (more waveforms to get acquired at a time). However, a very large sample size can slow down the display update. So to speed up the display rate, consider reducing the sample size.

This command works the same as the ACQuire:NUMSAMples command.

Group Mask

Syntax MASK:TESt:SAMp1e \{<NR1>\}
MASK:TESt:SAMple?

Arguments <NR1> the number of points to sample.

Examples MASK:TEST:SAMPLE 100000 sets the instrument to acquire $100,000 \mathrm{WfmDB}$ points.

MASK:TEST:SAMPLE? might return :MASK:TEST:SAMPLE 100000, indicating that the repeat pass/fail test on completion is set to $100,000 \mathrm{WfmDB}$ points.

## MASK:TESt:SAMple:THReshold

This command sets or returns the minimum number of hits in mask regions needed to cause the pass/fail status to change from PASSING to FAILING. This affects the mask test when the instrument is acquiring in waveform database (WfmDB) mode.

Group Mask

Syntax MASK:TESt:SAMple:THReshold \{<NR1>\}
MASK:TESt:SAMple:THReshold?

Arguments <NR1> is the number of hits that can happen when the test fails.

Examples MASK:TEST:SAMPLE:THRESHOLD 100 sets the test to fail when 100 or more hits happen.

MASK:TEST:SAMPLE:THRESHOLD? might return :MASK:TEST:THRESHOLD 1000 , indicating that the repeat pass/fail test on completion is set to 1000 WfmDB points.

## MASK:TESt:SAVEWFM

This command sets or returns the save waveform to file on failure setting. When enabled, this command copies waveform data from active channels to files when the pass/fail test status changes to 'Failing'.

NOTE. This instrument saves files only on the first violation that causes the pass/fail test to fail. To generate a waveform file for every violation occurrence, set MASK:TESt:REPeat to ON and MASK:TESt:WAVEform to 1. Use this technique only when the expected number of violations is small and the violation occurs intermittently.

Group Mask

Syntax MASK:TESt:SAVEWFM \{<NR1>|OFF|ON\}
MASK:TESt:SAVEWFM?

Arguments <NR1> = 0 turns off copying all active channel waveforms to files, and any other integer turns on copying all active channel waveforms to files.

OFF turns off copying all active channel waveforms to files.
ON turns on copying all active channel waveforms to files.

Examples MASK:TEST:SAVEWFM ON sets the instrument to save the failing waveform data to files.

MASK:TEST:SAVEWFM? might return :MASK:TEST:SAVEWFM 1000, indicating that the repeat pass/fail test on completion is set to 1000 WfmDB points.

## MASK:TESt:SAVEWFM:FILEName

This command sets or returns the name of the directory and file to use with the MASK:TESt:SAVEWFM command. It defines the directory the files will be put in (name comes from date and time).

Group Mask

Syntax MASK:TESt:SAVEWFM:FILEName <QString> MASK:TESt:SAVEWFM:FILEName?

Related Commands MASK:TESt:SAVEWFM, MASK:TESt:LOG:FAILure

Arguments <QString> is a string representing the name of the file to save waveform data to.

Examples MASK:TEST:SAVEWFM:FILENAME "TEST" sets the file "TEST" as the file to save waveform data to on failure.

MASK:TEST:SAVEWFM:FILENAME? might return :MASK:TEST:SAVEWFM:FILENAME "C:/TekScope/Waveforms", indicating that the directory "C:/TekScope/Waveforms" the files will be put in.

## MASK:TESt:SRQ:COMPLetion

This command sets or returns an SRQ on pass/fail test completion mode. When enabled, this command causes the instrument to send a GPIB SRQ command when the mask pass/fail test completes.

Group Mask

Syntax MASK:TESt:SRQ:COMPLetion \{<NR1>|OFF|ON\}
MASK:TESt:SRQ:COMPLetion?

Arguments <NR1> = 0 turns off the pass/fail SR on completion, any other integer turns on the pass/fail SRQ on completion.

OFF turns off the pass/fail SRQ on completion.
ON turns on the pass/fail SRQ on completion.

Examples MASK:TEST:SRQ:COMPLETION ON turns on pass/fail SRQ on completion.
MASK:TEST:SRQ:COMPLETION? might return :MASK:TEST:SRQ:COMPLETION 1 , indicating that the pass/fail SRQ on completion is turned on.

## MASK:TESt:SRQ:FAILure

This command sets or returns the SRQ status on pass/fail test failure mode. When enabled, this command causes the instrument to send a GPIB SRQ command
when the pass/fail status changes to 'Failing'. In other words, it sends an SRQ when a failure occurs during the mask pass/fail test.

Group Mask

Syntax MASK:TESt:SRQ:FAILure \{<NR1>|OFF|ON\} MASK:TESt:SRQ:FAILure?

Arguments <NR1> = 0 turns off the pass/fail SRQ on failure, and any other integer turns on the pass/fail SRQ on failure.

OFF turns off the pass/fail SRQ on failure. This is the default.
ON turns on the pass/fail SRQ on failure.

Examples MASK:TEST:SRQ:FAILURE OFF turns off the pass/fail SRQ on failure.
MASK:TEST:SRQ:FAILURE? might return :MASK:TEST:SRQ:FAILURE 1, indicating that the pass/fail SRQ on failure is turned on.

## MASK:TESt:STATE

This command sets or returns the state of mask pass/fail testing. When enabled, this command resets the pass/fail status information and starts pass/fail mask testing. This command also generates an 'Operation Complete' message when pass/fail testing completes. Refer to BUSY? and *OPC commands for information on synchronizing a controller with pass/fail testing.

Group Mask

Syntax MASK:TESt:STATE \{<NR1>|OFF|ON\} MASK:TESt:STATE?

Arguments <NR1> = 0 turns off mask pass/fail testing; any other integer turns on mask pass/fail testing.

OFF turns off mask pass/fail testing.
ON turns on mask pass/fail testing.

Examples MASK:TEST:STATE ON turns on mask pass/fail testing.
MASK:TEST:STATE? might return :MASK:TEST:STATE 0 , indicating that the mask pass/fail testing is turned off.

## MASK:TESt:STATUS? (Query Only)

This query-only command returns the pass/fail test status. This command returns one of: OFF, DELAY, PASSING, FAILING, PASSED, FAILED, and VIOLATION. In other words, it indicates the result of the pass/fail test. When the violation count exceeds the violation threshold, the status changes from Passing to Failed.

Group Mask

Syntax MASK:TESt:STATUS?

Examples MASK:TEST:STATUS? might return :MASK:TEST:STATUS PASSING indicates pass test status.

## MASK:TESt:STOP:FAILure

This command sets or returns the stop status on pass/fail test failure mode. When enabled, this command causes the instrument to stop acquiring data when the pass/fail status changes to 'Failing'. Repeat-on-completion mode has no effect.

Group Mask

Syntax MASK:TESt:STOP:FAILure \{<NR1>|OFF|ON\}
MASK:TESt:STOP:FAILure?

Arguments <NR1> = 0 turns off the pass/fail stop on failure, and any other integer turns on the pass/fail SRQ on failure.

OFF turns off the pass/fail stop on failure. This is the default.
ON turns on the pass/fail stop on failure.

Examples MASK:TEST:STOP:FAILURE OFF turns off the pass/fail stop on failure.
MASK:TEST:STOP:FAILURE? might return :MASK:TEST:STOP:FAILURE 0, indicating that the mask pass/fail testing is turned off.

## MASK:TESt:THReshold

This command sets or returns the number of failed tested waveforms needed in each pass/fail test to cause the pass/fail status to change from 'Passing' to 'Failing'.

Group Mask

Syntax MASK:TESt:THReshold <NR1> MASK:TESt:THReshold?

Arguments <NR1> is an integer that represents the number of tested waveform violations occurring in each pass/fail test needed to change the pass/fail status to 'Failing'. This means that if the threshold is set to the default of 1 then 1 failure would cause a test failure. If the threshold is set to 2 then 2 failures would cause a test failure.

Examples MASK:TEST:THRESHOLD 20 sets the number of failed tested waveforms to 20 that is needed in each pass/fail test to cause the pass/fail status to change from 'Passing' to 'Failing'.

MASK:TEST:THRESHOLD? might return :MASK:TEST:THRESHOLD 32, indicating that the 32 failures would cause a test failure.

## MASK:TESt:WAVEform

This command sets or returns the number of waveforms to test during pass/fail testing. If Averaging is on, this is the number of averaged waveforms to test during pass/fail testing. It specifies the number of waveforms to be acquired in counting the mask hits in the pass/fail test. The default is 20 .

Group Mask

Syntax MASK:TESt:WAVEform <NR1>
MASK:TESt:WAVEform?

Arguments <NR1> is an integer that sets the number of tested (sampled or averaged) waveforms to test for each pass/fail test.

Examples MASK:TEST:WAVEFORM 20 sets the number of failures that would cause a test failure to 20 .

MASK:TEST:WAVEFORM? might return
:MASK:TEST:WAVEFORM 50, indicating that the 50 failures would cause a test failure.

## MASK:USER:AMPlitude

This command sets or returns the current mask's nominal pulse amplitude in volts. The query form of this command returns the nominal pulse amplitude of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:AMP1itude <NR3> MASK:USER:AMPlitude?

Related Commands MASK:USER:VSCAle

Arguments <NR3> is a floating number that sets the nominal pulse amplitude in volts.

Examples MASK:USER:AMPLITUDE 2.4 sets the user mask nominal pulse amplitude to 2.4 volts.

MASK:USER:AMPLITUDE? might return
:MASK:USER:AMPLITUDE $100.0000 \mathrm{E}-3$, indicating that the user mask nominal pulse amplitude to set to 0.1 volts.

MASK:USER:BITRate
This command sets or returns the bit rate for the user mask.

Group Mask

Syntax MASK:USER:BITRate <NR1>
MASK:USER:BITRate?

Arguments <NR1> is a number that sets the bit rate of the user mask in bits per second.

Examples MASK:USER:BITRATE 156E6 sets the bit rate.
MASK:USER:BITRATE? might return :MASK:USER:BITRATE 1560000, indicating that the bit rate of the user mask is set to 1560000 bits per second.

## MASK:USER:HSCAle

This command sets or returns the nominal timing resolution used to draw the mask in time/division. The query form of this command returns the nominal timing resolution of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:HSCATe <NR3> MASK:USER:HSCATe?

## Related Commands MASK:USER:HTRIGPOS

Arguments <NR3> is a floating point number that sets the mask drawing timing resolution.

Examples MASK:USER:HSCALE 200E-9 sets the nominal timing resolution used to draw the mask to 200 nanoseconds per division.

MASK:USER:HSCALE? might return :MASK:USER:HSCALE 40.0000E-9, indicating that the nominal timing resolution used to draw the mask pulse shape is set to 40 nanoseconds per division.

## MASK:USER:HTRIGPOS

This command sets or returns the nominal trigger position (pulse leading edge) used to draw the mask as a fraction of the display width. The query form of this command returns the nominal trigger position of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:HTRIGPOS <NR3>
MASK:USER:HTRIGPOS?

## Related Commands

## Arguments

## Examples

## MASK:USER:HSCAle

$<$ NR3> is a floating point number in the range of 0.0 to 1.0 that sets the trigger points as a fraction of the display width, referenced from the left edge of the graticule.
0.0 represents the left edge.

MASK:USER:HTRIGPOS 0.6 sets the nominal trigger position of the displayed mask to 0.6.

MASK:USER:HTRIGPOS? might return :MASK:USER:HTRIGPOS 500.0000E-3, indicating that the nominal trigger position of the displayed mask is set to 0.5 .

## MASK:USER:LABel

Group Mask

Syntax MASK:USER:LABE1 <QString> MASK:USER:LABE1?

Arguments <QString> is an alphanumeric character string used to annotate a user mask label.

Examples MASK:USER:LABEL "mikesdata" assigns "mikesdata" as the user mask label.
MASK:USER:LABEL? might return :MASK:USER:LABe1 "mikesdata", indicating that the label assigned to a user mask is set to "mikesdata".

## MASK:USER:PATTERNBITS

This command sets or returns the number of bits used for serial trigger for the User mask standard. For example, DS1 requires six bits, four leading zeros, a one, and a trailing zero. The query form of this command returns the serial bit value of the displayed mask. The set form of this command affects only the User mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:PATTERNBITS <NR1> MASK:USER:PATTERNBITS?

Related Commands MASK:USER:PRESAMPBITS

Arguments <NR1> is an integer that sets the number of bits.

Examples MASK:USER:PATTERNBITS 6 sets the serial bit value of the displayed mask to 6 .
MASK:USER:PATTERNBITS? might return :MASK:USER:PATTERNBITS 1, indicating that the serial bit value of the displayed mask is set to 1 .

## MASK:USER:PRESAMPBITS

This command sets or returns the number of bits before the (isolated one) pulse leading edge in the serial trigger pass/fail testing. For example, DS1 has four leading zeros. The query form of this command returns the presample bit value of the displayed mask. The set form of this command only affects the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:PRESAMPBITS <NR1> MASK:USER:PRESAMPBITS?

Related Commands MASK:USER:PATTERNBITS

Arguments <NR1> is an integer that sets the number of bits before the trigger pulse.

Examples MASK:USER:PRESAMPBITS 4 sets the presample bit value of the displayed mask to 4 .

MASK:USER:PRESAMPBITS? might return :MASK:USER:PRESAMPBITS 0, indicating that the presample bit value of the displayed mask is set to 0 .

## MASK:USER:RECOrdlength

This command sets or returns the nominal record length for pulse mask testing. The query form of this command returns the record length value of the displayed
mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:RECOrdlength <NR1> MASK:USER:RECOrdlength?

Arguments <NR1> is an integer number that sets the record length.

Examples MASK:USER:RECORDLENGTH 500 sets the record length value of the displayed mask to 500 points.

MASK:USER:RECORDLENGTH? might return :MASK:USER:RECORDLENGTH 0 , indicating that the record length value of the displayed mask is set to 0 .

## MASK:USER:SEG<m> (No Query Form)

This command deletes the specified mask segment from the user mask, whether or not the user mask is the current mask.
$m$ is an integer that specifies the user mask segment number to delete from the user mask.

Group Mask

Syntax MASK:USER:SEG<m> DELEte

Arguments DELEte removes the specified segment from the mask.

Examples MASK:USER:SEG3 DELETE deletes mask segment three from the user mask.

## MASK:USER:SEG<m>:NR_Pt? (Query Only)

This query-only command returns the number of points that make up the specified user mask segment. Each mask point consists of a pair of X-Y coordinates. m is an integer that specifies a user mask segment number.

Group Mask

Syntax MASK:USER:SEG<m>:NR_Pt?

Returns <NR1> is 0 to 50 .

Examples MASK:USER:SEG2:NR_PT? might return :MASK:USER:SEG2:NR_PT 5.

## MASK:USER:SEG<m>:POINTS

This command sets or returns the X-Y user coordinates of all points in the specified user mask segment. The set form defines new points in the user mask, replacing any existing points in the specified user mask segment. It sets or returns the vertices for a particular segment in the selected mask.
$m$ is an integer that specifies the user mask segment number.

Group Mask

Syntax MASK:USER:SEG<m>:POINTS <NR3>, <NR3> [, <NR3>, <NR3>] MASK:USER:SEG<m>:POINTS?

Arguments <NR3> refers to the coordinates of one of the vertices in the user mask. Each pair of numbers represents the horizontal and vertical coordinates of a mask segment vertex. The pairs must be listed in a counterclockwise order. If the vertical or horizontal scale or position is changed after this command and then the query form of this command is issued, the value returned from the instrument will not be the same. If just one pair is input, it is ignored and the user mask segment is marked as undefined. The default is not points in the user mask segment.

Examples MASK:USER:SEG2:POINTS -2.3E-9, 44E-3, $-2.5 \mathrm{E}-9,47 \mathrm{E}-3$, $1.2 \mathrm{E}-9,44 \mathrm{E}-3$ defines the points in user mask segment 2.

MASK:USER:SEG2:POINTS? might return :MASK:USER:SEG2:POINTS 0.00000 .0000 , indicating that the $\mathrm{X}-\mathrm{Y}$ user coordinates for user mask segment 2 in the selected mask is set to 0,0 .

## MASK:USER:TRIGTOSAMP

This command sets or returns the time in seconds, from the (leading edge) trigger position to the pulse bit sampling position. The query form of this command returns the time value of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:TRIGTOSAMP <NR3> MASK:USER:TRIGTOSAMP?

Related Commands MASK:USER:WIDth

Arguments <NR3> is the floating point number that sets the time to the pulse bit sampling position.

Examples
MASK:USER:TRIGTOSAMP 162E-9 sets the user mask time from the (leading edge) trigger position to the pulse bit sampling position to 162 nanoseconds.

MASK:USER:TRIGTOSAMP? might return :MASK:USER:TRIGTOSAMP 0.0000, indicating that the time value of the displayed mask is set to 0 nanosecond.

## MASK:USER:VOFFSet

This command sets or returns the nominal vertical offset in volts, used to vertically offset the input channels. The query form of this command returns the offset value of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask<br>Syntax MASK:USER:VOFFSet <NR3> MASK:USER:VOFFSet?<br>Related Commands MASK:USER:VPOS, MASK:USER:VSCAle

Arguments <NR3> is a floating point number that sets the nominal vertical offset in volts.

Examples MASK:USER:VOFFSET 0.0 sets the user mask nominal vertical offset to 0.0 volts. MASK:USER:VOFFSET? might return :MASK:USER:VOFFSET 0.0000, indicating that the nominal vertical offset value of the displayed mask is set to 0 volts.

## MASK:USER:VPOS

This command sets or returns the nominal vertical position, control in divisions, used to vertically position the input channels. The query form of this command returns the vertical position value of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:VPOS <NR3>
MASK:USER:VPOS?

Related Commands MASK:USER:VOFFSet, MASK:USER:VSCAle

Arguments <NR3> is a floating point number that sets the nominal vertical position control in divisions.

Examples MASK:USER:VPOS -0.8 sets the user mask nominal vertical position to -0.8 divisions.

MASK:USER:VPOS? might return :MASK:USER:VPOS 0.0000, indicating that the nominal vertical value of the displayed mask is set to 0 divisions.

## MASK:USER:VSCAle

This command sets or returns the nominal vertical scale in volts per division, used to vertically scale the input channels. The query form of this command returns the vertical scale value of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:VSCA1e <NR3> MASK:USER:VSCAle?

Related Commands MASK:USER:VOFFSet, MASK:USER:VPOS

Arguments <NR3> is a floating point number that sets the nominal bit width in seconds.

Examples MASK:USER:VSCALE200E-3 sets the user mask nominal vertical scale to 200 millivolts per division.

MASK:USER:VSCALE? might return :MASK:USER:VSCALE 1.0000E-3, indicating that the nominal vertical scale of the displayed mask is set to 1 millivolt per division.

## MASK:USER:WIDth

This command sets or returns the nominal bit width in seconds. The query form of this command returns the bit width value of the displayed mask. The set form of this command affects only the user mask, regardless of the current (displayed) mask.

Group Mask

Syntax MASK:USER:WIDth <NR3> MASK:USER:WIDth?

Related Commands MASK:USER:TRIGTOSAMP

Arguments <NR3> is a floating point number that sets the nominal bit width in seconds. This is the time of one bit of data where bit width = $1 /$ (data rate of the signal).

Examples MASK:USER:WIDTH 648E-9 sets the user mask nominal bit width to 648 nanoseconds ( 1.544 Mbits/second).

MASK:USER:WIDTH? might return :MASK:USER:WIDTH 1.0000E-3, indicating that the nominal vertical scale of the displayed mask is set to 1 millivolt per division.

## MATHArbflt<x>:FILepath

This command or query sets the file path for a file of filter coefficients. Setting a path will read that file and load the filter for ARBFLT $<\mathrm{x}>$, where x can be 1 to 8 .

Group Math

Syntax MATHArbflt<x>:FILepath <QString> MATHArbflt<x>:FILepath?

Arguments <QString> specifies the path to the file of filter coefficients.

Examples MATHARBFLT8:FILEPATH "c:/myfilters/20mhz.f7t" reads filter coefficients from the file and loads the filter for ARBFLT8.

MATHARBFLT1:FILEPATH? might return :MATHARBFLT1:FILEPATH
"C:\Users $\backslash$ Public\Tektronix\TekScope\Math Arbitrary Filters $\backslash$ LowPass-Norm $\backslash 7$ lowpass_0.bw.f7t", indicating that the path to the file of filter coefficients is set to "C:\Users\Public\Tektronix $\backslash$ TekScopelMath Arbitrary Filters\LowPass-Norm\lowpass_0.bw.fft".

## MATHArbflt<x>:READFile (No Query Form)

This command forces a reread of the filter file for each arbitrary filter in use. The $<\mathrm{x}>$ specifies the filter and can be 1 to 8 .

Group Math

Syntax MATHArbflt<x>:READFile FORCe

Arguments FORCe forces a reread of the filter file.

Examples MATHARBFLT8:READFILE FORCE forces a reread of the filter file at MATHARBFLT8: FILEPATH location for each arbitrary filter in use.

## MATHVAR? (Query Only)

This command queries all 8 numerical values you can use within math expressions.
Group Math
Syntax MATHVAR?
Related Commands MATHVAR:VAR $<x>$, MATH $<x>$ :DEFine
Returns <NR3> are the stored numerical values.
Examples MATHVAR? returns the values of all variables stored in locations 1 through 8.

## MATHVAR:VAR<x>

This command sets or queries one of 8 different numerical values you can use within math expressions. These values can range from -9.9e37 to 9.9e37; the default values are $0.0 .<x>$ specifies the location, 1 through 8 , in which you can store values. Stored math variables can be referenced within math expressions as VAR1, VAR2,...VAR8.

For example, the following command defines MATH1 as the product of Channel 1 and math variable 1: MATH1:DEFINE "CH1 * VAR1".

Group Math

Syntax MATHVAR:VAR<x> <NR3>
MATHVAR:VAR $<x>$ ?

Related Commands MATHVAR?, MATH $<x>$ :DEFine

Arguments <NR3> specifies the numerical value to be stored in location $\mathrm{x}<1$ through $8>$.

Examples MATHVAR:VAR3 $-2.43 \mathrm{E}-5$ stores the value $-2.43 \mathrm{e}-5$ in the third math variable location.

MATHVAR:VAR3? might return :MATHVAR:VAR3 24.3000E-6 for the expression stored in location 3.

## MATH<x>? (Query Only)

This query-only command returns the definition for the math waveform specified by $\langle x\rangle$, which ranges from 1 through 4 .

| Group | Math |
| :--- | :--- |
| Syntax | MATH<x>? |
| Related Commands | SELect:<wfm> |
| Examples | MATH1? might return the following definition of a math <br> waveform: : MATH1:DEFINE "Ch1-Ch2"; UNITSTRING "V"; <br>  <br>  <br>  <br>  <br> NUMAVG 2;VERTICAL:SCALE 112.000E-3; POSITION <br> $1.6400 ;$ AUTOSCALE 0;:MATH1:LABEL:NAME "";XPOS $1.0000 ;$ YPOS |

```
600.0000E-3;:MATH1:SPECTRAL:MAG DB;PHASE DEGREES;GATEPOS
0.0000;GATEWIDTH 4.0000E-6;REFLEVEL 20.0000;REFLEVELOFFSET
223.6000E-3;SPAN 625.0000E+6;CENTER 312.5000E+6;RESBW
500.0000E+3;WINDOW GAUSSIAN;SUPPRESS -200.0000;UNWRAP 0;LOCK 0.
```

## MATH<x>:DEFine

This command allows you to define new waveforms using mathematical expressions. Sending this command is equivalent to selecting Math Setup from the Math menu, selecting a math waveform (Math 1 through Math 4), and then entering a math expression in the Math $<\mathrm{x}\rangle$ box. The query form of this command returns the math definition for the specified math waveform.

You can specify a math expression from waveforms, measurements and scalar sources, functions, operands, and numerical constants. You can define and display up to four math waveforms simultaneously.

Math expressions can be simple, such as Ch1, which specifies that a waveform should show the signal source of Channel 1 with no mathematical computation. Math expressions can also be complex, consisting of 100 plus characters and comprising many sources (including other math waveforms), functions, and operands. As an example, you can enter the expression $\log (\mathrm{Ch} 1+\mathrm{Ch} 2)$, which specifies that the signals from channels 1 and 2 are to be algebraically added, and the base $10 \log$ of the sum is to be shown as the final math waveform.

For more information about constructing mathematical expressions, see Creating and Using Math Waveforms in the user online help for this instrument.

| Group | Math |
| ---: | :--- |
| Syntax | MATH<x>:DEFine <QString> <br> MATH<x>:DEFine? |
| Related Commands | MATHVAR:VAR $<x>$ |

Arguments <QString> quoted string argument is the mathematical expression that defines the waveform.

Examples MATH2:DEFINE "CH1+CH2" adds the Channel 1 and Channel 2, storing the results in Math 2 waveform.

MATH1:DEFINE? might return
:MATH1:DEFINE "CH2*REF2" as the expression that defines Math 1 waveform.

## MATH<x>:FILTer:MODe

This command or query sets or returns the filter rise time parameter.

Group Math

Syntax MATH<x>:FILTer:MODe \{CENTered|SHIFted\} MATH<x>:FILTER:MODe?

Arguments CENTERED sets the value at any point to the average of that point in the source waveform and N points on either side of that point.

SHIFTED sets the value at any point to the average of that point in the source waveform and 2 N points before that in the source waveform. This shifts a rising edge to the right side of the screen. Shifted mode is sometimes called a causal filter since the value at any point is not caused by points after it in time.

Examples MATH1:FILTER:MODE SHIFTED sets the filter mode to shifted.
MATH1:FILTER:MODE? might return :MATH1:FILTER:MODE CENTERED, indicating that the filter rise time parameter is set to CENTERED mode for Math 1 waveform.

## MATH<x>:FILTer:RISetime

This command or query sets or returns the filter rise time parameter.

Group Math

Syntax MATH<x>:FILTer:RISetime <NR3> MATH<x>:FILTer:RISetime?

Arguments <NR3> sets how the filter affects a signal. The bandwidth of the filter is approximately 0.35 / (filter rise time). For a square wave input, the measurement system rise time of Math $(x)=$ filter (chx) is very close to the filter rise time of Math(x).

Examples MATH1:FILTER:RISETIME $1.7 \mathrm{e}-3$ sets the filter rise time to 1.7 milliseconds. MATH1:FILTER: RISETIME? might return
:MATH1: FILTER:RISETIME $1.0000 \mathrm{E}-9$, indicating that the filter rise time parameter is set to 1 nanoseconds for Math 1 waveform.

## MATH<x>:LABel:NAMe

This command sets or returns the label string, which is used for annotating the math waveform on the screen. The math waveform to which the label is attached is specified by x , which ranges in value from 1 through 4 . This command is equivalent to selecting Math Setup from the Math menu and entering a label in the Label box.

Group Math

Syntax MATH<x>:LABe1:NAMe <QString> MATH<x>:LABE1:NAMe?

Arguments <QString> specifies the label to annotate the math waveform.

Examples MATH2:LABEL:NAME "PROBE POINT7" assigns "Probe point7" Math 2 waveform.

MATH2:LABEL:NAME? might return :MATH2:LABEL:NAME "Probe point7", indicating that Probe point 7 is the label for Math 2 waveform.

## MATH<x>:LABel:XPOS

This command sets or queries the X screen offset at which the label attached to a math waveform is displayed, relative to the left edge of the screen. Channels are specified by x , which ranges from 1 through 4 . This command is equivalent to selecting Math Label from the Math menu and entering a value in the X Position box.

Group Math
$\begin{array}{ll}\text { Syntax } & \begin{array}{ll}\text { MATH }<x>: \text { LABe } 1: X P O S ~<N R 1>~\end{array} \\ & \text { MATH }\langle x>: \text { LABe1:XPOS? }\end{array}$

Related Commands MATH $<x>:$ LABel:YPOS

Arguments <NR1> is the location (in divisions) where the label for the selected math waveform is displayed, relative to the left edge of the screen. Arguments should be integers ranging from 0 to 10 .

Examples MATH2:LABEL:XPOS 5 moves the waveform label for the Math 2 waveform (on a four-channel instrument) so that it begins 5 divisions to the right of the left edge of the screen.

MATH2:LABEL:XPOS? might return :MATH2:LABEL:XPOS 2.5, indicating that the waveform label for the Math 2 waveform is currently 2.5 divisions to the right of the left edge of the screen.

## MATH<x>:LABel:YPOS

This command sets or queries the Y screen offset at which the label attached to a math waveform is displayed, relative to the waveform handle. The Math waveform is specified by x , which ranges from 1 through 4 . This command is equivalent to selecting Math Label from the Math menu and entering a value in the Y Position box.

Group Math

Syntax MATH<x>:LABE1:YPOS <NR1>
MATH<x>:LABE1:YPOS?

Related Commands MATH $<\mathrm{x}>:$ :LABel:XPOS

Arguments <NR1> is the location (in divisions) where the label for the selected math waveform is displayed, relative to the waveform handle. Arguments should rang from 10 to -10 .

Examples MATH2:LABEL:YPOS -2.5 moves the waveform label for the Math 2 waveform to 2.5 divisions below the waveform handle.

MATH2:LABEL:YPOS? might return :MATH2:LABEL:YPOS 0, indicating that the waveform label for the Math 2 waveform is currently located at the waveform handle.

## MATH<x>:NUMAVg

This command sets or returns the acquisition number at which the averaging algorithm will begin exponential averaging. Prior to that acquisition number, the
algorithm uses stable averaging. This has no effect unless the AVG() function is used in the specified math expression. If so, it affects all $A V G()$ functions in this math expression. The Math waveform is specified by x, which ranges from 1 through 4. This command is equivalent to selecting Set Math Averages from the Math menu and then entering an averaging value for the math waveform.

Group Math

Syntax MATH<x>:NUMAVg <NR1>
MATH $\langle x>$ : NUMAVg?

Related Commands ACQuire:NUMAVg

Arguments <NR1> specifies the number of acquisitions over which exponential averaging is performed.

Examples MATH2: NUMAVG 10 averages the Math 2 waveform ten times.
MATH2: NUMAVG? might return :MATH2: NUMAVG 10, indicating that ten Math 2 waveforms are averaged before a single acquisition occurs.

## MATH<x>:SPECTral? (Query Only)

This query-only command returns the current spectral setups for the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4. This command is equivalent to selecting Spectral Setup from the Math menu and viewing the current spectral setup values.

Group Math

Syntax MATH<x>:SPECTra1?

Examples MATH1:SPECTRAL? might return the spectral setup values for MATH1 as follows: :MATH1:SPECTRAL:MAG DB; PHASE DEGREES; GATEPOS 0.0000E+00; GATEWIDTH 1.9996E-06; REFLEVEL 4.4587+01; REFLEVELOFFSET2.2360E-01; SPAN 1.2500E+09; CENTER 6.2500E+08; RESBW 1.0002E=06; WINDOW GAUSSIAN; SUPPRESS -3.5000E+01; UNWRAP 0;LOCK 0 .

## MATH<x>:SPECTral:CENTER

This command specifies or returns the center frequency of the spectral analyzer output data span for the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4 . This command is equivalent to selecting Spectral Setup from the Math menu and then entering a Center Freq value.

Group Math

Syntax MATH<x>:SPECTral:CENTER <NR3> MATH<X>:SPECTra1:CENTER?

Related Commands
MATH $<\mathrm{x}>$ :SPECTral:SPAN, HORizontal:MODE:SAMPLERate

Arguments <NR3> is the desired frequency of the spectral analyzer output data span in hertz.

Examples MATH3:SPECTRAL:CENTER 10.09E6 sets the center frequency to the closest value it can attain to 10.09 MHz .

MATH2:SPECTRAL:CENTER? might return :MATH2:SPECTra1:CENTER $10.0900 \mathrm{E}+06$, indicating that the center frequency is currently set at 10.09 MHz .

## MATH<x>:SPECTral:GATEPOS

This command sets or returns the position of the center of the gate, which is used as the data input to the spectral analyzer for the specified math waveform. The math waveform is specified by x , which ranges from 1 through 4 . This command is equivalent to selecting Spectral Setup from the Math menu and then entering a Gate Pos value.

Group Math

Syntax MATH<x>:SPECTral:GATEPOS <NR3>
MATH<x>:SPECTra1:GATEPOS?

Related Commands MATH $<\mathrm{x}>$ :SPECTral:GATEWIDTH

Arguments <NR3> is the gate position. Units are represented in seconds, with respect to trigger position.

Examples MATH1:SPECTRAL:GATEPOS $-2 e 8$ specifies the position of the edge of the gate used as the data input to the spectral analyzer. The $-2 \mathrm{e}-8$ specifies that the center of the gate is $2 \mathrm{e}-8$ seconds before (to the left of) the trigger.

MATH2:SPECTRAL:GATEPOS? might return :MATH2:SPECTRAL:GATEPOS $0.0000 \mathrm{E}+00$, indicating that the gate position is set to zero (the trigger position).

## MATH<x>:SPECTral:GATEWIDTH

This command sets or returns the gate width input in seconds, to the spectral analyzer for the specified math waveform. The math waveform is specified by x , which ranges from 1 through 4 . This command is equivalent to selecting Spectral Setup from the Math menu and entering a duration value in the Gate Dur box.

Group Math

Syntax MATH<x>:SPECTral:GATEWIDTH <NR3> MATH<X>:SPECTra1:GATEWIDTH?

Related Commands MATH $<x>$ :SPECTral:GATEPOS

Arguments <NR3> is the time across the 10-division screen in seconds.

Examples MATH1:SPECTRAL:GATEWIDTH 1.0E-3 sets the gate width input to the spectral analyzer at 1 ms .

MATH3:SPECTRAL:GATEWIDTH? might return :MATH3:SPECTRAL:GATEWIDTH $1.0000 \mathrm{E}-03$, indicating that the gate width to the spectral analyzer is set to 1 ms .

## MATH<x>:SPECTral:LOCk

This command locks menus for two or more math waveforms together as a group. The query form of this command returns an ON (1) or OFF (0), indicating whether spectral locking is turned on. This command is equal to selecting Spectral Setup from the Math menu, choosing the Control tab and then clicking the Time/Track Frequency Domain Controls button associated with the math waveforms that you want to lock.

Table 2-46: Math<x> Lock Combinations

| Math1 | Math2 | Math3 | Locked Math Waveforms |
| :--- | :--- | :--- | :--- |
| Off | Off | Off | None |
| Off | Off | On | Math3 and Math4 locked |

Table 2-46: Math< $x>$ Lock Combinations (cont.)

| Math1 | Math2 | Math3 | Locked Math Waveforms |
| :--- | :--- | :--- | :--- |
| Off | On | Off | Math2 and Math3 locked |
| Off | On | On | Math2, Math3, and Math4 locked |
| On | Off | Off | Math1 and Math2 locked |
| On | Off | On | Math1 and Math2 locked, Math3 <br> and Math4 locked |
| On | On | Off | Math1, Math2, and Math3 locked |
| On | On | On | Math1, Math2, Math3, and Math4 <br> locked |

NOTE. Executing MATH4:SPECTra 1:LOCk via the GPIB interface has no effect since there is no Math5 to which it can be locked.

Group Math

Syntax MATH<x>:SPECTral:LOCk \{ON|OFF|<NR1>\}
MATH<x>:SPECTra1:LOCk?

Arguments ON turns on the parameter lock for the specified math waveform.
OFF turns off the parameter lock for the specified math waveform.
<NR1> = 0 disables the parameter lock for the specified math waveform; any other value enables the parameter lock.

Examples MATH1:SPECTRAL:LOCK ON turns on the parameter lock for Math 1, which causes the parameters for Math 1 and Math 2 waveforms to be locked together.

MATH1:SPECTRAL:LOCK? might return :MATH1:SPECTRAL:LOCK 0, indicating that the parameter lock for Math 1 waveform is turned off.

## MATH<x>:SPECTral:MAG

This command sets or returns the units of the SpectralMag function in the specified math definition string. The Math waveform is specified by x , which ranges from 1 through 4. This command is equivalent to selecting Spectral Mag from the Math menu and then entering the units that you want in the Scale box, or selecting Basic from the Math menu and then clicking the desired Scale button.

Group Math

Syntax MATH<x>:SPECTral:MAG \{LINEAr|DB|DBM\}
MATH<X>:SPECTra1:MAG?

Arguments LINEAR sets the SpectralMag units to linear.
DB sets the SpectralMag units to decibels.
DBM sets the SpectralMag units to decibels. It also sets the Ref Level Offset to a value that is the equivalent of 1 mW into $50 \Omega$.

Examples MATH2:SPECTRAL:MAG DB sets the SpectralMag units for Math 2 waveform to decibels.

MATH2:SPECTRAL:MAG? might return :MATH2:SPECTRAL:MAG DB, indicating that the SpectralMag units for Math 2 waveform are set to decibels.

## MATH<x>:SPECTral:PHASE

This command sets or returns the units of a SpectralPhase function in the specified math definition string. The Math waveform is specified by x , which ranges from 1 through 4. This command is equal to selecting Spectral Phase from the Math menu, selecting the Advanced button, selecting the Vert Axis tab, and then clicking the desired Scale button.

Group Math

Syntax MATH<x>:SPECTra1:PHASE \{DEGrees|RADians|GROUPDe1ay\} MATH<X>:SPECTra1:PHASE?

Arguments DEGREES sets the SpectralPhase units to degrees.
RADIANS sets the SpectralPhase units to radians.
GROUPDELAY sets the SpectralPhase units to groupdelay, which computes the derivative of unwrapped phase spectrum. Units are expressed in seconds.

Examples MATH2:SPECTRAL:PHASE DEGREES sets the SpectralPhase units for Math 2 waveform to degrees.

MATH2:SPECTRAL:PHASE? might return :MATH2:SPECTRAL:PHASE RADIANS, indicating that the SpectralPhase units for Math 2 waveform are set to radians.

## MATH<x>:SPECTral:REFLevel

This command specifies the vertical position of the specified spectral math waveform on the display screen. The numerical value represents the position at the top of the display graticule. The Math waveform is specified by x , which ranges from 1 through 4. This command is equal to selecting Spectral Setup from the Math menu, choosing the Mag tab and then entering a value in the Reference Level box.

Group Math

Syntax MATH<x>:SPECTral:REFLeve1 <NR3> MATH<x>:SPECTral:REFLeve1?

Related Commands MATH $<\mathrm{x}>$ :SPECTral:REFLEVELOffset

Arguments <NR3> is the value that represents the top of the display screen graticule. The range depends on the units and both the MATH<x>:VERTical:SCA1e and MATH<x>:VERTical:POSition settings.

Examples MATH1:SPECTRAL:REFLEVEL -10 sets the top of the display screen to be a reference level of -10 dB . If the vertical scale is LINEAR, then the vertical units will be the same as the input waveform.

MATH1:SPECTRAL:REFLEVEL? might return :MATH1:SPECTRAL:REFLEVEL $2.0000 \mathrm{E}+01$, indicating that the top of the display screen is set to a reference level of 20 dB .

## MATH<x>:SPECTral:REFLEVELOffset

This command sets or returns the spectral level offset used for calculating the dB value for the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4 . Changing the reference level offset causes the spectral waveform to move vertically, with respect to zero dB . This command is equal to selecting Spectral Setup from the Math menu, choosing the Mag tab and then entering a value in the Reference Level Offset box.

Group Math

Syntax MATH<x>:SPECTral:REFLEVELOffset \{DBM|<NR3>\} MATH<x>:SPECTra1:REFLEVELOffset?

## Related Commands MATH $<x>$ :SPECTral:REFLevel

Arguments DBM specifies the reference level used for calculation to be equivalent to 1 mW into $50 \Omega$ (Zero dB will occur at this level).
<NR3> specifies the reference level used for calculation of the decibel value when the output units are Log.

Examples MATH1:SPECTRAL:REFLEVELOFFSET 0.5 sets the reference level for the Log calculation for decibel to be $0.5 . \mathrm{dB}=\mathrm{A} \times \log (\mathrm{y} /<\mathrm{NR} 3>)$ where A is 10 if the input units are watts and A is 20 if the input units are not watts.

MATH1:SPECTRAL: REFLEVELOFFSET DBM sets the decibel reference to be equivalent to 1 mW into $50 \Omega$. The reference level numerical value will depend on the input units. If the units are volts, the value is set to 0.2236 V ; if the units are amperes, the value is set to $40 \mu \mathrm{~A}$; if the units are watts, the value is set to 0.001 W .

MATH1: SPECTRAL:REFLEVELOFFSET? might return :MATH1:SPECTRAL: REFLEVELOFFSET $2.23360 E-01$, indicating that the spectral reference level offset is 223.6 mV .

## MATH $\langle x>$ :SPECTral:RESBw

This command sets or returns the resolution bandwidth of the spectral analyzer for the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4. This command is equivalent to selecting Spectral Setup from the Math menu and then entering a value in the Res BW box.

Group Math

Syntax MATH<x>:SPECTral:RESBw <NR3>
MATH<x>:SPECTra1:RESBw?

Related Commands
MATH $<\mathrm{x}>:$ SPECTral:GATEWIDTH, MATH $<\mathrm{x}>$ :SPECTral:CENTER, MATH $<x>$ :SPECTral:SPAN, MATH $<x>$ :SPECTral:WINdow

Arguments <NR3> is the desired resolution bandwidth value. Units are represented in Hertz.

Examples MATH1:SPECTRAL:RESBW 250E3 sets the resolution bandwidth to the attainable value that is close to 250 kHz .

MATH1:SPECTRAL:RESBW? might return :MATH1:SPECTRAL:RESBW $1.0002 \mathrm{E}+06$, indicating the actual resolution bandwidth value obtained from the spectral analyzer.

## MATH<x>:SPECTral:SPAN

This command sets the ceiling of the frequency span to a value that is closest to the specified value. The query form of this command returns the current span value for specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4. This command is equal to selecting Spectral Setup from the Math menu and then entering a value in the Freq Span box.

Group Math

Syntax MATH<x>:SPECTral:SPAN \{<NR3>|FUL1\}
MATH<X>:SPECTral:SPAN?

Related Commands MATH $<x>$ :SPECTral:CENTER

Arguments <NR3> specifies the frequency span of the output data vector from the spectral analyzer.

FULL sets the top of the span to $1 / 2$ the sample rate and sets the center frequency to $1 / 2$ the span.

Examples MATH1:SPECTRAL:SPAN FULL sets the top of the span to $1 / 2$ the sample rate and sets the center frequency to $1 / 2$ the span.

MATH1:SPECTRAL:SPAN 2.56 E 6 sets the top of the span to a value that is closest to 2.56 MHz .

MATH1:SPECTRAL:SPAN? might return :MATH1:SPECTRAL:SPAN $1.2500 \mathrm{E}+09$, indicating the actual span value obtained by the spectral analyzer.

## MATH<x>:SPECTral:SUPPress

This command sets or returns the phase suppression threshold for the specified math waveform. The Math waveform is specified by $x$, which ranges from 1 through 4. This command is equal to selecting Spectral Setup from the Math menu, choosing the Phase tab and then entering a value in the Suppression Threshold box. This command affects only Spectral Phase waveforms.

Group Math

Syntax MATH<x>:SPECTral:SUPPress <NR3> MATH<x>:SPECTral:SUPPress?

Related Commands MATH $<\mathrm{x}>$ :SPECTral:UNWRap

Arguments <NR3> is the magnitude level that data with magnitude values below this value are displayed as zero phase.

Examples MATH1:SPECTRAL:SUPPRESS -62 specifies that any data with magnitude values less than -62 dB will have their phase output set to zero.

MATH1:SPECTRAL: SUPPRESS? might return :MATH1: SPECTRAL: SUPPRESS $-3.5000 \mathrm{E}+01$, indicating that the phase suppression threshold is currently set to -35 dB .

## MATH<x>:SPECTral:UNWRap

This command sets or returns whether phase unwrap of the spectral analyzer output data is enabled for the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4 . This command is equal to selecting Spectral Setup from the Math menu, choosing the Phase tab and then clicking the Unwrap button. This command affects only Spectral Phase waveforms.

| Group | Math |
| :---: | :---: |
| Syntax | MATH<x>:SPECTral:UNWRap \{ON\|OFF|<NR1>\} <br> MATH $\langle x>$ :SPECTral:UNWRap? |
| Related Commands | MATH $<\mathrm{x}>$ :SPECTral:SUPPress |
| Arguments | ON enables phase unwrap. |
|  | OFF disables phase wrap. |
|  | <NR1> $=0$ disables phase wrap; any other value enables phase wrap. |
| Examples | MATH1:SPECTRAL:UNWRAP ON enables phase wrap of the spectral analyzer output data. |

MATH1:SPECTRAL:UNWRAP? might return :MATH1:SPECTRAL:UNWRAP 0, indicating that the phase unwrap of the spectral analyzer output data is disabled.

## MATH<x>:SPECTral:WINdow

This command sets or returns the window function used to multiply the spectral analyzer input data for the specified math waveform. The Math waveform is specified by $x$, which ranges from 1 through 4 . A spectral window determines what the filter shape of the spectral analyzer will be in the frequency domain. It can be described by a mathematical function that is multiplied point-by-point times the input data to the spectral analyzer. This command is equal to selecting Spectral Setup from the Math menu, and choosing from the Window Type drop-down list.

Following is a list of arguments that specify the window function used to multiply the spectral analyzer input data. The windows are listed in the order of their ability to resolve frequencies (resolution bandwidth). For additional information about spectral windows, see Selecting a Spectral Window in the online help for this instrument.

Group Math

Syntax MATH $<x>$ : SPECTra1:WINdow
\{RECTANGular|HAMMing|HANNing|KAISERBesse1|BLACKMANHarris| FLATTOP2|GAUSSian|TEKEXPonential\} MATH<x>:SPECTral:WINdow?

Related Commands MATH $<x>$ :SPECTral:RESBw

Arguments RECTANGular window function is equivalent to multiplying all gate data by one.
HAMMing window function is based on a cosine series.
HANNing window function is based on a cosine series.
KAISERBesse 1 window function is based on a cosine series.
BLACKMANHarris window function is based on a cosine series.
FLATTOP2 window function is a cosine series window with a flattened frequency response lobe.

GAUSSian window function has the best localization characteristics in the joint time/frequency plane.

TEKEXPonential window has an exponential nonsymmetrical shape in the time domain and a triangular shape in the frequency domain.

Examples MATH2:SPECTRAL:WINDOW HANNING applies a Hanning window to the spectral analyzer input data.

MATH2:SPECTRAL:WINDOW? might return :MATH2:SPECTRAL:WINDOW TEKEXPONENTIAL, indicating that the window function used to multiply the spectral analyzer input data is the Tek exponential function.

## MATH<x>:THRESHold

Group Math

Syntax MATH<x>:THRESHold <NR3>
MATH<x>:THRESHold?

Related Commands $\quad \mathrm{D}<\mathrm{x}>$ :THRESHold

Arguments <NR3> specifies the math threshold in volts.

Examples MATH1:THRESHOLD 1 sets the threshold value of the MATH1 to 1 volt.
MATH1:THRESHOLD? might return MATH1:THRESHOLD 500.0000E-3, indicating that the threshold value set for the MATH1 is 0.5 volts.

## MATH<x>:UNITString

This command sets or queries the string to use for units for the math waveform specified by x , which can be 1 through 4 . This command will override the default unit string with the one that you specify.

Group Math

Syntax MATH<x>:UNITString<QString> MATH<x>:UNITString?

Arguments <QString> quoted string argument is the units to be used for the specified math waveform.

Examples MATH2:UNITString "deg" specifies that the unit of the Math 2 waveform operation will be called deg.

MATH1:UNITSTRING? might return :MATH1:UNITSTRING "deg" as the unit for the Math 1 waveform operation.

## MATH<x>:VERTical:AUTOSCale

This command sets or queries auto-scaling of the specified math waveform.

Group Math<br>Syntax MATH<x>:VERTical:AUTOSCale \{<NR1>|OFF|ON\}<br>MATH<x>:VERTical:AUTOSCale?<br>Related Commands MATH $<\mathrm{x}>$ :VERTical:POSition<br>MATH $<\mathrm{x}>$ :VERTical:SCAle

Arguments $\mathrm{ON}, 1$ - enables auto-scaling of new math waveforms. (This is the default).
OFF, 2 - math waveforms will not be scaled after activation, and will use the current :MATH<x>:VERTical:SCATe and :MATH<x>:VERTical:POSition values.

Examples MATH1:VERTICAL:AUTOSCALE 1 enables auto-scaling of the Math1 waveform.

## MATH<x>:VERTical:POSition

This command sets or queries the vertical position of the specified Math waveform. The Math waveform is specified by x , which ranges from 1 through 4. The position value is usually applied to the signal before it is digitized. The highest three units/div scale ranges of a given math are implemented by changing the way the acquired data is displayed. When the instrument is operating in any of these highest three scale ranges, the position control operates only on the signal after it is digitized. Note that if a signal that exceeds the range of the digitizer in one of these three scale ranges is repositioned, the displayed waveform will contain clipped values on-screen. This command is equivalent to selecting Position/Scale from the Math menu and then entering a Vert Pos value or adjusting the front panel Vertical POSITION knob.

Increasing the position value of a waveform causes the waveform to move up, and decreasing the position value causes the waveform to move down. Position adjusts only the display position of a waveform, whether a channel, math, or reference
waveform. The position value determines the vertical graticule coordinate at which input signal values, equal to the present offset setting for that reference, are displayed. For example, if the position for Math 3 is set to 2.0 and the offset is set to 3.0 , then the input signals equal to 3.0 are displayed 2.0 divisions above the center of the screen.

Be aware that autoscaling occurs when a math waveform is first defined and enabled, or when a math string changes. After the math waveform is computed for the first time, the instrument determines the min + max of that waveform data. Then, the instrument sets the math position so that $(\min +\max ) / 2$ is in the center of the screen. In addition, the instrument sets the math scale so that the range of the min and max cover 6 divisions. This autoscaling process can take up to $1 / 2$ second to complete and will override any vertical scale or position commands for that math waveform received during this time. You should insert an appropriate pause in your program after defining and enabling a math waveform before changing its position or scale.

Group Math

Syntax MATH<x>:VERTical:POSition <NR3> MATH<X>:VERTical:POSition?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :POSition, $\mathrm{REF}<\mathrm{x}>$ :VERTical:POSition

Arguments <NR3> is the desired position control in divisions from the center graticule.

Examples MATH2:VERTICAL:POSITION $1.3 \mathrm{E}+00$ positions the Math 2 waveform input signal 1.3 divisions higher than a position of 0 .

MATH1:VERTICAL: POSITION? might return :MATH1:VERTICAL:POSITION $-1.3000 \mathrm{E}+00$ indicating that the current position of Math 1 waveform is 1.3 divisions below the center graticule.

## MATH<x>:VERTical:SCAle

This command sets or queries the vertical scale of the specified math waveform. The Math waveform is specified by x , which ranges from 1 through 4. This command is equivalent to selecting Position/Scale from the Math menu and then entering a Vert Scale value or adjusting the front panel Vertical SCALE knob.

Each waveform has its own vertical scale parameter. For a signal with constant amplitude, increasing the scale causes the waveform to be displayed smaller. Decreasing the scale causes the waveform to be displayed larger.

Scale affects all waveforms. For reference and math waveforms, the scale setting controls the display only, graphically scaling these waveforms and having no affect on the acquisition hardware.

Be aware that autoscaling occurs when a math waveform is first defined and enabled, or when a math string changes. After the math waveform is computed for the first time, the instrument determines the min + max of that waveform data. Then, the instrument sets the math position so that $(\min +\max ) / 2$ is in the center of the screen. In addition, the instrument sets the math scale so that the range of the min and max covers 6 divisions. This autoscaling process can take up to $1 / 2$ second to complete and will override any vertical scale or position commands for that math waveform received during this time. You should insert an appropriate pause in your program after defining and enabling a math waveform before changing its position or scale.

Group Math

Syntax MATH<x>:VERTical:SCATe <NR3>
MATH<x>:VERTical:SCAle?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :SCAle, $\mathrm{REF}<\mathrm{x}>$ :VERTical:SCAle

Arguments <NR3> is the scale in volts, amps or watts per division. The range is from $100.0 \mathrm{E}-36$ through $100.0 \mathrm{E}+36$.

Examples MATH4:VERTICAL:SCALE 100E-03 sets the Math 4 waveform scale to 100 mV per division.

MATH2:VERTICAL:SCALE? might return :MATH2:VERTICAL:SCALE $1.0000 \mathrm{E}+00$, indicating that the current scale setting of Math 2 waveform is 1 V per division.

## MEASUrement? (Query Only)

This query-only command returns all measurement parameters in the following order: MEAS1, MEAS2, MEAS3, MEAS4, MEAS5, MEAS6, MEAS7, MEAS8, and IMMED.

Group Measurement

Syntax MEASUrement?

```
Examples MEASUREMENT? might return :MEASUREMENT:GATING
OFF;IMMED:TYPE UNDEFINED;UNITS "V";SOURCE1 CH1;SOURCE2
CH1;SOURCE1:SIGTYPE PULSE;:MEASUREMENT:IMMED:SOURCE2:SIGTYPE
PULSE;:MEASUREMENT:IMMED:DELAY:EDGE1 RISE;EDGE2

```

## MEASUrement:ANNOTation:IMMEDSTAte

This command sets or queries the state of immediate measurement annotation. Immediate measurements and annotations are not displayed on the screen.

Group Measurement

Syntax MEASUrement:ANNOTation:IMMEDSTAte \{<NR1>|OFF|ON\} MEASUrement:ANNOTation:IMMEDSTAte?

Arguments NR1 = 0 disables immediate state measurement annotation, any other value enables immediate state measurements.

OFF disables annotation on immediate state measurements.
ON enables annotation on immediate state measurements.

Examples MEASUREMENT:ANNOTATION: IMMEDSTATE ON enables annotation of immediate measurements.

MEASUREMENT:ANNOTATION:IMMEDSTATE? might return :MEASUREMENT:ANNOTATION:IMMEDSTATE 0 , indicating that annotation of immediate measurements is off.

## MEASUrement:ANNOTation:NUMX? (Query Only)

This query-only command returns the number of horizontal measurement annotations currently being displayed. Immediate measurements and annotations are not displayed on the screen.
Group Measurement
Syntax MEASUrement:ANNOTation: NUMX?

Examples MEASUREMENT:ANNOTATION:NUMX? might return
MEASUREMENT:ANNOTATION: NUMX 2, indicating that there are currently 2 horizontal lines drawn on the graticule showing where the measurement specified by MEASUREMENT : ANNOTATION: STATE is being performed.

## MEASUrement:ANNOTation:NUMY? (Query Only)

This query-only command returns the number of vertical measurement annotations currently being displayed. Immediate measurements and annotations are not displayed on the screen.

Group Measurement

Syntax MEASUrement:ANNOTation:NUMY?

Examples MEASUREMENT:ANNOTATION:NUMY? might return
MEASUREMENT:ANNOTATION: NUMY 2, indicating that there are currently 2 vertical lines drawn on the graticule showing where the measurement specified by MEASUREMENT:ANNOTATION:STATE is being performed.

## MEASUrement:ANNOTation:STATE

This command sets or returns the state of visible measurement annotations.

Group Measurement

Syntax MEASUrement:ANNOTation:STATE
\{OFF|MEAS1|MEAS2|MEAS3|MEAS4|MEAS5|MEAS6|MEAS7|MEAS8\}
MEASUrement:ANNOTation:STATE?

Arguments OFF turns off visible measurement annotations.
MEAS $<x>$ turns on the display of visible measurement annotations for measurement $<\mathrm{x}>$, where $<\mathrm{x}>$ can be $1,2,3,4,5,6,7$, or 8 . There must be an active measurement before you can activate an annotation for a specified measurement.

Examples MEASUREMENT:ANNOTATION: STATE MEAS2 turns on the display of visible measurement annotations for measurement 2.

MEASUREMENT:ANNOTATION: STATE? might return :MEASUREMENT:ANNOTATION:STATE OFF, indicating that no measurement annotations are active.

## MEASUrement:ANNOTation:TYPe

This command sets or queries the type of annotations being used. This command is similar to setting the annotation type in the Measure > Annotation menu.

Group Measurement

Syntax MEASUrement:ANNOTation:TYPe \{STANdard|DETAiled\} MEASUrement:ANNOTation:TYPe?

Arguments STANdard sets the annotation type to STANDARD.
DETAi 1 ed sets the annotation type to DETAiled, so that more detailed annotations are displayed.

Examples MEASUREMENT:ANNOTATION:TYPE DETAILED sets the measurement annotation type to detailed.

MEASUREMENT:ANNOTATION:TYPE? might return :MEASUREMENT:ANNOTATION:TYPE STANDARD, indicating that standard annotations will be displayed.

## MEASUrement:ANNOTation:X<x>? (Query Only)

This query-only command returns the value of the specified X annotation. X annotations are numbered, in general, from top to bottom on the display. The value of $\langle\mathrm{x}\rangle$ can vary from 1 to 6 . Immediate measurements and annotations are not displayed on the screen.

Group Measurement

```
    Syntax MEASUrement:ANNOTation:X<x>?
Examples MEASUREMENT:ANNOTATION:X1? might return
    :MEASUREMENT:ANNOTATION:X1 277.2250E-12, indicating that annotation
    X1 is 277 ps to the right of the trigger.
```

## MEASUrement:ANNOTation:Y<x>? (Query Only)

This query-only command returns the value of the specified Y annotation. Y annotations are numbered, in general, from left to right on the display. The value of $\langle\mathrm{x}\rangle$ can vary from 1 to 6 . Immediate measurements and annotations are not displayed on the screen.

Group Measurement

Syntax MEASUrement:ANNOTation: $\mathrm{Y}<\mathrm{x}>$ ?

Examples MEASUREMENT:ANNOTATION:Y1? might return
:MEASUREMENT:ANNOTATION: X1 305.6406E-3,, indicating that annotation Y 1 is 305 mV above the channel reference.

## MEASUrement:GATing

This command specifies or returns the measurement gating setting. This command is equivalent to selecting Gating from the Measure menu and then clicking the desired Measurement Gating setting.

Group Measurement

Syntax MEASUrement:GATing \{ON|OFF|<NR1>|ZOOM<x>|CURSor\} MEASUrement:GATing?

Arguments ON turns on measurement gating.
OFF turns off measurement gating.
<NR1> = 0 turns off measurement gating; any other value turns on measurement gating.

ZOOM $<x>$ turns on gating, using the left and right edges of the zoom box. $<x>$ specifies the zoom window, which ranges from 1 through 4.

CURSOR limits measurements to the portion of the waveform between the vertical bar cursors, even if they are off screen.

Examples MEASUREMENT:GATING ON turns on measurement gating.
MEASUREMENT:GATING? might return :MEASUREMENT:GATING CURSOR, indicating that measurements are limited to the portion of the waveform between the vertical bar cursors.

## MEASUrement:IMMed? (Query Only)

This query-only command returns all immediate measurement setup parameters. Immediate measurements and annotations are not displayed on the screen.

Group Measurement

Syntax MEASUrement:IMMed?

Examples MEASUREMENT:IMMED? might return :MEASUREMENT:IMMED:TYPE AMPLITUDE; UNITS "V";SOURCE1 CH1;SOURCE2 CH1; SOURCE1:SIGTYPE PULSE; :MEASUREMENT:IMMED:SOURCE2:SIGTYPE PULSE; :MEASUREMENT:IMMED:DELAY:EDGE1 RISE; EDGE2 RISE;DIRECTION FORWARDS; :MEASUREMENT:IMMED:REFLEVEL:METHOD PERCENT; ABSOLUTE:HIGH 0.0000;LOW 0.0000;MID1 0.0000;MID2 0.0000;:MEASUREMENT:IMMED:REFLEVEL:PERCENT:HIGH 90.0000;LOW 10.0000;MID1 50.0000;MID2 50.0000;:MEASUREMENT:IMMED:METHOD histogram; Noise high.

## MEASUrement:IMMed:DELay? (Query Only)

This query-only command returns information about the immediate delay measurement. This command is equivalent to selecting Measurement Setup from the Measure menu, choosing the Time tab and then clicking the Delay button. Immediate measurements and annotations are not displayed on the screen.

Group Measurement

Syntax MEASUrement:IMMed:DELay?

```
Examples MEASUREMENT:IMMED:DELAY? might return
        :MEASUREMENT:IMMED:DELAY:EDGE1 RISE;EDGE2 RISE; DIRECTION
    FORWARDS.
```

## MEASUrement:IMMed:DELay:DIREction

This command sets or returns the starting point and direction that determines the delay "to" edge when taking an immediate delay measurement. Use the MEASUrement:IMMed:SOUrce $<x>$ command to specify the delay "to" waveform. This command is equivalent to selecting Measurement Setup from the Measure menu, choosing the Time tab, clicking the Delay button to display the delay settings and then clicking the desired Search Direction setting.

Group Measurement

Syntax MEASUrement:IMMed:DELay:DIRECtion \{BACKWards|FORWards\}
MEASUrement:IMMed:DELay:DIREction?

Related Commands MEASUrement:IMMed:SOUrce $<\mathrm{x}>$

Arguments $\quad \begin{aligned} & \text { BACKWards starts the search at the end of the waveform and looks for the last } \\ & \text { rising or falling edge in the waveform. }\end{aligned}$
FORWards starts the search at the beginning of the waveform and looks for the
first rising or falling edge in the waveform.
MEASUREMENT:IMMED:DELAY:DIRECTION? might return :MEASUREMENT:IMMED:DELAY:DIRECTION BACKWARDS, indicating that searching begins at the end of the waveform record and looks for the last rising or falling edge.

## MEASUrement:IMMed:DELay:EDGE[1]

This command sets or queries the slope of the edge that is used for the delay "from" waveform when taking an immediate delay measurement. Use the MEASUrement:IMMed:SOUrce $<x>$ command to specify the waveform. This command is equivalent to selecting Measurement Setup from the Measure menu, choosing the Time tab, clicking the Delay button to display the delay settings and then clicking the desired Delay Edgel setting.

NOTE. If you do not specify a numerical suffix, the source is assumed to be SOURCE 1.

Group Measurement

Syntax MEASUrement:IMMed:DELay:EDGE[1] \{FALL|RISe\} MEASUrement:IMMed:DELay:EDGE[1]?

Related Commands MEASUrement:IMMed:SOUrce $<x>$

Arguments FALL specifies the falling edge.
RISe specifies the rising edge.

Examples MEASUREMENT:IMMED:DELAY:EDGE[1] 1 RISE specifies that the rising edge be used for the immediate delay measurement.

MEASUREMENT:IMMED:DELAY:EDGE[1]? might return :MEASUREMENT:IMMED:DELAY:EDGE1 FALL, indicating that the falling edge or negative edge of the waveform is used for the immediate delay measurement.

## MEASUrement:IMMed:DELay:EDGE2

This command sets or queries the slope of the edge that is used for the delay "to" waveform when taking an immediate delay measurement. Use the MEASUrement:IMMed:SOUrce $<x>$ command to specify the waveform. This command is equivalent to selecting Measurement Setup from the Measure menu, choosing the Time tab, clicking the Delay button to display the delay settings and then clicking the desired Delay Edge2 setting.

Examples MEASUREMENT:IMMED:DELAY:EDGE2 RISE specifies that the rising edge be used for the immediate delay measurement.

MEASUREMENT:IMMED:DELAY:EDGE2? might return
:MEASUREMENT:IMMED:DELAY:EDGE2 FALL, indicating that the falling edge or negative edge of the waveform is used for the immediate delay measurement.

## MEASUrement:IMMed:METHod

This command specifies or queries the method used to calculate the $0 \%$ and $100 \%$ reference level for immediate measurements.

Group Measurement

Syntax MEASUrement:IMMed:METHod \{HIStogram|MINMax|MEAN\} MEASUrement:IMMed:METHod?

Arguments HIStogram sets the high and low waveform levels statistically using a histogram algorithm.

MINMax sets the high and low waveform levels to MAX and MIN, respectively.
MEAN sets the high and low waveform levels to their mean.

Examples MEASUREMENT:IMMED:METHOD HISTOGRAM specifies that the high and low reference levels are set statistically.

MEASUREMENT:IMMED:METHOD? might return :MEASUREMENT:IMMED:METHOD MINMAX, indicating that the reference levels are set to MIN and MAX for immediate measurements.

## MEASUrement:IMMed:NOISe

This command sets or queries whether the noise measurement is made on the high or low level of the waveform. Sending this command is equivalent to selecting Ref Levs > Eye > Top Level or Base Level in the Comm tab of the Measurement Setup dialog box. The Eye section is displayed only if you have an eye-pattern or optical measurement defined.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Measurement

```
Syntax MEASUrement:IMMed:NOISe {HIGH|LOW}
MEASUrement:IMMed:NOISe?
```

Arguments HIGH argument causes the measurement for noise to be taken at the high level of the waveform.

LOW argument causes the measurement for noise to be taken at the low level of the waveform.

Examples MEASUREMENT:IMMED: NOISE HIGH causes the noise measurement to be made at the high level of the waveform.

MEASUREMENT:IMMED:NOISE? might return :MEASUREMENT:IMMED:NOISE LOW, indicating that the noise measurement will be made at the low level of the waveform.

## MEASUrement:IMMed:REFLevel? (Query Only)

This query-only command returns the reference level settings for the immediate measurement. It returns them in the following order: ABSOLUTE and then PERCENT for individual user measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLeve1?

Examples MEASUREMENT:IMMED:REFLEVEL? might return :MEASUREMENT:IMMED:REFLEVEL:PERCENT:HIGH 90 indicating that the reference level is set to $90 \%$ of HIGH.

## MEASUrement:IMMed:REFLevel:ABSolute:HIGH

This command sets or queries the high reference level, and is the upper reference level when MEASUrement:IMMed:REFLevel:METHod is set to Absolute. Note that this command affects the results of rise and fall measurements.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLevel:ABSolute:HIGH <NR3> MEASUrement:IMMed:REFLevel:ABSolute:HIGH?

Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR3> is the high reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:HIGH 1.71 sets the high reference level to 1.71 V .

MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:HIGH? might return :MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:HIGH 1.7100E+00, indicating that the absolute high reference level is set to 1.71 V .

## MEASUrement:IMMed:REFLevel:ABSolute:LOW

This command sets or queries the low reference level, and is the zero percent level when MEASUrement:IMMed:REFLevel:METHod is set to Absolute. Note that this command affects the results of rise and fall measurements.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLevel:ABSolute:LOW <NR3> MEASUrement:IMMed:REFLevel:ABSolute:LOW?

Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR3> is the low reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:LOW 0.0 sets the low reference level to 0.0 V .<br>MEASUREMENT:IMMED: REFLEVEL:ABSOLUTE:LOW? might return :MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:LOW 0.0000E+00, indicating that the absolute low reference level is set to 0.0 V .

## MEASUrement:IMMed:REFLevel:ABSolute:MID<x>

This command sets or queries the mid reference level, and is the $50 \%$ reference level when MEASUrement:IMMed:REFLevel:METHod is set to Absolute. Note that this command affects the results of period, frequency, delay, and all cyclic measurements. Note that this command affects the results of delay measurements.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement<br>Syntax MEASUrement:IMMed:REFLeve1:ABSolute:MID<x> <NR3> MEASUrement:IMMed:REFLevel:ABSolute:MID<x>?<br>Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR3> is the mid1 (the "from" waveform when taking a delay measurement) or mid2 (the "to" waveform when taking a delay measurement) reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:MID2 0.5 sets the mid reference level for the delay waveform to 0.5 V .

MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:MID2? might return :MEASUREMENT:IMMED:REFLEVEL:ABSOLUTE:MID2 $0.5000 \mathrm{E}+00$, indicating that the absolute mid2 reference level is set to 0.5 V .

## MEASUrement:IMMed:REFLevel:METHod

This command specifies or queries the reference level units used for measurement calculations. This command is equivalent to selecting Reference Levels from the Measure menu and then choosing the desired reference level from the Units group box.

Group Measurement

Syntax MEASUrement:IMMed:REFLeve1:METHod \{ABSolute|PERCent\}
MEASUrement:IMMed:REFLeve1:METHod?

Arguments ABSolute specifies that the reference levels are set explicitly using the MEASUrement:IMMed:REFLeve1:ABSolute commands. This method is useful when precise values are required. For instance, when designing to published interface specifications, such as RS-232-C.

PERCent specifies that the reference levels are calculated as a percent relative to HIGH and LOW. The percentages are defined using the MEASUrement:IMMed:REFLeve1: PERCent commands.

Examples MEASUREMENT:IMMED:REFLEVEL:METHOD ABSOLUTE specifies that explicit user-defined values are used for the reference levels.

MEASUREMENT:IMMED:REFLEVEL:METHOD? might return :MEASUREMENT:IMMED:REFLEVEL:METHOD PERCENT, indicating that the reference level units used are calculated as a percent relative to HIGH and LOW.

## MEASUrement:IMMed:REFLevel:PERCent:HIGH

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the high reference level when MEASUrement:IMMed:REFLevel: METHod is set to Percent. Note that this command affects the results of rise and fall measurements.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLeve1:PERCent:HIGH <NR1>
MEASUrement:IMMed:REFLevel:PERCent:HIGH?

Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR1> is the high reference level, ranging from 0 to $100 \%$. The default high reference level is $90 \%$.

Examples MEASUREMENT:IMMED:REFLEVEL: PERCENT:HIGH 95 sets the high reference level to $95 \%$ of HIGH.

MEASUREMENT:IMMED: REFLEVEL:PERCENT:HIGH? might return :MEASUREMENT:IMMED:REFLEVEL:PERCENT:HIGH 90, indicating that the percentage high reference level is set to $90 \%$ of HIGH.

## MEASUrement:IMMed:REFLevel:PERCent:LOW

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the low reference level when MEASUrement:IMMed:REFLevel: METHod is set to Percent. Note that this command affects the results of rise and fall measurements. This command is equivalent to selecting Reference Levels from the Measure menu and then entering the Percentage Low Ref value.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLeve1:PERCent:LOW <NR1> MEASUrement:IMMed:REFLeve1:PERCent:LOW?

Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR1> is the low reference level, ranging from 0 to $100 \%$. The default low reference level is $10 \%$.

Examples MEASUREMENT:IMMED:REFLEVEL:PERCENT:LOW 15 sets the low reference level to $15 \%$ of HIGH.

MEASUREMENT:IMMED:REFLEVEL:PERCENT:LOW? might return :MEASUREMENT:IMMED:REFLEVEL:PERCENT:LOW 10, indicating that the percentage low reference level is set to $10 \%$ of HIGH.

## MEASUrement:IMMed:REFLevel:PERCent:MID<x>

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the mid reference level when MEASUrement:IMMed:REFLevel: METHod is set to Percent. Mid1 is for the first waveform specified, and Mid2 is for the second waveform specified. Note that this command affects the results of delay measurements.

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:IMMed:REFLeve1:PERCent:MID<x> <NR1> MEASUrement:IMMed:REFLeve1:PERCent:MID<x>?

Related Commands MEASUrement:IMMed:REFLevel:METHod

Arguments <NR1> is the mid reference level, ranging from 0 to $100 \%$. The default mid reference level is $50 \%$.

Examples MEASUREMENT:IMMED:REFLEVEL: PERCENT:MID2 40 sets the mid2 reference level to $40 \%$ of HIGH.

MEASUREMENT:IMMED:REFLEVEL:PERCENT:MID2? might return :MEASUREMENT:IMMED:REFLEVEL:PERCENT:MID2 45, indicating that the percentage mid2 reference level is set to $45 \%$ of HIGH.

## MEASUrement:IMMed:SOUrce<x>

This command sets or queries the source for phase or delay immediate measurements. This command is equivalent to selecting Measurement Setup from the Measure menu, choosing the Time tab, clicking the Delay button to display the delay settings and then clicking the desired Source1 (From) setting or Source2 (To) setting.

Tip: Source 2 measurements only apply to phase and delay measurement types, which require both a target (Source1) and reference (Source2) source.

Group Measurement

Syntax MEASUrement:IMMed:SOUrce<x> \{CH<x>|MATH<y>|REF<x>|HIStogram $\}$ MEASUrement:IMMed: SOUrce<x>?

Arguments $\mathrm{CH}<\mathrm{x}>$ is an input channel waveform. The x variable can be expressed as an integer ranging from 1 through 4.

MATH $<y>$ is a math waveform. The $y$ variable can be expressed as an integer ranging from 1 through 4.
$\operatorname{REF}<\mathrm{X}>$ is a reference waveform. The x variable can be expressed as an integer ranging from 1 through 4.

HIStogram indicates histogram as the object to be measured. HIStogram not allowed on SOUrce2.

Examples MEASUREMENT:IMMED:SOURCE2 REF3 sets the waveform in reference memory location 3 as the delay "to" source when making delay measurements.

MEASUREMENT:IMMED:SOURCE2? might return
:MEASUREMENT:IMMED: SOURCE2 MATH1, indicating that Math1 is the immediate measurement source.

## MEASUrement:IMMed:SOUrce<x>:SIGType

This command sets or queries the type of input signal used for measurement SOURCE $<\mathrm{x}>, 1$ or 2 .

To ensure accurate measurements, use this command to specify the input-signal type for the measurement source.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Measurement

Syntax MEASUrement:IMMed:SOUrce<x>:SIGType \{PULse|EYE\} MEASUrement:IMMed:SOUrce<x>:SIGType?

Arguments PULSE is for generic signals that are not associated with synchronous communications standards.

EYE is for synchronous-communication signals with NRZ-like characteristics (nonreturn to zero).

Examples MEASUREMENT:IMMED:SOURCE1:SIGTYPE PULSE selects Pulse as the signal type for source 1.

MEASUREMENT:IMMED:SOURCE1:SIGTYPE? might return :MEASUREMENT:IMMED:SOURCE1:SIGTYPE EYE, indicating that the signal type for source 1 is EYE.

## MEASUrement:IMMed:TYPe

This command sets or queries the immediate measurement type. Immediate measurements and annotations are not displayed on the screen.

Group Measurement

```
Syntax MEASUrement:IMMed:TYPe \{AMP1itude|AREa|
    BURst|CARea|CMEan|CRMs|DELay|DISTDUty|
    EXTINCTDB|EXTINCTPCT|EXTINCTRATIO|
    EYEHeight|EYEWIdth|FALL|FREQuency|HIGH|
    HITs |LOW|MAXi mum|MEAN|MEDian |MINImum |
    NCROss | NDUty | NOVershoot |NWIdth|PBASe|
    PCROss|PCTCROss|PDUty|PEAKHits|PERIod|
    PHAse|PK2Pk|PKPKJitter|PKPKNoise|
    POVershoot|PTOP|PWIdth|QFACtor|RISe|
    RMS|RMSJitter|RMSNoise|SIGMA1|SIGMA2|
    SIGMA3|SIXSigmajit|SNRatio|STDdev| UNDEFINED|WAVEFORMS\}
    MEASUrement:IMMed:TYPe?
```

Arguments AMP1itude measures the amplitude of the selected waveform. In other words, it measures the high value less the low value measured over the entire waveform or gated region.

$$
\text { Amplitude }=\text { High }- \text { Low }
$$

AREa measures the voltage over time. The area is over the entire waveform or gated region and is measured in volt-seconds. The area measured above the ground is positive, while the area below ground is negative.

BURst measures the duration of a burst. The measurement is made over the entire waveform or gated region.

CARea (cycle area) measures the voltage over time. In other words, it measures in volt-seconds, the area over the first cycle in the waveform or the first cycle in the gated region. The area measured above the common reference point is positive, while the area below the common reference point is negative.

CMEan (cycle mean) measures the arithmetic mean over the first cycle in the waveform or the first cycle in the gated region.

CRMs (cycle rms) measures the true Root Mean Square voltage over the first cycle in the waveform or the first cycle in the gated region.

DELay measures the time between the middle reference (default $=50 \%$ ) amplitude point of the source waveform and the destination waveform.

DISTDUty (duty cycle distortion) measures the time between the falling edge and the rising edge of the eye pattern at the mid reference level. It is the peak-to-peak time variation of the first eye crossing measured at the mid-reference as a percent of the eye period.

EXTINCTDB measures the extinction ratio of an optical waveform (eye diagram). Extinction Ratio (dB) measures the ratio of the average power levels for the logic High to the logic Low of an optical waveform and expresses the result in dB. This measurement only works for fast acquisition signals or a reference waveform saved in fast acquisition mode.

$$
\text { Extinction } d B=10 \times(\log 10(H i g h ~ / ~ L o w) ~
$$

EXTINCTPCT measures the extinction ratio of the selected optical waveform. Extinction Ratio (\%) measures the ratio of the average power levels for the logic Low (off) to the logic (High) (on) of an optical waveform and expresses the result in percent. This measurement only works for fast acquisition signals or a reference waveform saved in fast acquisition mode.

$$
\text { Extinction \% = } 100.0 \times(\text { Low } / \mathrm{High})
$$

EXTINCTRATIO measures the extinction ratio of the selected optical waveform. Extinction Ratio measures the ratio of the average power levels for the logic High to the logic Low of an optical waveform and expresses the result without units. This measurement only works for fast acquisition signals or a reference waveform saved in fast acquisition mode. Extinction ratios greater than 100 or less than 1 generate errors; low must be greater than or equal to $1 \mu \mathrm{~W}$.

$$
\text { Extinction Ratio }=(\text { High } / \text { Low })
$$

EYEHeight measures the vertical opening of an eye diagram in volts.
EYEWidth measures the width of an eye diagram in seconds.
FALL measures the time taken for the falling edge of the first pulse in the waveform or gated region to fall from a high reference value (default is $90 \%$ ) to a low reference value (default is $10 \%$ ).

FREQuency measures the first cycle in the waveform or gated region. Frequency is the reciprocal of the period and is measured in hertz $(\mathrm{Hz})$, where $1 \mathrm{~Hz}=1$ cycle per second.

HIGH measures the High reference ( $100 \%$ level, sometimes called Topline) of a waveform.

You can also limit the High measurement (normally taken over the entire waveform record) to a gated region on the waveform.

HITs (histogram hits) measures the number of points in or on the histogram box.
Low measures the Low reference ( $0 \%$ level, sometimes called Baseline) of a waveform.
maXimum finds the maximum amplitude. This value is the most positive peak voltage found. It is measured over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the maximum measurement measures the voltage of the highest nonzero bin in vertical histograms or the time of the right-most bin in horizontal histograms.

MEAN amplitude measurement finds the arithmetic mean over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the mean measurement measures the average of all acquired points within or on the histogram.
MEDian (histogram measurement) measures the middle point of the histogram box. Half of all acquired points within or on the histogram box are less than this value and half are greater than this value.

MINImum finds the minimum amplitude. This value is typically the most negative peak voltage. It is measured over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the minimum measurement measures the lowest nonzero bin in vertical histograms or the time of the left-most nonzero bin in the horizontal histograms.

NCROss (timing measurement) measures the time from the trigger point to the first falling edge of the waveform or gated region. The distance (time) is measured at the middle reference amplitude point of the signal.

NDUty (negative duty cycle) is the ratio of the negative pulse width to the signal period, expressed as a percentage. The duty cycle is measured on the first cycle in the waveform or gated region.

Negative Duty Cycle $=($ Negative Width $) /$ Period $\times 100 \%$
NOVershoot (negative overshoot) finds the negative overshoot value over the entire waveform or gated region.

Negative Overshoot $=($ Low - Minimum $) /$ Amplitude $\times 100 \%)$
NWIdth (negative width) measurement is the distance (time) between the middle reference (default $=50 \%$ ) amplitude points of a negative pulse. The measurement is made on the first pulse in the waveform or gated region.

PBASe measures the base value used in extinction ratio measurements.
PCROss (timing measurement) measures the time from the trigger point to the first positive edge of the waveform or gated region. The distance (time) is measured at the middle reference amplitude point of the signal.

PCTCROss measures the location of the eye crossing point expressed as a percentage of EYEHeight.

Crossing percent $=100 \times[($ eye-crossing-point - PBASe $) /($ PTOP - PBASe $)]$
PDUty (positive duty cycle) is the ratio of the positive pulse width to the signal period, expressed as a percentage. It is measured on the first cycle in the waveform or gated region.

Positive Duty Cycle $=($ Positive Width $) /$ Period $\times 100 \%$
PEAKHits measures the number of points in the largest bin of the histogram.
PERIod is the time required to complete the first cycle in a waveform or gated region. Period is the reciprocal of frequency and is measured in seconds.

PHAse measures the phase difference (amount of time a waveform leads or lags the reference waveform) between two waveforms. The measurement is made between the middle reference points of the two waveforms and is expressed in degrees, where $360^{\circ}$ represents one waveform cycle.

PK2Pk (peak-to-peak) finds the absolute difference between the maximum and minimum amplitude in the entire waveform or gated region. When histogram is
selected with the MEASUrement:METHod command, the PK2Pk measurement measures the histogram peak to peak difference.

PKPKJitter measures the variance (minimum and maximum values) in the time locations of the cross point.

PKPKNoise measures the peak-to-peak noise on a waveform at the mid reference level.

## POVershoot

The positive overshoot amplitude measurement finds the positive overshoot value over the entire waveform or gated region.

$$
\text { Positive Overshoot }=(\text { Maximum }- \text { High }) / \text { Amplitude } \times 100 \%
$$

PTOT measures the top value used in extinction ratio measurements.
PWIdth (positive width) is the distance (time) between the middle reference (default $=50 \%$ ) amplitude points of a positive pulse. The measurement is made on the first pulse in the waveform or gated region.

QFACtor measures the quality factor. The Q factor is a figure of merit for an eye diagram, which indicates the vertical eye opening relative to the noise at the low and high logic levels. It is the ratio of the eye size to noise.

RISe timing measurement finds the rise time of the waveform. The rise time is the time it takes for the leading edge of the first pulse encountered to rise from a low reference value (default is $10 \%$ ) to a high reference value (default is $90 \%$ ).

RMS amplitude measurement finds the true Root Mean Square voltage in the entire waveform or gated region.

RMSJitter measures the variance in the time locations of the cross point. The RMS jitter is defined as one standard deviation at the cross point.

RMSNoise measures the Root Mean Square noise amplitude on a waveform at the mid reference level.

SIGMA1 (histogram measurement) measures the percentage of points in the histogram that are within one standard deviation of the histogram mean.

SIGMA2 (histogram measurement) measures the percentage of points in the histogram that are within two standard deviations of the histogram mean.

SIGMA3 (histogram measurement) measures the percentage of points in the histogram that are within three standard deviations of the histogram mean.

SIXSigmajit (histogram measurement) is six $\times$ RMSJitter.
SNRatio measures the signal-to-noise ratio. The signal-to-noise ratio is the amplitude of a noise rejection band centered on the mid level.

STDdev measures the standard deviation (Root Mean Square (RMS) deviation) of all acquired points within or on the histogram box.

UNDEFINED is the default measurement type, which indicates that no measurement type is specified. Once a measurement type is chosen, it can be cleared using this argument.

WAVEFORMS (waveform count) measures the number of waveforms used to calculate the histogram.

Examples MEASUREMENT:IMMED:TYPE FREQUENCY defines the immediate measurement to be a frequency measurement.

MEASUREMENT:IMMED:TYPE? might return :MEASUREMENT:IMMED:TYPE RMS, indicating that the immediate measurement is the true Root Mean Square voltage.

## MEASUrement:IMMed:UNIts? (Query Only)

This query-only command returns the units of the immediate measurement.

```
Group Measurement
Syntax MEASUrement:IMMed:UNIts?
Examples MEASUREMENT:IMMED:UNITS? might return :MEASUREMENT:IMMED:UNIts " s ", indicating that units for the immediate measurement are in seconds.
```

## MEASUrement:IMMed:VALue? (Query Only)

This query-only command returns the value of the measurement specified by the MEASUrement:IMMed:TYPe command. The measurement is immediately taken on the source(s) specified by a MEASUrement:IMMed:SOUrce $<\mathrm{x}>$ command. Immediate measurements and annotations are not displayed on the screen.

> NOTE. A change to $C H<x>: S C A L e ~ w i l l ~ n o t ~ n e c e s s a r i l y ~ h a v e ~ t a k e n ~ a f f e c t ~ i f ~$ followed by this command.

Group Measurement

Syntax MEASUrement:IMMed:VALue?

Related Commands MEASUrement:IMMed:TYPe, MEASUrement:IMMed:SOUrce<x>, *ESR?, ALLEv?

Examples MEASUREMENT:IMMED:VALUE? might return :MEASUREMENT:IMMED:VALUE $9.9000 \mathrm{E}+37$. If the measurement has an error or warning associated with it, then an item is added to the error queue. The error can be checked for with the *ESR? and ALLEv? commands.

## MEASUrement:MEAS<x>? (Query Only)

This query-only command returns all measurement parameters for the displayed measurement specified by x , which can range from 1 through 8 . This query command is equivalent to selecting Measurement Setup from the Measure menu and viewing the Measurements table; then choosing the Time tab, clicking the Delay button and viewing the Delay Edge and Search Direction settings.

Group Measurement

Syntax MEASUrement:MEAS<x>?

| Examples | MEASUREMENT:MEAS1? might return :MEASUREMENT:MEAS1:STATE |
| :--- | :--- |
|  | $0 ;$ TYPE UNDEFINED;UNITS "V"; SOURCE1 CH1;SOURCE2 |
|  | CH1;SOURCE1:SIGTYPE PULSE;:MEASUREMENT:MEAS1:SOURCE2:SIGTYPE |
|  | PULSE;:MEASUREMENT:MEAS1:DELAY:EDGE1 RISE;EDGE2 RISE; |
|  | DIRECTION FORWARDS;:MEASUREMENT:MEAS1:REFLEVEL:METHOD |
|  | PERCENT;ABSOLUTE:HIGH 0.0000;LOW 0.0000;MID1 0.0000;MID2 |
|  | O.0000;:MEASUREMENT:MEAS1:REFLEVEL:PERCENT:HIGH 90.0000;LOW |
|  | 10.0000;MID1 50.0000;MID2 50.0000;:MEASUREMENT:MEAS1:METHOD |
|  | HISTOGRAM;NOISE HIGH. |

## MEASUrement:MEAS<x>:COUNt? (Query Only)

This query-only command returns the number of values accumulated for this measurement since the last statistical reset. Some values might have been ignored because they generated an error. Measurements are specified by x , which ranges from 1 through 8 .

| Group | Measurement |
| :---: | :--- |
|  |  |
| Syntax | MEASUrement:MEAS $\langle x>:$ COUNt? |
|  |  |
| Examples |  |
|  | $3.247000000 E+03$. |

## MEASUrement:MEAS<x>:DELay? (Query Only)

This query-only command returns the delay measurement parameters for the measurement specified by $\langle x\rangle$, which ranges from 1 through 8 . Measurement parameters are presented in the following order: Edge1, Edge2, and Direction. This query command is equivalent to selecting Time from the Measure menu, choosing Delay and viewing the Delay Edge and Search Direction settings.

Group Measurement

Syntax MEASUrement:MEAS<x>:DELay?

Examples MEASUREMENT:MEAS3:DELAY? might return :MEASUREMENT:MEAS3:DELAY:EDGE1 RISE;EDGE2 RISE;DIRECTION FORWARDS.

## MEASUrement:MEAS<x>:DELay:DIREction

This command sets or queries the starting point and direction that determines the delay "to" edge when taking a delay measurement. Use the MEASUrement:MEAS $<x>$ :SOUrce $<x>$ command to specify the waveform. This command is equivalent to selecting Time from the Measure menu, choosing Delay from the drop-down list and then clicking the desired Search Direction setting. Measurements are specified by x , which ranges from 1 through 8.

Group Measurement

Syntax MEASUrement:MEAS<x>:DELay:DIRECtion \{BACKWards|FORWards\} MEASUrement:MEAS<x>:DELay:DIREction?

Related Commands MEASUrement:MEAS $<x>$ :SOUrce $<x>$

Arguments BACKWards means that the search starts at the end of the waveform and looks for the last rising or falling edge in the waveform. Use the MEASUrement:MEAS $<\mathrm{x}>$ :DELay:EDGE $<\mathrm{x}>$ command to specify the slope of the edge.

FORWards means that the search starts at the beginning of the waveform and looks for the first rising or falling edge in the waveform. Use the MEASUrement:MEAS $<x>$ :DELay:EDGE $<x>$ command to specify the slope of the edge.

Examples MEASUREMENT:MEAS1:DELAY:DIRECTION BACKWARDS starts searching from the end of the waveform record.

MEASUREMENT:MEAS3:DELAY:DIRECTION? might return :MEASUREMENT:MEAS3:DELAY:DIRECTION BACKWARDS, indicating that the current search direction is backward.

## MEASUrement:MEAS<x>:DELay:EDGE<x>

This command sets or queries the slope of the edge that is used for the delay "from" waveform (edge1) and the delay "to" waveform (edge2) when taking a delay measurement. Use the MEASUrement: MEAS $\langle x>$ : SOURCE2 command to specify the waveform. This command is equivalent to selecting Time from the Measure menu, choosing Delay from the drop-down list and then clicking the desired Delay Edge setting. Measurements are specified by x , which ranges from 1 through 8.

Group Measurement

Arguments FALL specifies the falling edge of the waveform.
RISE specifies the rising edge of the waveform.

Examples MEASUREMENT:MEAS3:DELAY:EDGE2 RISE specifies that the rising edge of the waveform be used for measurement 3 .

MEASUREMENT:MEAS1:DELAY:EDGE2? might return
:MEASUREMENT:MEAS1:DELAY:EDGE2 FALL, indicating that the falling edge of the waveform is being used for measurement 1 .

## MEASUrement:MEAS<x>:MAXimum? (Query Only)

This query-only command returns the maximum value found for this measurement since the last statistical reset. Measurements are specified by x , which ranges from 1 through 8.

Group Measurement

## MEASUrement:MEAS<x>:MEAN? (Query Only)

This query-only command returns the mean value accumulated for this measurement since the last statistical reset. Measurements are specified by x , which ranges from 1 through 8 .

Group Measurement

Syntax MEASUrement:MEAS<x>:MEAN?

Examples MEASUREMENT:MEAS1:MEAN? might return :MEASUREMENT:MEAS1:MEAN 514.71E-09.

## MEASUrement:MEAS<x>:METHod

This command specifies or queries the method used to calculate the $0 \%$ and $100 \%$ reference level.

Group Measurement

Syntax MEASUrement:MEAS<x>:METHod \{HIStogram|MINMax|MEAN\} MEASUrement:MEAS<x>:METHod?

Arguments HIStogram sets the high and low waveform levels statistically using a histogram algorithm.

MINMax sets the high and low waveform levels to MAX and MIN, respectively. MEAN sets the high and low waveform levels to their mean.

Examples MEASUREMENT:MEAS1:METHOD HISTOGRAM specifies that the high and low reference levels are set statistically.

MEASUREMENT:MEAS1:METHOD? might return :MEASUREMENT:MEAS1:METHOD MINMAX, indicating that the reference levels are set to MIN and MAX.

## MEASUrement:MEAS<x>:MINImum? (Query Only)

This query-only command returns the minimum value found for this measurement since the last statistical reset. Measurements are specified by x , which ranges from 1 through 8 .

Group Measurement

Syntax MEASUrement:MEAS<X>:MINImum?

Examples MEASUREMENT:MEAS1:MINIMUM? might return :MEASUREMENT:MEAS1:MINIMUM 1.75E-09.

## MEASUrement:MEAS<x>:NOISe

This command sets or queries whether the noise measurement is made on the high or low level of the waveform. Sending this command is equivalent to selecting Ref Levs > Eye > Top Level or Base Level in the Comm tab of the Measurement Setup dialog box. The Eye section is displayed only if you have an eye-pattern or optical measurement defined. Measurements are specified by x , which ranges from 1 through 8 .

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Measurement

Syntax MEASUrement:MEAS<x>:NOISe \{HIGH|LOW\}
MEASUrement:MEAS<x>:NOISe?

Arguments HIGH argument causes the measurement for noise to be taken at the high level of the waveform.

Low argument causes the measurement for noise to be taken at the low level of the waveform.

Examples MEASUREMENT:MEAS1:NOISE HIGH causes the noise measurement to be made at the high level of the waveform for Measurement 1.
MEASUREMENT:MEAS2 : NOISE? might return :MEASUREMENT:MEAS2 : NOISE LOW, indicating that Measurement 2 will measure noise at the low level of the waveform.

## MEASUrement:MEAS<x>:REFLevel? (Query Only)

This query-only command returns the current reference level parameters. It returns them in the following order: ABSOLUTE and then PERCENT for individual user measurements. Measurements are specified by x , which ranges from 1 through 8 .

## MEASUrement:MEAS<x>:REFLevel:ABSolute:HIGH

This command sets or queries the high reference level, and is the upper reference level when MEASUrement:MEAS $<\mathrm{x}>$ :REFLevel:METHod is set to Absolute. Measurements are specified by x , which ranges from 1 through 8 .

NOTE. This command affects the results of rise and fall measurements

Group Measurement

Syntax MEASUrement:MEAS<X>:REFLeve1:ABSolute:HIGH <NR3> MEASUrement:MEAS<x>:REFLeve1:ABSolute:HIGH?

Related Commands MEASUrement:MEAS $<x>$ :REFLevel:METHod

Arguments <NR3> is the high reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:HIGH 1.71 sets the high reference level to 1.71 V .

MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:HIGH? might return :MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:HIGH $1.7100 \mathrm{E}+00$, indicating that the absolute high reference level is set to 1.71 V .

## MEASUrement:MEAS<x>:REFLevel:ABSolute:LOW

This command sets or queries the low reference level, and is the lower reference level when MEASUrement:MEAS $<x>:$ REFLevel:METHod is set to Absolute. Measurements are specified by x , which ranges from 1 through 8 .

NOTE. This command affects the results of rise and fall measurements.

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:ABSolute:LOW <NR3> MEASUrement:MEAS<X>:REFLeve1:ABSolute:LOW?

Related Commands MEASUrement:MEAS $<x>:$ REFLevel:METHod

Arguments <NR3> is the low reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:LOW 0.0 V sets the low reference level to 0.0 V .

MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:LOW? might return :MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:LOW 0.0000E+00, indicating that the absolute low reference level is set to 0.0 V .

## MEASUrement:MEAS<x>:REFLevel:ABSolute:MID<x>

This command sets or queries the mid reference level for the "to" waveform when taking a delay measurement, and is the $50 \%$ reference level when MEASUrement:MEAS $<x>:$ REFLevel:METHod is set to Absolute. Mid1 sets the "from" waveform and Mid2 sets the "to" waveform when taking a delay measurement. Measurements are specified by x , which ranges from 1 through 8 .

NOTE. This command affects the results of period, frequency, delay, and all cyclic measurements.

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:ABSolute:MID<x> <NR3>
MEASUrement:MEAS<x>:REFLeve1:ABSolute:MID<x>?

Related Commands MEASUrement:MEAS $<x>:$ REFLevel:METHod

Arguments <NR3> is the mid reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:MID2 0.5 sets the mid reference level for the delay waveform to 0.5 V .

MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:MID2? might return :MEASUREMENT:MEAS1:REFLEVEL:ABSOLUTE:MID2 $0.5000 \mathrm{E}+00$, indicating that the absolute mid2 reference level is set to 0.5 V .

## MEASUrement:MEAS<x>:REFLevel:METHod

This command specifies or queries the reference level units used for measurement calculations. This command is equivalent to selecting Reference Levels from the Measure menu and then choosing the desired reference level from the Units group box. Measurements are specified by x , which ranges from 1 through 8 .

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:METHod \{ABSolute|PERCent\}
MEASUrement:MEAS<x>:REFLeve1:METHod?

Arguments ABSolute specifies that the reference levels are set explicitly using the MEASUrement:MEAS<x>:REFLeve1:ABSolute commands. This method is useful when precise values are required (for example, when designing to published interface specifications, such as RS-232-C.

PERCent specifies that the reference levels are calculated as a percent relative to HIGH and LOW. The percentages are defined using the MEASU rement:MEAS<x>: REFLeve1: PERCent commands.
$\begin{array}{ll}\text { Examples } & \text { MEASUREMENT:MEAS1:REFLEVEL:METHOD ABSOLUTE specifies that explicit } \\ & \text { user-defined values are used for the reference levels. }\end{array}$
MEASUREMENT:MEAS1:REFLEVEL:METHOD? might return
:MEASUREMENT:MEAS1:REFLEVEL:METHOD PERCENT, indicating that the reference level units used are calculated as a percent relative to HIGH and LOW.

## MEASUrement:MEAS<x>:REFLevel:PERCent:HIGH

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the high reference level when MEASUrement:MEAS $<x>$ : REFLevel:METHod is set to Percent. Measurements are specified by x , which ranges from 1 through 8.

NOTE. This command affects the results of rise and fall measurements.

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:PERCent:HIGH <NR3> MEASUrement:MEAS<x>:REFLeve1:PERCent:HIGH?

Related Commands MEASUrement:MEAS $<x>$ :REFLevel:METHod

Arguments <NR3> is the high reference level, ranging from 0 to $100 \%$. The default high reference level is $90 \%$.

Examples MEASUREMENT:MEAS1:REFLEVEL:PERCENT:HIGH 95 sets the high reference level to $95 \%$ of HIGH.

MEASUREMENT:MEAS1:REFLEVEL:PERCENT:HIGH? might return :MEASUREMENT:MEAS1:REFLEVEL:PERCENT:HIGH 90, indicating that the percentage high reference level is set to $90 \%$ of HIGH.

## MEASUrement:MEAS<x>:REFLevel:PERCent:LOW

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the low reference level when MEASUrement:MEAS $<x>$ :REFLevel: METHod is set to Percent. This command is equivalent to selecting Reference Levels from the Measure menu, and then entering the Percentage Low Ref value. Measurements are specified by x , which ranges from 1 through 8.

NOTE. This command affects the results of rise and fall measurements.

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:PERCent:LOW <NR3>
MEASUrement:MEAS<x>:REFLeve1:PERCent:LOW?

# Related Commands MEASUrement:MEAS $<x>:$ REFLevel:METHod 

Arguments <NR3> is the low reference level, ranging from 0 to $100 \%$. The default low reference level is $10 \%$.

Examples MEASUREMENT:MEAS1:REFLEVEL:PERCENT:LOW 15 sets the high reference level to $15 \%$ of HIGH.

MEASUREMENT:MEAS1:REFLEVEL:PERCENT:LOW? might return :MEASUREMENT:MEAS1:REFLEVEL:PERCENT:LOW 10, indicating that the percentage high reference level is set to $10 \%$ of HIGH.

## MEASUrement:MEAS<x>:REFLevel:PERCent:MID<x>

This command sets or queries the percentage (where $100 \%$ is equal to HIGH) used to calculate the mid reference level for the second waveform specified when MEASUrement:MEAS $<\mathrm{x}>$ :REFLevel:METHod is set to Percent. Mid1 specifies the "from" waveform and Mid2 specifies the "to" waveform for delay measurements. Measurements are specified by x , which ranges from 1 through 8 .

NOTE. This command affects the results of delay measurements.

Group Measurement

Syntax MEASUrement:MEAS<x>:REFLeve1:PERCent:MID<x> <NR3>
MEASUrement:MEAS<x>:REFLeve1:PERCent:MID<x>?

Related Commands MEASUrement:MEAS $<\mathrm{x}>$ :REFLevel:METHod

Arguments <NR3> is the mid reference level, ranging from 0 to $100 \%$. The default mid reference level is $50 \%$.

Examples MEASUREMENT:MEAS1:REFLEVEL:PERCENT:MID2 40 sets the mid2 reference level to $40 \%$ of HIGH.

MEASUREMENT:MEAS1:REFLEVEL:PERCENT:MID2? might return :MEASUREMENT:MEAS1:REFLEVEL:PERCENT:MID2 45, indicating that the percentage mid2 reference level is set to $45 \%$ of HIGH.

## MEASUrement:MEAS<x>:SOUrce<x>

This command sets or queries the source for all single channel measurements and specifies the reference source to measure "to" when taking a delay measurement or phase measurement. Measurements are specified by x , which ranges from 1 through 8. This command is equivalent to selecting Measurement Setup from the Measure menu, selecting a measurement type of either Phase or Delay, and then choosing the desired measurement source.

Tip: Source 2 measurements apply only to phase and delay measurement types, which require both a target (Source1) and reference (Source2) source.

Group Measurement

Syntax MEASUrement:MEAS<x>:SOUrce<x>
\{CH $<x>\mid$ MATH $<y>\mid$ REF $<x>\mid$ HIStogram $\}$
MEASUrement:MEAS<x>: SOUrce<x>?

Related Commands MEASUrement:MEAS $<\mathrm{x}>$ :TYPe

Arguments $C H<x>$ is an input channel waveform. The $x$ variable can be expressed as an integer ranging from 1 through 4.

MATH $<\mathrm{y}>$ is a math waveform. The y variable can be expressed as an integer ranging from 1 through 4.

REF $<x>$ is a reference waveform. The x variable can be expressed as an integer ranging from 1 through 4.

HIStogram is a histogram. Histogram is valid only for source 1.

Examples MEASUREMENT:MEAS4:SOURCE2 CH1 specifies CH1 as the delay "to" source when making delay measurement.

MEASUREMENT:MEAS2:SOURCE2? might return
:MEASUREMENT:MEAS2:SOURCE2 MATH1, indicating that Math 1 is the measurement 2 source.

## MEASUrement:MEAS<x>:SOUrce<x>:SIGType

This command sets or queries the type of input signal used for the specified measurement slot. MEAS $<x>$ is 1 through 8 for the measurement slot using SOURCE $<\mathrm{x}>, 1$ or 2 .

To ensure accurate measurements, use this command to specify the input-signal type for the measurement source.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Measurement

Syntax MEASUrement:MEAS<x>:SOUrce<x>:SIGType \{PULse|EYE\}
MEASUrement:MEAS<x>:SOUrce<x>:SIGType?

Arguments PULSE is for generic signals that are not associated with synchronous communications standards.

EYE is for synchronous-communication signals with NRZ-like characteristics (nonreturn to zero).

Examples MEASUREMENT:MEAS5:SOURCE1:SIGTYPE PULSE selects Pulse as the signal type associated with source 1 for measurement slot 5 .

MEASUREMENT:MEAS2:SOURCE1:SIGTYPE? might return :MEASUREMENT:MEAS2:SOURCE1:SIGTYPE EYE, indicating that the signal type associated with source 1 of measurement slot 2 is EYE.

## MEASUrement:MEAS<x>:STATE

This command sets or queries whether the specified measurement slot is computed and displayed. The measurement slot is specified by x , which ranges from 1 through 8. This command is equivalent to selecting Measurement Setup from the Measure menu and then clicking the Display button.

For a measurement to display, you must have selected a source waveform and defined the measurement you want to take and display. You select the measurement using the MEASUrement:MEAS $<x>$ :SOUrce $<x>$ command. You define the measurement type using the MEASUrement:MEAS $<x>:$ TYPe command.

Group Measurement

Syntax MEASUrement:MEAS<X>:STATE \{<NR1>|OFF|ON\}
MEASUrement:MEAS<x>:STATE?

Related Commands MEASUrement:MEAS $<\mathrm{x}>:$ SOUrce $<\mathrm{x}>$, MEASUrement:MEAS $<\mathrm{x}>:$ TYPe

Arguments <NR1> = 0 disables calculation and display of the specified measurement slot; any other value enables calculation and display of the specified measurement slot.

OFF disables calculation and display of the specified measurement slot. ON enables calculation and display of the specified measurement slot.

Examples MEASUREMENT:MEAS2:STATE ON computes and displays the measurement defined as measurement 2.

MEASUREMENT:MEAS1:STATE? might return :MEASUREMENT:MEAS1:STATE 0, indicating that measurement defined for measurement slot 1 is disabled.

## MEASUrement:MEAS<x>:STDdev? (Query Only)

This query-only command returns the standard deviation of values accumulated for this measurement since the last statistical reset. Measurements are specified by x , which ranges from 1 through 8 .

Group Measurement

Syntax MEASUrement:MEAS<x>:STDdev?

Examples MEASUREMENT:MEAS1:STDDEV? might return :MEASUREMENT:MEAS1:STDDEV $21.0 \mathrm{E}-12$.

## MEASUrement:MEAS<x>:TYPe

This command sets or queries the measurement type defined for the specified measurement slot. The measurement slot is specified by x , which ranges from 1 through 8. This command is equivalent to selecting Measurement Setup from the Measure menu and then choosing the desired measurement type.

```
Group Measurement
Syntax MEASUrement:MEAS<x>:TYPe {AMPlitude|AREa|
        BURst|CARea|CMEan|CRMs|DELay|DISTDUty|

        SIGMA3|SIXSigmajit|SNRatio|STDdev|UNDEFINED| WAVEFORMS}
    MEASUrement:MEAS<x>:TYPe?
```

AMP1itude measures the amplitude of the selected waveform. In other words, it measures the high value less the low value measured over the entire waveform or gated region.

$$
\text { Amplitude }=\text { High }- \text { Low }
$$

AREa measures the voltage over time. The area is over the entire waveform or gated region and is measured in volt-seconds. The area measured above the ground is positive, while the area below ground is negative.

BURst measures the duration of a burst. The measurement is made over the entire waveform or gated region.

CARea (cycle area) measures the voltage over time. In other words, it measures in volt-seconds, the area over the first cycle in the waveform or the first cycle in the gated region. The area measured above the common reference point is positive, while the area below the common reference point is negative.

CMEan (cycle mean) measures the arithmetic mean over the first cycle in the waveform or the first cycle in the gated region.

CRMs (cycle rms) measures the true Root Mean Square voltage over the first cycle in the waveform or the first cycle in the gated region.

DELay measures the time between the middle reference (default $=50 \%$ ) amplitude point of the source waveform and the destination waveform.

DISTDUty (duty cycle distortion) measures the time between the falling edge and the rising edge of the eye pattern at the mid reference level. It is the peak-to-peak time variation of the first eye crossing measured at the mid-reference as a percent of the eye period.

EXTINCTDB measures the extinction ratio of an optical waveform (eye diagram). Extinction Ratio (dB) measures the ratio of the average power levels for the logic High to the logic Low of an optical waveform and expresses the result in dB. This measurement only works for fast acquisition signals or a reference waveform saved in fast acquisition mode.

$$
\text { Extinction } d B=10 \times(\log 10(\mathrm{High} / \text { Low })
$$

EXTINCTPCT measures the extinction ratio of the selected optical waveform. Extinction Ratio (\%) measures the ratio of the average power levels for the logic Low (off) to the logic (High) (on) of an optical waveform and expresses the result in percent. This measurement only works for fast acquisition signals or a reference waveform saved in fast acquisition mode.

$$
\text { Extinction \% = } 100.0 \times(\text { Low } / \text { High })
$$

EXTINCTRATIO measures the extinction ratio of the selected optical waveform. Extinction Ratio measures the ratio of the average power levels for the logic High to the logic Low of an optical waveform and expresses the result without units. This measurement only works for fast acquisition signals or a reference waveform
saved in fast acquisition mode. Extinction ratios greater than 100 or less than 1 generate errors; low must be greater than or equal to $1 \mu \mathrm{~W}$.
Extinction Ratio = (High / Low)

EYEHeight measures the vertical opening of an eye diagram in volts.
EYEWidth measures the width of an eye diagram in seconds.
FALL measures the time taken for the falling edge of the first pulse in the waveform or gated region to fall from a high reference value (default is $90 \%$ ) to a low reference value (default is $10 \%$ ).

FREQuency measures the first cycle in the waveform or gated region. Frequency is the reciprocal of the period and is measured in hertz $(\mathrm{Hz})$, where $1 \mathrm{~Hz}=1$ cycle per second.

HIGH measures the High reference ( $100 \%$ level, sometimes called Topline) of a waveform.

You can also limit the High measurement (normally taken over the entire waveform record) to a gated region on the waveform.

HITs (histogram hits) measures the number of points in or on the histogram box.
Low measures the Low reference ( $0 \%$ level, sometimes called Baseline) of a waveform.
mAXimum finds the maximum amplitude. This value is the most positive peak voltage found. It is measured over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the maximum measurement measures the voltage of the highest nonzero bin in vertical histograms or the time of the right-most bin in horizontal histograms.

MEAN amplitude measurement finds the arithmetic mean over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the mean measurement measures the average of all acquired points within or on the histogram.

MEDian (histogram measurement) measures the middle point of the histogram box. Half of all acquired points within or on the histogram box are less than this value and half are greater than this value.

MINImum finds the minimum amplitude. This value is typically the most negative peak voltage. It is measured over the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the minimum measurement measures the lowest nonzero bin in vertical histograms or the time of the left-most nonzero bin in the horizontal histograms.

NCROss (timing measurement) measures the time from the trigger point to the first falling edge of the waveform or gated region. The distance (time) is measured at the middle reference amplitude point of the signal.

NDUty (negative duty cycle) is the ratio of the negative pulse width to the signal period, expressed as a percentage. The duty cycle is measured on the first cycle in the waveform or gated region.

Negative Duty Cycle $=($ Negative Width $) /$ Period $\times 100 \%$
Novershoot (negative overshoot) finds the negative overshoot value over the entire waveform or gated region.

Negative Overshoot $=($ Low - Minimum $) /$ Amplitude $\times 100 \%)$
NWIdth (negative width) measurement is the distance (time) between the middle reference (default $=50 \%$ ) amplitude points of a negative pulse. The measurement is made on the first pulse in the waveform or gated region.

PBASe measures the base value used in extinction ratio measurements.
PCROss (timing measurement) measures the time from the trigger point to the first positive edge of the waveform or gated region. The distance (time) is measured at the middle reference amplitude point of the signal.

PCTCROss measures the location of the eye crossing point expressed as a percentage of EYEHeight.

Crossing percent $=100 \times[($ eye-crossing-point $-P B A S e) /(P T O P-P B A S e)]$
PDUty (positive duty cycle) is the ratio of the positive pulse width to the signal period, expressed as a percentage. It is measured on the first cycle in the waveform or gated region.

## Positive Duty Cycle $=($ Positive Width $) /$ Period $\times 100 \%$

PEAKHits measures the number of points in the largest bin of the histogram.
PERIod is the time required to complete the first cycle in a waveform or gated region. Period is the reciprocal of frequency and is measured in seconds.

PHAse measures the phase difference (amount of time a waveform leads or lags the reference waveform) between two waveforms. The measurement is made between the middle reference points of the two waveforms and is expressed in degrees, where $360^{\circ}$ represents one waveform cycle.

PK2Pk (peak-to-peak) finds the absolute difference between the maximum and minimum amplitude in the entire waveform or gated region. When histogram is selected with the MEASUrement:METHod command, the PK2Pk measurement measures the histogram peak to peak difference.

PKPKJitter measures the variance (minimum and maximum values) in the time locations of the cross point.

PKPKNoise measures the peak-to-peak noise on a waveform at the mid reference level.

POVershoot

The positive overshoot amplitude measurement finds the positive overshoot value over the entire waveform or gated region.

$$
\text { Positive Overshoot }=(\text { Maximum }- \text { High }) / \text { Amplitude } \times 100 \%
$$

PTOT measures the top value used in extinction ratio measurements.
PWIdth (positive width) is the distance (time) between the middle reference (default $=50 \%$ ) amplitude points of a positive pulse. The measurement is made on the first pulse in the waveform or gated region.

QFACtor measures the quality factor. The Q factor is a figure of merit for an eye diagram, which indicates the vertical eye opening relative to the noise at the low and high logic levels. It is the ratio of the eye size to noise.

RISe timing measurement finds the rise time of the waveform. The rise time is the time it takes for the leading edge of the first pulse encountered to rise from a low reference value (default is $10 \%$ ) to a high reference value (default is $90 \%$ ).

RMS amplitude measurement finds the true Root Mean Square voltage in the entire waveform or gated region.

RMSJitter measures the variance in the time locations of the cross point. The RMS jitter is defined as one standard deviation at the cross point.

RMSNoise measures the Root Mean Square noise amplitude on a waveform at the mid reference level.

SIGMA1 (histogram measurement) measures the percentage of points in the histogram that are within one standard deviation of the histogram mean.

SIGMA2 (histogram measurement) measures the percentage of points in the histogram that are within two standard deviations of the histogram mean.

SIGMA3 (histogram measurement) measures the percentage of points in the histogram that are within three standard deviations of the histogram mean.

SIXSigmajit (histogram measurement) is six $\times$ RMSJitter.
SNRatio measures the signal-to-noise ratio. The signal-to-noise ratio is the amplitude of a noise rejection band centered on the mid level.

STDdev measures the standard deviation (Root Mean Square (RMS) deviation) of all acquired points within or on the histogram box.

UNDEFINED is the default measurement type, which indicates that no measurement type is specified. Once a measurement type is chosen, it can be cleared using this argument.

WAVEFORMS (waveform count) measures the number of waveforms used to calculate the histogram.

Examples MEASUREMENT:MEAS2:TYPE FREQUENCY defines measurement 2 as a measurement of the frequency of a waveform.

MEASUREMENT:MEAS1:TYPE? might return :MEASUREMENT:MEAS1:TYPE RMS, indicating that measurement 1 is defined to measure the RMS value of a waveform.

## MEASUrement:MEAS<x>:UNIts? (Query Only)

This query-only command returns the units associated with the specified measurement. Measurements are specified by x , which ranges from 1 through 8 .

Group Measurement

Syntax MEASUrement:MEAS<x>:UNIts?

Related Commands MEASUrement:MEAS $<x>$ :TYPe

Examples MEASUREMENT:MEAS1:UNITS? might return :MEASUREMENT:MEAS1:UNITS \%, indicating units for measurement 1 are set to percent.

## MEASUrement:MEAS<x>:VALue? (Query Only)

This query-only command returns the value that is calculated for the measurement specified by $\langle x\rangle$, which ranges from 1 through 8 . This command is equivalent to selecting Display Statistics from the Measure menu and then choosing Value from the drop-down list to display all measurement values on-screen.

NOTE. This is the displayed value in the on-screen display. If measurement statistics are enabled, a new value is calculated with every waveform. In addition, this value is updated about every $1 / 3$ second. If you are acquiring a long acquisition record, the instrument can take longer to update.

Group Measurement

Syntax MEASUrement:MEAS<x>:VALue?

Related Commands MEASUrement:MEAS<x>:UNIts?, *ESR?, ALLEv?

Examples MEASUREMENT:MEAS1:VALUE? might return :MEASUREMENT:MEAS1:VALUE $2.8740 \mathrm{E}-06$. If the measurement has an error or warning associated with it,
then an item is added to the error queue. The error can be checked for with the *ESR? and ALLEv? commands.

## MEASUrement:METHod

This command sets or queries the method used to calculate the $0 \%$ and $100 \%$ reference level. This command is equivalent to selecting Reference Levels from the Measure menu and then choosing the desired Determine Base, Top From setting.

Group Measurement

Syntax MEASUrement:METHod \{HIStogram|MEAN|MINMax\} MEASUrement:METHod?

Related Commands MEASUrement:REFLevel:PERCent:HIGH, MEASUrement:REFLevel:PERCent: LOW, MEASUrement:REFLevel:PERCent:MID $<\mathrm{x}>$,

Arguments HIStogram sets the high and low reference levels to the most common values either above or below the mid point, depending on whether the high reference point or the low reference point is being defined. Because the statistical approach ignores short-term aberrations, such as overshoot or ringing, the histogram method is the best setting for examining pulses.

MEAN sets the high and low reference levels to the mean values using all values either above or below the midpoint, depending on whether it is defining the high or low reference level. The selection is best used for examining eye patterns.

MINMax uses the highest and lowest values of the waveform record. This selection is best for examining waveforms with no large, flat portions of a common value, such as sine waves and triangle waves.

Examples MEASUREMENT:METHOD HISTOGRAM specifies that the high and low reference levels are set statistically.

MEASUREMENT:METHOD? might return :MEASUREMENT:METHOD MINMAX, indicating that the reference levels are set to MIN and MAX.

## MEASUrement:NOISe

This command sets or queries whether the noise measurement is made on the high or low level of the waveform. Sending this command is equivalent to selecting Ref Levs > Eye > Top Level or Base Level in the Comm tab of the Measurement

Setup dialog box. The Eye section is displayed only if you have an eye-pattern or optical measurement defined.

Conditions This command is only valid if the instrument has Option MTM is installed

Group Measurement

Syntax MEASUrement:NOISe \{HIGH|LOW\}
MEASUrement:NOISe?

Arguments HIGH argument causes the measurement for noise to be taken at the high level of the waveform.

LOW argument causes the measurement for noise to be taken at the low level of the waveform.

Examples MEASUREMENT:NOISEHIGH causes the noise measurement to be made at the high level of the waveform.

MEASUREMENT:NOISE? might return :MEASUREMENT:NOISE LOW, indicating that the noise measurement will be made at the low level of the waveform.

## MEASUrement:REFLevel:ABSolute:HIGH

This command sets or queries the high reference level, and is the upper reference level when MEASUrement:REFLevel:METHod is set to Absolute. This command affects the results of rise and fall measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Absolute High Ref value.

> NOTE. this command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS $\langle x>:$ REFLevel commands.

Group Measurement

Syntax MEASUrement:REFLevel:ABSolute:HIGH <NR3>
MEASUrement:REFLevel:ABSolute:HIGH?

## Related Commands MEASUrement:REFLevel:METHod, MEASUrement:IMMed:TYPe, MEASUrement:MEAS $<x>$ :TYPe

Arguments <NR3> is the high reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:REFLEVEL:ABSOLUTE:HIGH 1.71 sets the high reference level to 1.71 V .

MEASUREMENT:REFLEVEL:ABSOLUTE:HIGH? might return :MEASUREMENT:REFLEVEL:ABSOLUTE:HIGH 1.7100E+00, indicating that the absolute high reference level is set to 1.71 V .

## MEASUrement:REFLevel:ABSolute:LOW

This command sets or queries the low reference level, and is the lower reference level when MEASUrement:REFLevel:METHod is set to Absolute. This command affects the results of rise and fall measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Absolute Low Ref value.

NOTE. this command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS $<x>:$ REFLevel commands.

Group Measurement

Syntax MEASUrement:REFLeve1:ABSolute:LOW <NR3>
MEASUrement:REFLevel:ABSolute:LOW?

Related Commands MEASUrement:REFLevel:METHod, MEASUrement:IMMed:TYPe, MEASUrement:MEAS<x>:TYPe

Arguments $<\mathrm{NR} 3>$ is the low reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:REFLEVEL:ABSOLUTE:LOW 0.0 sets the low reference level to 0.0 V .

MEASUREMENT:REFLEVEL:ABSOLUTE:LOW? might return :MEASUREMENT: REFLEVEL:ABSOLUTE:LOW $0.0000 \mathrm{E}+00$, indicating that the absolute low reference level is set to 0.0 V .

## MEASUrement:REFLevel:ABSolute:MID<x>

This command sets or queries the mid reference level for the "from" waveform (mid1) and the "to" waveform (mid2) when taking a delay measurement, and is the $50 \%$ reference level when MEASUrement:REFLevel:METHod is set to Absolute. This command affects the results of period, frequency, delay, and all cyclic measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Absolute Mid2 Ref value.

NOTE. This command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS $\langle x\rangle$ :REFLevel commands.

Group Measurement

Syntax MEASUrement:REFLeve1:ABSolute:MID<x> <NR3> MEASUrement:REFLeve1:ABSolute:MID<x>?

Related Commands MEASUrement:REFLevel:METHod

Arguments $<N R 3>$ is the mid reference level in volts. The default is 0.0 V .

Examples MEASUREMENT:REFLEVEL:ABSOLUTE:MID2 0.5 sets the mid reference level for the delay waveform to 0.5 V .

MEASUREMENT:REFLEVEL:ABSOLUTE:MID2? might return :MEASUREMENT: REFLEVEL:ABSOLUTE:MID2 $0.5000 \mathrm{E}+00$, indicating that the absolute mid2 reference level is set to 0.5 V .

## MEASUrement:REFLevel:METHod

This command specifies or queries the reference level units used for measurement calculations. This command is equivalent to selecting Reference Levels from the Measure menu, and then choosing the desired reference level from the Units group box.

NOTE. This command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS $\langle x>$ :REFLevel commands.

Group Measurement

Syntax MEASUrement:REFLeve1:METHod \{ABSolute|PERCent\}
MEASUrement:REFLeve1:METHod?

Arguments ABSolute specifies that the reference levels are set explicitly using the MEASUrement:REFLevel:ABSolute commands. This method is useful when precise values are required (for example, when designing to published interface specifications, such as RS-232-C).

PERCent specifies that the reference levels are calculated as a percent relative to HIGH and LOW. The percentages are defined using the MEASUrement:REFLevel:PERCent commands.

Examples MEASUREMENT:REFLEVEL:METHOD ABSOLUTE specifies that explicit user-defined values are used for the reference levels.

MEASUREMENT:REFLEVEL:METHOD? might return :MEASUREMENT:REFLEVEL:METHOD PERCENT, indicating that the reference level units used are calculated as a percent relative to HIGH and LOW.

## MEASUrement:REFLevel:PERCent:HIGH

This command sets or queries the percent (where $100 \%$ is equal to HIGH) that is used to calculate the high reference level when MEASUrement:REFLevel:METHod is set to Percent. This command affects the results of rise and fall measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Percentage High Ref value.

NOTE. This command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS<x>:REFLeve 7 commands.

Group Measurement

Syntax MEASUrement:REFLeve1:PERCent:HIGH <NR3> MEASUrement:REFLeve1:PERCent:HIGH?

Related Commands MEASUrement:REFLevel:METHod, MEASUrement:IMMed:TYPe, MEASUrement:MEAS $<x>$ :TYPe

Arguments <NR3> is the high reference level, ranging from 0 to $100 \%$. The default high reference level is $90 \%$.

Examples MEASUREMENT:REFLEVEL:PERCENT:HIGH 95 sets the high reference level to $95 \%$ of HIGH .

MEASUREMENT: REFLEVEL: PERCENT:HIGH? might return :MEASUREMENT:REFLEVEL:PERCENT:HIGH 90, indicating that the percentage high reference level is set to $90 \%$ of HIGH.

## MEASUrement:REFLevel:PERCent:LOW

This command sets or queries the percent (where $100 \%$ is equal to HIGH) that is used to calculate the low reference level when MEASUrement:REFLevel:METHod is set to Percent. This command affects the results of rise and fall measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Percentage Low Ref value.

NOTE. This command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASURement:MEAS<x>:REFLeve 7 commands.

Group Measurement

Syntax MEASUrement:REFLeve1:PERCent:LOW <NR3>
MEASUrement:REFLeve1:PERCent:LOW?

Related Commands MEASUrement:REFLevel:METHod, MEASUrement:IMMed:TYPe, MEASUrement:MEAS $<x>$ :TYPe

Arguments <NR3> is the low reference level, ranging from 0 to $100 \%$. The default low reference level is $10 \%$.

Examples MEASUREMENT:REFLEVEL: PERCENT:LOW 15 sets the high reference level to $15 \%$ of HIGH.

MEASUREMENT: REFLEVEL: PERCENT:LOW? might return :MEASUREMENT:REFLEVEL:PERCENT:LOW 10, indicating that the percentage high reference level is set to $10 \%$ of HIGH.

## MEASUrement:REFLevel:PERCent:MID<x>

This command sets or queries the percent (where $100 \%$ is equal to HIGH) that is used to calculate the mid reference level when MEASUrement:REFLevel:METHod is set to Percent. Mid1 specifies the percent for the first waveform and Mid2 specifies the percent for the second waveform specified for delay measurements. This command affects the results of period, frequency, delay, and all cyclic measurements and is equivalent to selecting Reference Levels from the Measure menu, and then entering the Percentage Mid Ref value.

NOTE. This command affects the associated reference level parameter for all MEASurements:IMMed and the eight periodic measurements. To change the parameter for individual measurements, use the MEASUrement:MEAS $\langle x\rangle$ :REFLevel commands.

Group Measurement

Syntax MEASUrement:REFLeve1:PERCent:MID<x> <NR3> MEASUrement:REFLeve1:PERCent:MID<x>?

Related Commands MEASUrement:REFLevel:METHod

Arguments <NR3> is the mid reference level, ranging from 0 to $100 \%$. The default mid reference level is $50 \%$.

Examples MEASUREMENT:REFLEVEL:PERCENT:MID2 40 sets the mid2 reference level to $40 \%$ of HIGH.

MEASUREMENT:REFLEVEL:PERCENT:MID2? might return :MEASUREMENT:REFLEVEL:PERCENT:MID2 45, indicating that the percentage mid2 reference level is set to $45 \%$ of HIGH.

## MEASUrement:SOUrce<x>:SIGType

This command sets or queries the type of input signal used for measurement SOURCE $<\mathrm{x}>, 1$ or 2 .

To ensure accurate measurements, use this command to specify the input-signal type for the measurement source.

Conditions This command is valid only if the instrument has Option MTM is installed

Group Measurement

Syntax MEASUrement:SOUrce<x>:SIGType \{PULse|EYE\}
MEASUrement:SOUrce<x>:SIGType?

Arguments PULSE is for generic signals that are not associated with synchronous communications standards.

EYE is for synchronous-communication signals with NRZ-like characteristics (nonreturn to zero).

Examples MEASUREMENT:SOURCE1:SIGTYPE PULSE selects Pulse as the signal type for source 1.

MEASUREMENT: SOURCE1:SIGTYPE? might return
:MEASUREMENT: SOURCE1:SIGTYPE EYE, indicating that the signal type for source 1 is EYE.

## MEASUrement:STATIstics:COUNt (No Query Form)

This command (no query form) clears existing measurement statistics from memory. This command is equivalent to selecting Measurement Setup from the Measure menu, selecting Statistics, and clicking the Reset button.

Arguments RESET clears existing measurement statistics from memory.

Examples MEASUREMENT:STATISTICS:COUNT RESET resets the count of the statistics measurement to zero, clears the measurement statistics from memory, and restarts the calculation.

## MEASUrement:STATIstics:MODe

This command controls the operation and display of measurement statistics. This command is equivalent to selecting Measurement Setup from the Measure menu, clicking the Statistics button and then choosing the desired Measurement Format.

Group Measurement

Syntax MEASUrement:STATIstics:MODe
\{OFF|ALL|VALUEMean|MINMax|MEANSTDdev\}
MEASURement:STATIstics:MODe?

Related Commands MEASUrement:STATIstics:WEIghting

Arguments OFF turns off all measurements. This is the default value.
ALL turns on statistics and displays all statistics for each measurement.
VALUEMean turns on statistics and displays the value and the mean ( $\mu$ ) of each measurement.

MINMax turns on statistics and displays the min and max of each measurement.
MEANSTDdev turns on statistics and displays the mean and standard deviation of each measurement.

Examples MEASUREMENT:STATISTICS:MODE OFF turns off statistic measurements.
MEASUREMENT:STATISTICS:MODE? might return
:MEASUREMENT:STATISTICS:MODE ALL, indicating that measurement statistics are turned on and all statistics are being displayed for each measurement.

## MEASUrement:STATIstics:WElghting

This command sets or queries the time constant for mean and standard deviation statistical accumulations. This command is equivalent to selecting Measurement Setup from the Measure menu, clicking the Statistics button and entering the desired Weight $\mathrm{n}=$ value.

Group Measurement

Syntax MEASUrement:STATIstics:WEIghting <NR1> MEASUrement:STATIstics:WEIghting?

## Related Commands MEASUrement:STATIstics:MODe

## Arguments <NR1> is the time constant for the mean and standard deviation statistical accumulations. <br> Examples <br> MEASUREMENT:STATISTICS:WEIGHTING 4 sets statistical weighting to 4. <br> MEASUREMENT:STATISTICS:WEIGHTING? might return :MEASUREMENT:STATISTICS:WEIGHTING 4, indicating that measurement statistics weighting is currently set to 4 .

## MULTiscope:CONFig

This command sets or queries the current MultiScope operational configuration. This command is for the Master instrument in the multi-instrument configuration.

NOTE. Switching configurations results in a restart of the TekScope application, and may take several minutes to complete.

Group Miscellaneous

Syntax MULTiscope:CONFig \{ATI | TEKCONnect | TIMESYnc\}

Arguments ATI sets the MultiScope system to use the ATI channels.
TEKCONNECT sets the MultiScope system to use the TekConnect channels.
TIMESYNC sets the MultiScope system to use the TekConnect channels in TimeSync mode. TimeSync mode is only available on some instruments. The Master instrument controls the instrument hardware such as the horizontal and trigger settings. Desired results are only achieved in Single Sequence acquisition mode. Data from all channels can be acquired using programmable interface commands.

Examples MULTISCOPE: CONFIG ATI sets your MultiScope system to use the ATI channels.
MULTiscope:CONFig? might return :MULTiscope:CONFig TEKCONNECT indicating that your MultiScope system is set to use the TekConnect channels.

## MULTiscope:EXIT (No Query Form)

This command instructs the Configuration Managers (and active scope applications) across the entire MultiScope configuration to shutdown.

Group Miscellaneous

Syntax MULTiscope:EXIT

Examples MULTISCOPE:EXIT causes the Configuration Managers (and active scope applications) across the entire MultiScope configuration to shutdown.

## MULTiscope:RESTART (No Query Form)

This command instructs the Configuration Managers (and active scope applications) across the entire MultiScope configuration to exit and restart themselves.

Group Miscellaneous

Syntax MULTiscope:RESTART

Examples MULTISCOPE:RESTART causes the Configuration Manager and active scope applications across the entire MultiScope configuration to exit and restart themselves.

## MULTiscope:STATUS? (Query Only)

This query returns the current state of oscilloscopes in the MultiScope system.

Group Miscellaneous

Syntax MULTiscope: STATUS?

Returns If all of the oscilloscopes are running correctly then "All Extensions are Running" is returned. If one or more extensions have failed, "Failed Extensions are <extension letters>" is returned with the failing extensions noted.

Examples MULTISCOPE:STATUS? might return :MULTISCOPE:STATUS "Failed Extensions are B", indicating that extension B failed.

## NEWpass (No Query Form)

This command (no query form) changes the password that enables access to password protected data. The PASSWord command must be successfully executed before using this command or an execution error will be generated.

Group Miscellaneous<br>Syntax NEWpass <QString>

Related Commands PASSWord, *PUD

Arguments <QString> is the new password, which can contain up to 10 characters.

Examples NEWPASS"mypassword" creates a new password (mypassword) for accessing your protected data.
*OPC
This command generates the operation complete message in the Standard Event Status Register (SESR) when all pending commands that generate an OPC message are complete. The *OPC? query places the ASCII character " 1 " into the output queue when all such OPC commands are complete. The *OPC? response is not available to read until all pending operations finish. For a complete discussion of the use of these registers and the output queue, see Registers and Queues.

The *OPC command allows you to synchronize the operation of the instrument with your application program. For more information, see Synchronization Methods.

Table 2-47: Commands that Generate an OPC Message

| Operation | Command |
| :--- | :--- |
| Single sequence acquisition | ACQuire:STATE ON or |
|  | ACQuire:STATE RUN or |
|  | ACQuire:STATE 1 (when ACQuire:STOPAfter is set to |
|  | SEQuence) |
| Starts diagnostics | DIAg:EXECUTE |
| Calibration step | Refer to the Service Manual. |

Table 2-47: Commands that Generate an OPC Message (cont.)

| Operation | Command |
| :--- | :--- |
| Test execution | TEST |
| Recall setup | ${ }^{* R S T, ~ F A C t o r y, ~ T E K S e c u r e ~}$ |
|  | ${ }^{* R C L}$, RECAll:SETUp |

Group Status and Error

Syntax *OPC
*OPC?

## Related Commands BUSY?, *WAI

Examples *OPC generates the operation complete message in the SESR at the completion of all pending OPC operations.
*OPC? might return 1 to indicate that all pending OPC operations are finished.

## OPCEXtended

This command sets or queries the behavior of OPC commands and queries. When enabled, operations referenced in the *OPC command description notify when their overlapped functionality has completed. When disabled, the operations notify as they have in the past (only once updated in the instrument state database).

Table 2-48: Command synchronization

| Operation | PI sequence |
| :--- | :--- |
| Single sequence with :ACQUIRE:STOPAFTER SEQUENCE <br> ttOff  | $:$ :ACQUIRE:STATE 1;*OPC?;:WFMOUTPRE:XZERO? |
| Single sequence | :ACQUIRE:STOPAFTER |

| Single sequence with Measurement on Math | :ACQUIRE:STOPAFTER SEQUENCE;:HORIZONTAL:MODE MANUAL;RECORDLENGTH 2500000 <br> :MATH1:DEFINE "CH1*CH1";:SELECT:MATH1 1 <br> :MEASUREMENT:MEAS1:STATE 1;TYPE AMPLITUDE;SOURCE <br> MATH1 <br> :ACQUIRE:STATE 1;*OPC?;:MEASUREMENT:MEAS1:VALUE? |
| Acq Count | *RST;*WAI;:ACQUIRE:NUMACQ? |
| Acq state after single sequence | :ACQUIRE:STOPAFTER SEQUENCE;STATE 1;*WAI;:ACQUIRE:STATE? |

Group Status and Error

Syntax OPCEXtended \{<NR1>|OFF|ON\} OPCEXtended?

Arguments ON turns on extended OPC behavior.
OFF turns off extended OPC behavior.
<NR1> = 0 turns off extended OPC behavior; any other value turns on extended OPC behavior.

## Examples OPCEXTENDED ON turns on extended OPC behavior.

OPCEXTENDED? might return :OPCEXTENDED 1 indicating that extended OPC behavior is turned on.

## *OPT? (Query Only)

This query-only command returns a list of the options installed in your instrument.

```
    Group Status and Error
    Syntax *OPT?
Examples *OPT? might return :3M:16 Meg Max 4M/CH.
```

## PASSWord (No Query Form)

This command (no query form) enables the *PUD and NEWpass set commands. Sending PASSWord without any arguments disables these same commands. Once the password is successfully entered, the *PUD and NEWpass commands are enabled until the instrument is powered off, or until the FACtory command, the PASSWord command with no arguments, or the *RST command is issued.

To change the password, you must first enter the valid password with the PASSWord command and then change to your new password with the NEWpass command. Remember that the password is case sensitive.

Group Miscellaneous<br>Syntax PASSWord <QString><br>Related Commands NEWpass, *PUD

Arguments <QString> is the password, which can contain up to 10 characters. The factory default password is "XYZZY" and is always valid.

Examples PASSWORD "XYZZY" enables the *PUD and NEWPass set commands.
PASSWORD disables the *PUD and NEWPass set commands. You can still use the query version of *PUD.

This command sets and queries the power-on status flag that controls the automatic power-on handling of the DESER, SRER, and ESER registers. When
*PSC is true, the DESER register is set to 255 and the SRER and ESER registers are set to 0 at power-on. When *PSC is false, the current values in the DESER, SRER, and ESER registers are preserved in nonvolatile memory when power is shut off and are restored at power-on.

Group Status and Error

Syntax *PSC \{<NR1>|OFF|ON\}
*PSC?

Related Commands DESE, *ESE, FACtory, *RST, *SRE
$<N R 1>=0$ sets the power-on status clear flag to false, disables the power-on clear and allows the instrument to possibly assert SRQ after power-on; any other value sets the power-on status clear flag to true, enabling the power-on status clear and prevents any SRQ assertion after power on.

OFF sets the power-on status clear flag to false, disables the power-on clear and allows the instrument to possibly assert SRQ after power-on.

ON sets the power-on status clear flag to true, enabling the power-on status clear and prevents any SRQ assertion after power on.

Examples *PSC0 sets the power-on status clear flag to false.
*PSC? might return 1 to indicate that the power-on status clear flag is set to true.

## *PUD

Group Status and Error

Syntax *PUD \{<Block>|<QString>\}
*PUD?

Related Commands PASSWord

Arguments <Block> is a block containing up to 100 characters. <QString> is a string containing up to 100 characters.

Examples *PUD\#229This instrument belongs to me stores the string "This instrument belongs to me" in the user protected data area. *PUD? might return \#221PROPERTY OF COMPANY X.

## *RCL (No Query Form)

This command (no query form) restores the state of the instrument from a copy of the settings stored in memory (The settings are stored using the *SAV command). If 'factory' is referenced (by specifying ' 0 '), the factory default values will be restored.

This command is equivalent to RECAll:SETup and performs the same function as selecting Recall from the File menu, and then pressing the Setup button.

Group Save and Recall

Syntax *RCL <NR1>

Related Commands DELEte:SETUp, FACtory, *LRN?, RECAll:SETUp, *RST, *SAV, SAVe:SETUp

Arguments <NR1> specifies a setup storage location value ranging from 0 through 10. Using an out-of-range value causes an execution error.

Examples *RCL 3 restores the instrument from a copy of the settings stored in memory location 3.

## RECAII:MASK (No Query Form)

This command (no query form) recalls a stored mask as the User mask.

Group Mask<br>Syntax RECA11:MASK <QString><br>Related Commands SAVe:MASK

Arguments <QString> is a quoted string that defines the file name and path from where the mask will be recalled. Input the file path using the form $<$ drive $>/<$ dir $>/<$ filename $>$. $<$ drive $>$ and one or more $<$ dir>s are optional. If you do not specify them, the instrument will read the mask from the default directory. <filename> stands for a file name of up to 128 characters (use of wildcard characters in filenames is not supported). File name extensions are not required but are highly recommended.

The file is stored in ASCII format and is user-editable.

Examples RECALL:MASK "TEST" recalls the mask stored in the file named TEST as the User mask.

## RECAII:SETUp (No Query Form)

This command (no query form) returns stored or factory settings to the instrument from a copy of the settings stored in memory. If factory is referenced (by specifying ' 0 '), the factory default values will be restored. This command is equivalent to *RCL and performs the same function as selecting Recall from the File menu, and then choosing the Setup button.

Group Save and Recall<br>Syntax RECA11:SETUp \{FACtory|<NR1>|<file path>\}<br>Related Commands FACtory, *RCL, *RST, *SAV, SAVe:SETUp

## Arguments FACtory restores the factory setup.

<NR1> specifies a setup storage location to restore. Setup storage location values range from 0 through 10; using an out of range value causes an error (222, "Data out of range").
<file path> specifies a location for an instrument setup file. <file path> is a quoted string that defines the file name and path. Input the file path using the form <drive>:<dir>/<filename>.<drive> and one or more $<$ dir>s are optional. If you do not specify them, the instrument will read the file from the default directory (C:\Users\Public\Tektronix \TekScope\setups). <filename> stands for a file name of up to 128 characters (use of wildcard characters in filenames is not supported). File name extensions are not required, but highly recommended.

Examples RECALL: SETUP FACTORY recalls (and makes current) the instrument setup to its factory defaults.

RECALL: SETUP 2 recalls the instrument setup from setup storage location 2 .

RECALL: SETUP "TEK00000.SET" recalls the setup from the file TEK00000.SET in the default directory for setups ( $\mathrm{C}: \backslash$ Users $\backslash$ Public $\backslash$ Tektronix $\backslash$ TekScope $\backslash$ setups).

## RECAII:SETUp:DESKew

This command sets or queries the deskew values that are affected by a default setup or a recalled setup.

NOTE. This setting is changed only by TekSecure (which resets it to the default setting of UNLOCK) or through explicit user request (from the Recall Setup dialog box in the TekScope User Interface).

Group Save and Recall

Syntax RECA11:SETUp:DESKew \{LOCK|UNLOCK\}
RECA11:SETUP:DESKew?

Arguments LOCK a default or a recall setup will not change the deskew settings when this option is selected.

UNLOCK a default setup will reset the deskew settings to factory values and a recall setup will apply the setup deskew values to the recalled oscilloscope state.

Examples RECALL:SETUP:DESKEW LOCK, a default or recall setup will not change the deskew settings.

RECALL:SETUP:DESKEW? might return :RECALL:SETUP:DESKEW UNLOCK, indicating that a default setup will reset the deskew settings to factory values and a recall setup will apply the setup deskew values to the recalled oscilloscope state.

## RECAII:WAVEform (No Query Form)

This command (no query form) recalls a stored waveform to a reference location. This command is equivalent to selecting Recall from the File menu, and then pressing the Waveform button.

Group Save and Recall

Syntax RECA11:WAVEform <file path>,REF<x>

Arguments <file path> specifies a location for a stored waveform file. <file path> is a quoted string that defines the file name and path. Input the file path using the form <drive>:<dir>/<filename>.<drive> and one or more <dir>s are optional. If you do not specify them, the instrument will read the waveform from the default directory (C:\Users\Public\Tektronix\TekScope|Waveforms). <filename> stands for a file name of up to 128 characters (use of wildcard characters in filenames is not supported). File name extensions are not required but are highly recommended.

REF $<\mathrm{X}>$ specifies a location in internal reference memory. Reference memory location values range from 1 through 4.

Examples RECALL:WAVEFORM "TEK00000.WFM", REF1 recalls the waveform stored in the file named TEK00000.WFM from the default directory for waveforms (C:\Users\Public\Tektronix $\backslash$ TekScope\Waveforms) to the reference location 1.

## REF <x>:HORizontal:POSition

This command sets or queries the horizontal display position of the reference waveform. The reference waveform is specified by x . The value of x can range from 1 through 4. This command is equivalent to selecting Reference Waveforms from the File menu, choosing Reference Setup $1 / 4$ from the drop-down list, selecting a reference waveform, and then entering the horizontal position value using the multipurpose knob.

Group Vertical

Syntax REF<x>:HORizontal:POSition <NR3>
REF<X>:HORizontal:POSition?

Arguments <NR3> argument specifies the horizontal position of the specified reference waveform in percentage of the waveform that is displayed to the right of the center vertical graticule. The range of this argument is from 0 through 100.

## Examples REF2:HORIZONTAL:POSITION 0.0 positions the start of the Reference 2

 waveform at the center graticule.REF1:HORIZONTAL: POSITION? might return :REF1:HORIZONTAL:POSITION 50 , indicating that the Reference 1 waveform is centered on the horizontal graticule.

## REF<x>:LABel? (Query Only)

This query-only command returns a branch query containing the waveform label name and the coordinates at which the label (attached to the displayed waveform of the specified reference) is displayed. The reference waveform is specified by $x$. The value of $x$ can range from 1 through 4 . This command is equivalent to selecting Reference Waveforms from the File menu and then choosing Label from the drop-down list.

Group Vertical

Syntax REF $<x>$ : LABe 1 ?

Related Commands $\quad$ REF $<x>: L A B e l: N A M e, R E F<x>: L A B e l: X P O S, R E F<x>: L A B e l: Y P O S$

Examples REF1:LABEL? might return :REF1:LABE1:NAME
"Myname";:XPOS-200;:YPOS 50.

## REF < $\mathrm{x}>:$ LABel:NAMe

This command sets or queries the label of the designated waveform. The reference waveform is specified by $x$. The value of $x$ can range from 1 through 4 . This command is equivalent to selecting Reference Waveforms from the File menu, choosing Label from the drop-down list, selecting the tab associated with the reference for which you want to create a label, and entering a label in the Label box.

Group Vertical

Syntax REF<x>:LABe1:NAMe <QString>
REF<x>:LABe1:NAMe?

Related Commands $\quad$ REF $<x>$ :LABel?

Arguments <QString> is the character string that will be used for the reference waveform label name.

Examples REF4:LABEL: NAME "My Reference" sets the label name of Reference 4 waveform to "My Reference".

REF3:LABEL:NAME? might return : REF3: LABEL:NAME "Signa12", indicating that the label name for Reference 3 waveform is currently set to "Signal2".

## REF <x>:LABel:XPOS

This command sets or queries the X screen offset at which the label (attached to the displayed waveform of the specified reference) is displayed, relative to the left edge of the screen The reference waveform is specified by $x$. The value of $x$ can range from 1 through 4 . This command is equivalent to selecting Reference Waveforms from the File menu, choosing Label from the drop-down list, selecting the tab associated with the reference for which you want to position a label, and entering a value in the X Position box.

Group Vertical

Syntax REF<x>:LABel:XPOS <NR1>
REF $<x>$ :LABe1:XPOS?

Related Commands $\quad$ REF $<x>:$ LABel?

Arguments <NR1> is the location (control in divisions) where the waveform label for the selected reference is displayed, relative to the left edge of the screen. Arguments should be integers ranging from 0 through 10 .

Examples REF4:LABEL:XPOS 10 moves the waveform label for the Reference 3 waveform, so that it begins 10 divisions to the right of the left edge of the screen.

REF2:LABEL:XPOS? might return :REF2:LABEL:XPOS 1.5, indicating that the x -axis for the Reference 2 waveform is currently 1.5 divisions to the right of the left edge of the screen.

## REF <x>:LABel:YPOS

This command sets or queries the Y screen offset at which the label (attached to the displayed waveform of the specified reference) is displayed, relative to the center of the screen. The reference waveform is specified by $x$. The value of $x$ can range from 1 through 4 . This command is equivalent to selecting Reference Waveforms from the File menu, choosing Label from the drop-down list, selecting the tab associated with the reference for which you want to position a label, and entering a value in the Y Position box.

Group Vertical

Syntax REF<x>:LABe1:YPOS <NR1> REF<X>:LABe1:YPOS?

Related Commands $\quad$ REF $<x>:$ LABel ?

Arguments <NR1> is the location (in divisions) where the waveform label for the selected reference is displayed, relative to the waveform handle. Arguments should be integers ranging from 10 to -10 .

Examples REF3:LABEL:YPOS -10 moves the waveform label for the Reference 3 waveform 10 divisions below the waveform handle.

REF2:LABEL:YPOS? might return :REF2:LABEL:YPOS 0, indicating that the waveform label for the Reference 2 waveform is currently located at the waveform handle.

## REF<x>:THRESHold

This command sets or queries the comparable threshold for converting the reference signal to digital form for the channel specified by x . The value of x can range from 1 through 4.

Group Digital

Syntax REF<x>:THRESHold <NR3> REF < X > : THRESHold?

Arguments <NR3> specifies the reference threshold in volts.

Examples REF1:THRESHOLD 1 sets the threshold value of the reference REF1 to 1 volt. REF1:THRESHOLD? might return :REF1:THRESHOLD $500.0000 \mathrm{E}-3$, indicating that the threshold value set for the reference REF 1 is 0.5 volts.

## REF<x>:VERTical:POSition

This command sets or queries the vertical position of a reference waveform The reference waveform is specified by x . The value of x can range from 1 through 4 .

This command is equivalent to selecting Reference Waveforms from the File menu, choosing Reference Setup from the drop-down list, selecting a reference waveform, and then entering the Position value using the multipurpose knob.

Increasing the position value of a waveform causes the waveform to move up, and decreasing the position value causes the waveform to move down. Position adjusts only the display position of a waveform. The position value determines the vertical graticule coordinate at which signal values are displayed. For example, if the position for Reference 3 is set to 2.0 , the signal represented by that reference will be displayed at 2.0 divisions above the center of the screen.

NOTE. References are static. All position and scale changes are applied in a post-processing mode.

Group Vertical

Syntax REF<x>:VERTical:POSition <NR3>
REF<X>:VERTical:POSition?

Related Commands $\quad \mathrm{CH}<\mathrm{x}>$ :POSition, MATH $<\mathrm{x}>$ :VERTical:POSition, $\mathrm{D}<\mathrm{x}>$ :POSition

Arguments <NR3> is the desired position, control in divisions from the center horizontal graticule. The range is from -5 to 5 divisions.

Examples REF2:VERTICAL:POSITION 1.3E+00 positions the Reference 2 waveform input signal 1.3 divisions above the center horizontal graticule.

REF1:VERTICAL: POSITION? might return : REF1:VERTICAL: POSITION $-1.3000 \mathrm{E}+00$, indicating that the current position of Reference 1 waveform is 1.3 divisions below the center horizontal graticule.

## REF <x>:VERTical:SCAle

This command sets or queries the vertical scale of a reference waveform. The reference waveform is specified by x . The value of x can range from 1 through 4. This command is equivalent to selecting Reference Waveforms from the File menu, choosing Reference Setup from the drop-down list, selecting a reference waveform, and then entering the Scale value using the multipurpose knob.

Each waveform has a vertical scale parameter. For a signal with constant amplitude, increasing the Scale causes the waveform to be displayed smaller. Decreasing the scale causes the waveform to be displayed larger.

Scale affects all waveforms, but affects reference and math waveforms differently from channel waveforms:

- For reference and math waveforms, this setting controls the display only, graphically scaling these waveforms and having no affect on the acquisition hardware.
- For channel waveforms, this setting controls the vertical size of the acquisition window and the display scale. The range and resolution of scale values depends on the probe attached and any other external factors you have specified.

Group Vertical

Syntax REF<x>:VERTical:SCAle <NR3> REF $<x>$ :VERTical:SCAle?

Related Commands
$\mathrm{CH}<\mathrm{x}>$ :SCAle, MATH $<\mathrm{x}>$ :VERTical:SCAle

Arguments <NR3> is the gain in user units per division.

Examples REF4:VERTICAL:SCALE 100E-03 sets the Reference 4 waveform scale to 100 mV per division.

REF4:VERTICAL:SCALE? might return : REF2:VERTICAL: SCALE $1.0000 \mathrm{e}+00$, indicating that the current vertical scale setting for Reference 2 waveform is 1 V per division.

## REM (No Query Form)

This command (no query form) embeds a comment within GPIB programs as a means of internally documenting the programs. The instrument ignores these embedded comment lines.

Group Miscellaneous

Syntax REM <QString>

Related Commands NEWpass, *PUD

Arguments <QString> is a string that can contain a maximum of 80 characters.

Examples REM "This is a comment" is a comment string that the instrument will ignore.

## ROSc:OUT:FREQuency

## NOTE. Not available on some models.

This command sets or returns the selected frequency for the timebase reference output signal.

Group Miscellaneous

Syntax ROSc:OUT:FREQuency \{MHz10|MHZ100\} ROSC:OUT:FREQuency?

Arguments MHZ10 outputs a 10 MHz reference signal to the REF OUT connector. MHZ100 outputs a 100 MHz reference signal to the REF OUT connector.

Examples ROSC: OUT: FREQUENCYMHZ10 outputs a 10 MHz reference signal to the REF OUT connector.

ROSC:OUT:FREQUENCY? might return ROSC:OUT:FREQUENCY MHZ100 indicating that the 100 MHz reference signal is output to the REF OUT connector.

## ROSc:OUT:ULTRAsync

This command sets or queries the state of the UltraSync 12.5 GHz Clock Out. DPO70000SX Series only.

Group Miscellaneous

Syntax ROSc:OUT:ULTRASync \{OFFION\} ROSc:OUT:ULTRAsync?

Arguments OFF disables the 12.5 GHz Clock Out.
ON enables the 12.5 GHz Clock Out.

# Examples ROSC:OUT:ULTRASYNC ON enables the UltraSync 12.5 GHz Clock Out. <br> ROSC:OUT:ULTRASYNC? might return ROSC:OUT:ULTRASYNC 0 indicating the UltraSync 12.5 GHz Clock Out is disabled. 

## ROSc:SOUrce

NOTE. Not available on some models.

This command sets or queries the selected source for the time base reference oscillator. The reference oscillator locks to this source. Depending on the command argument that you specify, you can use an external reference or use the internal crystal oscillator as the time base reference.

This command is also useful for synchronizing multiple instruments.

Arguments ULTRAsync specifies the 12.5 GHz UltraSync Clock as the time base reference. INTERna 1 specifies the internal 10 MHz crystal oscillator as the time base reference.

EXTernal specifies the user-supplied external signal as the time base reference.

Examples ROSC: SOURCE INTERNAL specifies the internal 10 MHz crystal oscillator as the time base reference.

ROSC: SOURCE? might return : ROSC: SOURCE INTERNAL, indicating that the 10 MHz crystal oscillator is being used as the time base reference.

## ROSc:STATE? (Query Only)

NOTE. Not available on some models.

This query-only command returns whether the time base reference oscillator is locked. This command will return either LOCKED or UNLOCKED.

Group Miscellaneous

Syntax ROSC:STATE?

Related Commands ROSc:TRACking

Examples ROSC:STATE? might return : ROSC: STATE LOCKED, indicating that the time base reference is locked.

## ROSc:TRACking

## NOTE. Not available on some models.

This command sets or queries the tracking mode for the time base reference oscillator. The reference oscillator locks to the source. Depending on the command argument that you specify, you can use an external reference signal that is fed through or bypasses the phase-locked loop.

This command is also useful for synchronizing multiple instruments.

Group Miscellaneous

Syntax ROSC:TRACking \{STAB1e|FAST\}
ROSC:TRACking?

Arguments STAB7e tracking mode specifies that the external reference signal is fed through a phase-locked loop that removes jitter from the external reference.

FAST tracking mode specifies that the external reference signal bypasses the phase-locked loop.

Examples ROSC:TRACKING STABLE feeds the external reference signal through the instrument phase-locked loop.

ROSC:TRACKING? might return :ROSC:TRACKING FAST, indicating that the external reference signal bypasses the phase-locked loop.

## *RST (No Query Form)

This command (no query form) resets the instrument to the factory default settings. The *RST command does not change the following:

- The state of the IEEE Std 488.1-1987 interface
- The selected IEEE Std 488.1-1987 address of the instrument
- Calibration data that affect device specifications
- The Output Queue
- The Service Request Enable Register setting
- The Power-on status clear flag setting
- Alias definitions
- Stored settings
- The *PUD? Response
- Any of the values associated with the DATA command.
*RST only resets the programmable interface settings, it does not change the user interface settings.

Group Status and Error

## Syntax *RST

Related Commands FACtory, RECAll:SETUp, SAVe:SETUp

Arguments None

Examples *RST resets the instrument settings to factory defaults.

## *SAV (No Query Form)

This command (no query form) stores the state of the instrument to a specified memory location. You can later use the *RCL command to restore the instrument to this saved state.

This command is equivalent to selecting Save As from the File menu, and then pressing the Setup button.

Group Save and Recall

Syntax *SAV <NR1>

Related Commands *RCL, RECAll:SETUp, SAVe:SETUp

Arguments <NR1> specifies a location in which to save the state of the instrument. Location values range from 1 through 10. Using an out-of-range location value causes an execution error. Any settings that have been stored previously at this location will be overwritten.

Examples *SAV 2 saves the current instrument state in memory location 2.

## SAVe:EVENTtable:BUS<x> (No Query Form)

Saves the event table contents of the specified bus in CSV format, to the file that you specify by <string>.

Group Save and Recall

Syntax SAVe:EVENTtable:BUS<x> <string>

Arguments <string> is the file name.

Examples SAVE:EVENTTABLE:BUS2 "EVENTTABLE" stores the event table for bus B2 in a file named "EVENTTABLE", to the default location C: \users \username\Tektronix\TekScope.

## SAVe:MARKS (No Query Form)

This command saves the user search marks in CSV format, to the file that you specify by <string>.

Group Save and Recall

Syntax SAVe:MARKS <string>

Arguments <string> specifies the file that the marks are save to.

Examples SAVE:MARKS "C:\users\username\Tektronix\TekScope\mymarks\} mymarks.csv" sets that path and file name as the place to store the search marks.

## SAVe:MASK (No Query Form)

This command (no query form) saves the user mask to a mass storage file.

Group Mask<br>Syntax SAVe:MASK <QString><br>Related Commands RECAll:MASK

Arguments <QString> is the location to where the mask is stored. <file path> is a quoted string that defines the file name and path. Input the file path using the form <drive>/<dir>/<filename>. <drive> and one or more <dir>s are optional.

The file is stored in ASCII format and is user-editable.

Examples SAVE:MASK "TEST" saves the user mask to the file TEST in the default directory and on the default drive.

## SAVe:SETUp (No Query Form)

This command (no query form) stores the state of the instrument to a specified memory location. You can later use the *RCL command to restore the instrument to this saved state. This is equivalent to selecting Save As from the File menu, and then pressing the Setup button.

Group Save and Recall

Syntax SAVe:SETUp \{<file path>|<NR1>\}

Related Commands *RCL, RECAll:SETUp, *SAV

Arguments <file path> is the target location for storing the setup file. <file path> is a quoted string that defines the file name and path. Input the file path using the form <drive>:<dir>/<filename>. <drive> and one or more <dir>s are optional. If you do not specify them, the instrument will store the file in the default directory (C:\Users\Public\Tektronix\TekScopelsetups). <filename> stands for a file name of up to 128 characters. (Use of wildcard characters in filenames is not supported.) File name extensions are not required but are highly recommended. For setups, use the extension ".SET".
<NR1> specifies a location for saving the current front panel setup. The front panel setup value ranges from 1 to 10 . Using an out-of-range value causes an execution error. Any settings that have been stored previously at this location will be overwritten.

## Examples

SAVE: SETUP 5 saves the current instrument setup in memory location 5 .
SAVE:SETUP"TEK00000.SET" saves the current instrument setup in the file TEK00000.SET in the default directory for setups (C:\Users\Public\Tektronix \TekScope\setups).

## SAVe:WAVEform (No Query Form)

This command (no query form) saves a waveform to one of four reference memory locations or a file. This command is equivalent to selecting Reference Waveforms from the File menu and choosing Save Wfm from the drop-down list.

Group Save and Recall

Syntax SAVe:WAVEform [<wfm>,REF<x>]| [<wfm>, <QString>] | [ALL,[QString]]| [DIGITALALL,<QString>]

Related Commands DELEte:WAVEform, RECAll:WAVEform, SAVe:WAVEform:FILEFormat, SAVe:WAVEform:DATa:STARt, SAVe:WAVEform:DATa:STOP

Arguments <wfm>, REF<x> saves the specified waveform to the specified reference memory location. $<\mathrm{wfm}>$ can be any of $\mathrm{CH}<\mathrm{x}>$, MATH $<\mathrm{x}>$, and REF $<\mathrm{x}>$.
<wfm>, <QString> saves the specified waveform to the file specified. The file is a quoted string that defines the file name and path. Input the file path using the form <drive $>\mid<$ dir $>/<$ filename $>$. <drive> and one or more $<$ dir>s are optional. If you do not specify them, the instrument will write the waveform to the default directory. <filename> stands for a file name of up to 125 characters, followed by a period (".") and the three-character extension. Internal format waveforms use
the .wfm extension, spreadsheet format files use the .csv extension and MathCad format files use the .dat extension.

ALL, [QString>] saves all displayed waveforms, excluding digital waveforms, to individual files based on the SAVE:WAVEFORM: FILEFORMAT setting. If a file name argument is specified, it is used as a prefix for each file followed by the waveform ID (such as CH1, MATH1, REF1). If no file name is specified, the default prefix "TDSWfm_" is used, and the file is saved to the default directory. DIGITALALL, <QString> saves all digital waveforms to a single file specified by the quoted string argument and based on the SAVE:WAVEFORM: FILEFORMAT setting. Possible output formats include SPREADSHEET.CSV. SPREADSHEET.TXT, and INTERNAL. Any other formats default to SPREADSHEET. CSV output.

Examples SAVE:WAVEFORM MATH2, REF2 saves the Math2 waveform in reference memory location2.

SAVE:WAVEFORM MATH1, "TEK0000.WFM" saves the Math1 waveform to the file TEK00000.WFM in the default directory and on the default drive.

## SAVe:WAVEform:DATa:STARt

Sets or queries the save waveform starting waveform data sample.

NOTE. Save:Waveform:FileFormat Auto always uses the entire waveform record and does not utilize SAVe:WAVEform:DATa:STARt or STOP or any other limitations on output data.

Group Save and Recall

Syntax SAVe:WAVEform:DATa:STARt \{<NR1>\}

Related Commands SAVe:WAVEform, SAVe:WAVEform:FILEFormat, SAVe:WAVEform:DATa: STOP
$\begin{array}{ll}\text { Arguments } \quad \begin{array}{l}\text { <NR1> specifies the starting waveform sample used by the SAVe:WAVEform } \\ \text { command. This works for Spreadsheet CSV, Spreadsheet TXT, Mathcad, and }\end{array} \\ & \text { Matlab file formats. }\end{array}$

Examples SAVE:WAVEFORM:DATA:START 150 specifies that the saved waveform data starts at waveform sample 150 .

SAVE:WAVEFORM:DATA:START? might return SAVE:WAVEFORM:DATA:START 200, indicating that first data point of the saved waveform is waveform sample 200.

## SAVe:WAVEform:DATa:STOP

Sets or queries the save waveform ending waveform data sample.

NOTE. Save:Waveform:FileFormat Auto always uses the entire waveform record and does not utilize SAVe:WAVEform:DATa:STARt or STOP or any other limitations on output data.

Group Save and Recall

Syntax SAVe:WAVEform:DATa:STOP \{<NR1>\}

Related Commands SAVe:WAVEform, SAVe:WAVEform:FILEFormat, SAVe:WAVEform:DATa: STARt

Arguments <NR1> specifies the ending waveform sample used by the SAVe:WAVEform command. This works for Spreadsheet CSV, Spreadsheet TXT, Mathcad, and Matlab file formats.

Examples SAVE:WAVEFORM:DATA:STOP 500 specifies that the saved waveform data stops at waveform sample 500 .

SAVE:WAVEFORM:DATA:STOP? might return SAVE:WAVEFORM:DATA:STOP 1000, indicating that the last data point of the saved waveform is waveform sample 1000.

## SAVe:WAVEform:FILEFormat

This command specifies or returns the file format for saved waveforms. Waveform header and timing information is included in the resulting file of non-internal formats. The instrument saves DPO waveforms as a $1000 \times 502$ matrix, with the first row corresponding to the most recently acquired data. The values specified by SAVe:WAVEform:DATa:STARt and SAVe:WAVEform:DATa:STOP determine the range of waveform data to output. In the event that SAVe:WAVEform:DATa: STOP value is greater than the current record length, the current record length determines the last output value.

This command is equivalent to selecting Save As from the File menu, clicking the Waveform button, and selecting the desired waveform file format.

> Group Save and Recall

```
Syntax SAVe:WAVEform:FILEFormat
{INTERNal|MATHCad|MATLab|SPREADSHEETCsv|
SPREADSHEETTxt|TIMEStamp|AUTO}
SAVe:WAVEform:FILEFormat?
```

Related Commands CURVe, DATa, DATa:STARt, DATa:STOP, SAVe:WAVEform, WFMInpre:NR_Pt, WFMOutpre:NR_Pt?, SAVe:WAVEform:DATa:STARt, SAVe:WAVEform:DATa:STOP

Arguments INTERNa 1 specifies that waveforms are saved in an internal format, using a .wfm file name extension. These files can be recalled as reference waveforms. When this argument is specified, the settings specified via the SAVe:WAVEform:DATa:STARt and SAVe:WAVEform:DATa:STOP commands have no meaning as the entire waveform is saved.

MATHCad specifies that waveforms are saved in MathCad format, using a .dat file name extension. When saving in this format, waveform values are delimited with new lines. MathCad format enables easy import of waveform data into MathCad or MATLAB. For FastAcq waveforms, data is imported as a matrix. For these formats, waveform header and timing information is saved in a separate header file. MathCad format header files use a _hdr.dat extension.

MATLab specifies that waveforms are saved in Matlab format, using a dat file name extension. When saving in this format, waveform values are delimited with new lines. MATLAB format enables easy import of waveform data into MathCad or MATLAB. For FastAcq waveforms, data is imported as a matrix. For these formats, waveform header and timing information is saved in a separate header file. MATLAB format header files use $\mathrm{a}_{\_}$hdr.dat extension.

SPREADSHEETCsv specifies that waveform data is saved in a format that contains comma delimited values. These waveform data files are named using the .csv file name extension. Saving waveforms in CSV format enables spreadsheet programs to import the data.

SPREADSHEETTxt specifies that waveform data is saved in a format that contains tab delimited values. These waveform data files are named using the .txt file name extension. Saving waveforms in this format enables spreadsheet programs to import the data.

TIMEStamp specifies that timestamp data is saved in a format that contains comma delimited values. These data files are named using the .txt file name extension. Saving waveforms in this format enables spreadsheet programs to import the data.

AUTO specifies that the file format should be taken from the file name extension. Supported extensions include *.wfm, *.csv, *.txt, *.h5). If an extension is read that is not supported, no file will be written out. If no extension is given in the filename, *.csv will be written out. Auto format always uses the entire waveform record and does not utilize SAVe:WAVEform:DATa:STARt or STOP or any other limitations on output data.

Examples SAVE:WAVEFORM:FILEFORMAT INTERNAL specifies that the internal file format is the format used for saving waveforms.

SAVE:WAVEFORM:FILEFORMAT? might return :SAVE:WAVEFORM: FILEFORMAT INTERNAL, indicating that waveforms are saved using the internal format.

## SAVe:WAVEform:FORCESAMEFilesize

This command sets or queries the save waveform force same file size.

Group Save and Recall

Syntax SAVe:WAVEform:FORCESAMEFilesize \{<NR1>|OFF|ON\}
SAVe:WAVEform:FORCESAMEFilesize?

Arguments <NR1> $=0$ disables the function; any other value enables it.
OFF disables the function.
ON enables the function.

Examples SAVe:WAVEform:FORCESAMEFilesize ON forces the same files size for waveform saves.

SAVe:WAVEform:FORCESAMEFilesize? might return :SAVE:WAVEFORM: FORCESAMEFILESIZE 0 , indicating that force same file size is disabled.

## SAVEON (No Query Form)

Sets the auto-increment file count to 0 .
Once the number of saved files has reached the limit that you set (using the SAVEON:NUMevents command), no files will be saved until you reset the count.

Group Save On

Syntax SAVEON \{RESET\}

Related Commands SAVEON:NUMEvents

Arguments RESET sets the file count to 0 .

Examples SAVEON RESET sets the file count to 0 .

## SAVEON:COUNt? (Query Only)

Returns the number of events (files) that have been saved since the last reset.

Group Save On

Syntax SAVEON: COUNt?

Related Commands SAVEON, SAVEON:NUMEvents,

Examples SAVEON:COUNT? might return : SAVEON: COUNT 15, indicating that 15 events have been saved.

## SAVEON:FILE:AUTOInc

Sets or queries the state of the auto increment file name feature (on or off). If AUTOInc is on, each time that an image, measurement, or waveform is saved to a file, the number that is appended to the file name will be augmented automatically, depending on the settings that you have made in the Related Commands, below. If AUTOInc is off, the previous file will be overwritten.

Group Save On

Syntax SAVEON:FILE:AUTOInc \{<NR1>|ON|OFF\} SAVEON: FILE:AUTOInc?

Related Commands SAVEON:COUNt?, SAVEON:FILE:COUNt, SAVEON:FILE:DEST, SAVEON:FILE:NAME, SAVEON:FILE:TYPE, SAVEON:NUMEvents

Arguments <NR1> = 1 enables the Auto increment function; any other value disables the function.

ON indicates that each time that an image, measurement, or waveform is saved, the number that is appended to the file name will be augmented automatically.

OFF indicates that when an image, measurement, or waveform file is saved, the name will not be augmented and the previously saved file will be overwritten.

Examples
SAVEON: FILE:AUTOINC ON turns on the auto increment feature.
SAVEON:FILE:AUTOINC? might return :SAVEON:FILE:AUTOINC 1, indicating that the auto increment feature is enabled.

## SAVEON:FILE:COUNt

Sets or queries the starting number that will be appended to the custom file name when SAVEON:FILE:AUTOInc is enabled and an image, measurement, or waveform is saved. The total of files saved cannot exceed 32767. If this file count is reached, files will not be saved until you change the file count to a lower number.

Group Save On

Syntax SAVEON:FILE:COUNt <NR3> SAVEON: FILE:COUNt?

Related Commands
SAVEON:FILE:AUTOInc, SAVEON:FILE:TYPE, SAVEON:NUMEvents

Arguments

Examples SAVEON: FILE: COUNT250 specifies that the number to be appended to the file name will start with 250 .

SAVEON:FILE:COUNT? might return :SAVEON:FILE:COUNT 500, indicating that when the oscilloscope starts saving files, it will start with 500 as the number that is appended to the end of the file name. It cannot go above 32767.

## SAVEON:FILE:DEST

Sets or queries the location where files are saved. The default destination is C:\users lusername\Tektronix\TekScope\SaveOnTrigger\. You can save the files to a local drive or network path by entering the desired location in <string>. You
can also select to save the files to a USB drive, using the browse button in the oscilloscope interface.

Group Save On

Syntax SAVEON:FILE:DEST <string>
SAVEON:FILE:DEST?

## Related Commands SAVEON:FILE:NAME

Arguments <string> specifies the location to store files.

Examples SAVEON:FILE:DEST
"C:\users\username\Tektronix\TekScope\SaveOnTrigger" sets this as the location to save files (named by the SAVEON:FILE:NAME command), when there is a trigger.

SAVEON:FILE:DEST? might return :SAVEON:FILE:DEST
"C:\users\username\Tektronix\TekScope\SaveOnEvent", indicating the drive location where files will be saved when there is a trigger.

## SAVEON:FILE:NAME

Sets or queries the file name to use when the file type is set to Custom.
Selecting a file name. You can select your own file name by entering the desired name in the <string>. Follow standard Microsoft Windows naming conventions. The limit is 127 characters, with no spaces allowed in the name.

File storage location. The file is saved in the location specified by the SAVEON:FILE:DEST command.

Default names. The default file name is SaveOnEvent. This name will be appended under certain circumstances. If you have previously selected (through the oscilloscope interface) to save channel 1 and channel 2 waveforms, for example, two files are saved, and the default file names will reflect the channel. If you have selected to save bus B1, the default file name will reflect that. The file name also indicates whether it is an image, measurement, or waveform.

Autoincrement. If SAVEON:FILE:AUTOInc is enabled, a number will be added to the file name and will be incremented for each new file. For example, if three events trigger the oscilloscope to save a measurement, three files will be created, which might be named "SaveOnEvent1Meas," "SaveOnEvent2Meas," and "SaveOnEvent3Meas."

Extensions. Although these files have extensions (CSV for measurements and WFM for waveforms, for example), you do not need to enter the extension. It will be added automatically, depending on what you are saving. The query SAVEON:FILE:NAME? will return the file name without the extension.

Group Save On

Syntax SAVEON:FILE:NAME <string> SAVEON: FILE: NAME?

Related Commands SAVEON:FILE:AUTOInc, SAVEON:FILE:DEST, SAVEON:FILE:TYPE

Arguments <string> is the file name you want to use.

Examples SAVEON:FILE:NAME"MaskFailure" sets the name of the file to MaskFailure.
SAVEON:FILE:NAME? might return ": SAVEON:FILE:NAME MaskFailure5", indicating the name you set for the oscilloscope to use, with the autoincrement number (5) appended.

## SAVEON:FILE:TYPE

Sets or queries whether to use the data and time as the file name (auto) or to use a custom file name.

Group Save On

Syntax SAVEON:FILE:TYPE \{AUTO|CUSTOM\}
SAVEON:FILE:TYPE?

Related Commands SAVEON:FILE:COUNt, SAVEON:FILE:NAME

Arguments AUTO uses the date and time as the file name for the saved events. An example auto file name is: 20110711_182946.

CUSTOM uses the file name that you specified using the SAVEON: FILE: NAME command.

Examples SAVEON: FILE:TYPE AUTO sets the oscilloscope to use the file name and date (at the time of the save) as the file name when it saves an image, measurement, or waveform on a trigger.

SAVEON: FILE:TYPE? might return :SAVEON: FILE:TYPE CUSTOM, indicating that the oscilloscope will use the file name that you specified when it saves an image, measurement, or waveform on a trigger.

## SAVEON:IMAGe

Sets or queries whether to save a screen capture when any of the following triggers occurs:

- Limit test failure - if set to On. (SAVEON:LIMit)
- Mask failure - if set to On. (SAVEON:MASK)
- Trigger - if set to On. (SAVEON:TRIGger)

The image will be saved to the file you selected with SAVEON:FILE:NAME, in the location that you selected using SAVEON:FILE:DEST. You can set options for file storage (such as file name, file destination, and autoincrement), using the SaveOn File commands. You can set the file type for the image to be stored in (such as BMP or JPG), through the oscilloscope interface (the SaveOn event setup menu).

Group Save On

Syntax SAVEON:IMAGe \{<NR1>|OFF|ON\}
SAVEON:IMAGe?

Related Commands
SAVEON:FILE:DEST, SAVEON:FILE:NAME, SAVEON:LIMit, SAVEON:MASK, SAVEON:TRIGger

Arguments <NR1> = 0 disables Save On Image; any other value turns this feature on. OFF disables Save On Image.

ON enables Save On Image.

Examples SAVEON:IMAGE ON sets the oscilloscope to save a screen capture on a specified trigger.

SAVEON:IMAGE? might return :SAVEON:IMAGE 1, indicating that the oscilloscope will save a screen capture when the specified trigger occurs.

## SAVEON:LIMit

Group Save On

Syntax SAVEON:LIMit \{<NR1>|OFF|ON\}
SAVEON:LIMit?

## Related Commands

Arguments
<NR1> = 0 disables Save On Limit; any other value turns this feature on.
OFF disables Save On Limit.
on enables Save On Limit.

## Examples SAVEON: LIMIT ON sets the oscilloscope to save (image, measurement, and/or

 waveform) files when there is a limit test failure.SAVEON: LIMIT ? might return : SAVEON:LIMIT OFF, indicating that files will not be saved when there is a limit test failure.

## SAVEON:MASK

Sets or queries whether to save a file when there is a mask failure.
When SAVEON:MASK is enabled, a mask failure will trigger the instrument to save an image, a measurement, and/or a waveform to a file, depending on what you specify using the Related Commands listed below. When there is a mask failure, if you have enabled SAVEON:IMAGe, the instrument will save a screen capture to the file you selected using SAVEON:FILE:NAME and SAVEON:FILE:DEST. You can set options for file storage (such as file name, file destination, and autoincrement), using the SaveOn File commands.

Use the oscilloscope interface to select whether to save one or more analog channels, digital channels, or math waveforms

Analog and math waveforms are saved using one file per waveform. Digital waveforms are all saved to a single file.

Group Save On

Syntax SAVEON:MASK \{<NR1>|OFF|ON\}
SAVEON:MASK?

Related Commands SAVEON:FILE:DEST, SAVEON:FILE:NAME, SAVEON:IMAGe, SAVEON:MEASUrement, SAVEON:WAVEform

Arguments <NR1> = 0 disables Save On Mask; any other value turns this feature on.
off disables Save On Mask.
on enables Save On Mask.

Examples SAVEON:MASK ON sets the oscilloscope to save (image, measurement, and/or waveform) files when there is a mask failure.

SAVEON:MASK ? might return :SAVEON:MASK OFF, indicating that files will not be saved on mask failure.

## SAVEON:MEASUrement

Sets or queries whether to save a measurement when any of the following triggers occurs:

- Limit test failure - if set to On. (SAVEON:LIMit)
- Mask failure - if set to On. (SAVEON:MASK)
- Trigger - if set to On. (SAVEON:TRIGger)

The image will be saved to the file you selected with SAVEON:FILE:NAME, in the location that you selected using SAVEON:FILE:DEST. You can set options for file storage (such as file name, file destination, and autoincrement), using the SaveOn File commands.

Group Save On

Syntax SAVEON:MEASUrement $\{<$ NR1>|OFF|ON $\}$
SAVEON:MEASUrement?

Related Commands
SAVEON:FILE:DEST, SAVEON:FILE:NAME, SAVEON:LIMit, SAVEON:MASK, SAVEON:TRIGger

Arguments
<NR1> = 0 disables Save On Measurement; any other value turns this feature on.
OFF disables Save On Measurement.
ON enables Save On Measurement.

Examples SAVEON:MEASUREMENT ON to save measurements when specified triggers occur.
SAVEON:MEASUREMENT ? might return :SAVEON:MEASUREMENT 0, indicating that a measurement will not be saved when triggers occur.

## SAVEON:NUMEvents

Sets or queries the maximum number of events that will be saved. You can use this feature to avoid running out of disk space, especially if you save large files.

Group Save On

Syntax SAVEON:NUMEvents <NR3> SAVEON:NUMEvents?

Related Commands SAVEON:COUNt?,

Arguments <NR3> specifies the number of events that will be saved before a reset is required.

Examples SAVEON: NUMEVENTS 10 sets the number of events that will be saved to 10 .
SAVEON: NUMEVENTS ? might return :SAVEON: NUMEvents 30, indicating that the next 30 events will be saved to files. After that, no files will be saved until you reset the counter.

SAVEON:SETUP
Saves the instrument setup when there is an event. Queries the status of this feature (on or off).

Group Save On

Syntax SAVEON: SETUP $\{<$ NR1>|ON|OFF $\}$
SAVEON: SETUP?

Arguments <NR1> = 0 disables the feature; any other value turns this feature on.
ON enables the feature.
OFF disables the feature.

Examples SAVEON: SETUP ON sets the oscilloscope to save the instrument setup when there is an event (limit test failure, mask failure, or trigger).

SAVEON: SETUP? might return : SAVEON: SETUP 0 , indicating that the oscilloscope will not save the instrument setup when there is an event.

## SAVEON:TRIGger

Sets or queries whether to save a file when a trigger occurs. You can define the trigger using Trigger commands or the oscilloscope interface.

The trigger will cause the instrument to save an image, a measurement, and/or a waveform to a file, depending on what you specified (see Related Commands below). For example, if you have set SAVEON:IMAGe to On, and a trigger event occurs, the instrument will save a screen capture. You can set options for file storage (such as file name, file destination, and autoincrement), using the SaveOn File commands.

Use the oscilloscope interface to select whether to save one or more analog channels, digital channels, or math waveforms

Analog and math waveforms are saved using one file per waveform. Digital waveforms are all saved to a single file.

Group Save On

Syntax SAVEON:TRIGger $\{<$ NR1>|ON|OFF $\}$
SAVEON:TRIGger?

Related Commands SAVEON:IMAGe, SAVEON:MEASUrement, SAVEON:WAVEform

Arguments <NR1> $=0$ disables Save On Trigger; any other value turns this feature on. OFF disables Save On Trigger.
on enables Save On Trigger.

Examples SAVEON:TRIGGER ON sets the oscilloscope to save an image, measurement, and/or waveform when a trigger occurs.

SAVEON:TRIGGER? might return : SAVEON:TRIGGER ON, indicating that a file will be saved on triggering.

## SAVEON:WAVEform

Sets or queries whether to save a waveform when any of the following triggers occurs:

- Limit test failure - if set to On. (SAVEON:LIMit)
- Mask failure - if set to On. (SAVEON:MASK)
- Trigger - if set to On. (SAVEON:TRIGger)

The waveform will be saved to the file you selected with SAVEON:FILE:NAME, in the location that you selected using SAVEON:FILE:DEST. You can set options for file storage (such as file name, file destination, and autoincrement), using the SaveOn File commands.

Group Save On

Syntax SAVEON:WAVEform \{<NR1>|ON|OFF\}
SAVEON:WAVEform?

Related Commands SAVEON:FILE:DEST, SAVEON:FILE:NAME, SAVEON:LIMit, SAVEON:MASK, SAVEON:TRIGger

Arguments <NR1> = 0 disables Save On Waveform; any other value turns this feature on.
OFF disables Save On Waveform.
ON enables Save On Waveform.

Examples SAVEON:WAVEFORM ON turns on the Save On Waveform feature, so that a waveform will be saved when a selected trigger occurs.

SAVEON:WAVEFORM ? might return : SAVEON:WAVEFORM ON, indicating that a waveform will be saved when a selected trigger occurs.

## *SDS (No Query Form)

This command (no query form) changes the specified setup to reference the factory setup instead of the specific user setup slot. The content of the setup slot is unchanged, but the data will no longer be accessible to you.

This command is equivalent to selecting Delete from the File menu, and then choosing the specified setup.

Group Save and Recall

Syntax *SDS <NR1>

Related Commands DELEte:SETUp

Arguments <NR1> specifies a user setup location to delete. Setup storage location values range from 1 through 10; using an out-of-range value causes an error.

Examples *SDS2 changes setup slot 2 to reference the factory setup.

## SEARCH:MARKALLevents

This command sets or queries the mark all trigger events setting.

Group Search and Mark

Syntax SEARCH:MARKALLevents \{<NR1>|OFF|ON\} SEARCH:MARKALLevents?

Arguments <NR1> = 0 disables the function; any other value enables it.
OFF disables the function.
ON enables the mark all trigger events function.

Examples SEARCH:MARKALLEVENTS ON turns on the mark all trigger events feature.
SEARCH:MARKALLEVENTS? might return :SEARCH:MARKALLEVENTS 0, indicating that mark all trigger events is turned off.

## SEARCH:SEARCH<x>

This command converts the specified search marks to the user marks. $<\mathrm{x}>$ can be 1 to 8 .

Group Search and Mark

Syntax SEARCH:SEARCH<x> <QString> SEARCH:SEARCH<x>?

Arguments <QString> specifies the user search marks.

Examples SEARCH: SEARCH1 TOUSER converts the Search 1 mark to the user marks.
SEARCH:SEARCH1? might return :SEARCH:SEARCH1 TOUSER, indicating that all the search1 marks are converted to user marks.

## SEARCH:SEARCH<x>:COPy (No Query Form)

This command (no query form) copies the search criteria to the trigger, the trigger criteria to a search, or copy search to search. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:COPy \{SEARCHtotrigger|TRIGgertosearch|FROMSearch<x>\}

Arguments SEARCHtotrigger copies the search criteria to the trigger. TRIGgertosearch copies the trigger criteria to the search. FROMSearch $\langle x\rangle$ copies the search criteria to the search, where $\langle x\rangle$ is 1 to 8 .

Examples SEARCH:SEARCH1:COPY TRIGGERTOSEARCH copies the trigger criteria to the search 1 criteria.

## SEARCH:SEARCH<x>:STATE

This command sets the search state to on or off. $\langle\mathrm{x}\rangle$ is the search number, which can be 1 to 8 . The query form returns the search state.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:STATE \{<NR1>|OFF|ON\} SEARCH:SEARCH<X>:STATE?

Arguments OFF or <NR1> = 0 sets the search state to off. ON or $\langle$ NR1 $>\neq 0$ sets the search state to on.

Examples SEARCH:SEARCH2:STATE ON sets the search state for search 2 on.
SEARCH:SEARCH1:STATE? might return :SEARCH:SEARCH1:STATE 0, indicating that the search 1 is off.

## SEARCH:SEARCH<x>:TOTAL? (Query Only)

This query-only command returns the total number of matches for the search. The total number of matches can be more than the number of marks placed. $<x>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TOTAL?

Examples SEARCH:SEARCH1:TOTAL? might return :SEARCH:SEARCH1:TOTAL 7, indicating that there are 7 matches for search 1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:CONDition

This command sets or queries the CAN bus trigger condition. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:CONDition
    {ERRor|DATA|IDANDDATA|EOF|IDentifier|ACKMISS|SOF|FRAMEtype}
    SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:CONDition?
```

Arguments Arguments specify the CAN bus trigger condition.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:CONDition EOF sets the CAN bus trigger condition to end of frame.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:CONDition? might return : SEARCH: SEARCH1:TRIGGER:A:BUS:CAN:CONDITION SOF, indicating the CAN bus trigger condition is set to start of frame.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:FORMat

This command sets or queries the CAN bus trigger data format. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:CAN:DATa:FORMat \{BINary|HEX\} SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:FORMat?

Arguments BINary specifies the pattern format as binary. HEX specifies the pattern format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:FORMat HEX sets the data format to HEX.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:DATA:FORMAT BINARY, indicates that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:QUALifier

This command sets or queries the CAN bus trigger data qualifier. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:QUALifier \{EQUa1|LESSEQual|MOREEQua|UNEQual|LESSThan|MOREthan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATA:QUALifier?

Arguments Arguments are the data qualifier types.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:QUALifier UNEQual sets the data qualifier to unequal.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:QUALifier? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:DATA:QUALIFIER EQUAL, indicating that the data qualifier is set to equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:SIZe

This command sets or queries the CAN bus trigger data size in bytes. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:SIZe <nr3> SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:SIZe?

Arguments <nr3> specifies the data size.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:SIZe 1 sets the data size to 1 .
SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:SIZe? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:DATA:SIZE 1, indicating the data size is set to 1 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:VALue

This command sets or queries the CAN bus trigger data value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:DATa:VALue?

Arguments <string> is the data value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:VALue "1010" sets the data value to XXXXXX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:DATa:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:DATA:VALUE "XXXXXXXXXXX", indicating the data value is a don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:FRAMEtype

This command sets or queries CAN bus trigger frame type. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:FRAMEtype \{DATa|ERRor|OVERLoad|REMote\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:FRAMEtype?

Arguments Arguments are the available frame types.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:FRAMEtype ERROR sets the frame type to error.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:FRAMEtype? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:FRAMETYPE DATA, indicates the frame type is set to data.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:DIRection

This command sets or queries the CAN bus identifier direction. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:DIRection } \\ & \text { \{DONTCare|READ|WRITE\} } \\ & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:DIRection? }\end{array}$

Arguments DONTCare specifies the direction is a don't care.
READ specifies the read direction.
WRITE specifies the write direction.

| Examples | SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:DIRection |
| :--- | :--- |
|  | SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:DIRection? might |
|  | return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:IDENTIFIER:DIRECTION |
|  | DONTCARE, indicating the direction is a don't care. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:FORMat

This command sets or queries the CAN bus trigger identifier format. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:CAN:IDentifier:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:FORMat?

Arguments BINary specifies the identifier format as binary.
HEX specifies the identifier format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:FORMat HEX sets the identifier format to hexadecimal.

SEARCH: SEARCH1:TRIGger:A:BUS:CAN:IDentifier:FORMat? might return : SEARCH: SEARCH1:TRIGGER:A:BUS:CAN:IDENTIFIER:FORMAT BINARY, indicating that the identifier format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:MODe

This command sets or queries the CAN bus trigger identifier mode. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:MODe \{EXTENDed|STandard\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:MODe?

Arguments EXTENDed specifies the extended identifier mode.
STandard specifies the standard identifier mode.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:MODe EXTEND sets the identifier mode to extended.

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:MODe? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:IDENTIFIER:MODE STANDARD, indicating the identifier mode is set to standard.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:VALue

This command sets or queries CAN bus trigger identifier value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:CAN:IDentifier:VALue?

Arguments <string> is the identifier value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:VALue "1010" sets the identifier value to XXXXXX 1010 .

SEARCH:SEARCH1:TRIGger:A:BUS:CAN:IDentifier:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:CAN:IDENTIFIER:VALUE " XXXXXXXXXXX ", indicating the identifier value is a don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition

This command specifies a field or condition within an Ethernet frame to search on.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition \{STARTFRAME|MACADDRess|MACTYPE|IPV4Header|TCPHeader|DATa |ENDPACKET|FCSError|QTAG|TCPDATA\}

SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition?

Related Commands Most of the other TRIGger:A:BUS:B<x>:ETHERnet commands are impacted by the setting of this command.

SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier

Arguments SFD - Start of frame delimiter.
MACADDRess - MAC addresses field.
MACLENgth - MAC length/type field.
IPHeader - IP header field. .
TCPHeader - TCP header field.
DATa - TCP/IPv4 or MAC protocol client data field.
EOP - End of Packet field.
IDLe - Idle field.
FCSError - Frame Check Sequence Error (CRC) field.
QTAG - IEEE 802.1Q (VLAN) control information field.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:CONDITION MACADDRESS specifies MACADDRess as the field within an Ethernet frame to search on.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:CONDITION? might return DATA, indicating that DATA is the currently specified field within an Ethernet frame to search on.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet data field. The search condition needs to be set to DATa.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:FORMat?

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:ETHERnet:DATa:FORMat HEX specifies HEX as the data format to use when searching on the Ethernet data field.

SEARCH:SEARCH1:TRIGger:A:BUS:ETHERnet:DATa:FORMat?might return BINARY, indicating that binary is the currently specified data format for searching on the Ethernet data field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:OFFSet

This command specifies the data offset value, in bytes, to use when searching on the Ethernet data field. The search condition needs to be set to DATa.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:OFFSet<NR1> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:OFFSet?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:VALue SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:SIZe

Arguments <NR1> is an integer whose minimum and default values are -1 (don't care) and maximum is 1,499 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:OFFSEt 36 sets the data offset to 36 bytes.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:OFFSET? might return -1 , indicating that the data offset value is the default value, -1 , meaning "don't care".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:SIZe

This command specifies the number of contiguous TCP/IPv4/MAC client bytes to use when searching on the Ethernet data field. The default is all X's (don't care). The search condition needs to be set to DATa.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:SIZe <NR1> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:SIZe?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier

Arguments The minimum and default values are 1 , and the maximum value is 16 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:SIZE 4 specifies 4 as the number of contiguous TCP/IPv4/MAC client bytes to use when searching on the Ethernet data field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:SIZE? might return 6, indicating that 6 is the currently specified number of contiguous TCP/IPv4/MAC client bytes to use when searching on the Ethernet data field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:VALue

This command specifies the binary value to use when searching on the Ethernet data field. The default is all X's (don't care). The search condition needs to be set to DATa.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:VALue <QString> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier
SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:DATa:OFFSet
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:DATa:SIZe

Arguments QString is a quoted string where the allowable characters are 0,1 , and X . The allowable number of characters depends on the setting for size (using SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:DATa:SIZe). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:VALUE "00001000" specifies 00001000 as the value to use when triggering on the Ethernet binary data field, assuming that TRIGGER:A:BUS:ETHERNET:DATA:SIZe is set to 1 byte.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:DATA:VALUE? might return " 00001000 ", indicating 0000100 is the currently specified value used when searching on the Ethernet binary data field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header address destination field. The search condition needs to be set to IPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark<br>Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:FORMat \{BINary|HEX|DECIma1\}<br>SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:FORMat?<br>Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition<br>SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:VALue

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

DECIma1 specifies the data format as decimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:FORMA HEX specifies HEX as the data format to use when searching on the Ethernet IPv4 header address destination field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:FORMA might return BINARY, indicating binary is the currently specified data format used when triggering on the Ethernet IPv4 header address destination field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:VALue

This command specifies the 32 -bit value to use when searching on the Ethernet IPv4 header address destination field. The default is all X's (don't care). The search condition needs to be set to IPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:VALue <QString> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader: DESTinationaddr:VALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition

SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:IPHeader:
DESTinationaddr:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:VALUE "11000000101010000000000000000001" specifies 192.168.0.1 as the value to use when searching on the Ethernet IPv4 header address destination field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:VALUE? might return "11000000101010000000000000000001", indicating that 192.168.0.1 is the currently specified value used when searching on the Ethernet IPv4 header address destination field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:FORMat

This command specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header protocol field. The search condition needs to be set to MACADDRess.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL: FORMAT HEX specifies HEX as the data format to use when searching on the Ethernet IPv4 header protocol field.

SEARCH: SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:FORMAT? might return BINARY, indicating that binary is the currently specified data format used when searching on the Ethernet IPv4 header protocol field.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:VALue

This command specifies the 8 -bit value to use when searching on the Ethernet IPv4 header protocol field. The default is all X's (don't care). The search condition needs to be set to IPHeader.

> NOTE. Commonly used protocol values are 1 (ICMP), 2 (IGMP), 6 (TCP) and 17 (UDP).

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: VALue <QString>
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: VALue?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol: FORMat

Arguments QString is a quoted string of up to 8 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:VALUE " 01010010 " specifies 01010010 as the value to use when searching on the Ethernet IPv 4 header protocol field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:VALUE? might return "XXXXXXXX", indicating that the trigger value has been set to "don't care".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:FORMat

This command specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet IPv4 header address source field. The search condition needs to be set to IP header.

Conditions
Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:Sourceaddr: FORMat \{BINary|HEX|DECImal\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:Sourceaddr: FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr: VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECIma1 specifies the data format as decimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:FORMAT HEX specifies to use the HEX data format when searching on the Ethernet IPv4 header address source field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:VALue

This command specifies the 32 -bit value to use when searching on the Ethernet IPv4 header address source field. The default is all X's (don't care). The search condition needs to be set to IPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

# Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr: VALue <QString> <br> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:Sourceaddr: VALue? 

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr: FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:VALUE " 1100000010101000000000000000001 " specifies to use the value of 192.168.0.1 when searching on the Ethernet IPv4 header address source field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:VALUE might return "11000000101010000000000000000001", indicating that the search value has been set to 192.168.0.1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:FORMat

This command specifies the data format (binary or hex) of the bit pattern to use when searching on the Ethernet MAC address destination field. The search condition needs to be set to MACADDRess.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:
DESTination:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination: FORMat?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:
DESTination:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION: FORMAT
HEX specifies to use the HEX data format when searching on the Ethernet MAC address destination field.

SEARCH: SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION: FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:VALue

This command specifies the 48 -bit value to use when searching on the Ethernet MAC address destination field. The default is all X's (don't care). The search condition needs to be set to MACADDRess.

NOTE. MAC Addresses are 48-bit values such as 08:00:11:1E:C9:AE hex.

Conditions Requires the SR-ENET Triggering and Analysis application.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination:VALue <QString> <br> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination:VALue? |
| Related Commands | SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition |
|  | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:MAC:ADDRess: DESTination:FORMat |

[^1]SEARCH: SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION:VALUE? might return " $\mathrm{XXXXXXXX001101011111100000001111010101011001000"}$, indicating a MAC address destination field value of XX:35:FC:07:AA:C8 hex.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet MAC address source field. The search condition needs to be set to MACADDRess.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: FORMat \{BINary|HEX\} SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: VALue

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:SOURCE:FORMAT HEX specifies to use the HEX data format when searching on the Ethernet MAC address source field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:SOURCE:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:VALue

This command specifies the 48 -bit value to use when searching on the Ethernet MAC address source field. The default is all X's (don't care). The search condition needs to be set to MACADDRess.

NOTE. MAC Addresses are 48-bit values such as 08:00:11:1E:C9:AE hex.

Conditions Requires the SR-ENET Triggering and Analysis application.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | ```SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: VALue <QString> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: VALue?``` |
| Related Commands | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:CONDition |
|  | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce: FORMat |

Arguments QString is a quoted string of up to 48 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:SOURCE:VALUE "XXXXXXXX0011010111111100000001111010101011001000" specifies to use the value of XX:35:FC:07:AA:C8 hex when searching on the Ethernet MAC address source field.

SEARCH: SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS: SOURCE:VALUE? might return "XXXXXXXX0011010111111100000001111010101011001000", indicating a MAC address source field value of XX:35:FC:07:AA:C8 hex.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet MAC length or type. The search condition needs to be set to MACADDRess.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}: FORMat \{BINarylHEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}: FORMat?

# Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition SEARCH:SEARCH $<\mathrm{x}>:$ TRIGger:A:BUS:ETHERnet:MAC $\{: L E N g t h \mid: T Y P e\}:$ VALue 

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:TYPE:FORMAT HEX specifies to use the HEX data format when searching on the Ethernet MAC type.

SEARCH: SEARCH1:TRIGGER:A:BUS: ETHERNET:MAC:TYPE:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:VALue

This command specifies the 16 -bit value to use when searching on the Ethernet MAC length/type. The default is all X's (don't care). The search condition needs to be set to MACADDRess.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}: VALue <QString>
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}: VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:ETHERnet:MAC $\{: L E N g t h \mid: T Y P e\}:$ FORMat

Arguments QString is a quoted string of up to 16 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:TYPE:VALUE "XXXXXXXX00001000" specifies to use the hexadecimal value XX08 when searching on the Ethernet MAC type.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:TYPE:VALUE? might return "XXXXXXXX00001000", indicating an Ethernet MAC type value of XX08 hex.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:FORMat

This command specifies the data format (binary or hex) to use when searching on the Q-Tag field. The search condition needs to be set to QTAG.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:FORMat
\{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:FORMat?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDition
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:QTAG:FORMAT HEX specifies to use the HEX data format when searching on the Ethernet Q-Tag field.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:QTAG:FORMAT? might return BINARY, indicating that the data format to use for searching on the Ethernet Q-Tag field has been set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:VALue

This command specifies the 32 -bit value to use when searching on the Ethernet Q-Tag field. The default is all X's (don't care). The search condition needs to be set to QTAG.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:VALue <QString> SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:VALue?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QTAG:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:QTAG:VALUE "XXXXXXXXXXXXXXXXXXXX010010001010" specifies to use the value of hexadecimal XXXXX48A when searching on the Ethernet Q-Tag field.

SEARCH: SEARCH1:TRIGGER:A:BUS:ETHERNET:QTAG:VALUE? might return "XXXXXXXXXXXXXXXXXXXX010010001010", indicating that hexadecimal XXXXX48A has been set as the Ethernet Q-Tag field search value.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier

This command specifies the qualifier to be used when the Ethernet search condition is set to MACLENgth or DATa. Normally, the Ethernet qualifier is set to "equal to".

Conditions Requires the SR-ENET Triggering and Analysis application.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier \{LESSthan\|MOREthan|EQual|UNEQual|LESSEQual|MOREEQual\} |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:QUALifier? |
| Related Commands | SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDition |
| Arguments | LESSthan sets the qualifier to less than. |
|  | MOREthan sets the qualifier to greater than. |
|  | EQual sets the qualifier to equal. |
|  | UNEQual sets the qualifier to not equal. |
|  | LESSEQual sets the qualifier to less than or equal. |

MOREEQua 1 sets the qualifier to greater than or equal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:QUALIFIER LESSTHAN sets the qualifier to "less than".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet TCP header acknowledgement number. The search condition needs to be set to TCPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum: FORMat \{BINary|HEX|DECIma1\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum: FORMat?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:ETHERnet:CONDitionSEARCH: SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECIma1 specifies the data format as decimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:FORMAT HEX specifies to use the HEX data format when searching on the Ethernet TCP header acknowledgement number.

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:FORMAT? might return BINARY, indicating that the data format to use when triggering on the Ethernet TCP header acknowledgement number has been set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue

This command specifies the 32 -bit value to use when searching on the Ethernet TCP header acknowledgement number. The default is all X's (don't care). The search condition needs to be set to TCPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

```
    Group Search and Mark
    Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:
        VALue <QString>
        SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:
        VALue?
    Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:CONDition
        SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:
        FORMat
```

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:VALUE "XXXXXXXXXXXXXXXXXXXX00001000" specifies hexadecimal XXXXXX08 as the value to use when searching on the Ethernet TCP header acknowledgement number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:VALUE? might return "XXXXXXXXXXXXXXXXXXXXX00001000", indicating that hexadecimal XXXXXX08 has been specified as the value to use when searching on the Ethernet TCP header acknowledgement number.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the Ethernet TCP header destination port number. The search condition needs to be set to TCPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Search and Mark

| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:ETHERnet:TCPHeader: |
| :--- | :--- |

SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:TCPHEADER:SOURCEPORT:VALUE? might return "XXXXX01001010110", indicating that hexadecimal X0A6 has been specified as the value to use when searching on the Ethernet TCP header source port number.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CONDition

This command sets or queries FLEXRAY bus search trigger condition. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CONDition \{SOF|FRAMEtype|IDentifier|CYCLEcount|HEADer|DATA|IDANDDATA|EOF|ERRor\} SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CONDition?

Arguments Arguments are the available trigger conditions.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CONDition SOF sets the trigger condition to start of frame.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CONDition? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:CONDITION SOF, indicating the FLEXRAY trigger condition is start of frame.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat

This command sets or queries the FLEXRAY bus search cycle count format. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLECount:FORMat } \\ & \text { \{BINary|HEX\} } \\ & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLECount:FORMat? }\end{array}$

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat HEX sets the cycle count format to hexadecimal.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:FORMAT BINARY, indicating the cycle count format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier

This command sets or queries the FLEXRAY bus search trigger cycle count qualifier. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier \{EQUal|LESSEQual|MOREEQual|UNEQual|LESSthan|MOREthan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier?

Arguments Arguments are the available cycle count qualifiers.

> Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier LESSthan sets the cycle count qualifier to less than.
> SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier? might return
> :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:QUALIFIER EQUAL, indicating the cycle count qualifier is set to equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue

This command sets or queries the FLEXRAY bus search cycle count value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue?

Arguments <string> specifies the cycle count value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue "1010" sets the cycle count value to XX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:VALUE "XXXXXX", indicating the cycle count value is don't care, and it will trigger on any cycle count.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:FORMat

This command sets or queries FLEXRAY bus search data format. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:FLEXRAY:DATa:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:FORMat?

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:FORMat HEX sets the data format to hexadecimal.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:DATA:FORMAT BINARY, indicating the data format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:OFFSet

This command sets or queries the FLEXRAY bus search trigger data offset. The search number is specified by $x$.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:OFFSet <nr3> SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:OFFSet?

Arguments <nr3> specifies the data offset in bytes. A setting of X/Don't care is accomplished by setting the offset to -1 .

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:OFFSet 2 sets the data offset to 2 bytes.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:OFFSet? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:DATA:OFFSET -1, indicating the data offset is don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:QUALifier

This command sets or queries the FLEXRAY bus search trigger data qualifier. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:QUALifier |

|  | \{EQUa1\|LESSEQual|MOREEQua1|UNEQual|LESSthan|MOREthan |
|  | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:FLEXRAY:DATa:QUALifier? |

Arguments Arguments are the available data qualifiers.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:QUALifier LESSTHAN sets the data qualifier to less than.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:QUALifier? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:DATA:QUALIFIER EQUAL, indicating the data qualifier is equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:SIZe

This command sets or queries the FLEXRAY bus search trigger data size in bytes. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:SIZe<NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes. A data size of -1 is don't care.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:SIZe 2 sets the data size to 2.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:SIZe? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:DATA:SIZE 1, indicating the data size is 1 byte.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:VALue

This command sets or queries the FLEXRAY bus search trigger data value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:VALue <STRING> SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:DATa:VALue?

Arguments <STRING> specifies the data value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:VALue " 1010 " sets the data value to XXXXXX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:DATa:VALue? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:DATA:VALUE " $\mathrm{XXXXXXXXXX"} ,\mathrm{indicating} \mathrm{the} \mathrm{data} \mathrm{value} \mathrm{is} \mathrm{a} \mathrm{don't} \mathrm{care}$.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:EOFTYPE

This command sets or queries the FLEXRAY bus search trigger end of file type. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:EOFTYPE \{ALL|STATIC|DYNAMIC\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:EOFTYPE?

Arguments ALL specifies either end of file type.
STATIC specifies the static end of file type.
DYNAMIC specifies the static end of file type.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:EOFTYPE STATIC sets the end of file type to static.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:EOFTYPE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:EOFTYPE ALL, indicating either end of file type will cause a trigger.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:ERRTYPE

This command sets or queries the FLEXRAY bus search trigger error type. The search number is specified by $x$.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:ERRTYPE \{CRCHEADer|CRCTRAILer|NULLFRSTATIC|NULLFRDYNAMIC | SYNCFRAME |STARTUPNOSYNC\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:ERRTYPE?

Arguments Arguments are the available error types.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:ERRTYPE SYNCFRAME sets the error type to SYNCFRAME.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:ERRTYPE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:ERRTYPE CRCHEADER, indicating the error type is CRCHEADER.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:FRAMEType

This command sets or queries the FLEXRAY bus search trigger frame type. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:FRAMEType \{NORMal|PAYload|NULL|SYNC|STARTUp\} SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:FRAMEType?

Arguments Arguments are the available frame types.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:FRAMEType startup sets the frame type to startup.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:FRAMEType? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:FRAMETYPE NORMAL, indicating the frame type is normal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CRC

This command sets or queries the FLEXRAY bus search trigger header CRC. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CRC <STRING> SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CRC?

Arguments <STRING> specifies the CRC.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CRC "1010" sets the header CRC to XXXXXX101.

SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CRC? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:HEADER:CRC " $\mathrm{XXXXXXXXXXX"} ,\mathrm{indicating} \mathrm{the} \mathrm{header} \mathrm{CRC} \mathrm{is} \mathrm{a} \mathrm{don't} \mathrm{care}$.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount

This command sets or queries the FLEXRAY bus search trigger header cycle count. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount <STRING>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount?

Arguments <STRING> specifies the header cycle count.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount "1010" sets the header cycle count to XX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:HEADER:CYCLECOUNT " XXXXXX " indicating the cycle count has not been set.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID

This command sets or queries the FLEXRAY bus search trigger header frame id. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID <STRING>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID?

Arguments <STRING> specifies the frame ID.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID "1010" sets the header frame ID to XXXXXXX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:HEADER:FRAMEID " XXXXXXXXXXX ", indicating the frame ID is a don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:INDBits

This command sets or queries the FLEXRAY bus search header Indicator Bits. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:INDBits <STRING>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:INDBits?

Arguments <STRING> specifies the header Indicator Bits.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:INDBits "1010" sets the header Indicator Bits to X1010.

SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:INDBits? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:HEADER:INDBITS "XXXXX", indicating the Indicator Bits have not been set.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth

This command sets or queries the FLEXRAY bus search trigger header payload length. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth <STRING>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth?

Arguments <STRING> specifies the header Payload Length.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth "1010" sets the Payload Length to 1010 .

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:HEADER:PAYLENGTH "XXXXXXX", indicating the Payload Length has not been set.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat

This command sets or queries the FLEXRAY bus search trigger identifier format. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat
    {BINary|HEX}
    SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat?
```

| Arguments | BINary specifies the identifier format as binary. |
| :--- | :--- |
|  | HEX specifies the identifier format as hexadecimal. |
| Examples | SEARCH:SEARCH1:TRIGger:A:BUS: FLEXRAY:IDentifier: FORMat HEX |
|  | sets the identifier format to hexadecimal. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier

This command sets or queries the FLEXRAY bus search trigger identifier qualifier. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier \{EQUa1|LESSEQual|MOREEQual|UNEQua1|LESSthan|MOREthan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier?

Arguments Arguments are the available identifier qualifiers.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier LESSTHAN sets the identifier qualifier to less than.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:IDENTIFIER:QUALIFIER EQUAL, indicating the identifier qualifier is equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:VALue

This command sets or queries the FLEXRAY bus search trigger identifier value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:VALue
<STRING>
SEARCH:SEARCH<x>:TRIGger:A:BUS:FLEXRAY:IDentifier:VALue?
```

Arguments <STRING> specifies the identifier value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:IDentifier:VALue "1010" sets the identifier value to XXXXXXX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:FLEXRAY:IDentifier:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:FLEXRAY:IDENTIFIER:VALUE "XXXXXXXXXXX", indicating the identifier value is a don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:FORMat

This command sets or queries the address format for the I2C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:FORMat \{BINary|HEXadecimal\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:I2C:ADDress:FORMat?

Arguments BINary specifies the address format as Binary.
HEXadecima 1 specifies the address format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:FORMAT HEX sets the address format for I2C bus trigger search 1 as hexadecimal.

SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:FORMAT BINARY, indicating that the address format for I2C bus trigger search 1 is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:MODe

This command sets or queries the address mode for the specified I2C bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:MODe \{ADDR10|ADDR7\} SEARCH:SEARCH<X>:TRIGger:A:BUS:I2C:ADDress:MODe?

Arguments ADDR10 specifies the address mode as ADDR10. ADDR7 specifies the address mode as ADDR7.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:MODE ADDR10 sets the address mode for I2C bus trigger search 1 to ADDR10.

SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:ADDRESS:MODE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:ADDRESS:MODE ADDR7, indicating that the address mode for I2C bus trigger search 2 is set to ADDR7.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:TYPe

This command sets or queries the address type for the specified I2C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:TYPe \{CBUS|EEPROM|GENeralcal1|HSMODe|NONe|STARtbyte\} SEARCH:SEARCH<X>:TRIGger:A:BUS:I2C:ADDress:TYPe?

Arguments CBUS specifies the address type as CBUS.
EEPROm specifies the address type as EEPROM.
GENeralcal1 specifies the address type as General Call.

HSMODe specifies the address type as High Speed Mode.
NONe specifies the address type as None.
STARtbyte specifies the address type as Start Byte.

$$
\begin{array}{ll}
\text { Examples } & \text { SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:TYPE CBUS sets the } \\
& \text { address type for I2C bus trigger search } 1 \text { to CBUS. } \\
& \text { SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:TYPE? might return } \\
& \text { :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:TYPE NONE, indicating } \\
\text { that the address type for I2C bus trigger search 1 is set to NONe. }
\end{array}
$$

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:VALue

This command sets or queries the address string when the search condition for the specified search is Address or AddressData.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:ADDress:MODe, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:I2C:ADDress:FORMat

Arguments <string> specifies the address value. This is either a 7 -bit or 10 -bit value depending on the address mode. The valid characters are $0-9, \mathrm{~A}-\mathrm{F}$, and X for addresses in hexadecimal format; and 0,1 , and X otherwise.

Examples SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:ADDRESS:VALUE "01xXXXX" sets the address value to " 01 XXXXX " when the mode is ADDR7 and the format is binary.

SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:ADDRESS:VALUE "XX", indicating that the address value is " XX " when the address mode is set to ADDR7 and the address format is hexadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:CONDition

This command sets or queries the trigger condition for the specified I2C bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:CONDition \{ADDress|ADDRANDDATA|DATa|ACKMISS|REPEATstart|STARt|STOP\} SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:CONDition?

Arguments ADDress specifies the trigger condition as Address.
ADDRANDDATA specifies the trigger condition as Address and Data.
DATa specifies the trigger condition as Data.
ACKMISS specifies the trigger condition as Missing of Acknowledgement.
REPEATstart specifies the trigger condition as Repeat of Start.
STARt specifies the trigger condition as Start.
STOP specifies the trigger condition as Stop.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:CONDITION ADDRESS sets the trigger condition for I2C bus trigger search 1 to Address.

SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:CONDITION ADDRANDDATA, indicating that the trigger condition for I2C bus trigger search 1 is set to Address and Data.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:DIRection

This command sets or queries the direction of the data for the I2C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:DIRection \{DONTCare|READ|WRITE\}<br>SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:DIRection?

Arguments DONTCare specifies the direction of data as Don't Care.
READ specifies the direction of data as Read.
WRITE specifies the direction of data as Write.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:DIRECTION READ sets the data direction for I2C bus trigger search 1 to READ.

SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:DATA:DIRECTION? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:DATA:DIRECTION DONTCARE, indicating that the data direction of the I2C bus trigger search 2 is DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:FORMat

This command sets or queries the trigger data format for the specified I2C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:FORMat
\{BINary|HEXadecima1\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:FORMat?

Arguments BINary specifies the trigger data format as Binary.
HEX specifies the trigger data format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:FORMAT HEX sets the trigger data format for I2C bus trigger search 1 to hexadecimal.

SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:FORMAT BINARY, indicating that the trigger data format for I2C bus trigger search 1 is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:SIZe

This command sets or queries the length of the data string in bytes used for the specified I2C bus trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:SIZe<NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:SIZE 1 sets the length of the data string for I2C bus trigger search 1 to 1 byte.

SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:SIZE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:SIZE 3, indicating that the length of the data string for I2C bus trigger search 1 is 3 bytes.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:VALue

This command sets or queries the data value of the data token for the specified I2C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:I2C:DATa:VALue?

Arguments
<string> specifies the data value. The valid characters are 0,1 , or X for binary format; and A-F, 0-9, and X for hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:I2C:DATA:VALUE "1001" sets the data value for I2C bus trigger search 1 to " 1001 ".

SEARCH: SEARCH2:TRIGGER:A:BUS:I2C:DATA:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:I2C:DATA:VALUE "XX", indicating that the data value for I2C bus trigger search is "XX" in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:CONDition

This command sets or queries the LIN bus search trigger condition. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:CONDition \{DATA|IDANDDATA|ERROR|IDentifier|SLEEP|SYNC|WAKEup\} SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:CONDition?

Arguments Arguments are the available trigger conditions.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:LIN:CONDition DATA sets the trigger condition to data.

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:CONDition? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:CONDITION SYNC, indicating the trigger condition is sync.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:FORMat

This command sets or queries the LIN bus search trigger data format. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:FORMat \{BINary|HEX\} SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:FORMat?

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:LIN:DATa:FORMat HEX sets the data format to hexadecimal.

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:DATa:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:DATA:FORMAT BINARY, indicating the data format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:QUALifier

This command sets or queries the LIN bus search trigger data qualifier. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:QUALifier \{EQUa1|LESSEQual|MOREEQual|UNEQual|LESSthan|MOREthan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:QUALifier?

Arguments Arguments are the available data qualifiers.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:LIN:DATa:QUALifier LESS sets the data qualifier to less than.

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:DATa:QUALifier? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:DATA:QUALIFIER EQUAL, indicating the data qualifier is equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:SIZe

This command sets or queries the LIN bus search trigger data size in bytes. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:SIZe <nr3> SEARCH:SEARCH<X>:TRIGger:A:BUS:LIN:DATa:SIZe?

Arguments <nr3> specifies the data size.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:LIN:DATa:SIZe 1.0 sets the data size to 1 .

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:DATa:SIZe? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:DATA:SIZE 1, indicating the data size is 1 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:VALue

This command sets or queries the LIN bus search trigger data value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:DATa:VALue?

Arguments <string> specifies the data value.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:LIN:DATa:VALue 1010 sets the data value to XXXXXX1010.

SEARCH: SEARCH1:TRIGger:A:BUS:LIN:DATa:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:DATA:VALUE " $X X X X X X X X X X$ ", indicating that the data value is a don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:ERRTYPE

This command sets or queries the LIN bus search trigger error type. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:ERRTYPE \{CHecksum|PARity|SYNC\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:ERRTYPE?

Arguments CHecksum specifies the error type is checksum.
PARity specifies the error type is parity.
SYNC specifies the error type is sync.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:LIN:ERRTYPE Parity sets the error type to parity.

SEARCH:SEARCH2:TRIGger:A:BUS:LIN:ERRTYPE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:LIN:ERRTYPE SYNC, indicating that the error type is sync.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:FORMat

This command sets or queries the LIN bus search trigger identifier format. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:FORMat?

Arguments BINary specifies the identifier format as binary.
HEX specifies the identifier format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:LIN:IDentifier:FORMat BINARY sets the identifier format to binary.

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:IDentifier:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:IDENTIFIER:FORMAT BINARY, indicating that the identifier format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:VALue

This command sets or queries the LIN bus search identifier value. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:LIN:IDentifier:VALue?

Arguments <string> specifies the identifier value.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:LIN:IDentifier:VALue 1010 sets the identifier value to XX1010.

SEARCH:SEARCH1:TRIGger:A:BUS:LIN:IDentifier:VALue? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:LIN:IDENTIFIER:VALUE "XXXXXX", indicates the identifier value is don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:FORMat

This command sets the data format of the address (either binary or hex) to use in a MIL-STD-1553 bus command word search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

| Arguments | BINary specifies the data format as binary. |
| :---: | :---: |
|  | HEX specifies the data format as hexadecimal. |
| Examples | SEARCH:SEARCH<X>:TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS:FORMAT HEX sets the data format to HEX. |
|  | SEARCH:SEARCH<X>:TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS:FORMAT? might return BINARY, indicating that the data format is set to binary. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:QUALifier

This command specifies the qualifier to use when searching on a MIL-STD-1553 bus command word remote terminal address field. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND: ADDRess:QUALifier \{LESSthan\|MOREthan|EQual |UNEQual|LESSEQual|MOREEQua1\} |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess: QUALifier? |
| Related Commands | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess: VALue |
| Arguments | LESSthan sets the Command Address qualifier to less than. |
|  | MOREthan sets the Command Address qualifier to greater than. |
|  | EQual sets the Command Address qualifier to equal. |
|  | UNEQua 1 sets the Command Address qualifier to not equal. |
|  | LESSEQua 1 sets the Command Address qualifier to less than or equal. |
|  | MOREEQua 1 sets the Command Address qualifier to greater than or equal. |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS: QUALIFIER EQUAL sets the qualifier to be used with the remote terminal address to equal. | QUALIFIER EQUAL sets the qualifier to be used with the remote terminal address to equal.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS: QUALIFIER? might return EQUAL.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:VALue

This command specifies the value of the 5-bit remote terminal address to use in a MIL-STD-1553 bus command word search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess: VALue <QString>

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess: VALue?

## Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess: QUALifier

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS:VALUE "01000" sets the remote terminal address to be used in the search to 01000.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS:VALUE? might return 01000.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt

This command specifies the bit pattern for the 5-bit Word Count/Mode Code sub-address field to use in a MIL-STD-1553 bus command word trigger. (Use the commandSEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:COMMAND: SUBADdress to specify Word Count or Mode Code.) In Word Count mode, this field defines the number of data words to be transmitted or received, depending on the $\mathrm{T} / \mathrm{R}$ bit setting. (Use the commandSEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:

BUS:MIL1553B:COMMAND:TRBit to set the T/R bit.) A word count value of 0 actually indicates a transfer of 32 data words.

| Conditions | Requires the SR-AERO Serial Triggering and Analysis Application. |
| :---: | :---: |
| Group | Search and Mark |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt <QString> <br> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt? |
| Related Commands | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition |
|  | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:COMMAND: SUBADdress |
|  | SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIL1553B:COMMAND:TRBit |

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 and X .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:COUNT " 01000 " sets the bit pattern for the Word Count/Mode Code field to 01000.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:COUNT? might return "XXXXX".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt:FORMat

This command specifies the data format (binary or hex) of the bit pattern for the 5-bit Word Count/Mode Code field to use in a MIL-STD-1553 bus command word search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt: FORMat?

## Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:COUNT:FORMAT HEX sets the data format to HEX.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:COUNT:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:PARity

This command specifies the parity to use in a MIL-STD-1553 bus command word search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:PARity \{0|1|X|ZERo|ONE|NOCARE|OFF|ON\}

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:PARity?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0
1
X sets the value to X ("don't care") which is the default.
ZERO sets the value to 0 .
ONE sets the value to 1 .
NOCARE sets the value to X ("don't care") which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:PARITY ZERO sets the Command word parity bit to 0 .

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND:PARITY? might return 0,1 or X .

## SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress

This command specifies the 5 bit sub-address to use in a MIL-STD- 1553 bus command word sub-address search. When the sub-address value is set to 00000 or 11111 binary, it specifies that the command is a "Mode Code" command. Any other value specifies that it is a "Word Count" command. The default is all X's (don't care). The search condition needs to be set to COMMAND.

NOTE. The sub-address field is used to direct data to different functions within the subsystem for values 1-30.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress <QString>

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition
SEARCH:SEARCH $<x>: T R I G g e r: A: B U S: M I L 1553 B: C O M M A N D: C O U N t ~$

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:COMMAND: SUBADDRESS " 01000 " sets the search sub-address to 01000 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress:FORMat

This command specifies the data format (binary or hex) of the sub-address field bit pattern to use in a MIL-STD-1553 bus command word sub-address search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress: FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress: FORMat?

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:SUBADDRESS:FORMAT HEX sets the data format to HEX.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND: SUBADRESS:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:TRBit

This command specifies to search on either a "transmit" or a "receive" signal for the transmit/receive bit (bit 9), for a MIL-STD-1553 bus command word search. The search condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:TRBit \{RX|TX|X|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:TRBit?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:COMMAND:COUNt

Arguments TX (logic 1) directs the instrument to search for a TX or "transmit" from a remote terminal.

RX (logic 0 ) directs the instrument to search for an RX or "receive" from a remote terminal.
x, DONTCare indicates "don't care".

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:TRBIT TX directs the instrument to search for a TX or "transmit" from a remote terminal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:COMMAND:TRBIT? might return TX.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition

This command specifies which word type or condition within a MIL-STD-1553 bus word to search on.

NOTE. There are three types of MIL-STD-1553 (Aircraft) bus words: Command, Status, and Data, all sharing a common structure twenty bits in length. The first three bits are used as a synchronization field. The last bit is the odd parity of the previous 16 bits.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition \{SYNC|COMMAND|STATUS|DATA|TIMe|ERRor\}

SEARCH:SEARCH<X>:TRIGger:A:BUS:MIL1553B:CONDition?

Related Commands Most of the other SEARCH:SEARCH1:TRIGger:A:BUS:B<x>:MIL1553B commands are impacted by the setting of this command.
TRIGger:A:BUS:MIL1553B:CONDition
BUS:B<x>:MIL1553B:SOUrce

Arguments SYNC refers to the 3-bit sync pulse that precedes each word.
COMMAND is one of 316 -bit word types. It specifies the function that a remote terminal is to perform.

STATus is one of 316 -bit word types. Remote terminals respond to valid message transmissions via status words.

DATA is one of 316 -bit word types.

TIMe specifies to search for either the RT (remote terminal response time), or the IMG (Inter-message Gap). Use the commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:TIME:QUALifier, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:TIME:LESSLimit, and SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit to specify the time parameters.

ERRor specifies to search for a signaling error. (You can specify which type of error - Parity, Sync, Manchester or Non-contiguous Data - by using the command SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:ERRTYPE.)

```
NOTE. Use the
SEARCH:SEARCH1:TRIGger:A:BUS:B<x>:MIL1553B:CONDition:STATus:BIT
commands to set the following bits:
9 - message error
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME
10 - instrumentation
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:INSTR
\(11-S R Q\) (service request)
SEARCH:SEARCH \(<x>\) :TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ
\(15-B C R\) (broadcast command received)
SEARCH:SEARCH \(<x>\) :TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR
16-busy
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY
17 - subsystem flag
SEARCH:SEARCH \(<x>\) :TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF
18 - DBCA (dynamic bus control acceptance)
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:DBCA
19 - terminal flag
SEARCH:SEARCH \(<x>\) :TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF
```

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:CONDITION STAT sets the word type to search for to STATUS.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:CONDITION? might return DATA.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:FORMat

This command specifies the format (binary or hex) of the bit pattern to use for a MIL-STD-1553 bus data word search. The search condition needs to be set to DATA.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA: FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:DATA:PARity, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:DATA:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:DATA:FORMAT HEX sets the data format to HEX.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIL1553B:DATA: FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:PARity

This command specifies the parity to use when searching on a MIL-STD-1553 bus data word parity bit. The search condition must be set to DATA.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:PARity \{0|1|X|ZERo|ONE|NOCARE|OFF|ON\}

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:PARity?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:VALue

## Arguments 0

1

X sets the value to X ("don't care") which is the default.
ZERO sets the value to 0 .
ONE sets the value to 1 .
NOCARE sets the value to X ("don't care") which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:DATA:PARITY 1 sets the data parity bit to be used in a MIL-STD-1553 bus search to 1 .

SEARCH: SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:DATA:PARITY? might return 0 , indicating that the data parity bit to be used in a MIL-STD-1553 bus search is set to 0 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:VALue

This command specifies the value to use for a MIL-STD-1553 bus data word search. This is a 16 -bit field. The default is all X's (don't care). The search condition must be set to DATA.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:VALue <QString> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:VALue?

Related Commands
SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIL1553B:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:DATA:PARity

Arguments QString is a quoted string of up to 16 characters, where the allowable characters are 0,1 , and X .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:DATA:VALUE "01000" sets the data binary pattern to be used in a MIL-STD-1553 bus search to 01000 .

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:DATA:VALUE? might return XXXXXXXXXXX01000.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:ERRTYPE

This command specifies the signaling error type to use for a MIL-STD-1553 bus data word search: Parity, Sync, Manchester, or Data. The search condition must be set to ERRor.

| Conditions | Requires the SR-AERO Serial Triggering and Analysis Application. |
| ---: | :--- |
| Group | Search and Mark |$\quad$| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:ERRTYPE <br> \{PARity\|SYNC|MANCHester|DATA\} |
| ---: | :--- |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:ERRTYPE? |

Arguments PARity - an incorrect parity setting.
SYNc - the high to low, or low to high transition doesn't happen in the middle of the sync time as it should.

MANCHester - no transition in a bit time.
DATA - a non-contiguous data error.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:ERRTYPE PARITY sets the error type to be used in the search to PARITY.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:ERRTYPE? might return SYNC.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:FORMat

This command specifies the format (binary or hex) of the bit pattern to use when searching on the MIL-STD-1553 status address field. The search condition needs to be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: FORMat \{BINary|HEX\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: FORMat?

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIL1553B:STATUS:ADDRESS:FORMAT HEX sets the data format to HEX.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIL1553B:STATUS:ADDRESS:FORMAT? might return BINARY, indicating that the data format is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier

This command specifies the qualifier to use when searching on the MIL-STD-1553 status address field. The default is EQUAL. The search condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS: <br> MIL1553B:STATUS:ADDRess:QUALifier <br> \{LESSthan\|MOREthan|EQual|UNEQual|LESSEQual|MOREEQua1\} |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: QUALifier? |
| Related Commands | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition |
|  | SEARCH:SEARCH $<\mathrm{x}>:$ TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: QUALifier |
|  | SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: VALue |

| Arguments | LESSthan sets the Status Address qualifier to less than. MOREthan sets the Status Address qualifier to greater than. EQua1 sets the Status Address qualifier to equal. UNEQual sets the Status Address qualifier to not equal. LESSEQual sets the Status Address qualifier to less than or equal. MOREEQual sets the Status Address qualifier to greater than or equal. |
| :---: | :---: |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS: QUALIFIER MORETHAN sets the qualifier to be used with the address field to greater than. <br> SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS: QUALIFIER? might return MORETHAN. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue

This command specifies the value of the 5-bit remote terminal address to use when searching on the MIL-STD-1553 status address field. The default is all X's (don't care). The search condition must be set to STATUS.

| Conditions | Requires the SR-AERO Serial Triggering and Analysis Application. |
| :---: | :---: |
| Group | Search and Mark |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue <QString> <br> SEARCH:SEARCH<X>:TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: VALue? |
| Related Commands | SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIL1553B:CONDition |
|  | SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:STATUS:ADDRess: QUALifier |
| Arguments | QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X . |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS: VALUE " 01000 " sets the value of the 5 -bit remote terminal address to be used in the search. |

SEARCH: SEARCH1:TRIGGER:A:BUS:B1:MIL1553B: STATUS:ADDRESS: VALUE? might return "01000".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR

This command specifies the status word broadcast command received (BCR) bit value (bit 15) to use when searching on the MIL-STD-1553 status bit field. The default is all X's (don't care). The search condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR \{0|1|X|ZERo|ONE|NOCARE|OFF|ON\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1, ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:BCR NOCARE sets the BCR bit search value to X .

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:BCR? might return 1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY

This command specifies the status word busy bit value (bit 16) to use when searching on the MIL-STD-1553 status bit field. The default is all X's (don't care). The search condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY \{O|1|X|ZERo|ONE|NOCARE|OFF|ON\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY?

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.

OFF sets the value to 0 .
ON sets the value to 1 .
$\begin{array}{ll}\text { Examples } & \text { SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT: } \\ & \text { SUBSF NOCARE sets the status word subsystem flag bit search value to X. }\end{array}$
SEARCH: SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:
SUBSF? might return 1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF

This command specifies the status word terminal flag bit value (bit 19) to use when searching on the MIL-STD-1553 status bit field. The default is all X's (don't care). The search condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF \{0|1|X|ZERo|ONE|NOCARE|OFF|ON $\}$

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0, ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:TF NOCARE sets the status word terminal flag bit search value to $X$.

SEARCH: SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:TF? might return 1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:LESSLimit

This command specifies either the minimum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit, or else it specifies the minimum inter-message gap (IMG). The search condition must be set to TIMe

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:LESSLimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:LESSLimit?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit

Arguments <NR3> is a floating point number that specifies either the minimum remote terminal response time (RT) or the inter-message gap (IMG) in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:LESSLIMIT $3.0000 \mathrm{E}-6$ would set either the minimum remote terminal response time (RT) or the minimum inter-message gap (IMG) to $3.00 \mu \mathrm{~S}$.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:LESSLIMIT? might return $2.0000 \mathrm{e}-6$, indicating that the minimum RT or IMG has been set to $2.00 \mu \mathrm{~S}$.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit

This command specifies either the maximum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit, or it specifies the maximum inter-message gap (IMG). The search condition must be set to TIMe,

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:CONDition SEARCH:SEARCH $<\mathrm{x}>:$ TRIGger:A:BUS:MIL1553B:TIME:LESSLimit

Arguments <NR3> is a floating point number that specifies either the maximum remote terminal response time (RT) or the inter-message gap (IMG) in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:MORELIMIT $80.0000 \mathrm{E}-6$ would set either the maximum remote terminal response time (RT) or the maximum inter-message gap (IMG) to be used in the search to $80.0 \mu \mathrm{~S}$.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:MORELIMIT? might return $100.0000 \mathrm{e}-6$, indicating that the maximum RT or IMG has been set to $100.00 \mu \mathrm{~S}$.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:QUALifier

This command specifies the qualifier to use when triggering on either the remote terminal response time (RT) or the inter-message gap (IMG). The search condition must be set to TIMe,

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:QUALifier \{LESSthan|MOREthan|INrange|OUTrange\}

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:QUALifier?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIL1553B:CONDition
SEARCH:SEARCH $<\mathrm{x}>:$ TRIGger:A:BUS:MIL1553B:TIME:LESSLimit SEARCH:SEARCH<x>:TRIGger:A:BUS:MIL1553B:TIME:MORELimit

Arguments LESSthan sets the Time qualifier to less than minimum. MOREthan sets the Time qualifier to greater than maximum INrange sets the Time qualifier to inside range. OUTrange sets the Time qualifier to out of range.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:QUALIFIER LESSTHAN sets the qualifier to less than minimum.

SEARCH:SEARCH1:TRIGGER:A:BUS:B1:MIL1553B:TIME:QUALIFIER? might return OUTRANGE.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:CONDition

This command sets or queries the search condition for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:CONDition \{ESCMode|EOT|ERROR|LONG|SHORT|SOT|STOP|WARNing\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:CONDition?

Arguments ESCMode specifies the search condition as Escape Mode.
EOT specifies the search condition as End Of Transmission.
ERROR specifies the search condition as Error.
LONG specifies the search condition as Long Packet.
SHORT specifies the search condition as Short Packet.
SOT specifies the search condition as Start Of Transmission.
STOP specifies the search condition as Stop.
WARNing specifies the search condition as Warning.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:CONDITION EOT sets the search condition for the MIPI CSI2 bus trigger search 1 to EOT.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:CONDITION LONG, indicating that the search condition for MIPI CSI2 bus trigger search 1 is set to LONG.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:DTLong

This command sets or queries the data type for long packets for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:DTLong |
|  | \{ANY\|BLANK|EMBEDded|NULL|RAW10|RAW12|RAW14|RAW6|RAW7|RAW8| |
|  | RGB444\|RGB555|RGB565|RGB666|RGB888|USER8B1|USER8B2|USER8B3| |
|  | USER8B4\|USER8B5|USER8B6|USER8B7|USER8B8|YUV420B10|YUV420C10| |
|  | YUV420B8\|YUV420C8|YUV420L8|YUV422B10|YUV422B8\} |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:DTLong? |

Arguments ANY specifies the data type as Any.
BLANK specifies the data type as Blank.
EMBEDded specifies the data type as Embedded.
NULL specifies the data type as Null.
RAW10 specifies the data type as RAW10.
RAW12 specifies the data type as RAW12.
RAW14 specifies the data type as RAW14.
RAW6-RAW8 specifies the data type as RAW6, RAW7, or RAW8.
RGB444 specifies the data type as RGB444.
RGB555 specifies the data type as RGB555.
RGB565 specifies the data type as RGB565.
RGB666 specifies the data type as RGB666.
RGB888 specifies the data type as RGB888.
USER8B1-USER8B8 specifies the data type as User 8-bit 1, User 8-bit 2, User 8 -bit 3, User 8 -bit 4, User 8 -bit 5, User 8 -bit 6 , User 8 -bit 7, User 8 -bit 8 .

YUV420b10 specifies the data type as YUV420 10-bit.
YUV420C10 specifies the data type as YUV420 10-bit (Chroma Shifted Pixel Sampling).

YUV420B8 specifies the data type as YUV420 8-bit.

YUV420C8 specifies the data type as YUV420 8-bit (Chroma Shifted Pixel Sampling).

YUV420L8 specifies the data type as YUV420 8-bit (legacy).
YUV422B10 specifies the data type as YUV422 10-bit.
YUV422B8 specifies the data type as YUV422 8-bit.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTLONG EMBEDDED sets the data type for long packets for MIPI CSI2 bus trigger search 1 to EMBEDded.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTLONG? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTLONG NULL, indicating that the data type for long packets for MIPI CSI2 bus trigger search 1 is set to NULL.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:DTShort

This command sets or queries the data type for short packets for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWO:DTShort \{ANY|FRAMEEnd|FRAMEStart|GSP1|GSP2|GSP3|GSP4|GSP5| GSP6|GSP7|GSP8|LINEEnd|LINEStart\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:DTShort?

Arguments ANY specifies the data type as Any.
frameend specifies the data type as Frame End.
FRAMEStart specifies the data type as Frame Start.
GSP1-GSP8 specifies the data type as GSP1 to GSP8, where GSP refers to General Short Packet.

LINEEnd specifies the data type as Line End.
LINEStart specifies the data type as Line Start.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTSHORT FRAMEEND sets the data type for short packets for MIPI CSI2 bus trigger search 1 to FRAMEEnd.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTSHORT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:DTSHORT ANY, indicating that the data type for short packets for MIPI CSI2 bus trigger search 1 is set to ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ERRor

This command sets or queries the error type for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ERRor
\{ANY|CHECKsumerror|ECCError\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ERRor?

Arguments ANY specifies the error type as Any. CHECKsumerror specifies the error type as CHECKsumerror. ECCError specifies the error type as ECCError.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:ERROR ANY sets the error type for MIPI CSI2 bus trigger search 1 to ANY.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:ERROR? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:ERROR ECCERROR, indicating that the error type for MIPI CSI2 bus trigger search 2 is set to ECCError.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ESCape

This command sets or queries the Escape command for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

| Syntax | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ESCape \{ANY\|LPDATA|RESET|ULTRALP\} |
| :---: | :---: |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:ESC |

Arguments ANY specifies the Escape command as Any.
LPDATA specifies the Escape command as Low Power Data Transmission.
RESET specifies the Escape command as Reset.
ULTRALP specifies the Escape command as Ultra Low Power State.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:ESCAPE ANY sets the Escape command for MIPI CSI2 bus trigger search 1 to ANY.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:ESCAPE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:ESCAPE LPDATA, indicating that the Escape command for MIPI CSI2 bus trigger search 2 is set to LPDATA.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:OFFset:VALue

This command sets or queries the offset value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:OFFset:VALue } \\ & \text { \{<NR3>|DONTCare }\} \\ & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:OFFset:VALue? }\end{array}$

Arguments <NR3> specifies an offset value.
DONTCare specifies the offset value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:OFFSET:VALUE 599 sets the offset value for the MIPI CSI2 bus trigger search to 599.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPICSITWO:OFFSET:VALUE? might return : SEARCH: SEARCH1:TRIGGER:A:BUS:MIPICSITWO:OFFSET:VALUE DONTCARE, indicating that the offset value for MIPI CSI2 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:FORMat

This command sets or queries the format of the packet data for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:FORMat
    {BINary|HEXadecimal}
    SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:FORMat?
```

Arguments BINary specifies the data packet format as Binary. HEXadecimal specifies the data packet format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:PACKETDATA: FORMAT BIN sets the packet data format for MIPI CSI2 bus trigger search 1 to binary.

SEARCH: SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PACKETDATA: FORMAT? might return
: SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PACKETDATA:FORMAT HEX, indicating that the packet data format for MIPI CSI2 bus trigger search 2 is set to hexadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:VALue

This command sets or queries the value of the packet data string for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:VALue
    <string>
    SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PACKetdata:VALue?
```

Arguments | <string> specifies the 16-bit packet data string. The valid characters are 0,1, |
| :--- |
| and X when the format is set to Binary; and 0-9, A-F, and X when the format |
| is set to hexadecimal. |

Examples $\quad$| SEARCH: SEARCH1:TRIGGER:A: BUS:MIPICSITwo: PACKETDATA:VALUE |
| :--- |
| "100" sets the value of the packet data string to "XXXXXXXXXXXXX100" for |
|  |
| MIPI CSI2 bus trigger search 1 when the packet data format is set to binary. |

```
SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PACKETDATA:VALUE?
```

might return
:SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PACKETDATA:VALUE
" $\times 100$ ", indicating that the value of the packet data string for MIPI CSI2 bus
trigger search 2 is set to " 100 ," in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat

This command sets or queries the generic payload format for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat \{BINary|HEXadecima1\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:VALue

| Arguments | BINary specifies the generic payload format as Binary. |
| :--- | :--- |
|  | HEXadecimal specifies the generic payload format as Hexadecimal. |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS: MIPICSITWO: PAYLOAD: FORMAT |
|  | BINARY sets the generic payload format for MIPI CSI2 bus trigger search 1 to |
|  | BINary. |
|  | SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PAYLOAD: FORMAT? might |
|  | return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO: PAYLOAD:FORMAT |
|  | HEX, indicating that the generic payload format for MIPI CSI2 bus trigger search |
|  | 2 is set to HEXadecimal. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe

This command sets or queries the generic payload size of the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:VALue

Arguments <NR3> specifies a number from 1 to 16 that sets the generic payload size in bytes.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:PAYLOAD:SIZE 12 sets the generic payload size of the MIPI CSI2 bus trigger search 1 to 12 bytes.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPICSITWO:PAYLOAD:SIZE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:PAYLOAD:SIZE 16, indicating that the generic payload size of MIPI CSI2 bus trigger search 1 is set to 16 bytes.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:VALue

This command sets or queries the generic payload value string of the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:VALue
    <string>
    SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:VALue?
```

# Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe 

Arguments Examples
<string> specifies the generic payload value. The valid characters are 0,1 , and X for values in binary format; and A-F, $0-9$, and X for values in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PIXel:VALue

This command sets or queries the pixel value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PIXe1:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PIXe1:VALue?

Arguments <NR3> specifies a number that represents the pixel value.
DONTCare specifies the pixel value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:PIXEL:VALUE 350 sets the pixel value for MIPI CSI2 bus trigger search 1 to 350 .

SEARCH: SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PIXEL:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:PIXEL:VALUE DONTCARE, indicating that the pixel value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:QUAlifier

This command sets or queries the RAW qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:QUA1ifier \{EQUa1|LESSThan|MOREThan\}
SEARCH: SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:QUAlifier?

Arguments EQUa1 specifies the RAW qualifier as Equal.
LESSThan specifies the RAW qualifier as Less Than.
MOREThan specifies the RAW qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:QUALIFIER EQUAL sets the RAW qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:QUALIFIER? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:QUALIFIER LESSTHAN, indicating that the RAW qualifier for MIPI CSI2 bus trigger search 1 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:VALue

This command sets or queries the RAW value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RAW:VALue?

Arguments <NR3> specifies a number that represents the RAW value. DONTCare specifies the RAW value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:VALUE 100 sets the RAW value for MIPI CSI2 bus trigger search 1 to 100.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RAW:VALUE DONTCARE, indicating that the RAW value for MIPI CSI2 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUe:QUAlifier

This command sets or queries the RGB Blue qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUE:QUATifier \{EQUa1|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUe: QUAlifier?

Related Commands

Arguments
EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than.
MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:BLUE:QUALIFIER EQUAL sets the RGB Blue qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:BLUE:QUALIFIER? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:BLUE:QUALIFIER LESSTHAN, indicating that the RGB Blue qualifier for MIPI CSI2 bus trigger search 2 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUe:VALue

This command sets or queries the RGB Blue value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUE:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUe:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:BLUe:QUAlifier

Arguments <NR3> specifies a number for the RGB Blue value; the range of the number is dependent on the data type.
DONTCare specifies the RGB Blue value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:BLUE:VALUE 125 sets the RGB Blue value to 125 .

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:BLUE:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:VALUE DONTCARE, indicating that the RGB Blue value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen:QUAlifier

This command sets or queries the RGB Green qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen: QUA1ifier \{EQUa1|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen: QUAlifier?

## Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:RGB:GREen:VALue

Arguments EQUa1 specifies the qualifier as Equal. LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:QUALIFIER EQUAL sets the RGB Green qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:QUALIFIER? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:QUALIFIER LESSTHAN, indicating that the RGB Green qualifier for MIPI CSI2 bus trigger search 2 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen:VALue

This command sets or queries the RGB Green value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:GREen:VALue?

Related Commands
SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:RGB:GREen:QUAlifier

Arguments <NR3> specifies a number for the RGB Green value; the range of the number is dependent on the data type.

DONTCare specifies the RGB Green value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:VALUE 164 sets the RGB Green value for MIPI CSI2 bus trigger search 1 to 164 .

SEARCH:SEARCH21:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:VALUE?
might return
:SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:GREEN:VALUE

DONTCARE, indicating that the RGB Green value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:QUAlifier

This command sets or queries the RGB Red qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:QUA1ifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:QUA1ifier?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:QUALIFIER EQUAL sets the RGB Red qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:QUALIFIER? might return
:SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:QUALIFIER LESSTHAN, indicating that the RGB Red qualifier for MIPI CSI2 bus trigger search 2 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:VALue

This command sets or queries the RGB Red value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:VALue
\{<NR3>|DONTCare\}
SEARCH: SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:RGB:RED:VALue?
```

Arguments <NR3> specifies a number for the RGB Red value; the range of the number is dependent on the data type.

DONTCare specifies the RGB Red value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:VALUE 108 sets the RGB Red value for MIPI CSI2 bus trigger search 1 to 108.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:RGB:RED:VALUE DONTCARE, indicating that the RGB Red value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:VC

This command sets or queries the Virtual Channel for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:VC
\{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:VC?

Arguments <NR3> specifies a number from 0 to 3 that represents the virtual channel. DONTCare specifies the virtual channel as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:VC 3 sets the virtual channel for MIPI CSI2 bus trigger search 1 to 3 .<br>SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:VC? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:VC DONTCARE, indicating that the virtual channel for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WARNing

This command sets or queries the warning type for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WARNing \{ANY|ECCWarn\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WARNing?

Arguments ANY specifies the warning type as Any.
ECCWarn specifies the warning type as ECC Warning.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:WARNING ANY sets the warning type for MIPI CSI2 bus trigger search 1 to ANY.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:WARNING? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:WARNING ECCWARN, indicating that the warning type for MIPI CSI2 bus trigger search 2 is set to ECCWarn.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WC:VALue

This command sets or queries the word count value for a specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WC:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:WC:VALue?

Arguments <NR3> specifies a number for the word count value. DONTCare specifies the word count value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:WC:VALUE 50 sets the word count value for MIPI CSI2 bus trigger search 1 to 50 .

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:WC:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:WC:VALUE DONTCARE, indicating that the word count value for MIPI CSI2 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:QUAlifier

This command sets or queries the YUV U qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:QUA1ifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:QUAlifier?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:YUV:U:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than.
MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:U:QUALIFIER EQUAL sets the YUV U qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:U:QUALIFIER? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:U:QUALIFIER LESSThan, indicating that the YUV U qualifier for MIPI CSI2 bus trigger search 1 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:VALue

This command sets or queries the YUV U value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:MIPICSITWo:YUV:U:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:U:QUAlifier

Arguments <NR3> specifies a number for the YUV U value; the range of the number is dependent on the data type.

DONTCare specifies the YUV U value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:U:VALUE 104 sets the YUV U value for MIPI CSI2 bus trigger search 1 to 104.

SEARCH: SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:U:VALUE? might return : SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:U:VALUE DONTCARE, indicating that the YUV U value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:QUAlifier

This command sets or queries the YUV V qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:QUA1ifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWO:YUV:V:QUAlifier?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than.

MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITwo:YUV:V:QUALIFIER EQUAL sets the YUV V qualifier for MIPI CSI2 bus trigger search 1 to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:V:QUALIFIER? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:V:QUALIFIER MORETHAN, indicating that the YUV V qualifier for MIPI CSI2 bus trigger search 1 is set to MOREThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:VALue

This command sets or queries the YUV V value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:V:VALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:YUV:V:QUAlifier

Arguments <NR3> specifies a number for the YUV V value; the range of the number is dependent on the data type.

DONTCare specifies the YUV V value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:V:VALUE 1003 sets the YUV V value for MIPI CSI2 bus trigger search 1 to 1003.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:V:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:V:VALUE DONTCARE, indicating that the YUV V value for MIPI CSI2 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:QUAlifier

This command sets or queries the YUV Y qualifier for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:QUATifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:QUAlifier?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:QUALIFIER LESSTHAN sets the YUV Y qualifier for MIPI CSI2 bus trigger search 1 to LESSThan.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:QUALIFIER? might return
:SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:QUALIFIER EQUAL, indicating that the YUV Y qualifier for MIPI CSI2 bus trigger search 2 is set to EQUal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:VALue

This command sets or queries the YUV Y value for the specified MIPI CSI2 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:VALue \{<NR3>|DONTCare\}

```
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:YUV:Y:VALue?
```

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPICSITWo:YUV:Y:QUAlifier

Arguments <NR3> specifies a number for the YUV Y value; the range of the number is dependent on the data type.

DONTCare specifies the YUV Y value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:VALUE 1004 sets the YUV Y value for MIPI CSI2 bus trigger search 1 to 1004.

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPICSITWO:YUV:Y:VALUE DONTCARE, indicating that the YUV Y value for MIPI CSI2 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ACKERRreport

This command sets or queries the Acknowledge and Error Report for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ACKERRreport
\{ANY|CHKSUMError|CONTention|DSINR|DSIViolation|DSIVC|
ECCMBError|ECCSBError|EOTSync|ESCMODEError|FCE|HSRTError| INVALID|LPTSError|SOTError|SOTSync\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ACKERRreport?

Arguments ANY matches any error condition.
CHKSUMError Checksum Error.
CONTention is the contention detected.
dSInR DSI Data Type Not Recognized.
DSIViolation DSI Protocol Violation.
DSIVC DSI Virtual Channel ID Invalid.
eccmberror ECC Error, Multi-bit.

ECCSBError ECC Error, Single-bit.
EOTSync End of Transmission Sync.
ESCMODEError Escape Mode Entry Command Error.
FCE False Control Error.
HSRTError High-Speed Receive Timeout Error.
INVALID Invalid Transmission Length.
LPTSError Low-Power Transmit Sync Error.
SOTError Start of Transmission Error.
sOTSync Start of Transmission Sync Error.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ACKERRREPORT SOTERROR sets the search condition for MIPI DSI1 bus trigger search 1 to SOTError.

SEARCH: SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:ACKERRREPORT? might return : SEARCH: SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:ACKERRREPORT ANY, indicating that the search condition for MIPI DSI1 bus trigger search 1 is set to ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:CONDition

This command sets or queries the search condition for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:CONDition
\{ESCMode|BTA|EOT|ERROR|LONG|SHORT|SOT|STOP|WA\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:CONDition?

Arguments ESCMode specifies the search condition as Escape Mode.
BTA specifies the search condition as Bus Turnaround.
EOT specifies the search condition as End of Transmission.
ERROR specifies the search condition as Error.
LONG specifies the search condition as Long Packet.

SHORT specifies the search condition as Short Packet.
SOT specifies the search condition as Start of Transmission.
STOP specifies the search condition as Low Power Stop State.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:CONDITION ERROR sets the search condition for MIPI DSI1 bus trigger search 1 to ERROR.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:CONDITION STOP, indicating that the search condition for MIPI DSI1 bus trigger search 1 is set to STOP.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DIRection

This command sets or queries the direction for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DIRection \{FORWard|REVErse|ANY\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DIRection?

Arguments FORWard specifies the direction as Forward.
REVErse specifies the direction as Reverse.
ANY specifies the direction as Any.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DIRECTION FORWARD sets the direction for MIPI DSI1 bus trigger search 1 to FORWard.

SEARCH: SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:DIDRECTION? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIMPIDSIONE:DIRECTION ANY, indicating that the direction for MIPI DSI1 bus trigger search 2 is set to ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTLong

This command sets or queries the data type for long packets for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTLong
\{ANY|BLANK|DCSLONGRead|DCSLONGWrite|GLONGRead|GLONGWrite| LPS666|NULL | PPS565 | PPS666|PPS888| PPS101010| PPS121212|
YCBCR12 |YCBCR16|YCBCR20|YCBCR24\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTLong?

Arguments ANY specifies the data type as Any.
BLANK specifies the data type as Blank.
DCSLONGRead specifies the data type as DCS Long Read.
DCSLONGWrite specifies the data type as DCS Long Write.
GLONGRead specifies the data type as General Long Read Response.
GLONGWrite specifies the data type as General Long Write.
LPS666 specifies the data type as Loosely Packed 18-bit RGB, 6-6-6.
NULL specifies the data type as Null.
PPS565 specifies the data type as 16-bit RGB, 5-6-5.
PPS666 specifies the data type as 18 -bit RGB, 6-6-6.
PPS 888 specifies the data type as 24 -bit RGB, 8-8-8.
PPS101010 specifies the data type as 30 -bit RGB, 10-10-10.
PPS121212 specifies the data type as 36 -bit RGB, 12-12-12.
YCBCR12 specifies the data type as 12-bit $\mathrm{YCbCr}, 4: 2: 0$.
YCBCR16 specifies the data type as 16-bit $\mathrm{YCbCr}, 4: 2: 2$.
YCBCR20 specifies the data type as $20-\mathrm{bit} \mathrm{YCbCr}, 4: 2: 2$.
YCBCR24 specifies the data type as 24 -bit $\mathrm{YCbCr}, ~ 4: 2: 2$.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DTLONG GLONGWRITE sets the data type for long packets for MIPI DSI1 bus trigger search 1 to GLONGWrite.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DTLONG? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DTLONG NULL, indicating that the data type for MIPI DSI1 bus trigger search 1 long packets is set to NULL.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTShort

This command sets or queries the data type for short packets for the MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTShort \{ACKErrorreport|ANY|COLOROFF|COLORON|DCSR|DCSSRR1| DCSRR2|DCSSW0|DCSSW1|EOT|GR0|GR1|GR2|GSRR1|GSRR2| GSW0|GSW1|GSW2|HSYNCEnd|HSYNCStart|MAXRETsize|SHUTDown| TURNON|VSYNCEnd|VSYNCStart\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:DTShort?

Arguments ACKErrorreport Acknowledge and Error report.
ANY matches any data type.
coloroffColor Mode Off.
coloron Color Mode On.
DCSR DCS Read.
DCSSRR1 DCS Short Read Response, 1 byte.
DCSRR2 DCS Short Read Response, 2 bytes.
DCSSWO DCS Short Write, no parameters.
DCssw1 DCS Short Write, 1 parameter.
EOT End of Transmission.
GR0 Generic Read, no parameters.
GR1 Generic Read, one parameter.
GR2 Generic Read, two parameters.
GSRR1 Generic Short Read Response, 1 byte.
GSRR2 Generic Short Read Response, 2 bytes.
GSW0 Generic Short Write, no parameters.

GSW1 Generic Short Write, one parameters
GSW2 Generic Short Write, two parameters.
HSYNCEnd HSync End.
HSYNCStart HSync Start.
mAXRETsize Set Maximum Return Packet Size.
shutdown Shut Down Peripheral.
turnon Turn On Peripheral.
VSYNCEnd VSync End
VSYNCStart VSync Start.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:DTShort SHUTDOWN sets the data type for MIPI DSI1 bus trigger search 1 short packets to SHUTDown.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DTSHORT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:DTSHORT ANY, indicating that the data type for MIPI DSI1 bus trigger search 1 short packets is set to ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ERRor

This command sets or queries the error type for the specified MIPI DSIl bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ERRor
\{ANY|CHECKsumerror|ECCError\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ERRor?

Arguments ANY specifies the error type as Any.
CHECKsumer ror specifies the error type as Check Sum Error. ECCError specifies the error type as ECC Error.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ERROR CHECKsumerror sets the error type for MIPI DSI1 bus trigger search 1 to CHECKsumerror.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ERROR? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ERROR ECCError, indicating that the error type for MIPI DSI1 bus trigger search 1 is set to ECCError.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ESCape

This command sets or queries the Escape command for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:MIPIDSIOne:ESCape
\{ACK|LPDATA|RESET|ANY|TEAR|ULTRALP\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:ESCape?

Arguments ACK specifies the Escape command as Ack (positive acknowledgement).
LPDATA specifies the Escape command as Low Power Data Transmission.
RESET specifies the Escape command as Reset.
ANY specifies the Escape command as Any.
TEAR specifies the Escape command as Tearing Effect.
ULTRALP specifies the Escape command as Ultra Low Power State.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ESCAPE RESET sets the Escape command for MIPI DSI1 bus trigger search 1 to RESET.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ESCAPE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:ESCAPE ACK, indicating that the Escape command for MIPI DSI1 bus trigger search 1 is set to ACK.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue

This command sets or queries the offset value for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue?

Arguments <NR3> specifies an offset value.
DONTCare specifies the offset value as Don't Care.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue 34445 sets the offset value for MIPI DSI1 bus trigger search 1 to 34445.

SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue? might return :SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:OFFset:VALue DONTCare, indicating the offset value for MIPI DSI1 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata:FORMat

This command sets or queries the format of the packet data for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata:FORMat \{BINary|HEXadecimal\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata:FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUEOne, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne: PACKetdata:VALUETwo

Arguments BINary specifies the format of the packet data as Binary. HEXadecima1 specifies the format of the packet data as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:FORMAT BINARY sets the packet data format for MIPI DSI1 bus trigger search 1 to BINary.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:FORMAT?
might return
: SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE: PACKETDATA: FORMAT
HEX, indicating that the format for MIPI DSIl bus trigger search 1
packet data is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata:VALUEOne

This command sets or queries the value of the first byte ( 8 bits) of a packet data string for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUEOne <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUEOne?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:PACKetdata:FORMat, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUETwo

| Arguments | <string> specifies the first byte of the packet data string. The valid characters are 0,1 , and $X$ when the format is set to binary; and $0-9$, A-F, and $X$ when the format is set to hexadecimal. |
| :---: | :---: |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUEONE " 09 " sets the first byte of the packet data string for MIPI DSI1 bus trigger search 1 to " 09 " when the packet data format is hexadecimal. |
|  | SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUEONE? might return |
|  | :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUEONE " 00001001 ", indicating that the value of the first byte of the packet data string for MIPI DSI1 bus trigger search 1 is " 00001001 " when the packet data format is binary. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata:VALUETwo

This command sets or queries the value of the second byte ( 8 bits) of a packet data string for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUETwo <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUETwo?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIPIDSIOne:PACKetdata:FORMat, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:PACKetdata: VALUEOne

Arguments <string> specifies the second byte of a packet data string. The valid characters are 0,1 , and X when the format is set to binary; and $0-9, \mathrm{~A}-\mathrm{F}$, and X when the format is set to hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUETWO "01" sets the second byte of a packet data string for MIPI DSI1 bus trigger search 1 to " 01 " when the packet data format is hexadecimal.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUETWO? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PACKETDATA:VALUETWO "XXXXXX01", indicating that the second byte of a packet data string for MIPI DSI1 bus trigger search 1 is "XXXXXX01" when the packet data format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:FORMat

This command sets or queries the generic payload format for the specified MIPI DSII bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:FORMat } \\ & \text { \{BINary|HEXadecimal\} } \\ & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:FORMat? }\end{array}$

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:PAYLoad:SIZe, SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:VALue

Arguments BINary specifies the generic payload format as Binary.
HEXadecimal specifies the generic payload format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD:FORMAT BINARY sets the generic payload format for MIPI DSI1 bus trigger search 1 to BINary.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD: FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD: FORMAT HEX, indicating that the generic payload format for MIPI DSI1 bus trigger search is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:SIZe

This command sets or queries the generic payload size of the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:SIZe <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:SIZe?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:FORMat, SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIPIDSIOne:PAYLoad:VALue

## Arguments

<NR3> specifies a number from 1 to 16 , that sets the size of the generic payload in bytes.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD:SIZE 5 sets the size of MIPI DSI1 bus trigger search 1 payload to 5 bytes.

SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE: PAYLOAD: SIZE? might return : SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD: SIZE 16 , indicating that the payload size of MIPI DSI1 bus trigger search 1 is set to 16 bytes.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:VALue

This command sets or queries the generic payload value string of the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

#### Abstract

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PAYLoad:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPICSITWo:PAYLoad:FORMat, SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:MIPICSITWo:PAYLoad:SIZe

Arguments <string> specifies the payload value. The valid characters are 0,1 , and X for values in binary format; and A-F, $0-9$, and X for values in hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD:VALUE "A1234" sets the payload value string for MIPI DSI1 bus trigger search 1 to "A1234" when the payload format is hexadecimal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PAYLOAD:VALUE "XXXXXXXXXXXXXXXXXX11", indicating that the payload value string for MIPI DSIl bus trigger search 1 is set to "XXXXXXXXXXXXXXXXXX11" in binary format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PIXel:VALue

This command sets or queries the pixel value for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PIXe1:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:PIXe1:VALue?

Arguments <NR3> specifies a number that represents the pixel value DONTCare specifies the pixel value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PIXEL:VALUE 55 sets the pixel value for MIPI DSI1 bus trigger search 1 to 55 .

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PIXEL:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:PIXEL:VALUE 65535 , indicating that the pixel value for MIPI DSI1 bus trigger search 1 is set to 65535 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe:QUAlifier

This command sets or queries the RGB Blue qualifier for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUE:QUA1ifier \{EQUa1|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe: QUAlifier?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:QUALIFIER EQUAL sets the RGB Blue qualifier for the specified MIPI DSI1 bus trigger search to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:QUALIFIER? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:QUALIFIER LESSTHAN, indicating that the RGB Blue qualifier for the specified MIPI DSI1 bus trigger search is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe:VALue

This command sets or queries the RGB Blue value for the for the specified MIPI DSIl bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUE:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe:VALue?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:MIPIDSIOne:RGB:BLUe:QUAlifier

Arguments <NR3> specifies a number for the RGB Blue value; the range is dependent on the data type.

DONTCare specifies the RGB Blue value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:VALUE 125 sets the RGB Blue value for MIPI DSIl bus trigger search 1 to 125 .

SEARCH:SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:RGB:BLUE:VALUE DONTCARE, indicating that the RGB Blue value for MIPI DSI1 bus trigger search 2 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:QUAlifier

This command sets or queries the RGB Green qualifier for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen: QUAlifier \{EQUal|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen: QUAlifier?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:VALue

Arguments EQUa1 specifies the qualifier as Equal. LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:QUALIFIER EQUAL sets the RGB Green qualifier for MIPI DSI1 bus trigger search 1 to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:QUALIFIER? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:QUALIFIER
LESSTHAN, indicating that the RGB Green qualifier for MIPI DSII bus trigger search 1 is set to LESSThan.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:VALue

This command sets or queries the RGB Green value for the specified MIPI DSII bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:VALue \{<NR3>|DONTCare\}
SEARCH: SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:VALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:RGB:GREen:QUAlifier

Arguments <NR3> specifies a number for the RGB Green value; the range is dependent on the data type.

DONTCare specifies the RGB Green value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:VALUE 255
sets the RGB Green value for MIPI DSI1 bus trigger search 1 to 255.
SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:VALUE? might return
: SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:GREEN:VALUE DONTCARE, indicating that the RGB Green value for MIPI DSI1 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:QUAlifier

This command sets or queries the RGB Red qualifier for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:QUAlifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:QUAlifier?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:RGB:RED:VALue

Arguments EQUa1 specifies the qualifier as Equal.
LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:RED:QUALIFIER MORETHAN sets the RGB Red value for MIPI DSI1 bus trigger search 1 to MOREThan.

```
SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:RED:QUALIFIER?
might return
    :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:RED:QUALIFIER
    EQUAL, indicating that the RGB Red qualifier for MIPI DSI1 bus trigger search 1
    is set to EQUal.
```

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:VALue

This command sets or queries the RGB Red value for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:VALue \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:RGB:RED:VALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:MIPIDSIOne:RGB:RED:QUAlifier

| Arguments | <NR3> specifies a number for the RGB Red value; the range is dependent on the data type. |
| :---: | :---: |
|  | DONTCare specifies the RGB Red value as Don't Care. |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:VALUE 25 sets the RGB Red value for MIPI DSI1 bus trigger search 1 to 25. |
|  | SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:RGB:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:MIPIDSIONE:RGB:VALUE DONTCARE, indicating that the RGB Red value for MIPI DSI1 bus trigger search 2 is set to DONTCare. |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:VC

This command sets or queries the Virtual Channel for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:VC
\{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:VC?

Arguments <NR3> specifies a Virtual Channel from 0 to 3.
DONTCare specifies the Virtual Channel as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:VC 3 sets the virtual channel for MIPI DSI1 bus trigger search 1 to 3 .

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:VC? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:VC 1, indicating that the virtual channel for MIPI DSI1 bus trigger search 1 is set to 1 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WARNing

This command sets or queries the warning type for a specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WARNing \{ANY|ECCWarn\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WARNing?

Arguments ANY specifies the warning type as Any. ECCWarn specifies the warning type as ECCWarn.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WARNING ECCWARN sets the warning type for MIPI DSI1 bus trigger search 1 to ECCWarn.

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WARNING? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WARNING ANY, indicating that the warning type for MIPI DSIl bus trigger search 1 is set to ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WC:VALue

This command sets or queries the word count value for the specified MIPI DSI1 bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WC:VALue \{<NR3>|DONTCare\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:WC:VALue?

Arguments <NR3> specifies a number for the word count value. DONTCare specifies the word count value as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WC:VALUE 45 sets the word count value for MIPI DSI1 bus trigger search 1 to 45 .

SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WC:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:WC:VALUE DONTCARE, indicating that the word count value for MIPI DSI1 bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:QUAlifier

This command sets or queries MIPI DSI-1 CB qualifier for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:QUAlifier \{EQUa1|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB: QUAlifier?

Arguments EQUal sets the qualifier to equal.
LESSThan sets the qualifier to less than.

MOREThan sets the qualifier to more than.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:QUA1ifier 1essthan sets the qualifier to lessthan.

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:QUA1ifier? might return
: SEARCH: SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:CB:QUALIFIER EQUAL, indicating that the qualifier is set to equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:VALue

This command sets or queries MIPI DSI-1 CB value for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:VALue \{<nr3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:VALue?

Arguments <nr3> specifies the CB value.
DONTCare specifies the CB values is don't care.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:VALue 2 sets the CB value to 2 .

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CB:VALue? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:CB:VALUE DONTCARE, indicating the CB value is don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:QUAlifier

This command sets or queries MIPI DSI-1 CR qualifier for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:QUATifier \{EQUa1|LESSThan|MOREThan\} SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR: QUAlifier?

Arguments EQUal sets the qualifier to equal.
LESSThan sets the qualifier to less than.
MOREThan sets the qualifier to more than.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:QUA1ifier lessthan sets the qualifier to less than.

SEARCH:SEARCH1:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:QUA1ifier? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:CR:QUALIFIER EQUAL, indicating the CR qualifier is set to equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:VALue

This command sets or queries MIPI DSI-1 CR value for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:VALue \{<nr3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:VALue?

Arguments <nr3> specifies the CR value.
DONTCare specifies the CR values is don't care.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:VALue 2 sets the CR value to 2 .

SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:CR:VALue? might return
: SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:CR:VALUE DONTCARE, indicating the CR value is don't care.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:QUAlifier

This command sets or queries MIPI DSI-1 Y qualifier for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:QUAlifier \{EQUa1|LESSThan|MOREThan\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:QUAlifier?

Arguments EQUal sets the qualifier to equal.
LESSThan sets the qualifier to less than.
MOREThan sets the qualifier to more than.

Examples SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:QUATifier Lessthan sets the qualifier to less than.
SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:QUAlifier? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:Y:QUALIFIER EQUAL, indicating the qualifier is set to equal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:VALue

This command sets or queries MIPI DSI-1 Y value for the specified search. The search is specified by x . The value of x can range from 1 to 8 .

NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:VALue } \\ & \{<n r 3>\mid \text { DONTCare }\} \\ & \text { SEARCH:SEARCH }<x>: \text { TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:VALue? }\end{array}$

| Arguments | <nr3> specifies the Y value. |
| :---: | :---: |
|  | DONTCare specifies the Y values is don't care. |
| Examples | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:VALue 2 sets the Y value to 2 . |
|  | SEARCH:SEARCH<x>:TRIGger:A:BUS:MIPIDSIOne:YCBCR:Y:VALue? might return |
|  | :SEARCH:SEARCH1:TRIGGER:A:BUS:MIPIDSIONE:YCBCR:Y:VALUE |

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PARallel:DATa:FORMat

This command sets or queries the data format for a parallel bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PARa11e1:DATa:FORMat \{BINary|HEXadecimal|SYMBolic\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PARa11e1:DATa:FORMat?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:BUS:PARallel:DATa:VALue

Arguments BINary specifies the data format as Binary.
HEXadecima 1 specifies the data format as Hexadecimal.
symbolic specifies the data format as Symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:PARALLEL:DATA:FORMAT SYMBOLIC sets the data format for parallel bus trigger search 1 to SYMBolic.

SEARCH:SEARCH1:TRIGGER:A:BUS:PARALLEL:DATA:FORMAT? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:PARALLEL:DATA:FORMAT HEX, indicating that the data format for parallel bus trigger search 1 is HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PARallel:DATa:VALue

This command sets or queries the data value string for a parallel bus trigger search to determine where to place a mark. $<x>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PARa11e1:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:PARal1e1:DATa:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:PARallel:DATa:FORMat

Arguments <string> specifies the data value in a valid format. Valid characters are $0-9$,

Examples SEARCH:SEARCH2:TRIGGER:A:BUS:PARALLEL:DATA:VALUE " $x X X X X X X X "$ sets the string data value to "XXXXXXXX" in binary format.

SEARCH: SEARCH1:TRIGGER:A:BUS:PARALLEL:DATA:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PARALLEL:DATA:VALUE "XXXXXXXXXXXXXXXX10010", indicating that the data value string is set to "XXXXXXXXXXXXXXX10010" in binary format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:CHAR

This command sets or queries the PCIE bus search trigger character. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:PCIE:CHARacter:CHAR <STRING> SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:CHAR?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR, SEARCH:SEARCH $<\mathrm{x}>:$ TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>,

SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments <STRING> specifies the trigger character. The string can be a mnemonic, K , or D code character.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:CHAR "COM" sets the trigger character to COM.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:CHAR? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:CHARACTER:CHAR "K28.5", indicating the trigger character is set to K28.5 with nothing or neutral disparity.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

This command sets or queries the PCIE bus search character symbol minus. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbo1:MINus <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus $<x>$, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments <string> specifies the character symbol minus.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus " 10000001 " sets the character symbol minus to 10000001 .

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus? might return
: SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:CHARACTER:SYMBOL:MINUS "0011111010", indicating the character symbol minus is 0011111010.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

This command sets or queries the PCIE bus search trigger character symbol plus. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

| Related Commands | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:PATtern:ORDERedset, |
| :--- | :--- |
|  | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, |
|  | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:CHARacter:CHAR, |

|  | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, |
|  | SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS |

Arguments <string> specifies the character symbol plus.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS " 10110010 " sets the character symbol plus to 10110010.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:CHARACTER:SYMBOL:PLUS " 1100000101 ", indicating the character symbol plus is set to 1100000101 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CONDition

This command sets or queries the PCIE bus search trigger condition. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CONDition \{ANYControl|CHARacter|ERROR|PATtern\} SEARCH:SEARCH<X>:TRIGger:A:BUS:PCIE:CONDition?

Arguments Arguments are the available search trigger conditions.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CONDition ERROR sets the search trigger condition to error.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:CONDition? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:CONDITION PATTERN, indicating the search trigger condition is pattern.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:DISParity

This command sets or queries the PCIE bus search trigger disparity. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Arguments NEGative specifies negative disparity.
POSITIVe specifies positive disparity.
EITher specifies either disparity.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:DISParity NEGATIVE sets the trigger disparity to negative.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:DISParity? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:DISPARITY EITHER, indicates either positive or negative disparity.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:CHAR

This command sets or queries the PCIE bus search trigger error character. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:CHAR } \\ & \text { \{<NR1>|OFF|ON\}} \\ & \text { SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:CHAR? }\end{array}$

Arguments <NR1> = 0 disables the function; any other value enables it. OFF disables the function. ON enables the function.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:CHAR 0 disables the function.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:CHAR? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:ERROR:CHAR 1, indicating the function is on.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:DISParity

This command sets or queries the PCIE search trigger error disparity. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:DISParity \{<NR1>|OFF|ON\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:DISParity?

Arguments <NR1> = 0 disables the function; any other value enables it. OFF disables the function.

ON enables the function.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:DISParity 0 disables the function.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:DISParity? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:ERROR:DISPARITY 1, indicating the function is on.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:ORDERedset

This command sets or queries the PCIE bus search trigger error ordered set. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:ORDERedset \{<NR1>|OFF|ON\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:ORDERedset?

Arguments <NR1> = 0 disables the function; any other value enables it.
OFF disables the function.
ON enables the function.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:ORDERedset 0 disables the function.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:ORDERedset? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:ERROR:ORDEREDSET 1, indicating the function is enabled.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:SYNC

This command sets or queries the triggering on SYNC error state.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:SYNC \{<NR1>|OFF|ON\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:ERROR:SYNC?
```

Arguments <NR1> = 1 enables the triggering on a SYNC error. Any other character disables the triggering.

OFF disables triggering on a SYNC error.
ON enables triggering on a SYNC error.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:SYNC ON enables triggering on a SYNC error in search 1.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:SYNC? might return SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:ERROR:SYNC 1 indicating that triggering on a SYNC error is enabled for search 1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:FORMat

This command sets or queries the PCIE search trigger format. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:FORMat
\{ORDERedset|SYMbol|CHAR\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:FORMat?

Arguments Arguments are the available formats.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:FORMat SYMBOL sets the format to symbol.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:FORMat? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:FORMAT ORDEREDSET, indicating the format is orderedset.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:LONGORDERedset

This command sets or queries the PCIE bus search trigger long ordered set. The search number is specified by x .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:LONGORDERedset \{EIE|TS1|TS2\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:LONGORDERedset?

Arguments EIE is the Electrical Idle Exit ordered set.
TS1 is the Training Sequence 1 ordered set.
TS2 is the Training Sequence 2 ordered set.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:LONGORDERedset TS2 sets the long ordered set to TS2

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:LONGORDERedset? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:LONGORDEREDSET TS1, indicating the long ordered set is TS1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:CHAR<x>

This command sets or queries the PCIE bus search pattern character. The search number is specified by x and can be 1 through 16 . The character number is specified by x and can be 1 through 4 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:CHAR<x> <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:CHAR<x>?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR,

SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS<x>, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments <string> is the pattern character.

Examples SEARCH:SEARCH16:TRIGger:A:BUS:PCIE:PATtern:CHAR4 K28.5 sets the pattern character to K28.5.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:PATtern:CHAR1? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:PATTERN:CHAR1 "COM", indicating the pattern character is COM.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:ORDERedset

This command sets or queries the PCIE bus search trigger pattern ordered set. The search number is specified by x .

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:ORDERedset
\{COMPAT|EI|FTS|SKP|INVALID\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:ORDERedset?

Related Commands SEARCH:SEARCH $<x>:$ TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments COMPAT is the compliance pattern ordered set COM D21.5 COM D10.2.
EI is the electrical idle ordered set COM IDL IDL IDL.
FTS is the fast training sequence ordered set COM FTS FTS FTS.
SKP is the skip ordered set COM SKP SKP SKP
INVALID is an invalid set. Invalid can be returned, but it should never be sent.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:PATtern:ORDERedset EI sets the ordered set pattern to electrical idle.

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:PATtern:ORDERedset? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:PATTERN:ORDEREDSET SKP, indicating the ordered set pattern is skip.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>

This command sets or queries the PCIE bus search trigger pattern symbol minus. The search number is specified by x and can be 1 through 16. Minus is specified by x and can be 1 through 4 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINuS<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS $<x>$, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments
<string> specifies the minus pattern symbol.

Examples SEARCH:SEARCH15:TRIGger:A:BUS:PCIE:PATtern:SYMbo1:MINus3 " 0010000010 " sets the minus symbol to 0010000010 .

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:PATtern:SYMbo1:MINus1? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:PATTERN:SYMBOL:MINUS1 " 0011111010 ", indicating the minus symbol is 0011111010 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS<x>

This command sets or queries the PCIE bus search pattern symbol plus. The search number is specified by x and can be 1 through 16 . Plus is specified by x and can be 1 through 4 .

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbo1:PLUS<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbo1:PLUS<x>?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:ORDERedset, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:CHAR<x>, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:CHAR, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus $<x>$, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus, SEARCH:SEARCH<x>:TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS

Arguments <string> specifies the plus pattern symbol.

Examples SEARCH:SEARCH11:TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS2 "1010110010" sets the plus pattern symbol to 1010110010 .

SEARCH:SEARCH1:TRIGger:A:BUS:PCIE:PATtern:SYMbo1:PLUS1? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:PCIE:PATTERN:SYMBOL:PLUS1 " 1100000101 ", indicating the plus pattern symbol is 1100000101 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:CONDition

This command sets or queries the search condition for the specified RS232C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:CONDition \{DATa|EOp|PARItyerror|STARt\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:RS232C:CONDition?

Arguments DATa specifies the search condition as Data. EOp specifies the search condition as End of Packet.

PARItyerror specifies the search condition as Parity Error.
STARt specifies the search condition as Start.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:CONDITION DATA sets the search condition for RS232C bus trigger search 1 to Data.

SEARCH:SEARCH2:TRIGGER:A:BUS:RS232C:CONDITION? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:RS232C:CONDITION EOP, indicating that the search condition for RS232C bus trigger search 2 is set to End of Packet.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:FORMat

This command sets or queries the data format for the specified RS232C bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:FORMat \{BINary|HEXadecima1\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:FORMat?

Arguments BINary specifies the data format as Binary.
HEXadecima 1 specifies the data format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:FORMAT BINary sets the data format for RS232C bus trigger search 1 to BINary.

SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:FORMAT HEX, indicating that the data format for RS232C bus trigger search 1 is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:SIZe

This command sets or queries the number of bits per word in the data string for the specified RS232C bus trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:SIZe <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:SIZe?

Arguments $<$ NR $3>$ is the number of bits per word in the data string, from 1 to 8 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:SIZE 1 sets the number of bits per word in RS232C bus trigger search 1 data string to 1 .

SEARCH:SEARCH2:TRIGGER:A:BUS:RS232C:DATA:SIZE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:RS232C:DATA:SIZE 8, indicating that the bits per word for RS232C bus trigger search 2 is set to 8 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:VALue

This command sets or queries the data string value for the specified RS232C bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:RS232C:DATa:VALue?

Arguments
<string> specifies the value of the data string. The valid characters are 0,1 , and X for values in binary format; and A-F, $0-9$, and X for values in hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:VALUE "01" sets the value of the data string for RS232C bus trigger search 1 to " 01 " when the format is hexadecimal.
:SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:RS232C:DATA:VALUE "XXXXXXX1", indicating that the data string value for RS232C bus trigger search 1 is set to "XXXXXXX1" when the format is binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:CHAR

Sets or queries the single 8B10B character in the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:CHAR <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:CHAR?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> sets the 8B10B character.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR "K28.5" sets the character in search 1 to K28.5.

SEARCH:SEARCH6:TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR? might return :SEARCH:SEARCH6:TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR "K28.5", indicating that the character in search 6 is set to K28.5.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus

Sets or queries the specified 8B10B character bit pattern (negative disparity) for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbo1:MINus <string>
SEARCH: SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbo1: MINus?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> sets the 8B10B character bit pattern.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS "0011111010" sets the character bit pattern in search 1 to 0011111010.

SEARCH: SEARCH2:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS? might return
: SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS
"0011110011", indicating that the character bit pattern for search 2 is 0011110011

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS

Sets or queries the specified 8B10B character bit pattern (positive disparity) for the specified search.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbo1:PLUS <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:SYMbo1:PLUS?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> sets the character bit pattern.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS " 1100000101 " sets the character bit pattern in search 1 to 1100000101.

SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS?
might return
:SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS
" 1100001100 ", indicating that the character bit pattern for search 2 is set to 1100001100 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CONDition

This command sets or queries the trigger condition for the specified 8B10B bus trigger search to determine where to place a mark. The search number is represented by $<\mathrm{x}>$.

The selection (character, error, pattern, or any control) must be correct before you can use the corresponding 8B10B search commands (character, error, and pattern).

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CONDition \{ANYControl|CHARacter|ERROR|PATtern\}?

Related Commands Related commands are shown in the Arguments, below.

| Arguments | ANYCONTROL specifies that the oscilloscope will search for any control character. <br> CHARACTER specifies that the oscilloscope will search for a character, specified by SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:CHAR <br> ERROR specifies that the oscilloscope will search for errors, specified by SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:S8B10B:ERROR:CHAR and SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:ERROR:DISParity. <br> PATTERN specifies that the oscilloscope will search for a pattern, specified by SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus $<x>$, or SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:S8B10B:PATtern:SYMbol: PLUS<x> |
| :---: | :---: |
| Examples | SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CONDITION PATTERN specifies that search 1 will search for a pattern. |

SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:CONDITION ERROR, indicating that search 1 will search for errors.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:DISParity

Sets or queries the disparity (positive, negative, or either).

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:DISParity
\{NEGAtive|POSITIVe|EITher\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:DISParity?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:DISParity

Arguments POSITIVE only the positive values will be used in the search.
NEGATIVE only the negative values will be used in the search.
EITHER positive and negative values will be used in the search.

Examples SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:DISPARITY POSITIVE sets the disparity in search 5 to positive. Only the positive values will be used in the search.

SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:DISPARITY? might return SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:DISPARITY NEGATIVE, indicating that the disparity in search 5 is set to negative. Only the negative values will be used in the search.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:CHAR

Sets the character error search to on or off, or queries the status of the feature.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:CHAR
\{<NR1>|ON|OFF\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:CHAR?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CONDition

Arguments <NR1> = 1 enables the character error search. Any other character disables the search.

ON enables the character error search.
OFF disables the character error search.

Examples SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:ERROR:CHAR ON sets search 5 to search for character errors.

SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:ERROR:CHAR? might return :SEARCH:SEARCH5:TRIGGER:A:BUS:S8B10B:ERROR:CHAR 0, indicating that search 5 will not search for character errors.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:DISParity

Sets or queries the disparity error search (on or off).
NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:DISParity \{<NR1>|ON|OFF\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:ERROR:DISParity?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:DISParity

Arguments <NR1> = 1 enables the disparity error search. Any other character disables the search.

ON enables the disparity error search.
OFF disables the disparity error search.

Examples SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:ERROR:DISPARITY 1 sets search 2 to search for disparity errors.

SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:ERROR:DISPARITY? might return : SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:ERROR:DISPARITY 1, indicating that search 2 will search for disparity errors.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:FORMat

Sets the format for the specified search to character or symbol, or queries the state of this feature. Applies to the search character and pattern commands.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:FORMat \{CHAR|SYMbol\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:FORMat?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:CHARacter:CHAR, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:PATtern:CHAR $<x>$, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus $<x>$, SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>

Arguments CHARACTER allows you to edit the values using character format.
SYMBOL allows you to edit the values using symbol format (using the binary equivalent to the character value)

Examples SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:FORMAT CHARACTER sets the search 2 format to character.

SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:FORMAT? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:S8B10B:FORMAT CHARACTER, indicating that the search 2 format is set to character.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:CHAR<x>

Sets or queries the first, second, third or fourth character in the pattern for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:CHAR<x> <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:CHAR<x>?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> is the 8B10B character.

Examples SEARCH:SEARCH3:TRIGGER:A:BUS:S8B10B:PATTERN:CHAR3 "K28.5" sets the third character in search 3 to K28.5.

SEARCH:SEARCH3:TRIGGER:A:BUS:S8B10B:PATTERN:CHAR4? might return :SEARCH:SEARCH4:TRIGGER:A:BUS:S8B10B:PATTERN:CHAR3 "K28.3", indicating that the third character in search 4 is set to K28.3.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus<x>

Sets or queries the specified character bit pattern (negative disparity) for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbol: MINus<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbol: MINuS $<x>$ ?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> is the character bit pattern.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:MINUS3 "0011111010" sets the third character bit pattern in search 1 to 0011111010.

SEARCH: SEARCH1:TRIGGGER:A:BUS:S8B10B:PATTERN: SYMBOL:MINUS2? might return
: SEARCH: SEARCH1:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS2
"0011110011", indicating that the second character bit pattern in search 1 is set to 0011110011 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>

Sets or queries the specified 8B10B character bit pattern (positive disparity) for the specified search.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbo1:PLUS<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:S8B10B:PATtern:SYMbo1: PLUS<X>?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:CONDition, SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:S8B10B:FORMat

Arguments <string> is the 8B10B character bit pattern.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:PLUS3 " 1100000101 " sets the third character bit pattern in search 1 to 0011111010.

SEARCH:SEARCH1:TRIGGGER:A:BUS:S8B10B:PATTERN:SYMBOL:PLUS2? might return
: SEARCH: SEARCH1:TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS2
" 1100001100 ", indicating that the second character bit pattern in search 1 is 1100001100.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:SOUrce

This command sets or queries the bus source for the specified bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:SOUrce
\{B0|B1|B2|B3|B4|B5|B6|B7|B8|B9|B10| B11|B12|B13|B14|B15|B16\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:SOUrce?

Arguments $\quad \mathrm{B} 0-\mathrm{B} 16$ specifies the bus source as a bus number from B 01 to B 16 .

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:SOURCE B1 sets the bus source for bus trigger search 1 to B 1 .

SEARCH:SEARCH1:TRIGGER:A:BUS:SOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:SOURCE B15, indicating that the bus source for bus trigger search 1 is B15.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:CONDition

This command sets or queries the trigger condition for the specified SPI bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:CONDition \{DATA|SS\} SEARCH:SEARCH<X>:TRIGger:A:BUS:SPI:CONDition?

Arguments DATA specifies the trigger condition as Data.
SS specifies the trigger condition as Slave Selection.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:CONDITION SS sets the trigger condition for SPI bus trigger search 1 to SS.

SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:CONDITION DATA, indicating that the trigger condition for SPI bus trigger search 1 is set to Data.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:FORMat

This command sets or queries the data format for the specified SPI bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:FORMat \{BINary|HEXadecimal\} SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:FORMat?

Arguments BINary specifies the data format as Binary. HEXadecimal specifies the data format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:FORMAT BIN sets the data format for SPI bus trigger search 1 to BINary.

SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:FORMAT HEX, indicating that the data format for SPI bus trigger search 1 is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:SIZe

This command sets or queries the length of the data string in bytes used for the specified SPI bus trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:SIZe <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:SIZe?

Arguments <NR3> specifies the number of contiguous data bytes.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:SIZE 1 sets the length of the data string for SPI bus trigger search 1 to 1 byte.

SEARCH:SEARCH2:TRIGGER:A:BUS:SPI:DATA:SIZE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:SPI:DATA:SIZE 4, indicating that the length of the data string for SPI bus trigger search 2 is 4 bytes.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:VALue

The command sets or queries the data value of the data token for the specified SPI bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:SPI:DATa:VALue?

Arguments <string> specifies the data value in the specified valid format. The valid characters are 0,1 , and X for binary format; and A-F, $0-9$, and X for hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:VALUE "00001111" sets the data value for SPI bus trigger search 1 to "00001111" in binary format.

SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:SPI:DATA:VALUE "11", indicating that the data value for SPI bus trigger search 1 is set to " 11 " in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:FORMat

This command sets or queries the address format for normal token for the specified USB bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:FORMat \{BINary|HEX|SYMBolic\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:FORMat?

# Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:HIVALue, SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:VALue 

Arguments BINary specifies the address format as Binary.
HEX specifies the address format as Hexadecimal.
SYMBolic specifies the address format as Symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:FORMAT BINARY sets the address format for normal token for USB bus trigger search 1 to BINary.

SEARCH:SEARCH2:TRIGGER:A:BUS:USB:ADDRESS: FORMAT? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:ADDRESS:FORMAT HEX, indicating that the address format for normal token for USB bus trigger search 2 is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:HIVALue

This command sets or queries the address value for normal token to be used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

The VALue and HIVALue set a range that the INrange and OUTrange qualifiers use to decide when to trigger. For example, if the QUALIFER is set to INrange, and the address is within the range set by VALue and HIVALue, then a trigger can be generated.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:HIVALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:HIVALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB:ADDress:FORMat, SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:VALue

Arguments
<string> specifies the data value in the specified valid format. The valid characters are 0,1 , and X for binary; for hexadecimal; and symbolic).

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:HIVALUE
SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:HIVALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:HIVALUE "XX", indicating that the address value for normal token for USB bus trigger search 1 is set to "XX," in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:VALue

This command sets or queries the address value for normal token for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ADDress:VALue?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:BUS:USB:ADDress:HIVALue

Arguments <string> specifies the data value in the specified valid format. Valid characters are 0,1 , and X for binary; A-F, 0-9 and X for hexadecimal; and for symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:VALUE "1110000" sets the address value for the normal token for USB bus trigger search 1 to " 1110000 " in binary format.
SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ADDRESS:VALUE "11", indicating that the address value for normal token for USB bus trigger search 1 is set to " 11 " hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:CHAR

Sets or queries the single USB character in the specified search.
NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:CHAR <string> SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:CHARacter:CHAR?

Arguments <string> sets the character bit pattern.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:USB:CHARacter:CHAR "0011111010" will search for the 0011111010 character in search 2.

SEARCH: SEARCH2:TRIGger:A:BUS:USB:CHARacter:CHAR? may return " 1100000101 " indicating the instrument will search for the 1100000101 character in search 2.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbol:MINus

Sets or queries the specified USB character bit pattern (negative disparity) for the specified search.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbol:MINus <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbo1:MINus?

Arguments <string> sets the character bit pattern.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:CHARacter:SYMbo1:MINus "0011111010" sets the character bit pattern in search 1 to 0011111010.

SEARCH:SEARCH2:TRIGger:A:BUS:USB:CHARacter:SYMbo1:MINus? might return
: SEARCH: SEARCH2:TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:MINUS
"0011110011", indicating that the character bit pattern for search 2 is 0011110011

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS

Sets or queries the specified character bit pattern (positive disparity) for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS?

Arguments <string> sets the character bit pattern.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS"1100000101" sets the character bit pattern in search 1 to 1100000101 .

SEARCH:SEARCH2:TRIGger:A:BUS:USB:CHARacter:SYMbo1:PLUS? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:PLUS " 1100001100 ", indicating that the character bit pattern for search 2 is set to 1100001100.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CONDition

This command sets or queries the search condition for the specified USB bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:CONDition \{DATAPacket|EOP|ERROR|HANDSHAKEPacket|RESET|RESUME| SPECIALPacket|SUSPEND|SYNC|TOKENPacket\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:CONDition?

Arguments DATAPacket specifies the search condition as Data Packet.
EOP specifies the search condition as End of Packet.
ERROR specifies the search condition as Error.
HANDSHAKEPacket specifies the search condition as Handshake Packet.
RESET specifies the search condition as Reset.
RESUME specifies the search condition as Resume.

SPECIALPacket specifies the search condition as Special Packet.
SUSPEND specifies the search condition as Suspend.
SYNC specifies the search condition as Sync.
TOKENPacket specifies the search condition as Token (Address) Packet.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:CONDITION EOP sets the search condition for USB bus trigger search 1 to End of Packet.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:CONDITION? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:CONDITION SYNC, indicating that the search condition for USB bus trigger search 1 is set to Sync.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:FORMat

This command sets or queries the data format for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:DATa:FORMat \{bINary|HEX|SYMBolic\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:FORMat?

Arguments BINary specifies the data format as Binary.
HEX specifies the data format as Hexadecimal.
SYMBolic specifies the data format as Symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:FORMAT HEX sets the data format for USB bus trigger search 1 to HEXadecimal.

SEARCH:SEARCH2:TRIGGER:A:BUS:USB:DATA:FORMAT? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:DATA:FORMAT BINARY, indicating that the data format for USB bus trigger search 2 is set to BINary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:HIVALue

This command sets or queries the data value for data token used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:HIVALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:HIVALue?

Arguments <string> specifies the data value in the specified valid format (binary, hexadecimal, or symbolic). The valid characters for binary are 0,1 , and X ;

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:HIVALUE "XXXXX111" sets the data value for USB bus trigger search 1 to "XXXXX111" in binary format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:HIVALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:HIVALUE " 11 ", indicating that the data value for USB bus trigger search 1 is set to " 11 " in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:OFFSet

This command sets or queries the data offset for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:OFFSet \{<NR3>|DONTCare\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:OFFSet?

Arguments <NR3> specifies the data offset in bytes.
DONTCare specifies the data offset as Don't Care.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:OFFSET 5 sets the data offset for USB bus trigger search 1 to 5 bytes.

SEARCH: SEARCH1:TRIGGER:A:BUS:USB:DATA:OFFSET? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:OFFSET DONTCARE, indicating that the data offset for USB bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:SIZe

This command sets or queries the length of the data string in bytes for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:SIZe <NR3> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:SIZE 1 sets the size of the data string for USB bus trigger search 1 to 1 byte.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:SIZE? might return : SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:SIZE 3, indicating that the size of the data string for USB bus trigger search 1 is set to 3 bytes.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:TYPe

This command sets or queries the data packet type for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:TYPe
\{ANY|DATA0|DATA1|DATA2|MDATA\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:TYPe?

Arguments ANY specifies the data packet type as Any. DATA0 specifies the data packet type as DATA0. DATA1 specifies the data packet type as DATA1. DATA2 specifies the data packet type as DATA2. MDATA specifies the data packet type as MDATA.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:TYPE ANY sets the data packet type for USB bus trigger search 1 to ANY.

SEARCH:SEARCH2:TRIGGER:A:BUS:USB:DATA:TYPE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:DATA:TYPE MDADA, indicating that the packet type for USB bus trigger search 2 is set to MDATA.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:VALue

This command sets or queries the data value for data token for the specified bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DATa:VALue <string> SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:DATa:VALue?

Arguments <string> specifies the data value. The valid characters are 0,1 , and X for binary format; and A-F, 0-9, and X for hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:VALUE "AB" sets the data value for data token for USB bus trigger search 1 to "AB" in hexadecimal format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:DATA:VALUE "XXXXXXXX", indicating that the data value for data token for USB bus trigger search 1 is set to "XXXXXXXX" in binary format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DISParity

Sets or queries the disparity (positive, negative, or either).

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:DISParity \{NEGAtive|POSITIVe|EITher\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:DISParity?

Arguments POSITIVE only the positive values will be used in the search.
NEGATIVE only the negative values will be used in the search.
EITHER positive and negative values will be used in the search.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:DISParity POSITIVE sets the disparity in search 1 to positive. Only the positive values will be used in the search.

SEARCH:SEARCH5:TRIGger:A:BUS:USB:DISParity? might return SEARCH:SEARCH5:TRIGGER:A:BUS:USB:DISPARITY NEGATIVE, indicating that the disparity in search 5 is set to negative. Only the negative values will be used in the search.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:FORMat

This command sets or queries the endpoint format for data token (to be used with In Range and Out of Range qualifiers) for the specified USB bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:FORMat \{BINary|HEXadecimal|SYMBolic\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB:ENDPoint:HIVALue, SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:VALue

Arguments BINary specifies the endpoint format as Binary.
HEXadecima1 specifies the endpoint format as Hexadecimal.

SYMBolic specifies the endpoint format as Symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:FORMAT BINARY sets the endpoint format for data token for USB bus trigger search 1 to BINary.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:FORMAT HEXADECIMAL, indicating that the endpoint format for data token for USB bus trigger search 1 is set to HEXadecimal.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:HIVALue

This command sets or queries the endpoint value for data token used with In Range and Out of Range qualifiers for the specified USB bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:HIVALue <string>\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:HIVALue?

Arguments <string> specifies the data value in the specified valid format. <NO LRN> specifies do not return a list of instrument settings.
<NO BQ> specifies do not

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:HIVALUE "0010" sets the upper limit of the endpoint value for data token for USB bus trigger search 1 to " 0010 " in binary format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:HIVALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:HIVALUE " $X$ ", indicating that the endpoint value for data token for USB bus trigger search 1 is " X " in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:VALue

This command sets or queries the endpoint value for normal token for the specified USB bus trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ENDPoint:VALue?

Arguments <string> specifies the data value in the specified valid format. The valid characters are 0,1 , and X for binary format; A-F, 0-9 and X for hexadecimal format.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:VALUE "1111" sets the endpoint value for normal token for USB bus trigger search 1 to " 1111 " in binary format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ENDPOINT:VALUE " 1 ", indicating that the endpoint value for normal token for USB bus trigger search 1 is set to " 1 " in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:CHAR

Sets the character error search to on or off, or queries the status of the feature.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:CHAR \{<NR1>|OFF|ON\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:CHAR?

Arguments <NR1>= 1 enables the character error search. Any other character disables the search.

ON enables the character error search.

OFF disables the character error search.

Examples SEARCH:SEARCH51:TRIGger:A:BUS:USB:ERROR:CHAR ON sets search 5 to search for character errors.

SEARCH:SEARCH5:TRIGger:A:BUS:USB:ERROR:CHAR?might return :SEARCH:SEARCH5:TRIGGER:A:BUS:USB:ERROR:CHAR 0, indicating that search 5 will not search for character errors.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:DISParity

Sets or queries the disparity error search (on or off).

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:ERROR:DISParity
\{<NR1>|OFF|ON\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:DISParity?

Arguments <NR1> = 1 enables the disparity error search. Any other character disables the search.

ON enables the disparity error search.
OFF disables the disparity error search.

Examples SEARCH:SEARCH2:TRIGger:A:BUS:USB:ERROR:DISParity1 sets search 2 to search for disparity errors.

SEARCH:SEARCH2:TRIGger:A:BUS:USB:ERROR:DISParity? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:ERROR:DISPARITY 1, indicating that search 2 will search for disparity errors.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:ORDERedset

This command sets or queries the state of searching for an ordered set in the specified search.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:ORDERedset
{|OFF|ON}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERROR:ORDERedset?
```

Arguments OFF disables searching for an ordered set. ON enables searching for an ordered set.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:ERROR:ORDERedset ON enables searching for an ordered set with search 1.

SEARCH:SEARCH1:TRIGger:A:BUS:USB:ERROR:ORDERedset? may return OFF indicating that searching for an ordered set using search 1 is disabled.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERRTYPE

This command sets or queries the error type for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERRTYPE
\{BITSTUFFing|CRC5|CRC16|PID\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:ERRTYPE?

Arguments BITSTUFFing specifies the error type as Bit Stuffing.
CRC5 specifies the error type as Token CRC5 (Cyclic Redundancy Check 5).
CRC16 specifies the error type as Data CRC16 (Cyclic Redundancy Check 16). PID specifies the error type as PID Check Bits.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ERRTYPE CRC5 sets the error type for USB bus trigger search 1 to Token CRC5.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ERRTYPE? might return SEARCH:SEARCH1:TRIGGER:A:BUS:USB:ERRTYPE PID, indicating that the error type for USB bus trigger search 1 is set to PID Check Bits.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:FORMat

Sets the format for the specified search to character or symbol, or queries the state of this feature. Applies to the search character and pattern commands.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:FORMat \{CHAR|SYMbol\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:FORMat?

Arguments CHARACTER allows you to edit the values using character format.
SYMBOL allows you to edit the values using symbol format (using the binary equivalent to the character value).

Examples SEARCH:SEARCH2:TRIGger:A:BUS:USB:FORMatCHARACTER sets the search 2 format to character.

SEARCH:SEARCH2:TRIGger:A:BUS:USB:FORMat? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:FORMAT CHARACTER, indicating that the search 2 format is set to character.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:HANDSHAKEType

This command sets or queries the handshake type for the specified USB bus trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:HANDSHAKEType \{ACK|ANY|NAK|NYET|STALL\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:HANDSHAKEType?

Arguments ACK specifies the handshake type as Acknowledgement (positive) (XX10). ANY specifies the handshake type as Any (0010).

NAK specifies the handshake type as Negative Acknowledgment (1010).

NYET specifies the handshake type as No response Yet (0110).
STALL specifies the handshake type as Stall (endpoint is halted or control pipe request not supported) (1110).

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:HANDSHAKETYPE NAK sets the handshake type for USB bus trigger search 1 to NAK.

SEARCH:SEARCH2:TRIGGER:A:BUS:USB:HANDSHAKETYPE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:HANDSHAKETYPE NYET, indicating that the handshake type for USB bus trigger search 2 is set to NYET.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:LONGORDERedset

This command sets or queries the USB bus search trigger long ordered set. The search number is specified by x .

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:LONGORDERedset \{EIE|TS1|TS2\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:LONGORDERedset?

Arguments EIE is the Electrical Idle Exit ordered set.
TS1 is the Training Sequence 1 ordered set.
TS2 is the Training Sequence 2 ordered set.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:LONGORDERedset TS2 sets the long ordered set to TS2

SEARCH:SEARCH1:TRIGger:A:BUS:USB:LONGORDERedset? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:LONGORDEREDSET TS1, indicating the long ordered set is TS1.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets

Sets or queries the USB bus search packets to mark. This setting only applies when search type is set to Packets. This setting is only available when the USB bitrate is set to SS.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets \{LMP | TP | DP | ITP\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets?

Arguments LMP mark LMP packets, TP mark TP packets, DP mark DP packets, ITP Mmark ITP packets.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PACKets LMP marks LMP packets.

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PACKets? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:PACKETS LMP

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:LMPPACKets

Sets or queries the LMP packets to mark when system is searching for LMP packets. This setting is only available when the USB bitrate is set to SS.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:LMPPACKets \{ANY | LMPLink | LMPUtwo | LMPDevice | LMPConfig | LMPResponse\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:LMPPACKets?

Arguments ANY mark all LMP packets
LMPLink mark only link packets
LMPUtwo mark only U2 packets
LMPDevice mark only Device packets
LMPConfig mark only Config Packets
LMPResponse mark only response packets

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PACKets ANY marks all LMP packets.

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PACKets? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:PACKETS:LMPPACKETS ANY..

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:TPPACKets

Sets or queries the TP packets to mark when the system is searching for TP packets. This setting is only available when the USB bitrate is set to SS.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:TPPACKets \{ANY | TPACK | TPNRDY | TPERDY | TPStatus | TPSTa11 | TPNotify | TPPing | TPResponse\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PACKets:TPPACKets?

Arguments ANY mark all TP packets
TPACK mark all ACK packets
TPNRDY mark al NRDY (not ready) packets
TPERDY mark all ERDY packets.
TPStatus mark all status packets.
TPSTa11 mark all stall packets.
TPNotify mark all notify packets.
TPPing mark all ping packets.
TPResponse mark all response packets.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PACKets:TPPACKets TPSTall marks all stall packets.

SEARCH: SEARCH1:TRIGger:A:BUS:USB:PACKets:TPPACKets? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:PACKETS:TPPACKETS ANY.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:CHAR<x>

Sets or queries the first, second, third or fourth character in the pattern for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:CHAR<x> <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:CHAR<x>?

Arguments <string> is the character.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:CHAR1 "0011111010" searches for 0011111010 as the first character in search 1.

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:CHAR1?might return " 11000001010 " as the first character in search 1 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:NUMSymbols

Sets or queries the number of symbols to search for when USB search type is in pattern mode. This setting is only available when the USB bitrate is set to SS.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:PATtern:NUMSymbols <NR1> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:NUMSymbols?

Arguments $<$ NR1 $>$ is the number 2,3 , or 4 .

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:NUMSymbols 2 sets the number of symbols to 2 .

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:NUMSymbols? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:PATTERN:NUMSYMBOLS 2.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:ORDERedset

This command sets or queries the state of searching for an ordered set.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:ORDERedset \{OFF|ON|O|1\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:ORDERedset?

Arguments OFF disables searching for an ordered set. ON enables searching for an ordered set.

0 disables searching for an ordered set.
1 enables searching for an ordered set.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:ORDERedset ON enables searching for an ordered set on search 1 .

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:ORDERedset? may return OFF indicating that searching for an ordered set on search 1 is disabled.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbol:MINus<x>

Sets or queries the specified character bit pattern (negative disparity) for the specified search.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbo1:MINus<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbo1:MINus<x>?

Arguments <string> is the character bit pattern.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:SYMbol:MINus3 "0011111010" sets the third character bit pattern in search 1 to 0011111010.

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:SYMbo1:MINus2? might return
: SEARCH: SEARCH1:TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:MINUS2
"0011110011", indicating that the second character bit pattern in search 1 is set to 0011110011 .

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x>

Sets or queries the specified character bit pattern (positive disparity) for the specified search.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x> <string>
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x>?

Arguments <string> is the symbol bit pattern.

Examples SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:SYMbol:mINus3 " 1100000101 " sets the third character bit pattern in search 1 to 0011111010 .

SEARCH:SEARCH1:TRIGger:A:BUS:USB:PATtern:SYMbol:MINus2? might return
:SEARCH:SEARCH1:TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:PLUS2
" 1100001100 ", indicating that the second character bit pattern in search 1 is 1100001100.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:QUAlifier

This command sets or queries the qualifier for address and data for the specified bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:QUAlifier \{EQUa1|INrange|LESSEQua1|MOREEQua1|
OUTrange |UNEQual |LESSThan |MOREThan\}
SEARCH:SEARCH<X>:TRIGger:A:BUS:USB:QUAlifier?

Arguments EQUa1 specifies the qualifier as Equal.
INrange specifies the qualifier as Inside Range.
LESSEQual specifies the qualifier as Less Than or Equal to.
moreequal specifies the qualifier as More Than or Equal to.
OUTrange specifies the qualifier as Out of Range.

UNEQual specifies the qualifier as Unequal.
LESSThan specifies the qualifier as Less Than. MOREThan specifies the qualifier as More Than.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:QUALIFIER EQUAL sets the qualifier for USB bus trigger search 1 to EQUal.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:QUALIFIER? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:QUALIFIER UNEQUAL, indicating that the qualifier for USB bus trigger search 1 is set to UNEQual.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SOF:FORMat

This command sets or queries the format for the Start of Frame frame number for the specified USB bus trigger search to determine where to place a mark. <x> is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SOF:FRAMENUMber

Arguments BINary specifies the format as Binary.
HEXadecima 1 specifies the format as Hexadecimal.
SYMBolic specifies the format as Symbolic.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FORMAT HEX sets the format for the SOF frame number for USB bus trigger search 1 to HEXadecimal.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FORMAT? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FORMAT BINARY, indicating that the format for the SOF frame number for USB bus trigger search 1 is set to BINary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SOF:FRAMENUMber

This command sets or queries the frame number string to use for the Start of Frame for the specified USB bus trigger search to determine where to place a mark. $\langle\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SOF:FRAMENUMber <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SOF:FRAMENUMber?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB:SOF:FORMat

Arguments <string> specifies the frame number string for the Start of Frame in a valid format (binary, hexadecimal, or symbolic).

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FRAMENUMBER "1001" sets the frame number string for the SOF for USB bus trigger search 1 to " 1001 " in symbolic format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FRAMENUMBER? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SOF:FRAMENUMBER "xxxxxxx1001", indicating that the frame number string for the SOF for USB bus trigger search 1 is set to "XXXXXXX1001" in binary format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPECIALType

This command sets or queries the PID value for the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPECIALType \{ANY|ERR|PING|PRE|RESERVED|SPLIT\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPECIALType?

Arguments ANY specifies the PID value as Any (XX00).
ERR specifies the PID value as ERR (1100).
PING specifies the PID value as PING (0100).
PRE specifies the PID value as PRE (1100).
RESERVED specifies the PID value as Reserved (0000).
SPLIT specifies the PID value as Split (1000).

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPECIALTYPE ERR sets the PID value for USB bus trigger search 1 to ERR.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPECIALTYPE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPECIALTYPE SPLIT, indicating that the PID value for USB bus trigger search 1 is set to SPLIT.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:ET:VALue

This command sets or queries the Endpoint Type value for the specified USB bus trigger search on split token field to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:ET:VALue \{BULK|CONTROL|DONTCare|INTERRUPT|ISOchronous\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:ET:VALue?

Arguments BULK specifies the Endpoint Type value as Bulk (10). CONTROL specifies the Endpoint Type value as Control (00). DONTCare specifies the Endpoint Type value as Don't Care. INTERRUPT specifies the Endpoint Type value as Interrupt (11). ISOchronous specifies the Endpoint Type value as Isochronous (01).

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:ET:VALUE BULK sets the Endpoint Type value for USB bus trigger search 1 to Bulk.

SEARCH: SEARCH1:TRIGGER:A:BUS:USB:SPLIT:ET:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:ET:VALUE DONTCARE, indicating that the Endpoint Type value for USB bus trigger search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:FORMat

This command sets or queries the format for the hub address of the specified USB bus trigger search on split token field to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:FORMat \{BINary|HEXadecima1\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:FORMat?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:VALue

Arguments BINary specifies the hub address format as Binary.
HEXadecima1 specifies the hub address format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:HUB:FORMAT HEX sets the hub address format for USB bus trigger search 1 to HEXadecimal.

SEARCH: SEARCH2:TRIGGER:A:BUS:USB:SPLIT:HUB: FORMAT? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:SPLIT:HUB:FORMAT BINARY, indicating that the hub address format for USB bus trigger search 2 is set to BINary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:VALue

This command sets or queries the hub address of the specified USB bus trigger on split token field search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:VALue?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:HUB:FORMat

Arguments <string> specifies the hub address. The valid characters are.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE "1001" sets the hub address to "XXX1001".

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE "XX" (for binary format), indicating that the hub address for the USB bus trigger search on split token field is " XX ".

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:FORMat

This command sets or queries the port address format for the specified USB bus trigger on split token field search to determine where to place a mark. $<x>$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:FORMat \{BINary|HEXadecimal\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:FORMat?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB:SPLIT:PORT:VALue

Arguments BINary specifies the port address format as Binary.
HEXadecicma1 specifies the port address format as Hexadecimal.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:PORT:FORMAT HEX sets the port address format for USB bus trigger search 1 to hexadecimal.

SEARCH: SEARCH2:TRIGGER:A:BUS:USB:SPLIT:PORT: FORMAT? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:SPLIT:PORT:FORMAT BINARY, indicating that the port address format for USB bus trigger search 2 on split token field is set to binary.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:VALue

This command sets or queries the port address for the specified USB bus trigger on split token field search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:VALue <string> SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:PORT:VALue?

Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:BUS:USB:SPLIT:PORT:FORMat

Arguments <string> specifies the port address in the valid format. The valid characters are

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE "1111" sets the port address for USB bus trigger search 1 to "XXX1111" for binary format.

SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE? might return SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE "XX", indicating that the port address for USB hub trigger search 1 is set to " XX " in hexadecimal format.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SC:VALue

This command sets or queries the Start/Complete value for the specified USB bus trigger on split token field search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SC:VALue \{CSPLIT|DONTCare|SSPLIT\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SC:VALue?

Arguments CSPLIT specifies Complete (CSPLIT)(1) Start/Complete value. DONTCare specifies the Start/Complete value as Don't Care (X). SSPLIT specifies Start (SSPLIT) (0) Start/Complete value.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:SC:VALUE DONTCARE sets the Start/Complete value for USB bus trigger search 1 to DONTCare.

SEARCH: SEARCH2:TRIGGER:A:BUS:USB:SPLIT:SC:VALUE? might return :SEARCH:SEARCH2:TRIGGER:A:BUS:USB:SPLIT:SC:VALUE SSPLIT, indicating that the Start/Complete value for USB bus trigger search 2 is set to SSPLIT.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SE:VALue

This command sets or queries the Start/End value for the specified USB bus trigger on split token field search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

## NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SE:VALue \{DONTCare|FULLSPeed|ISOALL|ISOEND|ISOMID|ISOSTART|LOWSPeed\} SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:SPLIT:SE:VALue?

Arguments DONTCare specifies Don't Care (X) Start/End bit value. FULLSPeed specifies Control/Bulk/Interrupt Full Speed device (0X) Start/End bit value.

ISOALL specifies Isochronous Data is All (11) Start/End bit value.
ISOEND specifies Isochronous Data is End (01) Start/End bit value.
ISOMID specifies Isochronous Data is Middle (00) Start/End bit value.
ISOSTART specifies Isochronous Data is Start (10) Start/End bit value.
LowSPeed specifies Control/Bulk/Interrupt Low Speed device (1X) Start/End bit value.

Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:SE:VALUE ISOSTART sets the Start/End value for USB bus trigger on split token field search 1 to ISOSTART.
SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:SE:VALUE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:SPLIT:SE:VALUE DONTCARE, indicating that the Start/End value for USB bus trigger on split token field search 1 is set to DONTCare.

## SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:TOKENType

This command sets or queries the token type when the specified USB bus trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

NOTE. Not available on some models.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:TOKENType \{ANY|IN|OUT|SETUP|SOF\}
SEARCH:SEARCH<x>:TRIGger:A:BUS:USB:TOKENType?

Arguments ANY specifies the token type as Any (XX01).
IN specifies the token type as IN (1001).
OUT specifies the token type as OUT (0001).
SETUP specifies the token type as SETUP (1101).
SOF specifies the token type as Start Of Frame (0101).

## Examples SEARCH:SEARCH1:TRIGGER:A:BUS:USB:TOKENTYPE IN sets the token type for USB bus trigger search 1 to IN. <br> SEARCH:SEARCH1:TRIGGER:A:BUS:USB:TOKENTYPE? might return :SEARCH:SEARCH1:TRIGGER:A:BUS:USB:TOKENTYPE SOF, indicating that the token type for USB bus trigger search 1 is set to Start Of Frame.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTOBitrate

This command sets or queries the auto bit rate value for a DDR Memory analysis search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTOBitrate
{AUTO|CUSTom|DDR200|DDR266|DDR333|DDR370|
DDR400|DDR533 |DDR667 |DDR800|DDR1066|DDR1200|DDR1333|DDR1466|
DDR1600|DDR1866|DDR2133|DDR2400|DDR2666|DDR3200|DDR4000|
DDR4800|DDR5000|DDR5500}
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTOBitrate?
```

Arguments AUTO sets the auto bit rate to auto. When auto is selected, the instrument determines the bit rate from the applied signal.
CUSTom sets the auto bit rate to custom. When custom is selected, you set the bit rate value.

DDR200 - DDR5500 sets the bit rate appropriate for the specified standard.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOBITRATE CUSTOM sets the auto bit rate to custom and you can set the desired bit rate value.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOBITRATE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOBITRATE AUTO, indicating that the auto bit rate is set to auto.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTOReflevel

This command sets or queries the reference levels for a DDR Memory analysis search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1 \{AUTO|CUSTOM\}
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1?

Arguments AUTO sets the reference levels to auto. When auto is selected, the instrument determines the reference level from the applied signal.

CUSTom sets the reference levels to custom. When custom is selected, you set the reference level

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOREFLEVEL CUSTOM sets the DDR reference levels to custom and you can set the desired reference level. SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOREFLEVEL? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:AUTOREFLEVEL AUTO, indicating that the reference levels are set to auto.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:BITRate

This command sets or queries the data rate value for a DDR Memory analysis search to determine where to place a mark. You can set the bit rate only when AUTOBITRATE is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:BITRate <NR3> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:BITRate?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTOBitRate

Arguments <NR3> specifies the DDR data rate in bits per second.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:BITRATE $8.0+36$ sets the DDR data rate to $8.0 \mathrm{E}+30 \mathrm{Mb} / \mathrm{s}$.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:BITRATE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:BITRATE 9.9000E+36, indicating that the DDR data rate is set to $9.9 \mathrm{E}+30 \mathrm{Mb} / \mathrm{s}$.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSActive

This command sets or queries whether the expected chip-select will be an active HIGH or LOW.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSActive \{HIGH|LOW\} SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSACtive?

Arguments HIGH sets the search to look for an active HIGH.
LOW sets the search to look for an active HIGH.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSACTIVE HIGH sets the DDR memory search chip select to an active HIGH.

SEARCH: SEARCH1:TRIGGER:A:DDRMEMORY:CSACTIVE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSACTIVE LOW, indicating the chip select is set to an active LOW.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSLevel

This command sets or queries the DDR memory search chip-select level.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSLeve1 <NR3> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSLevel?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSMode

Arguments <NR3> is the amount of chip-select level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSLEVEL 1.1 sets the chip-select level for DDR memory searches to 1.1 volts.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSLEVEL? might return : SEARCH: SEARCH1:TRIGGER:A:DDRMEMORY:CSLEVEL 0.0000, indicating the chip-select level for DDR memory searches is set to zero volts.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSMode

This command sets or queries the chip-select mode for DDR memory searches.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | ```SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSMode {AUTO\|MANual} SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSMode?``` |
| Related Commands | SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:DDRMemory:CSLevel |
| Arguments | AUTO mode calculates the chip-select level for you. |
|  | manual lets you manually set the chip-select level. |

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSMODE MANUAL sets the chip-select mode for DDR memory searches to MANUAL.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSMODE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSMODE AUTO, indicating the chip-select mode for DDR memory searches is set to AUTO.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSSource

This command sets or queries the chip select source for DDR memory searches.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSSource \{CH<x>|MATH<x>|REF<x>|NONe\}
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:CSSource?

Arguments $\mathrm{CH}<\mathrm{x}>$ specifies one input channel as the search source, where $<\mathrm{x}>$ is the channel number and can be $1,2,3$, or 4 .

MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4.

REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

NONe specifies no CSSource.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSSOURCE REF1 sets the chip select source for DDR memory searches to reference 1 .

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSSOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:CSSOURCE CH1, indicating the chip select source for DDR memory searches is channel 1.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:DATASource

This command sets or queries the data source for a DDR Memory analysis search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:DATASource $\{\mathrm{CH}<\mathrm{x}>\mid$ MATH $<\mathrm{x}>\mid$ REF $<\mathrm{x}>\}$

```
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:DATASource?
```

Arguments $\quad \mathrm{CH}<\mathrm{x}\rangle$ specifies one input channel as the search source, where $\langle\mathrm{x}\rangle$ is the channel number.

MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4.

REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:DATASOURCE CH2 sets the DDR data source to CH 2 .

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:DATASOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:DATASOURCE CH1, indicating that the DDR data source is set to CH1.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:HYSteresis

This command sets or queries the hysteresis percent for DDR memory searches.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:HYSteresis <NR3> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:HYSteresis?

Arguments <NR3> is the hysteresis amount in percent.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:HYSTERESIS 0.10 sets the hysteresis for DDR memory searches to 0.10 percent.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:HYSTERESIS? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:HYSTERESIS 1.0000, indicating the hysteresis for DDR memory searches is set to 1.0 percent.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MARgin

This command sets or queries the termination logic margin for back-to-back writes.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MARgin<NR3> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MARgin?

Arguments <NR3> is the termination logic margin in percent.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MARGIN 1.0000 sets the termination logic margin to 1.0 percent.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MARGIN? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MARGIN 0.0000, indicating the termination logic margin is set to 0.0 percent.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MAXCas

This command sets or queries the maximum distance in clock periods, to the left of the start of the mark where the instrument looks for the chip-select pulse.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MAXCas <NR3> SEARCH:SEARCH<X>:TRIGger:A:DDRMemory:MAXCas?

Arguments <NR3> is the maximum distance in clock periods, to the left of the start of the mark where the instrument looks for the chip-select pulse.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MAXCAS 2.0000 sets MAXCas to 2.0 clock periods to the left of the start of the mark.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MAXCAS? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MAXCAS 3.0000, indicating MAXCas is set to 3.0 clock periods to the left of the mark.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MINCas

This command sets or queries the minimum distance in clock periods, to the left of the start of the mark where the instrument looks for the chip-select pulse.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MINCas <NR3> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:MINCas?

Arguments <NR3> is the minimum distance in clock periods, to the left of the start of the mark where the instrument looks for the chip-select pulse.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MINCAS 2.0000 sets MINCas to 2.0 clock periods to the left of the start of the mark.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MINCAS? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:MINCAS 2.0000, indicating MINCas is set to 2.0 clock periods to the left of the mark.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:DATa:HIGH

This command sets or queries the value of the data HIGH reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:HIGH <NRF> <br> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:HIGH? |
| Related Commands | SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1 |
| Arguments | <NRF> specifies the value of the data HIGH reference level in volts. |
| Examples | SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:HIGH 1 sets the data HIGH reference level to 1.0 volt. |
|  | SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:HIGH? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:HIGH 0.0000 , indicating that the data HIGH reference level is set to 0 volt. |

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:DATa:LOW

This command sets or queries the value of the data LOW reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:LOW <NRF> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:LOW?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORef1eve1

Arguments <NRF> specifies the value of the data LOW reference level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:LOW 0.2 sets the data LOW reference level to 0.2 volt.

SEARCH: SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:LOW? might return : SEARCH: SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:LOW $200.0000 \mathrm{E}-3$, indicating that the data LOW reference level is set to 0.2 volt.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:DATa:MID

This command sets or queries the value of the data MID reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:MID <NRF> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:DATa:MID?

Related Commands
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1

Arguments
<NRF> specifies the value of the data MID reference level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:MID 1.5 sets the data MID reference level to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:MID? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:DATA:MID 1.0000 , indicating that the data MID reference level is set to 1.0 volt.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:STROBE:HIGH

This command sets or queries the value of the strobe HIGH reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:STROBE:HIGH <NRF> SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:STROBE:HIGH?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1

Arguments <NRF> specifies the value of the strobe HIGH reference level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:HIGH 5.0 sets the strobe HIGH reference level to 5.0 volts.

SEARCH: SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:HIGH? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:HIGH 0.000 , indicating that the strobe HIGH reference level is set to 0 volt.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:STROBE:LOW

This command sets or queries the value of the strobe LOW reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:STROBE:LOW <NRF>
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:STROBE:LOW?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORef1eve1

Arguments <NRF> specifies the value of the strobe LOW reference level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:LOW 1 sets the strobe LOW reference level to 1.0 volt.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:LOW? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:LOW 0.0000 , indicating that the strobe LOW reference level is set to 0 volt.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLevel:STROBE:MID

This command sets or queries the value of the strobe MID reference level for a DDR Memory analysis search to determine where to place a mark. You can set the value only when AUTOREFLEVEL is Custom. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:REFLeve1:STROBE:MID <NRF> SEARCH:SEARCH<X>:TRIGger:A:DDRMemory:REFLeve1:STROBE:MID?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:AUTORefleve1

Arguments <NRF> specifies the value of the strobe MID reference level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:MID 3 sets the strobe MID reference level to 3.0 volts.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:MID? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:REFLEVEL:STROBE:MID 0.0000 , indicating that the strobe MID reference level is set to 0 volt.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:STANdard

This command sets or queries the DDR standard for a DDR Memory analysis search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:STANdard \{DDR|DDR2|DDR3|GDDR3|LPDDR|DDR3L|DDR4|LPDDR3\}
SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:STANdard?

Arguments <DDR> sets the DDR standard type to DDR.
<DDR2> sets the DDR standard type to DDR2.
<DDR3> sets the DDR standard type to DDR3.
<GDDR3> sets the DDR standard type to GDDR3.
<LPDDR> sets the DDR standard type to LPDDR.
<DDR3L> sets the DDR standard type to DDR3L.
<DDR4> sets the DDR standard type to DDR4.
<LPDDR3> sets the DDR standard type to LPDDR3.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STANDARD DDR2 sets the DDR
standard to DDR2.
SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STANDARD? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STANDARD DDR3, indicating that the DDR standard is set to DDR3.

## SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:STROBEsource

This command sets or queries the strobe source for a DDR Memory analysis search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:DDRMemory:STROBEsource
\{CH<x>|MATH<x>|REF<x>\}
SEARCH:SEARCH<X>:TRIGger:A:DDRMemory:STROBEsource?

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ specifies the input channel as the search source, where $\langle\mathrm{x}\rangle$ is the channel number.

MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4 .
$R E F<x>$ specifies the reference waveform as the search source, where $\langle x\rangle=$ $1,2,3$ or 4.

Examples SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STROBESOURCE REF2 sets the DDR strobe source to REF2.

SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STROBESOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:DDRMEMORY:STROBESOURCE CH1, indicating that the DDR strobe source is set to CH 1 .

## SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:CH<x>

This command sets or queries the slope for an edge trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or the channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:CH<x> \{RISe|FALL|EITher\} SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:CH<x>?

Arguments RISe specifies a rising edge.
FALL specifies a falling edge.
EITher specifies either rising or falling edge.

Examples SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:CH2 RISE sets the Channel 2 slope for search 1 to rise.

SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:CH1 RISE, indicating that the slope for the Channel 1 trigger for search 1 is rise.

## SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:MATH<x>

This command sets or queries the slope for an edge trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or the math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:MATH<x> \{RISe|FALL|EITher\}
SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:MATH<x>?

Arguments RISe specifies a rising edge.
FALL specifies a falling edge.

EITHER specifies either rising or falling edge.
$\begin{array}{ll}\text { Examples } & \text { SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:MATH2 RISE sets the Math } 2 \\ & \text { waveform slope for search } 1 \text { to rise. }\end{array}$
SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:MATH1 RISE, indicating that the slope for the Math 1 waveform trigger for search 1 is rise.

## SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:REF<x>

This command sets or queries the slope for an edge trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number or the reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:REF<x>
\{RISe|FALL|EITher\}
SEARCH:SEARCH<x>:TRIGger:A:EDGE:SLOpe:REF<x>?

Arguments RISe specifies a rising edge.
FALL specifies a falling edge.
EITHER specifies either rising or falling edge.

Examples SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:REF2 RISE sets the Reference 2 waveform slope for search 1 to rise.

SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:EDGE:SLOPE:REF1 FALL, indicating that the slope for the Reference 1 waveform trigger for search 1 is the falling edge.

## SEARCH:SEARCH<x>:TRIGger:A:EDGE:SOUrce

This command sets or queries the source waveform for an edge trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:EDGE:SOUrce
\{CH $<x>\mid$ MATH $<x>\mid R E F<x>\}$
SEARCH:SEARCH<x>:TRIGger:A:EDGE:SOUrce?

Arguments $\mathrm{CH}\langle\mathrm{x}\rangle$ specifies one input channel as the edge source, where $\langle\mathrm{x}\rangle$ is the channel number.

MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4 .

REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:EDGE:SOURCE CH2 sets the source waveform for the A trigger to Channel 2.

SEARCH:SEARCH1:TRIGGER:A:EDGE:SOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:EDGE:SOURCE CH2, indicating that the Channel 2 edge trigger is the source for search 1.

## SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:CH<x>

This command sets or queries the polarity for a glitch trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\} SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:CH<x>?

Arguments EITher specifies positive or negative polarity.
NEGAtive specifies a negative polarity.
POSITIVe specifies a positive glitch polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:CH2 NEGATIVE specifies that the Channel 2 glitch polarity must be negative for search 1 .

SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:CH1 NEGATIVE, indicating that the Channel 1 glitch polarity for search 1 is negative.

## SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:MATH<x>

This command sets or queries the polarity for a glitch trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:MATH<x> \{EITher|NEGAtive|POSITIVe\} SEARCH: SEARCH<x>:TRIGger:A:GLItch:POLarity:MATH<x>?

Arguments EITher specifies positive or negative polarity. NEGAtive specifies a negative polarity. POSITIVe specifies a positive glitch polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:MATH2 NEGATIVE specifies that the Math 2 waveform glitch polarity must be negative for search 1 .

SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:MATH1 POSITIVE, indicating that the Math 1 waveform glitch polarity for search 1 is positive.

## SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:REF<x>

This command sets or queries the polarity for a glitch trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:REF<x>
\{EITher|NEGAtive|POSITIVe\}
SEARCH:SEARCH<x>:TRIGger:A:GLItch:POLarity:REF<x>?

Arguments EITher specifies positive or negative polarity.
NEGAtive specifies a negative polarity.
POSITIVe specifies a positive glitch polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:REF2 NEGATIVE specifies that the Reference 2 waveform glitch polarity must be negative for search 1.

SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:GLITCH:POLARITY:REF1 POSITIVE, indicating that the Reference 1 waveform glitch polarity for search 1 is positive.

## SEARCH:SEARCH<x>:TRIGger:A:GLItch:TRIGIF

This command sets or queries the accept or reject state for a glitch trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:GLItch:TRIGIF \{ACCept|REJect\} SEARCH:SEARCH<x>:TRIGger:A:GLItch:TRIGIF?

Arguments ACCept specifies that a glitch occurs.
REJect specifies that a glitch does not occur.

Examples SEARCH:SEARCH1:TRIGGER:A:GLITCH:TRIGIF ACCEPT specifies to place a mark if the A trigger glitch occurs.

SEARCH:SEARCH1:TRIGGER:A:GLITCH:TRIGIF? might return :SEARCH:SEARCH1:TRIGGER:A:GLITCH:TRIGIF ACCEPT, indicating that a mark will be placed if a glitch occurs.

## SEARCH:SEARCH<x>:TRIGger:A:GLItch:WIDth

This command sets or queries the glitch width for a glitch trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:GLItch:WIDth <NR3> SEARCH:SEARCH<x>:TRIGger:A:GLItch:WIDth?

Arguments <NR3> specifies the glitch width in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:GLITCH:WIDTH 0.000000002 sets the search1 glitch width to 2.0 ns .

SEARCH:SEARCH1:TRIGGER:A:GLITCH:WIDTH? might return :SEARCH:SEARCH1:TRIGGER:A:GLITCH:WIDTH 1.50E-6, indicating that the search 1 glitch width is set to $1.50 \mu \mathrm{~s}$.

## SEARCH:SEARCH<x>:TRIGger:A:LEVel:CH<x>

This command sets or queries the level for an edge trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the channel number. Each channel can have an independent level.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LEVe1:CH<x> \{<NR3>|ECL|TTL\} SEARCH:SEARCH<x>:TRIGger:A:LEVe1:CH<x>?

Arguments <NR3> specifies the trigger level in volts.
ECL specifies a -1.3 V trigger level.
TTL specifies a 1.4 V trigger level.

Examples SEARCH:SEARCH1:TRIGGER:A:LEVEL:CH2 1.0 sets the Channel 1 A trigger level for search 1 to 1.0 Volts.

SEARCH:SEARCH1:TRIGGER:A:LEVEL:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:LEVEL:CH1 200.0000E-3, indicating the Channel 1 trigger level for search 1 is 200 mV .

## SEARCH:SEARCH<x>:TRIGger:A:LEVel:MATH<x>

This command sets or queries the math waveform level for an edge trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LEVe1:MATH<x> \{<NR3>|ECL|TTL\} SEARCH:SEARCH<x>:TRIGger:A:LEVe1:MATH<x>?

Arguments <NR3> specifies the trigger level in volts.
ECL specifies a -1.3 V trigger level.
TTL specifies a 1.4 V trigger level.

Examples SEARCH:SEARCH1:TRIGGER:A:LEVEL:MATH2 0.20 sets the Math 2 waveform trigger level for search 1 to 200 mV .

SEARCH:SEARCH1:TRIGGER:A:LEVEL:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:LEVEL:MATH1 100.0000E-3, indicating that the Math 2 waveform trigger level for search 1 is set to 100 mV .

## SEARCH:SEARCH<x>:TRIGger:A:LEVel:REF<x>

This command sets or queries the specified reference waveform level for a trigger search to determine where to place a mark. SEARCH $<x>$ is the search number and $\operatorname{REF}<x>$ is the reference channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LEVe1:REF<x> \{<NR3>|ECL|TTL\} SEARCH:SEARCH<x>:TRIGger:A:LEVe1:REF<x>?

Arguments <NR3> specifies the trigger level in volts.
ECL specifies a -1.3 V trigger level.
TTL specifies a 1.4 V trigger level.

Examples SEARCH:SEARCH1:TRIGGER:A:LEVEL:REF2 0.20 sets the Reference 2 waveform trigger level for search 1 to 200 mV .

SEARCH:SEARCH1:TRIGGER:A:LEVEL:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:LEVEL:REF1 200.0000E-3, indicating that the Reference 1 waveform trigger level for search 1 is set to 200 mV .

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:FUNCtion

This command sets or queries the logic operator for a pattern or state trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark
$\begin{array}{ll}\text { Syntax } & \text { SEARCH:SEARCH }<x>\text { :TRIGger:A:LOGIC:FUNCtion \{AND|NANd|NOR|OR\} } \\ & \text { SEARCH:SEARCH }<x>\text { :TRIGger:A:LOGIC:FUNCtion? }\end{array}$

Arguments AND places a mark if all conditions are true. NANd places a mark if any of the conditions are false. NOR places a mark if all conditions are false. OR places a mark if any of the conditions are true.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:FUNCTION AND sets the trigger a logic function for search 1 to AND.

SEARCH:SEARCH1:TRIGGER:A:LOGIC:FUNCTION? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:FUNCTION NOR, indicating that the logic function for search 1 is set to NOR.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:INPut:CH<x>

This command sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LOGIC:INPut:CH<x> \{HIGH|LOW|X\}
SEARCH:SEARCH<x>:TRIGger:A:LOGIC:INPut:CH<x>?

Arguments HIGH specifies the logic high.
LOW specifies the logic low.
X specifies a "don't care" state.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:CH2 HIGH sets the logic input for Channel 1 to HIGH.

SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:CH1 LOW, indicating the logic input on Channel 1 for search 1 is set to LOW.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:INPut:MATH<x>

This command sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or the math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LOGIC:INPut:MATH<x> \{HIGH|LOW|X\} SEARCH:SEARCH<x>:TRIGger:A:LOGIC:INPut:MATH<x>?

Arguments HIGH specifies a high logic level.
Low specifies a low logic level.
X specifies a "don't care" condition.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:MATH2 HIGH sets the Math 2 waveform logic input for search 1 to HIGH.

SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:MATH1 LOW, indicating the Math 1 waveform logic input for search 1 is set to LOW.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:INPut:REF<x>

This command sets or queries the Boolean logic criteria for a pattern or state trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the reference channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:LOGIC:INPut:REF<X> \{HIGH|LOW|X\} SEARCH:SEARCH<x>:TRIGger:A:LOGIC:INPut:REF<x>?

Arguments HIGH specifies a high logic level. LOW specifies a low logic level. X specifies a "don't care" condition.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:REF2 HIGH sets the Reference 2 waveform logic input for search 1 to HIGH.

SEARCH: SEARCH1:TRIGGER:A:LOGIC:INPUT:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:INPUT:REF1 LOW, indicating the Reference 1 waveform login input for search 1 is set to LOW.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:THReshold:CH<x>

This command sets or queries the channel threshold level for a pattern or state trigger search to determine where to place a mark. SEARCH $\langle x\rangle$ is the search number and $\mathrm{CH}<\mathrm{x}>$ is the channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LOGIC:THReshold:CH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:LOGIC:THReshold:CH<x>?

Arguments <NR3> specifies the threshold level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:CH2 1.3 sets the Channel 2 logic threshold for search 1 to 1.3 Volts.

SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:CH1 2.0000, indicating the Channel 1 logic threshold for search 1 is set to 2.0 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:THReshold:MATH<x>

This command sets or queries the math waveform threshold level for a pattern or state trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LOGIC:THReshold:MATH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:LOGIC:THReshold:MATH<x>?

Arguments <NR3> specifies the threshold level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:MATH2 2.0 sets the Math 2 waveform logic trigger threshold for search 1 to 2.0 Volts.

SEARCH: SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:MATH1 1.4000, indicating the Math 1 waveform logic threshold for search 1 is set to 1.4 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:LOGIc:THReshold:REF<x>

This command sets or queries the reference waveform threshold level for a pattern or state trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:LOGIC:THReshold:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:LOGIc:THReshold:REF<x>?

Arguments <NR3> specifies the threshold level in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:REF2 2.0 sets the Reference 2 waveform logic trigger threshold for search 1 to 2.0 Volts.

SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:LOGIC:THRESHOLD:REF1 1.4000, indicating the Reference 1 waveform logic trigger threshold for search 1 is set to 1.4 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn

This command sets or queries the pattern trigger pattern test that determines where to place a mark. <x> is the search number.

Group Search and Mark<br>Syntax SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn<br>\{TRUe|FALSe|LESSThan|MOREThan\}<br>SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn?<br>Related Commands SEARCH:SEARCH $<x>$ :TRIGger:A:PATtern:WHEn:LESSLimit, SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:MORELimit

Arguments TRUe specifies a TRUE logic level.
FALSe specifies a FALSE logic level.
LESSThan specifies the pattern must be TRUE less than the time limit.
MOREThan specifies the pattern must be TRUE more than the time limit.

Examples SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN TRUE sets the pattern trigger to trigger when the pattern is TRUE.

SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN? might return
:SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN TRUE, indicating search 1 will place a mark when the pattern trigger pattern is TRUE.

## SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:LESSLimit

This command sets or queries the time the pattern trigger lesslimit test uses to determines where to place a mark. <x> is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:LESSLimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:LESSLimit?

Related Commands SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn, SEARCH:SEARCH $<\mathrm{x}>$ : TRIGger:A:PATtern:WHEn:MORELimit

Arguments <NR3> is the time in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN:LESSLIMIT 1.0e-9 sets the less than time limit to 1 ns .

SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN:LESSLIMIT? might return :SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN:LESSLIMIT 1.0000E-9, indicating the lesslimit time is set to 1 ns .

## SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:MORELimit

This command sets or queries the time the pattern trigger morelimit test uses to determines where to place a mark. <x> is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:MORELimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:PATtern:WHEn:MORELimit?

Related Commands SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:PATtern:WHEn, SEARCH:SEARCH $<\mathrm{x}>$ : TRIGger:A:PATtern:WHEn:LESSLimit

Arguments <NR3> is the time in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN:MORELIMIT $2.0 \mathrm{e}-9$ sets the more limit time to 2 ns .

SEARCH: SEARCH1:TRIGGER:A:PATTERN:WHEN:MORELIMIT? might return :SEARCH:SEARCH1:TRIGGER:A:PATTERN:WHEN:MORELIMIT $500.0000 \mathrm{E}-12$, indicating the more limit time is set to 500 ps .

## SEARCH:SEARCH<x>:TRIGger:A:PULse:SOUrce

This command sets or queries the source waveform for a pulse trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

NOTE. This is the source for Glitch, Width, Runt, Timeout or Window searches.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:PULse:SOUrce
\{CH $<x>\mid$ MATH $<x>\mid R E F<x>\}$
SEARCH:SEARCH<X>:TRIGger:A:PULse:SOUrce?

Arguments $\quad \mathrm{CH}\langle\mathrm{x}\rangle$ specifies one input channel as the edge source, where $\langle\mathrm{x}\rangle=1,2,3$ or 4 .
MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4.

REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:PULSE:SOURCE REF1 sets the pulse trigger source for search1 to the Reference 1 waveform.

SEARCH: SEARCH1:TRIGGER:A:PULSE:SOURCE? might return : SEARCH:SEARCH1:TRIGGER:A:PULSE:SOURCE MATH1, indicating the pulse trigger source for search 1 is set to the Math 1 waveform.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:CH<x>

This command sets or queries the polarity setting for a runt trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\}
SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:CH<x>?

Arguments EITher places a mark on a runt of either polarity.
NEGative places a mark when the falling edge crosses the high threshold and the rising edge recrosses the high threshold without either edge ever crossing the low threshold.
POSitive places a mark when the rising edge crosses the low threshold and the falling edge recrosses the low threshold without either edge ever crossing the high threshold.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:CH2 NEGATIVE sets the Channel 2 runt polarity for search 1 to negative.

SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:CH1 POSITIVE, indicating the Channel 1 runt polarity for search 1 is set to positive.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:MATH<x>

This command sets or queries the polarity setting for a runt trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or math waveform number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:MATH<x>
    {EITher|NEGAtive|POSITIVe}
    SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:MATH<x>?
```

Arguments EITher places a mark on a runt of either polarity.
NEGative places a mark when the falling edge crosses the high threshold and the rising edge recrosses the high threshold without either edge ever crossing the low threshold.

POSitive places a mark when the rising edge crosses the low threshold and the falling edge recrosses the low threshold without either edge ever crossing the high threshold.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:MATH2 NEGATIVE sets the Math 2 waveform runt polarity for search 1 to negative.

SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:MATH1 POSITIVE, indicating the Math 1 waveform runt polarity for search 1 is set to positive.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:REF<x>

This command sets or queries the polarity setting for a runt trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:REF<x> \{EITher|NEGAtive|POSITIVe\} SEARCH:SEARCH<x>:TRIGger:A:RUNT:POLarity:REF<x>?

Arguments EITher places a mark on a runt of either polarity.
NEGative places a mark when the falling edge crosses the high threshold and the rising edge recrosses the high threshold without either edge ever crossing the low threshold.

POSitive places a mark when the rising edge crosses the low threshold and the falling edge recrosses the low threshold without either edge ever crossing the high threshold.

## Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:REF2 NEGATIVE sets the Reference 1 waveform runt polarity for search 1 to negative.

SEARCH: SEARCH1:TRIGGER:A:RUNT:POLARITY:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:POLARITY:REF1 POSITIVE, indicating the Reference 1 waveform runt polarity for search 1 is set to positive.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:CH<x>

This command sets or queries the channel threshold HIGH level for a runt trigger search to determine where to place a mark. <x> is the search number or the channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:CH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:CH<x>?

Arguments <NR3> specifies the HIGH threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:CH2 1.3 sets the runt threshold high level to 1.3 Volts.

SEARCH: SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:CH1 2.0000, indicating the Channel 1 runt trigger high threshold is set to 2.0 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:MATH<x>

This command sets or returns the math waveform threshold HIGH level for a runt trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:MATH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:MATH<x>?

Arguments <NR3> specifies the HIGH threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:MATH2 1.3 sets the runt trigger HIGH threshold to 1.3 Volts.

SEARCH: SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:MATH1 2.0000 , indicating that the Math 1 waveform runt trigger HIGH threshold is set to 2.0 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:REF<x>

This command sets or returns the reference waveform threshold HIGH level for a runt trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:HIGH:REF<x>?

Arguments <NR3> specifies the HIGH threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:REF2 1.3 sets the runt trigger HIGH threshold to 1.3 Volts.

SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:HIGH:REF1 2.0000, indicating that the Reference 1 waveform runt trigger HIGH threshold is set to 2.0 Volts.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:CH<x>

This command sets or queries the channel waveform threshold LOW level for a runt trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:CH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:CH<x>?

Arguments <NR3> specifies the LOW threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:CH2 0.10 sets the Channel 2 LOW runt trigger threshold for search 1 to 100 mV .<br>SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:CH1 800.0000E-3, indicating the Channel 1 runt trigger LOW threshold for search 1 is set to 800 mV .

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:MATH<x>

This command sets or queries the math waveform threshold LOW level for a runt trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:MATH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:MATH<x>?

Arguments <NR3> specifies the LOW threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:MATH2 0.10 sets the Math 2 waveform runt trigger LOW threshold for search 1 to 100 mV .

SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:MATH1 $800.0000 \mathrm{E}-3$, indicating the Math 1 waveform runt trigger LOW threshold for search 1 is set to 800 mV .

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:REF<x>

This command sets or returns the reference waveform threshold LOW level for a runt trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or the reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:THReshold:LOW:REF<x>?

Arguments <NR3> specifies the LOW threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:REF2 0.10 sets the Reference 2 waveform runt trigger LOW threshold for search 1 to 100 mV .

SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:THRESHOLD:LOW:REF1 $800.0000 \mathrm{E}-3$, indicating that the Reference 1 waveform runt trigger LOW threshold for search 1 is 800 mV .

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:WHEn

This command sets or returns the condition setting for a runt trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:WHEn \{OCCurs|WIDERthan\} SEARCH:SEARCH<x>:TRIGger:A:RUNT:WHEn?

Arguments occurs argument specifies a trigger event if a runt of any detectable width occurs. WIDERthan argument sets the oscilloscope to trigger if a runt pulse is detected with width wider than the time set by the SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger: A:RUNT:WIDth command.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:WHEN WIDERTHAN sets the oscilloscope to trigger when a runt pulse is detected with width wider than the time set by the SEARCH:SEARCH $<\mathrm{x}>$ :TRIGger:A:RUNT:WIDth command.

SEARCH:SEARCH1:TRIGGER:A:RUNT:WHEN? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:WHEN OCCURS, indicating that a mark is placed if a runt trigger event occurs.

## SEARCH:SEARCH<x>:TRIGger:A:RUNT:WIDth

This command sets or queries the width setting for a runt trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:RUNT:WIDth <NR3> SEARCH:SEARCH<x>:TRIGger:A:RUNT:WIDth?

Arguments <NR3> specifies the minimum width in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:RUNT:WIDTH 400E-12 sets the runt trigger minimum width for search 1 to 0.4 nanoseconds.<br>SEARCH:SEARCH1:TRIGGER:A:RUNT:WIDTH? might return :SEARCH:SEARCH1:TRIGGER:A:RUNT:WIDTH $500.0000 \mathrm{E}-12$, indicating that the runt trigger minimum width for search 1 is set to 0.5 nanoseconds.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:EDGE

This command sets or queries the clock slope setting for a setup/hold trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:EDGE \{FALL|RISe\} SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:EDGE?

Arguments FALL specifies the polarity as the clock falling edge.
RISe specifies the polarity as the clock rising edge.

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:EDGE FALL sets the setup/hold trigger clock slope polarity for search 1 to falling edge.

SEARCH: SEARCH1:TRIGGER:A:SETHOLD:CLOCK:EDGE? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:EDGE RISE, indicating that the setup/hold trigger clock slope polarity for search 1 is set to rising edge.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:SOUrce

This command sets or queries the clock source setting for a setup/hold trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk: SOUrce
$\{\mathrm{CH}<\mathrm{x}>|\mathrm{MATH}<\mathrm{x}>|$ REF $<\mathrm{x}>\}$
SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk: SOUrce
SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:SOUrce?

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ specifies an input channel as the edge source, where $<\mathrm{x}>=1,2,3$ or 4 . MATH $\langle x>$ specifies the math waveform as the search source, where $<x>=1,2,3$ or 4.
$\operatorname{REF}<\mathrm{x}>$ specifies the reference waveform as the search source, where $<\mathrm{x}>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:SOURCE MATH1 sets the setup/hold trigger clock source setting for search 1 to MATH1.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:SOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:SOURCE CH1, indicating that the setup/hold trigger clock source setting for search 1 is set to CH 1 .

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:CH<x>

This command sets or queries the clock threshold setting for a setup/hold trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:CH<x> \{NR3|ECL|TTL\} SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:CH<x>?

Arguments <NR3> is the clock level in volts.
ECL specifies a preset ECL high level of -1.3 V .
TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:CH2 ECL sets the Channel 2 setup/hold trigger clock threshold setting for search 1 to ECL.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:CH1 -1.3000 , indicating that the Channel 1 setup/hold trigger clock threshold setting for search 1 is set to -1.3 volts.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:MATH<x>

This command sets or queries the clock threshold setting for a setup/hold trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:MATH<x> \{NR3|ECL|TTL\}
SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:MATH<x>?

Arguments <NR3> is the clock level in volts.
ECL specifies a preset ECL high level of -1.3 V .
TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:MATH2 ECL sets the clock threshold setting of the Math 2 waveform for a setup/hold trigger search to ECL.

SEARCH: SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:MATH1? might return : SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:MATH1 1.4000, indicating that the clock threshold setting of the Math 1 waveform for a setup/hold trigger search is set to 1.4 volts.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:REF<x>

This command sets or queries the clock threshold setting for a setup/hold trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:REF<X> \{NR3|ECL|TTL\}
SEARCH:SEARCH<x>:TRIGger:A:SETHold:CLOCk:THReshold:REF<x>?

Arguments <NR3> is the clock level in volts.
ECL specifies a preset ECL high level of -1.3 V .
TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:REF2 ECL sets the clock threshold setting of the Reference 2 waveform for a setup/hold trigger search to ECL.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:CLOCK:THRESHOLD:REF1 1.0000, indicating that the clock threshold setting of the Reference 1 waveform for a setup/hold trigger search is set to 1 volt.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:SOUrce

This command sets or queries the data source setting for a setup/hold trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:Source \{CH $<x>\mid$ MATH $<x>\mid$ REF $<x>\}$
SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:SOUrce?

Arguments $\quad \mathrm{CH}<\mathrm{x}\rangle$ specifies an input channel as the search source, where $\langle\mathrm{x}>=1,2,3$ or 4 . MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4.

REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:SOURCE MATH1 sets the setup/hold trigger data source setting for search 1 to the Math 1 waveform.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:SOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:SOURCE CH1, indicating that the setup/hold trigger data source setting for search 1 is set to the Channel 1.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:CH<x>

This command sets or queries the data threshold setting for a setup/hold trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:CH<x> \{NR3|ECL|TTL\}
SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:CH<x>?

Arguments <NR3> is the clock level in volts.
ECL specifies a preset ECL high level of -1.3 V .
TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:CH2 ECL sets the Channel 2 setup/hold trigger data threshold setting for search 1 to -1.3 volts.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:CH1 1.4000 , indicating that the Channel 1 setup/hold trigger data threshold setting for search 1 is set to 1.4 V .

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:MATH<x>

This command sets or queries the data threshold setting for a setup/hold trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:MATH<x> \{NR3|ECL|TTL\}
SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:MATH<x>?

Arguments <NR3> is the clock level in volts. ECL specifies a preset ECL high level of -1.3 V .

TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:MATH1 ECL sets the Math 2 waveform setup/hold trigger data threshold setting for search 1 to -1.3 volts.

SEARCH: SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:MATH1? might return : SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:MATH1 1.0000 , indicating that the Math 1 waveform setup/hold trigger data threshold setting for search 1 is set to 1.0 volt.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:REF<x>

This command sets or queries the data threshold setting for a setup/hold trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:REF<x> \{NR3|ECL|TTL\}
SEARCH:SEARCH<x>:TRIGger:A:SETHold:DATa:THReshold:REF<x>?

Arguments <NR3> is the clock level in volts.
ECL specifies a preset ECL high level of -1.3 V .
TTL specifies a preset TTL high level of 1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:REF2 ECL sets the Reference 2 waveform setup/hold trigger data threshold setting for search 1 to -1.3 volts.

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:DATA:THRESHOLD:REF1 1.4000, indicating that the Reference 1 waveform setup/hold trigger data threshold setting for search 1 is set to 1.4 volts.

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:HOLDTime

This command sets or queries the hold time setting for a setup/hold trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:HOLDTime <NR3> SEARCH:SEARCH<x>:TRIGger:A:SETHold:HOLDTime?

Arguments <NR3> specifies the hold time setting in seconds. Positive values for hold time occur after the clock edge. Negative values occur before the clock edge.

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:HOLDTIME 400E-12 sets the setup/hold trigger hold time setting for search 1 to 400 ps .

SEARCH:SEARCH1:TRIGGER:A:SETHOLD:HOLDTIME? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:HOLDTIME 500.0000E-12, indicating that the setup/hold trigger hold time setting for search 1 is set to 0.5 ns .

## SEARCH:SEARCH<x>:TRIGger:A:SETHold:SETTime

This command sets or queries the setup time setting for a setup/hold trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:SETHold:SETTime <NR3> SEARCH:SEARCH<x>:TRIGger:A:SETHold:SETTime?

Arguments <NR3> specifies the setup time for setup and hold violation triggering.

Examples SEARCH:SEARCH1:TRIGGER:A:SETHOLD:SETTIME 2E-9 sets the setup/hold trigger setup time setting for search 1 to 2 ns .

SEARCH: SEARCH1:TRIGGER:A:SETHOLD:SETTIME? might return :SEARCH:SEARCH1:TRIGGER:A:SETHOLD:SETTIME 1.0000E-9, indicating that the setup/hold trigger setup time setting for search 1 is set to 1.0 ns .

## SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:EDGE

This command sets or queries the clock slope setting for a state trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:EDGE \{FALL|RISe\} SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:EDGE?

Arguments FALL specifies polarity as the clock falling edge.
RISe specifies polarity as the clock rising edge.

Examples SEARCH:SEARCH1:TRIGGER:A:STATE:CLOCK:EDGE RISE sets the state trigger clock slope polarity setting for search 1 to RISE.

SEARCH: SEARCH1:TRIGGER:A:STATE:CLOCK:EDGE? might return :SEARCH:SEARCH1:TRIGGER:A:STATE:CLOCk:EDGE FALL, indicating that the state trigger clock slope polarity setting for search 1 is set to FALL.

## SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:SOUrce

This command sets or queries the clock source of the twelve waveforms for a state trigger search to determine where to place a mark. $\langle x\rangle$ is the search number. The hardware trigger is always on the channel 4.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:SOUrce \{CH $<x>\mid$ MATH $<x>\mid$ REF $<x>\}$
SEARCH:SEARCH<x>:TRIGger:A:STATE:CLOCk:SOUrce?

Arguments $\quad \mathrm{CH}<\mathrm{x}\rangle$ specifies an input channel as the search source, where $\langle\mathrm{x}\rangle=1,2,3$ or 4 . MATH $\langle x\rangle$ specifies the math waveform as the search source, where $\langle x\rangle=1,2,3$ or 4 .
REF $<x>$ specifies the reference waveform as the search source, where $<x>=$ $1,2,3$ or 4 .

Examples SEARCH:SEARCH1:TRIGGER:A:STATE:CLOCK:SOURCE CH2 sets the state trigger clock source for search 1 to Channel 2.

SEARCH:SEARCH1:TRIGGER:A:STATE:CLOCK:SOURCE? might return :SEARCH:SEARCH1:TRIGGER:A:STATE:CLOCK:SOURCE CH1, indicating that the state trigger clock source for search 1 is set to Channel 1.

## SEARCH:SEARCH<x>:TRIGger:A:STATE:WHEn

This command sets or queries the state trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:STATE:WHEn \{TRUe|FALSe\}
SEARCH:SEARCH<x>:TRIGger:A:STATE:WHEn?

Arguments TRUe specifies a TRUE logic level.
FALSe specifies a FALSE logic level.

Examples SEARCH:SEARCH1:TRIGGER:A:STATE:WHEN FALSE sets the state trigger logic level for search 1 to FALSE.

SEARCH:SEARCH1:TRIGGER:A:STATE:WHEN? might return :SEARCH:SEARCH1:TRIGGER:A:STATE:WHEN TRUE, indicating that the state trigger logic level for search 1 is set to TRUE.

## SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:CH<x>

This command sets or queries the polarity for a timeout trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

| Group | Search and Mark |
| :---: | :---: |
| Syntax | ```SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:CH<x> {STAYSHigh\|STAYSLow|EITher} SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:CH<x>?``` |
| Arguments | STAYSHigh specifies the polarity stays HIGH. |
|  | STAYSLow specifies the polarity stays LOW. |
|  | EITher specifies the polarity either stays HIGH or stays LOW. |
| Examples | SEARCH: SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:CH2 STAYSLOW sets the Channel 2 timeout trigger polarity for search 1 to STAYSLOW. |
|  | SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:CH1 STAYSHIGH, indicating that the Channel 2 timeout trigger polarity for search 1 is set to STAYSHIGH. |

## SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:MATH<x>

This command sets or queries the polarity for a timeout trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:MATH<x>
    {STAYSHigh|STAYSLow|EITher}
    SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:MATH<x>?
```

Arguments STAYSHigh specifies the polarity stays HIGH
STAYSLow specifies the polarity stays LOW.
EITher specifies the polarity either stays HIGH or stays LOW.

Examples SEARCH:SEARCH1:TRIGGER:A:TIMEOUT: POLARITY:MATH2 STAYSLOW sets the Math 2 waveform timeout trigger polarity for search 1 to STAYSLOW.

SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:MATH1 STAYSHIGH, indicating that the Math 1 waveform timeout trigger polarity for search 1 is set to STAYSHIGH.

## SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:REF<x>

This command sets or queries the polarity for a timeout trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:REF<x> \{STAYSHigh|STAYSLow|EITher\} SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:POLarity:REF<x>?

Arguments STAYSHigh specifies the polarity stays HIGH.
STAYSLow specifies the polarity stays LOW.
EITher specifies the polarity either stays HIGH or stays LOW.

Examples SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:REF2 STAYSLOW sets the Reference 2 waveform timeout trigger polarity for search 1 to STAYSLOW.

SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:POLARITY:REF1 STAYSHIGH, indicating that the Reference 2 waveform timeout trigger polarity for search 1 is set to STAYSHIGH.

## SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:TIMe

This command sets or queries the time setting for a timeout trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:TIMe <NR3> SEARCH:SEARCH<x>:TRIGger:A:TIMEOut:TIMe?

Arguments <NR3> is the time in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:TIME 400E-9 sets the timeout trigger time setting for search 1 to 400 ns .

SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:TIME? might return :SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:TIME 500.0000E-12, indicating that the timeout trigger time setting for search 1 is set to 500 ns .

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:DELTATime

This command sets or queries the transition time setting for a transition trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:DELTATime <NR3> SEARCH:SEARCH<x>:TRIGger:A:TRANsition:DELTATime?

Arguments <NR3> specifies the transition time in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:TIMEOUT:TIME 400E-9 sets the transition trigger time setting for search 1 to 400 ns .

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:DELTATIME? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:DELTATIME 500.0000E-12, indicating that the transition trigger time setting for search 1 is set to 500 ps .

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:CH<x>

This command sets or queries the polarity setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:CH<x>
    {EITher|NEGAtive|POSITIVe}
    SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:CH<x>?
```

Arguments EITher specifies either positive or negative polarity.
NEGative specifies that a pulse edge must traverse from the upper (most positive) to lower (most negative) level for transition triggering to occur.

POSitive specifies that a pulse edge must traverse from the lower (most negative) to higher (most positive) level for transition triggering to occur.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:CH12 NEGATIVE sets the Channel 2 transition trigger polarity setting for search 1 to NEGATIVE.

SEARCH: SEARCH1:TRIGGER:A:TRANSITION: POLARITY:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:CH1 POSITIVE, indicating that the Channel 1 transition trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:MATH<x>

This command sets or queries the polarity setting for a transition trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:MATH<x> \{EITher|NEGAtive|POSITIVe\}
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:MATH<x>?

Arguments EITher specifies either positive or negative polarity.
NEGative specifies that a pulse edge must traverse from the upper (most positive) to lower (most negative) level for transition triggering to occur.

POSitive specifies that a pulse edge must traverse from the lower (most negative) to higher (most positive) level for transition triggering to occur.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:MATH2 NEGATIVE sets the Math 2 waveform transition trigger polarity setting for search 1 to NEGATIVE.<br>SEARCH: SEARCH1:TRIGGER:A:TRANSITION: POLARITY:MATH1? might return : SEARCH:SEARCH1:TRIGGER:A:TRANSITION: POLARITY:MATH1 POSITIVE, indicating that the Math 1 waveform transition trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:REF<x>

This command sets or queries the polarity setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:REF<x> \{EITher|NEGAtive|POSITIVe\}
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:POLarity:REF<x>?

Arguments EITher specifies either positive or negative polarity.
NEGative specifies that a pulse edge must traverse from the upper (most positive) to lower (most negative) level for transition triggering to occur.

POSitive specifies that a pulse edge must traverse from the lower (most negative) to higher (most positive) level for transition triggering to occur.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:REF2 NEGATIVE sets the Reference 2 waveform transition trigger polarity setting for search 1 to NEGATIVE.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:POLARITY:REF1 POSITIVE, indicating that the Reference 2 waveform transition trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:CH<x>

This command sets or queries the threshold high voltage level setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:CH<x> <NR3>
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:CH<x>?
```

Arguments <NR3> specifies the HIGH threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:CH2 1.5 sets the Channel 2 transition trigger HIGH threshold setting for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:CH1 2.0000 , indicating that the Channel 1 transition trigger HIGH threshold setting for search 1 is set to 2 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:MATH<x>

This command sets or queries the threshold high voltage level setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:MATH<x> <NR3>
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH: MATH<X>?

Arguments <NR3> specifies the HIGH threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:MATH2 1.5 sets the Math 2 waveform transition trigger HIGH threshold setting for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:MATH1 2.0000 , indicating that the Math 1 waveform transition trigger HIGH threshold setting for search 1 is set to 2 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:REF<x>

This command sets or queries the threshold high voltage level setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:HIGH:REF<x>?

Arguments <NR3> specifies the HIGH threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:REF2 1.5 sets the Reference 2 waveform transition trigger HIGH threshold setting for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:REF1? might return
: SEARCH: SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:HIGH:REF1 2.0000 , indicating that the Reference 1 waveform transition trigger HIGH threshold setting for search 1 is set to 2 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:CH<x>

This command sets or queries the threshold low voltage level setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}>$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:CH<x> <NR3>
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:CH<x>?

Arguments <NR3> specifies the LOW threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:CH2 0.5 sets the Channel 2 transition trigger LOW threshold setting for search 1 to 0.5 volts.

SEARCH: SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:CH1? might return : SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:CH1 $800.0000 \mathrm{E}-3$, indicating that the Channel 1 transition trigger LOW threshold setting for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:MATH<x>

This command sets or queries the threshold low voltage level setting for a transition trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:MATH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:MATH<x>?

Arguments <NR3> specifies the LOW threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:MATH2 0.5 sets the Math 2 waveform transition trigger LOW threshold setting for search 1 to 0.5 volts.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:MATH1? might return
:SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:MATH1 $800.0000 \mathrm{E}-3$, indicating that the Math 1 waveform transition trigger LOW threshold setting for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:REF<x>

This command sets or queries the threshold low voltage level setting for a transition trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:TRANsition:THReshold:LOW:REF<x>?

Arguments <NR3> specifies the LOW threshold in volts.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:REF2 0.5 sets the Reference 2 waveform transition trigger LOW threshold setting for search 1 to 0.5 volts.

SEARCH: SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:REF1? might return : SEARCH:SEARCH1:TRIGGER:A:TRANSITION:THRESHOLD:LOW:REF1 $800.0000 \mathrm{E}-3$, indicating that the Reference 1 waveform transition trigger LOW threshold setting for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:TRANsition:WHEn

This command sets or queries the condition setting for a transition trigger search to determine where to place a mark. $<x>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:TRANsition:WHEn \{FASTERthan|SLOWERthan\}
SEARCH:SEARCH<x>:TRIGger:A:TRANsition:WHEn?

Arguments FASTERthan sets the trigger to occur when the transitioning signal is faster than the set volts/second rate.

SLOWERthan sets the trigger to occur when the transitioning signal is slower than the set volts/second rate.

Examples SEARCH:SEARCH1:TRIGGER:A:TRANSITION:WHEN SLOWERTHAN sets the transition trigger condition setting for search 1 to SLOWERTHAN.

SEARCH:SEARCH1:TRIGGER:A:TRANSITION:WHEN? might return :SEARCH:SEARCH1:TRIGGER:A:TRANSITION:WHEN FASTERTHAN, indicating that the transition trigger condition setting for search 1 is set to FASTERTHAN.

## SEARCH:SEARCH<x>:TRIGger:A:TYPe

This command sets or queries the trigger type setting for a search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

```
Syntax SEARCH:SEARCH<x>:TRIGger:A:TYPe
\{EDGE|RUNT|TRANsition|PATtern|GLItch|SETHold|UNDEFINED| WIDth|TIMEOut|WINdow|STATE|DDRRead|DDRWrite|DDRREADWrite\} SEARCH:SEARCH<x>:TRIGger:A:TYPe?
```

Arguments EDGE triggers when the source input signal amplitude crosses the specified level in the direction given by the slope.

NOTE. Some trigger types are optional.

RUNT triggers when a pulse crosses the first preset voltage threshold but does not cross the second preset threshold before recrossing the first. The thresholds are set with the SEARCH:SEARCH $<x>$ :TRIGger:A:RUNt:HIGH and SEARCH:SEARCH<x>:TRIGger:A:RUNt:LOW THRESHOLD commands.

TRANsition triggers when a pulse crosses both thresholds in the same direction as the specified polarity and the transition time between the two threshold crossings is greater or less than the specified time delta.

PATtern trigger on a functional pattern combination of one to four input signal sources.

GLItch triggers at the trailing edge of the glitch pulse where the signal crosses the trigger level.

SETHO 1 d triggers on the data input signal transitions relative to the clock input signal transitions within the setup and hold time violation zone.

UNDEFINED is the default. To perform a search, select a different argument.
WIDth triggers on input signal source pulses that are inside or outside of the given time range.

TIMEOut triggers on an input signal source that stays above, stays below, or stays either above or beow the trigger level for a given time.

WINdow triggers on an input signal source that enters or exits the horizontal band defined by the two trigger levels.

STATE triggers on a functional pattern combination of one to three data sources at the time of the clock transition.

DDRRead triggers at the start and end of the read bus.
DDRWrite triggers at the start and end of the write bus.
DDRREADWrite triggers at the start and end of both the read and write bus.

## Examples

SEARCH:SEARCH1:TRIGGER:A:TYPE RUNT sets the trigger type setting for search 1 to RUNT.

SEARCH:SEARCH1:TRIGGER:A:TYPE? might return
:SEARCH:SEARCH1:TRIGGER:A:TYPE EDGE, indicating that the trigger type setting for search 1 is set to EDGE.

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:HIGHLimit

This command sets or queries the upper time limit setting for a width trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:HIGHLimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:WIDth:HIGHLimit?

Arguments <NR3> specifies the upper time limit in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:HIGHLIMIT 400E-12 sets the width trigger upper time limit setting for search 1 to 0.4 ns .

SEARCH:SEARCH1:TRIGGER:A:WIDTH:HIGHLIMIT? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:HIGHLIMIT 500.0000E-12, indicating that the width trigger upper time limit setting for search 1 is set to 0.5 ns .

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:LOWLimit

This command sets or queries the lower time limit setting for a width trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:LOWLimit <NR3> SEARCH:SEARCH<x>:TRIGger:A:WIDth:LOWLimit?

Arguments <NR3> specifies the lower time limit in seconds.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:LOWLIMIT 400E-12 sets the width trigger lower time limit setting for search 1 to 0.4 ns .

SEARCH:SEARCH1:TRIGGER:A:WIDTH:LOWLIMIT? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:LOWLIMIT 500.0000E-12, indicating that the width trigger lower time limit setting for search 1 is set to 0.5 ns .

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:CH<x>

This command sets or queries the polarity for a width trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:CH<x> \{NEGAtive|POSITIVe\} SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:CH<x>?

Arguments NEGAtive specifies a negative polarity. POSITIVe specifies a positive polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:CH2 NEGATIVE sets the Channel 2 width trigger polarity setting for search 1 to NEGATIVE.

SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:CH1 POSITIVE, indicating that the Channel 1 width trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:MATH<x>

This command sets or queries the polarity for a width trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:MATH<x> \{NEGAtive|POSITIVe\} SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:MATH<x>?

Arguments NEGAtive specifies a negative polarity.
POSITIVe specifies a positive polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH: POLARITY:MATH2 NEGATIVE sets the Math 2 waveform width trigger polarity setting for search 1 to NEGATIVE.

SEARCH: SEARCH1:TRIGGER:A:WIDTH: POLARITY:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:MATH1 POSITIVE,
indicating that the Math 1 waveform width trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:REF<x>

This command sets or queries the polarity for a width trigger search to determine where to place a mark. $<\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:REF<x> \{NEGAtive|POSITIVe\}
SEARCH:SEARCH<x>:TRIGger:A:WIDth:POLarity:REF<x>?

Arguments NEGAtive specifies a negative polarity. POSITIVe specifies a positive polarity.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:REF2 NEGATIVE sets the Reference 2 waveform width trigger polarity setting for search 1 to NEGATIVE.

SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:POLARITY:REF1 POSITIVE, indicating that the Reference 1 waveform width trigger polarity setting for search 1 is set to POSITIVE.

## SEARCH:SEARCH<x>:TRIGger:A:WIDth:WHEn

This command sets or queries the width trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WIDth:WHEn \{OUTside|WIThin\}
SEARCH:SEARCH<x>:TRIGger:A:WIDth:WHEn?

Arguments OUTside specifies the outside limits. WIThin specifies the inside limits.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:WHEN OUTSIDE sets the width trigger for search 1 to outside limits.

SEARCH:SEARCH1:TRIGGER:A:WIDTH:WHEN? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:WHEN WITHIN, indicating that the width trigger for search 1 is set to inside limits.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:EVENT

This command sets or queries the window trigger search to determine where to place a mark. $\langle x\rangle$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:EVENT \{OUTSIDEGreater|INSIDEGreater|ENTERSWindow|EXITSWindow\} SEARCH:SEARCH<x>:TRIGger:A:WINdow:EVENT?

Arguments OUTSIDEGreater specifies a trigger event when the signal leaves the window defined by the threshold levels for the time specified by Width.

INSIDEGreater specifies a trigger event when the signal enters the window defined by the threshold levels for the time specified by Width.

ENTERSWindow specifies a trigger event when the signal enters the window defined by the threshold levels.

EXITSWi ndow specifies a trigger event when the signal leaves the window defined by the threshold levels.

Examples SEARCH:SEARCH1:TRIGGER:A:WIDTH:EVENT OUTSIDEGREATER sets the window trigger for search 1 specifies a trigger when the signal leaves the window defined by the threshold levels for the time specified by width.

SEARCH:SEARCH1:TRIGGER:A:WIDTH:EVENT? might return :SEARCH:SEARCH1:TRIGGER:A:WIDTH:EVENT ENTERSWINDOW, indicating that the window trigger for search 1 specifies a trigger when the signal enters the window defined by the threshold levels.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:CH<x>

This command sets or queries the channel threshold HIGH level for a window trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:CH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:CH<x>?

Arguments <NR3> specifies the HIGH threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:CH2 1.5000 sets the Channel 2 window trigger high threshold level for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:CH1 2.0000, indicating that the Channel 2 window trigger high threshold level for search 1 is set to 2.0 V .

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:MATH<x>

This command sets or queries the math waveform threshold HIGH level for a window trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:MATH<x> <NR3>
SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:MATH<x>?

Arguments <NR3> specifies the HIGH threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:MATH2 1.5000 sets the Math 2 waveform window trigger high threshold level for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:MATH1 2.0000 , indicating that the Math 1 waveform window trigger high threshold level for search 1 is set to 2.0 volts.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:REF<x>

This command sets or queries the reference waveform threshold HIGH level for a window trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<X>:TRIGger:A:WINdow:THReshold:HIGH:REF<X> <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:HIGH:REF<x>?

Arguments <NR3> specifies the HIGH threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:REF2 1.5000 sets the Reference 2 waveform window trigger high threshold level for search 1 to 1.5 volts.

SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:HIGH:REF1 2.0000, indicating that the Reference 1 waveform window trigger high threshold level for search 1 is set to 2.0 volts.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:CH<x>

This command sets or queries the channel waveform threshold LOW level for a window trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or channel waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:CH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:CH<x>?

Arguments <NR3> specifies the LOW threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:CH2 0.5 sets the Channel 2 window trigger low threshold level for search 1 to 0.5 volts.

SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:CH1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:CH1
$800.0000 \mathrm{E}-3$, indicating that the Channel 1 window trigger high threshold level for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:MATH<x>

This command sets or queries the math waveform threshold LOW level for a window trigger search to determine where to place a mark. $\langle\mathrm{x}\rangle$ is the search number or math waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:MATH<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:MATH<x>?

Arguments <NR3> specifies the LOW threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:MATH2 0.5 sets the Math 2 waveform window trigger low threshold level for search 1 to 0.5 volts.

SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:MATH1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:MATH1 $800.0000 \mathrm{E}-3$, indicating that the Math 1 waveform window trigger low threshold level for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:REF<x>

This command sets or queries the reference waveform threshold LOW level for a window trigger search to determine where to place a mark. $\langle x\rangle$ is the search number or reference waveform number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:REF<x> <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:THReshold:LOW:REF<x>?

Arguments <NR3> specifies the LOW threshold level.

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:REF2 0.5 sets the Reference 2 waveform window trigger low threshold level for search 1 to 0.5 volts.

SEARCH: SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:REF1? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:THRESHOLD:LOW:REF1 2.0000 , indicating that the Reference 1 waveform window trigger low threshold level for search 1 is set to 0.8 volts.

## SEARCH:SEARCH<x>:TRIGger:A:WINdow:WIDth

This command sets or queries the width setting for a window trigger search to determine where to place a mark. $<\mathrm{x}>$ is the search number.

Group Search and Mark

Syntax SEARCH:SEARCH<x>:TRIGger:A:WINdow:WIDth <NR3> SEARCH:SEARCH<x>:TRIGger:A:WINdow:WIDth?

Arguments <NR3> specifies the minimum width in seconds.
ECL specifies a preset high level of -1.3 V and TTL specifies a preset high level of +1.4 V .

Examples SEARCH:SEARCH1:TRIGGER:A:WINDOW:WIDTH 400E-12 sets the window trigger width setting for search 1 to 0.4 ns .

SEARCH:SEARCH1:TRIGGER:A:WINDOW:WIDTH? might return :SEARCH:SEARCH1:TRIGGER:A:WINDOW:WIDTH 500.0000E-12, indicating that the window trigger width setting for search 1 is set to 0.5 ns .

## SEARCH:STOP

This command sets or queries the stop of acquisitions when a search finds an event.

Group Search and Mark

Syntax SEARCH:STOP $\{<$ NR1>|OFF|ON|1|0\}
SEARCH: STOP?

Arguments <NR1> any numerical nonzero, stops the acquisition.
OFF continues the acquisition.
ON stops the acquisition.
1 stops the acquisition.

0 continues the acquisition.

Examples SEARCH:STOP 1 stops the acquisition.
SEARCH:STOP? might return :SEARCH:STOP 1, indicating that a search found an event and stops acquisition.

## SELect? (Query Only)

This query-only command returns the selected waveform that is affected by the front panel controls and the display status (on or off) of all waveforms. This query command is equivalent to selecting Measurement Setup from the Measure menu and viewing the Source waveform setting.

Group Vertical

Syntax SELect?

Examples SELECT? might return the waveform and status information as : SELECT:CH1 1;CH2 0;CH3 0;CH4 0;MATH1 0; MATH2 0;MATH3 0;MATH4 0;REF1 0;REF2 0; REF3 0;REF4 0;CONTROL CH1.

This command sets or queries the display state for the bus specified by x . The value of x can range from 1 through 16 .

Group Bus

Syntax SELect:B<x> \{0|1|OFF|ON\}
SELect: $B<x>$ ?

Related Commands SELect:CH $<x>$, SELect:D $<x>$, SELect:<wfm>

Arguments 0 turns off the display of the specified bus; any other value turns on the display of the specified bus.

1 turns on the display of the specified bus.
OFF turns off the display of the indicated bus.

ON turns on the display of the indicated bus.

Examples
SELECT: B1 1 displays bus B1.
SELECT:B1? might return :SELECT:B1 ON, indicating bus B1 is displayed.

## SELect:CH<x>

Group Vertical

Syntax SELect:CH<x> \{<NR1>|OFF|ON\} SELect:CH<x>?

Related Commands SELect:B<x>, SELect:D<x>, SELect:<wfm>

Arguments <NR1> = 0 turns off the display of the specified channel waveform; any other value turns on the display of the specified waveform.

OFF turns off the display of the indicated channel waveform.
ON displays the indicated channel waveform.

Examples SELECT:CH1 ON displays Channel 1.
SELECT:CH1? might return :SELECT:CH1 1, indicating Channel 1 is displayed.

## SELect:CONTROI<wfm>

This command sets or queries the waveform that is selected as the implied recipient of channel-related commands that support legacy-style programs. The command form also performs the equivalent of a SELect: $<\mathrm{wfm}>\mathrm{ON}$ command. This command is equivalent to selecting Measurement Setup from the Measure menu and either viewing or setting the Source waveform.

Group Vertical

Syntax SELect:CONTRO1 \{CH<x>|MATH<x>|REF<x>\}
SELect:CONTRO1?

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ selects the specified channel waveform as the waveform that is affected by the front panel controls. The x variable can be expressed as an integer ranging from 1 through 4.

MATH $<x>$ selects the specified math waveform as the waveform that is affected by the front panel controls. The x variable can be expressed as an integer ranging from 1 through 4.
$R E F<x>$ selects the specified reference waveform as the waveform that is affected by the front panel controls. The x variable can be expressed as an integer ranging from 1 through 4.

Examples SELECT: CONTROL CH2 resets acquisition displays on Channel 2, and causes the selected waveform to be the implied object of waveform commands.

SELECT: CONTROL? might return : SELECT: CONTROL MATH3, indicating that Math 3 is the implied object of waveform commands.

## SELect:DALL (No Query Form)

This command sets the displayed state of all the digital inputs.

Group Digital

Syntax SELect:DALL <NR1>

Arguments <NR1> = 0 turns off the display of all the digital inputs; any other value turns on the display of all the digital inputs.

OFF turns off the display of all the digital inputs.
ON displays all the digital inputs.

Examples SELECT:DALL ON sets the displayed state of all the digital inputs to on.

## SELect:DIGTraces:COMbination (No Query Form)

This command turns on the digital channels that have binary digits as 1 . The binary digits are obtained from the set decimal value.

Group Digital

Syntax SELect:DIGTraces:COMbination <nr1>

Arguments $n r 1$ is a decimal integer.

Examples SELECT:DIGTRACES:COMBINATION 6 turns on the D1 and D2 digital channels.

## SELect:DIGTraces:LISt

This command turns on the specified digital channels or returns the list of digital channels that are on.

Group Digital

Syntax SELect:DIGTraces:LISt <Dx> SELect:DIGTraces:LISt?

Arguments $\quad<\mathrm{Dx}>$ are the specified digital channels, for example D3, D6, D8.

Examples SELECT:DIGTRACES:LIST D0 D1 turns on the digital channel D0 and D1.
SELECT:DIGTRACES:LIST? might return :SELECT:DIGTRACES:LIST D3, D4, D5, indicating that digital channels D3, D4, and D5 are on. The other digital channels are off.

## SELect:D<x>

Group Digital

Syntax SELect:D<x> \{<NR1>|OFF|ON\} SELect: $\mathrm{D}<\mathrm{x}>$ ?

Related Commands SELect:B<x>, SELect:CH<x>, SELect:<wfm>

Arguments <NR1> = 0 turns off the display of the specified digital input; any other value turns on the display of the specified bus.

OFF turns off the display of the indicated bus.
ON turns on the display of the indicated bus.

Examples SELECT:D1 ON displays digital input D1.
SELECT:D1? might return :SELECT:D1 1, indicating digital input D1 is displayed.

## SELect:<wfm>

Group Vertical

Syntax SELect:<wfm> \{ON|OFF|<NR1>\}
SELect:<wfm>?

Related Commands
SELect:B<x>, SELect:CH<x>, SELect:D<x>

Arguments ON turns on the display of the specified waveform. This waveform also becomes the selected waveform.

OFF turns off the display of the specified waveform.
<NR1> = 0 turns off the display of the specified waveform; any other value turns on the display of the specified waveform.

Examples SELECT:CH2 ON turns the channel 2 waveform display on, and selects Channel 2.
SELECT:REF1? might return :SELECT:REF1 1, indicating that Reference 1 waveform is being displayed.

## SET? (Query Only)

This query-only command returns the commands that list the instrument settings, except for configuration information for the calibration values. You can use these commands to return the instrument to the state it was in when you made the SET? query. The SET? query always returns command headers, regardless of the setting of the HEADer command. This is because the returned commands are intended
to be sent back to the instrument as a command string. The VERBose command can still be used to specify whether the returned headers should be abbreviated or full-length.

This command is identical to the *LRN? command.

Group Miscellaneous

Syntax SET?

Related Commands HEADer, *LRN?, VERBose

Examples SET? might return the following response: : ACQUIRE:STOPAFTER RUNSTOP;STATE 1;MODE SAMPLE;NUMENV 10;NUMAVG 16;REPET 1;:FASTACQ:STATE 0;:APPLICATION:GPKNOB1:ACTIVE 0;:APPLICATION:GPKNOB2:ACTIVE 0;:APPLICATION:WINDOW:HEIGHT 236;WIDTH 640;:APPLICATION:SCOPEAPP:STATE RUNNING;WINDOW FULLSCREEN;:APPLICATION:EXTAPP:STATE NOTRUNNING;:AUXOUT:SOURCE ATRIGGER;EDGE FALLING;:CMDBATCH 1;:HEADER 1;:LOCK NONE;:ROSC:SOURCE INTERNAL;:VERBOSE 1;:ALIAS:STATE 0;:DISPLAY:CLOCK 1;COLOR:PALETTE NORMAL;MATHCOLOR DEFAULT;REFCOLOR DEFAULT;:DISPLAY:FILTER SINX;FORMAT YT;GRATICULE FULL;INTENSITY:WAVEFORM 75.0000;AUTOBRIGHT 1;:DISPLAY:PERSISTENCE OFF;STYLE VECTORS;TRIGBAR SHORT;TRIGT 1;VARPERSIST 500.0000e-3;:HARDCOPY:FILENAME "untitled";PORT FILE;:DIAG:LEVEL SUBSYS;:SAVE:WAVEFORM:FILEFORMAT INTERNAL;:TRIGGER:A:MODE AUTO;TYPE EDGE;LEVEL 0.0000;HOLDOFF:BY DEFAULT;TIME 1.5000E-6;:TRIGGER:A:EDGE:SOURCE CH1;COUPLING DC;SLOPE RISE;.

## SETUp:NAMe

This command allows you to create (or query) a name for your saved setups. The default name for all user setups is "User." The default name for factory setups is "Factory."

This command is equivalent to selecting Save As from the File menu, pressing the Setup button, selecting the desired setup location, clicking the keyboard icon, and entering your setup name.

Group Save and Recall

Syntax SETUP:NAMe <NR1>,<QString> SETUP:NAMe? <NR1>

## Related Commands SAVe:SETUp

Arguments <NR1> specifies a location in which the setup label is stored. Location values range from 1 through 10.
<QString> is a string containing the setup label.

Examples SETUP: NAME1, "My Setup" changes the setup label for internal setup location 1 to "My Setup".

SETUP: NAME? 2 might return :SETUP:NAME 2,"My Setup", indicating that "My Setup" is the setup label that you defined for internal setup location 2.

The *SRE (Service Request Enable) command sets and queries the bits in the Service Request Enable Register. For more information, refer to Registers.

Group Status and Error

Syntax *SRE <NR1>
*SRE?

Related Commands
*CLS, DESE, *ESE, *ESR?, EVENT?, EVMsg?, FACtory, *STB?

Arguments <NR1> is a value in the range from 0 through 255. The binary bits of the SRER are set according to this value. Using an out-of-range value causes an execution error. The power-on default for SRER is 0 if *PSC is 1 . If *PSC is 0 , the SRER maintains the previous power cycle value through the current power cycle.

Examples *SRE 48 sets the bits in the SRER to binary 00110000.
*SRE? might return 32 , showing that the bits in the SRER have the binary value of 00100000 .

## *STB? (Query Only)

The *STB? (Read Status Byte) query returns the contents of the Status Byte Register (SBR) using the Master Summary Status (MSS) bit. For more information, refer to Registers.

Group Status and Error<br>Syntax *STB?<br>Related Commands<br>*CLS, DESE, *ESE, *ESR?, EVENT?, EVMsg?, FACtory, *SRE<br>Returns <NR1><br>Examples *STB? might return 96, showing that the SBR contains the binary value 01100000 .

## TEKSecure (No Query Form)

This command initializes, for the current user, both waveform and setup memories, overwriting any previously stored data.

TEKSecure deletes all four waveform reference memory slots on the hard drive, if they exist, and puts all setups in the factory-initialized state. External setups that are stored on the hard drive are not affected.

Group Miscellaneous

Syntax TEKSecure

Examples TEKSECURE initializes both waveform and setup memories.

## TEST

This command provides the ability to select and execute an item at any level of the test hierarchy (Test, Area or Subsystem). The query returns the last command sent. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu, choosing a test and then pressing Run.

NOTE. We recommend turning off both DIAg:CONTROL:HALT and DIAg:CONTROL:LOOP before executing the TEST command.

Group Diagnostics

Syntax TEST <QString> TEST?

Related Commands TEST:RESults?, TEST:RESults:VERBose?, TEST:STOP

Arguments <QString> sets the test ID, which ranges from 0 through 3 characters. If no test ID is specified, all available diagnostics are executed.

Examples TEST "1" executes all Acquisition tests (Subsystem:Acquisition).
TEST "11" executes all Acquisition Memory tests (Subsystem:Acquisition, Area:Memory).

TEST "113" executes a specific Acquisition Memory test (Subsystem:Acquisition, Area:Memory, Test:Address Lines).

## TEST:RESults? (Query Only)

This query-only command returns an abbreviated status about the results of the last TEST execution. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then reviewing the Diagnostic Status.

Group Diagnostics

Syntax TEST:RESults?

Related Commands TEST, TEST:RESults:VERBose?

Examples TEST:RESULTS? might return :TEST:RESULTS "135", indicating the specific failure code of the first test failure.

TEST:RESULTS? might return :TEST:RESULTS "PASS", indicating that the previously executed test passed.

TEST:RESULTS? might return :TEST:RESULTS "*****", indicating that the test was not run.

## TEST:RESults:VERBose? (Query Only)

This query-only command returns a more explanatory message about the results of the last TEST execution than the TEST:RESults? query. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then clicking the Error Log button.

Group Diagnostics

Syntax TEST:RESults:VERBose?

Related Commands TEST, TEST:RESults?

Examples TEST:RESULTS:VERBOSE? might return :TEST:RESULTS:VERBOSE DIAG ABORTED, ERROR 15 in A2D-Dmux 1 interconnects".

## TEST:STOP (No Query Form)

This command (no query form) causes test (or diagnostics) execution to terminate at the end of the next low-level test. This command is equivalent to selecting Instrument Diagnostics from the Utilities menu and then clicking Abort.

Group Diagnostics

Syntax TEST: STOP

Related Commands DIAg:STOP

Examples TEST: STOP terminates test (or diagnostics) execution at the end of the next low-level test.

TIME
This command sets or queries the time that the instrument displays. This command is equivalent to selecting Set Time \& Date from the Utilities menu and then setting the fields in the Time group box.

Group Miscellaneous

Syntax TIME <QString> TIME?

Related Commands DATE

Arguments <QString> is a time in the form "hh:mm:ss" where hh refers to a two-digit hour number, mm refers to a two-digit minute number from 01 to 60 , and ss refers to a two-digit second number from 01 to 60 .

Examples TIME "14:00:00" sets the time to exactly 2:00 p.m.
TIME? might return :TIME "14:05:17, indicating the current time is set to 2:05 p.m. and 17 seconds.

## *TRG (No Query Form)

This command (no query form) performs the group execute trigger on commands defined by *DDT.

Group Miscellaneous

Syntax *TRG

Related Commands *DDT

Examples *TRG immediately executes all commands that have been defined by *DDT.

## TRIGger

This command forces a trigger event to occur. The query returns the current trigger parameters for the instrument.

Group Trigger

Syntax TRIGger FORCe TRIGger?

Arguments FORCe creates a trigger event. If TRIGger:STATE is set to READy, the acquisition will complete. Otherwise, this command will be ignored. This is equivalent to selecting A Event (Main) Trigger Setup from the Trig menu and then clicking Force Trigger.

## Examples TRIGGER FORCE forces a trigger event to occur.

TRIGGER? might return these trigger parameters: :TRIGGER:A:MODE AUTO;TYPE EDGE;LEVEL 0.0000;HOLDOFF:BY DEFAULT;TIME 1.5000E-6;:TRIGGER:A:EDGE:SOURCE CH1;COUPLING

DC;SLOPE RISE;:TRIGGER:A:LOGIC:CLASS PATTERN;FUNCTION AND;THRESHOLD:CH1 1.2000;CH2 1.2000;CH3 1.2000;CH4

## TRIGger:\{A|B\}:EDGE? (Query Only)

This query-only command returns the trigger source, coupling, and slope for the specified edge trigger. This command is equivalent to selecting Edge Setup from the Trig menu and viewing the current setups, or selecting B Event (Delayed) Trigger Setup from the Trig menu and viewing the current Source, Slope, and Coupling settings.

Group Trigger

Syntax TRIGger:\{A|B\}:EDGE?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ PULse?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ EDGE: COUPling, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :EDGE:SLOpe, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ EDGE:SOUrce, TRIGger:B:STATE

Examples TRIGGER:A:EDGE? might return :TRIGGER:A:EDGE:SOURCE CH1; COUPLING DC; SLOPE RISE, indicating the trigger source, coupling, and slope for the A edge trigger.

## TRIGger:\{A|B\}:EDGE:COUPling

This command sets or queries the type of coupling for the edge trigger. This command is equivalent to selecting Event Trigger Setup from the Trig menu, selecting Edge Trigger, and choosing from the Coupling drop-down list.

Group Trigger

```
Syntax TRIGger:{A|B}:EDGE:COUP7ing
    {AC|DC|HFRej|LFRej|NOISErej|ATRIGger}
    TRIGger:{A|B}:EDGE:COUP1ing?
```

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:SOUrce, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :EDGE:SLOpe

Arguments AC selects AC trigger coupling, which passes the input signals above 60 Hz to the trigger circuitry.

DC selects DC trigger coupling, which passes all input signals to the trigger circuitry.

HFRej coupling attenuates signals above 50 kHz before passing the signals to the trigger circuitry.

LFRej coupling attenuates signals below 80 kHz before passing the signals to the trigger circuitry.

NOISErej coupling provides stable triggering by increasing the trigger hysteresis. Increased hysteresis reduces the trigger sensitivity to noise but can require greater trigger signal amplitude.

ATRIGger this B trigger command sets the B trigger coupling to match the setting on the A trigger.

Examples TRIGGER:A:EDGE:COUPLING DC sets the A edge trigger coupling to DC.
TRIGGER:A:EDGE:COUPLING? might return :TRIGGER:A:EDGE:COUPLING $D C$, indicating that the A edge trigger coupling is set to DC.

## TRIGger:\{A|B\}:EDGE:COUPling:CH<x>

This command sets or queries the type of coupling for the A or B trigger for the specified channel. This command is equivalent to selecting A or B Trigger Setup from the Trig menu and choosing the setting from the Coupling drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:EDGE:COUP1ing:CH<x>
\{AC|DC|HFRej|LFRej|NOISErej\}
TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ EDGE: COUPling: $\mathrm{CH}<\mathrm{x}>$ ?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:COUPling

Arguments AC selects AC trigger coupling.
DC selects DC trigger coupling.
HFRej selects high frequency low sensitivity.
LFRej selects low frequency low sensitivity.
NOISErej selects DC low sensitivity.

Examples TRIGGER:B:EDGE:COUPLING:CH1 DC selects DC for the B trigger coupling of Channel 1.

TRIGGER:B:EDGE:COUPLING:CH1? might return :TRIGGER:B:EDGE:COUPLING:CH1 LFREJ for the B trigger coupling.

## TRIGger:\{A|B\}:EDGE:SLOpe

This command sets or queries the slope for the edge trigger. This command is equivalent to selecting Event Trigger Setup from the Trig menu and then choosing the desired Slope.

Group Trigger<br>Syntax TRIGger:\{A|B\}:EDGE:SLOpe \{RISe|FALL|EITher\}<br>TRIGger:\{A|B\}:EDGE:SLOpe?<br>Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :EDGE:SOUrce, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:COUPling, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE?, TRIGger:B:STATE

Arguments RISe specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.
EITHER specified to trigger on either the rising or falling edge of a signal.

NOTE. The edge trigger slope for channels 1-4 and Aux can be RISE, FALL, or EITHER on the DPO7000C and DPO/DSA/MSO70000C/D/DX Series instruments. For MSO/DPO5000/B oscilloscopes, the edge trigger slope for channels 1-4 can be RISE or FALL.

Examples TRIGGER:A:EDGE:SLOPE RISE sets the A edge trigger slope to positive, which triggers on the rising edge of the signal.

TRIGGER:A:EDGE:SLOPE? might return :TRIGGER:A:EDGE:SLOPE FALL, indicating that the A edge trigger slope is negative.

## TRIGger:\{A|B\}:EDGE:SLOpe:AUX

This command sets or queries the slope for the edge trigger for the AUX In input. This command is equivalent to selecting A Event or B Event Trigger Setup from the Trig menu and then choosing the desired Slope.

Group Trigger

Syntax TRIGger:\{A|B\}:EDGE:SLOpe:AUX \{RISe|FALL|EITHER\} TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ EDGE:SLOpe:AUX?

Arguments RISE specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.
EITHER specifies to trigger on either the rising or falling edge of a signal. EITHER is only available on the DPO7000C and DPO/DSA/MSO70000C/D/DX Series instruments.

Examples TRIGGER:A:EDGE:SLOPE:AUX RISE sets the A edge trigger slope to positive, which triggers on the rising edge of the signal.

TRIGGER:A:EDGE:SLOPE:AUX? might return :TRIGGER:A:EDGE:SLOPE:AUX FALL, indicating that the A edge trigger slope is negative.

## TRIGger:\{A|B\}:EDGE:SLOpe:CH<x>

This command sets or queries the slope for the edge trigger for the specified channel. This command is equivalent to selecting A Event or B Event Trigger Setup from the Trig menu and then choosing the desired Slope.

Group Trigger

Syntax TRIGger:\{A|B\}:EDGE:SLOpe:CH<X> \{RISe|FALL|EITher\} TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ : EDGE:SLOpe: $\mathrm{CH}<\mathrm{x}>$ ?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:SOUrce, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:COUPling

Arguments RISe specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.
EITher specifies to trigger on either the rising or falling edge of a signal. EITHER is only available on the DPO7000C and DPO/DSA/MSO70000C/D/DX Series instruments.

Examples TRIGGER:A:EDGE:SLOPE:CH2 RISE sets the Channel 2 edge trigger slope to rising or positive

TRIGGER:A:EDGE:SLOPE:CH1? might return :TRIGGER:A:EDGE:SLOPE FALL, indicating that the A edge trigger slope is negative.

## TRIGger:\{A|B\}:EDGE:SOUrce

This command sets or queries the source for the edge trigger. This command is equivalent to selecting Event Trigger Setup from the Trig menu and then choosing from the Source drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:EDGE:SOUrce \{AUXiliary|CH<x>|LINE|D<x>\} TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ : EDGE: SOUrce?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:SLOpe, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE:COUPling, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :EDGE?, TRIGger:B:STATE

Arguments
AUXiliary specifies an external trigger using the Auxiliary Trigger Input. $x$ can be $1,2,3$, or 4 .
$\mathrm{CH}<\mathrm{x}>$ specifies one input channel as the edge trigger source.
LINE specifies AC line voltage, and is for A Trigger only.
$\mathrm{D}<\mathrm{x}>$ specifies a digital input as the edge trigger source. x can be 0 through 15 .

Examples TRIGGER:A:EDGE: SOURCE CH2 sets the A edge trigger source to input channel CH2.

TRIGGER:A:EDGE:SOURCE? might return :TRIGGER:A:EDGE:SOURCE CH1, indicating that the A edge trigger source is set to input channel CH1.

## TRIGger:\{A|B\}:LEVel

This command sets or queries the level for the trigger. This command is equivalent to selecting Holdoff from the Trig menu and then viewing or setting the trigger Level or selecting B Event (Delayed) Trigger Setup from the Trig menu and setting the B Trig Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:LEVe1 \{ECL|TTL|<NR3>\}
TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LEVe1?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LEVel, TRIGger:B, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ EDGE:SOUrce TRIGger:B:STATE

Arguments ECL specifies the ECL high level.
TTL specifies the TTL high level.
<NR3> specifies the trigger level in user units (usually volts).

Examples TRIGGER:A:LEVEL TTL sets the A edge trigger to TTL high level.
TRIGGER:A:LEVEL? might return :TRIGGER:A:LEVe1 1.3000E+00, indicating that the A edge trigger is set to 1.3 V .

## TRIGger:\{A|B\}:LEVel:CH<x>

This command sets or queries the $\mathrm{CH}<\mathrm{x}>$ trigger level for TRIGGER:LVLSRCPREFERENCE SRCDEPENDENT mode.

The $\mathrm{CH}<\mathrm{x}>$ range is 1 to 4 .

Group Trigger

Syntax TRIGger:\{A|B\}:LEVe1:CH<x> \{ECL|TTL|<NR3>\}
TRIGger:\{A|B\}:LEVe1:CH<x>?

Arguments ECL specifies the ECL high level.
TTL specifies the TTL high level.
<NR3> specifies the trigger level in user units (usually volts).

Examples TRIGGER:A:LEVEL:CH1 TTL sets the A trigger level for Channel 1 to the TTL high level.

TRIGGER:A:LEVEL:CH2? might return :TRIGGER:A:LEVEL:CH2
$1.3000 \mathrm{E}+00$, indicating that the A trigger level for Channel 2 is set to 1.3 V .

## TRIGger:\{A|B\}:LOGIc? (Query Only)

This query-only command returns all of the logic trigger parameters.

## NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:CLAss

```
Examples TRIGGER:A:LOGIC? might return :TRIGGER:A:LOGIC:CLASS
PATTERN; FUNCTION AND;WHEN TRUE; THRESHOLD:CH1 1.4000;CH2
1.4000;CH3 1.4000; CH4 1.4000;:TRIGGER:A:LOGIC:INPUT:CH1

:TRIGGER:A:LOGIC:STATE:WHEN TRUE.
```

## TRIGger:\{A|B\}:LOGIc:CLAss

NOTE. Not available on some models.

This command sets or queries the class of the Logic Trigger. Used with the TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ TYPe command, this command is equivalent to selecting Logic Pattern, Logic State, or Setup/Hold Setup from the Trig menu.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:CLASs \{PATtern|STATE|SETHold\} TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:CLAss?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ TYPe, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :PULse:CLAss

Arguments PATtern sets the instrument to trigger when the specified logical combinations of Channels 1, 2, 3, and 4 are met.

STATE sets the instrument to trigger when the specified conditions of Channels 1, 2, and 3 are met after the Channel 4 (clock) condition is met.

SETHold sets the instrument to trigger on setup and hold violations between a data source and a clock source. Use one channel input as the clock signal and a second channel input as the data input. The clocking and data levels are used to determine if a clock or data transition has occurred.

Examples TRIGGER:A:LOGIC:CLASS PATTERN sets the trigger A logic class to PATtern, which causes the instrument to trigger when the specified logical combinations of Channels 1, 2, 3, and 4 are met.

TRIGGER:A:LOGIC:CLASS? might return :TRIGGER:A:LOGIC:CLASS
PATTERN, indicating that the A trigger level for channel 2 is set to PATTERN, which causes the instrument to trigger when the specified logical combinations of Channels 1, 2, 3, and 4 are met.

## TRIGger:\{A|B\}:LOGIc:FUNCtion

## NOTE. Not available on some models.

This command sets or queries the logical combination of the input channels for the pattern and state logic triggers. This command is equivalent to selecting Event Trigger Setup from the Trig menu, selecting Pattern or State for the Trigger Type, and setting or viewing the Pattern Type.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:FUNCtion \{AND|NANd|NOR|OR\}
TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIC: FUNCtion?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:PATtern:WHEn, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:INPut:CH $<\mathrm{x}>$, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:THReshold: $\mathrm{CH}<\mathrm{x}>$

Arguments AND specifies to trigger if all conditions are true.
NANd specifies to trigger if any of the conditions are false.
NOR specifies to trigger if all conditions are false.
OR specifies to trigger if any of the conditions are true.

Examples TRIGGER:A:LOGIC: FUNCTION AND sets the logical combination of channels to be true when all conditions are true.

TRIGGER:A: LOGIC: FUNCTION? might return :TRIGGER:A:LOGIC:FUNCTION NAND, indicating that the instrument will trigger if the AND logic conditions are false.

## TRIGger:\{A|B\}:LOGIc:INPut? (Query Only)

## NOTE. Not available on some models.

This query-only command returns the logic trigger input expected for Channel 1, 2, and 3. Channel 4 is set or queried with the command TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:INPut:CH $\langle\mathrm{x}\rangle$.

This command is equivalent to selecting Event Trigger Setup and viewing or setting the Input Threshold for the channels.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:INPut?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:INPut:CH $<\mathrm{x}>$

Examples TRIGGER:A:LOGIC:INPUT? might return :TRIGGER:A:LOGIC:INPUT:CH1 HIGH;CH2 X ; CH3 X , indicating that a logic high is expected on Channel 1 while Channel 2 and Channel 3 are "don't care."

## TRIGger:\{A|B\}:LOGIc:INPut:ALL

## NOTE. Not available on some models.

This command sets or queries the A or B logic trigger input condition for all the channels. The command is available when the Trigger Type is set to Pattern/State.

## Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:INPut:ALL <QString> TRIGger:\{A|B\}:LOGIC:INPut:ALL?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:INPut:FORMat

Arguments <QString> specifies the bit pattern for all the channels.

Examples TRIGGER:A:LOGIC:INPUT:ALL "0xxxx" sets logic high to channel D0 and "don't care" condition for CH1 through CH4.

TRIGGER:A:LOGIC:INPUT:ALL? might return
:TRIGGER:A:LOGIC:INPUT:ALL "1111xxxx", indicating that a logic high is set on D3 through D0 and a "don't care" condition is set on CH1 through CH4.

## TRIGger:\{A|B\}:LOGIc:INPut:CH<x>

NOTE. Not available on some models.

This command sets or queries the A or B logical trigger input for the channel specified by x . The value of x ranges from 1 through 3 . Note that CH4 cannot be set or queried with this command. For details about setting this channel, see TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:PATtern:INPut:CH $<\mathrm{x} \gg$. This command is equivalent to selecting Event Trigger Setup from the Trig menu and then choosing the desired logical input from the $\mathrm{Ch}<\mathrm{x}>$ drop-down list, which is located in the Input Threshold group box.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:INPut:CH<X> \{HIGH|LOW|X\} TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIC:INPut: $\mathrm{CH}<\mathrm{x}>$ ?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:INPut:CH $<\mathrm{x}>$

Arguments HIGH specifies the logic high. Low specifies the logic low.

X specifies a "don't care" state.

Examples TRIGGER:A:LOGIC:INPUT:CH2 HIGH sets the A logic trigger input to logic HIGH for Channel 2.

TRIGGER:A:LOGIC:INPUT:CH1? might return :TRIGGER:LOGIC:INPUT:CH1 X , indicating that the setting for the A logic trigger input to Channel 1 does not matter.

## TRIGger:\{A|B\}:LOGIc:INPut:FORMat

NOTE. Not available on some models.

This command sets or queries the A or B logic trigger pattern format.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:INPut:FORMat \{HEXadecimal|BINary\} TRIGger:\{A|B\}:LOGIC:INPut:FORMat?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:INPut:ALL

Arguments HEXadecimal specifies hexadecimal pattern format for A or B logic trigger. BINary specifies binary pattern format for A or B logic trigger.

Examples TRIGGER:A:LOGIC:INPUT: FORMAT HEX sets the A logic trigger pattern format to hexadecimal.

TRIGGER:A:LOGIC:INPUT:FORMAT? might return
:TRIGGER:A:LOGIC:INPUT:FORMAT BINARY, indicating that the A logic trigger pattern format is set to binary.

## TRIGger:\{A|B\}:LOGlc:PATtern? (Query Only)

## NOTE. Not available on some models.

This query-only command returns the conditions used for generating an A logic pattern trigger, with respect to the defined input pattern, and identifies the maximum and minimum time that the selected pattern can be true and still generate the trigger. This command is equivalent to selecting Logic Pattern from the Trig menu and then viewing the current setups.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:PATtern?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:INPut:CH $<\mathrm{x}>$, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:
PATtern:WHEn, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:PATtern:WHEn:LESSLimit, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:WHEn:MORELimit

Examples TRIGGER:A:LOGIC:PATTERN? might return
:TRIGGER:A:LOGIC:PATTERN:INPUT:CH4 X;
:TRIGGER:A:LOGIC:PATTERN:WHEN TRUE; WHEN:LESSLIMIT
5.0000E-9;MORELIMIT 5.0000E-9.

## TRIGger:\{A|B\}:LOGIc:PATtern:INPut:CH<x>

## NOTE. Not available on some models.

This command sets or queries the A or B logic trigger input for the specified channel. This command specifies the logic value used when the pattern trigger detects the threshold level.

This command is equivalent to selecting Logic Pattern from the Trig menu and then choosing the desired logical input from the channel drop-down list, which is located in the Input Threshold group box.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:PATtern:INPut:CH<X> \{HIGH|LOW|X\} TRIGger:\{A|B\}:LOGIC:PATtern:INPut:CH<x>?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:FUNCtion, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:INPut:CH $<\mathrm{x}>$, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:THReshold:CH $<\mathrm{x}>$

Arguments HIGH specifies the logic high.
LOW specifies the logic low.
X specifies a "don't care" state.

Examples TRIGGER:A:LOGIC:PATTERN:INPUT:CH4 HIGH This command sets the A logic trigger input to logic high for Channel 4 when the logic class is set to PATtern. When the threshold level is detected, High places a 1 on the Channel 4 input to the selected function.

TRIGGER:A:LOGIC:PATTERN:INPUT:CH4? might return :TRIGGER:A:LOGIC:PATTERN:INPUT:CH4 HIGH, indicating that the logic input for Channel 4 is logic high.

## TRIGger:\{A|B\}:LOGIc:PATtern:WHEn

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:PATtern:WHEn \{TRUe|FALSe|LESSThan|MOREThan\} TRIGger:\{A|B\}:LOGIC:PATtern:WHEn?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:FUNCtion, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:INPut?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:THReshold?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:PATtern:WHEn:LESSLimit, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:WHEn:MORELimit

Arguments TRUe sets the instrument to trigger when the pattern becomes true.
FALSe sets the instrument to trigger when the pattern becomes false.
LESSThan sets the instrument to trigger if the specific pattern is true less than the time set by the TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:WHEn:LESSLimit command.

MOREThan argument sets the instrument to trigger if the specific pattern is true longer than the specified time set by the TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:PATtern:WHEn: MORELimit command.

Examples TRIGGER:A:LOGIC:PATTERN:WHEN FALSE specifies to trigger the A logic pattern when the pattern becomes false.

TRIGGER:A:LOGIC:PATTERN:WHEN? might return :TRIGGER:A:LOGIC: PATTERN:WHEN TRUE, indicating that the A logic pattern will trigger when the pattern becomes true.

# TRIGger:\{A|B\}:LOGIc:PATtern:WHEn:LESSLimit 

NOTE. Not available on some models.

This command sets or queries the maximum time that the selected pattern can be true and still generate an A or B logic pattern trigger. This command is equivalent to selecting the A or B Event (Main) Trigger Setup from the Trig menu, selecting Pattern as the Trigger Type, selecting Less Than for the Pattern in the Trigger When settings, and entering a maximum value for Time.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:PATtern:WHEn:LESSLimit <NR3> TRIGger:\{A|B\}:LOGIC:PATtern:WHEn:LESSLimit?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:WHEn:MORELimit

#### Abstract

Arguments <NR3> specifies the amount of time to hold the pattern true.

Examples TRIGGER:A:LOGIC:PATTERN:WHEN:LESSLIMIT 10.0E+00 sets the maximum time that the selected pattern can hold true (and generate an A logic pattern trigger) to 10 s .

TRIGGER:A:LOGIC: PATTERN:WHEN:LESSLIMIT? might return :TRIGGER:A:LOGIC:PATTERN:WHEN:LESSLIMIT 5.0000E-09, indicating that the selected pattern can hold true for up to 5 ns and still generate an A logic pattern trigger.

## TRIGger:\{A|B\}:LOGIc:PATtern:WHEn:MORELimit

## NOTE. Not available on some models.

This command sets or queries the minimum time that the selected pattern can be true and still generate an A or B logic pattern trigger. This command is equivalent to selecting A or B Event (Main) Trigger Setup from the Trig menu, selecting Pattern as the Trigger Type, selecting More Than for the Pattern in the Trigger When settings, and entering a minimum value for Time.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:PATtern:WHEn:MORELimit <NR3> TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIC: PATtern:WHEn:MORELimit?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern:WHEn:LESSLimit

Arguments <NR3> specifies the amount of time to hold the pattern true.

Examples TRIGGER:A:LOGIC:PATTERN:WHEN:MORELIMIT 10.0E+00 sets the minimum time that the selected pattern can hold true (and generate an A logic pattern trigger) to 10 s .

TRIGGER:A:LOGIC:PATTERN:WHEN:MORELIMIT? might return :TRIGGER:A:LOGIC:PATTERN:WHEN:MORELIMIT 5.0000E-09, indicating that the selected pattern must hold true for at least 5 ns to generate an A logic pattern trigger.

## TRIGger:\{A|B\}:LOGIc:SETHold? (Query Only)

NOTE. Not available on some models.

This query-only command returns the clock edge polarity, voltage threshold and source input, data voltage threshold and source, and both setup and hold times for setup and hold violation triggering. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then viewing the current setups.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:PATtern?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:STATE?

Examples TRIGGER:A:LOGIC:SETHOLD? might return the settings :TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE RISE; THRESHOLD 1.4000;THRESHOLD:CH1 1.4000;CH2 1.2000;CH3 1.2000;CH4 1.2000;:TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE CH2;:TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD 1.4000;THRESHOLD: CH1 1.4000;CH2 1.2000;CH3 1.2000; CH4 1.2000;:TRIGGER:A:LOGIC:SETHOLD :HOLDTIME 2.0000E-9;SETTIME 3.0000E-9; QUALIFY OCCURS.

# TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk? (Query Only) 

NOTE. Not available on some models.

This query-only command returns the clock edge polarity, voltage threshold and source input for setup and hold triggering. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then viewing the current clock setups.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold:DATa?, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold: CLOCk:EDGE, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold:CLOCk:THReshold, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold:CLOCk:SOUrce

Examples TRIGGER:A:LOGIC:SETHOLD:CLOCK? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE RISE;THRESHOLD 1.2000;THRESHOLD:CH1 1.2000;CH2 1.2000; CH3 1.2000;CH4 1.2000;:TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE CH2, indicating the current clock settings for setup and hold triggering.

## TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:EDGE

## NOTE. Not available on some models.

This command sets or queries the clock edge polarity for setup and hold triggering. This is equivalent to selecting Setup/Hold Setup from the Trig menu and then choosing the desired Clock Edge.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:EDGE \{FALL|RISe\} TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:EDGE?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold:CLOCk:SOUrce, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc: SETHold:CLOCk:THReshold

Arguments FALL specifies polarity as the clock falling edge. RISe specifies polarity as the clock rising edge.

Examples TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE RISE specifies the polarity as the clock rising edge.

TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE RISE, indicating that polarity is specified as the clock rising edge.

## TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:SOUrce

## NOTE. Not available on some models.

This command sets or queries the clock source for the A or B logic trigger setup and hold input. This is equivalent to selecting Setup/Hold Setup from the Trig menu and choosing the desired channel from the Clock Source drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:SOUrce CH<x> TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIC:SETHold:CLOCk: SOUrce?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :OGIc:SETHold:CLOCk:EDGE, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc: SETHold:CLOCk:THReshold

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ specifies the input channel, which ranges from 1 through 4 for four-channel instruments or 1 through 2 for two channel instruments.

Examples TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE CH1 specifies channel 1 as the A logic setup and hold input.

TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE CH4, indicating that channel 4 is the clock source for the setup and hold input for the A logic trigger.

## TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:THReshold

NOTE. Not available on some models.

This command sets or queries the clock voltage threshold for the setup and hold trigger. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and setting the desired Clock Level.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:CLOCk:THReshold \{ECL|TTL|<NR3>\} TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:THReshold?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc:SETHold:CLOCk:EDGE, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc: SETHold:CLOCk:SOUrce

Arguments ECL specifies a preset ECL high level.
TTL specifies a preset TTL high level.
<NR3> is the clock level in volts.

Examples TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD TTL specifies the preset TTL value as the clock threshold for the setup and hold trigger.

TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD 1.2000E+00, indicating that the clock threshold for the setup and hold trigger is 1.2 V .

## TRIGger:\{A|B\}:LOGIc:SETHold:CLOCk:THReshold:CH<x>

NOTE. Not available on some models.

This command sets or queries the clock voltage threshold for setup and hold trigger. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then setting the desired Clock Level. The value of $x$ can range from 1 through 4.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:CLOCk:THReshold:CH<x> \{ECL|TTL|<NR3>\}
TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIC: SETHold:CLOCk:THReshold:CH<x>?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ LOGIc:SETHold:CLOCk:EDGE, TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}$ :LOGIc: SETHold:CLOCk:SOUrce

Arguments ECL specifies a preset ECL high level. TTL specifies a preset TTL high level. <NR3> is the clock level in volts.

Examples TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD:CH3 TTL specifies the preset TTL value as the clock threshold for setup and hold trigger for Channel 3.

TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD:CH3? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:THRESHOLD:CH3 1.2000E+00, indicating that the clock threshold for setup and hold trigger is 1.2 V for Channel 3.

## TRIGger:\{A|B\}:LOGIc:SETHold:DATa? (Query Only)

NOTE. Not available on some models.

This query-only command returns the voltage threshold and data source for the setup and hold trigger. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then viewing the current data setups.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:DATa?

Related Commands TRIGger: $\{\mathrm{A} \mid \mathrm{B}\}:$ :LOGIc:SETHold:CLOCk?

Examples TRIGGER:A:LOGIC:SETHOLD:DATA? might return :TRIGGER:A:LOGIC:SETHOLD:CLOCK:EDGE RISE;THRESHOLD 1.2000;THRESHOLD:CH1 1.2000;CH2 1.2000; CH3 1.2000;CH4 1.2000;:TRIGGER:A:LOGIC:SETHOLD:CLOCK:SOURCE CH2, indicating the current trigger data settings.

## TRIGger:\{A|B\}:LOGIc:SETHold:DATa:SOUrce

NOTE. Not available on some models.

This command sets or queries the data source for the setup and hold trigger. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and choosing the desired channel from the Data Source drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:DATa:SOUrce CH<X> TRIGger:\{A|B\}:LOGIc:SETHold:DATa:SOUrce?

Related Commands TRIGger:\{A|B\}:LOGIc:SETHold:DATa:THReshold

Arguments $\quad \mathrm{CH}<\mathrm{x}>$ specifies the input channel, which ranges from 1 through 4.

Examples TRIGGER:A:LOGIC:SETHOLD:DATA:SOURCE CH1 sets channel 1 as the clock source for the setup and hold trigger.

TRIGGER:A:LOGIC:SETHOLD:DATA:SOURCE? might return :TRIGGER:A:LOGIC:SETHOLD:DATA:SOURCE CH2, indicating that Channel 2 is the current clock source for the setup and hold trigger.

## TRIGger:\{A|B\}:LOGIc:SETHold:DATa:THReshold

## NOTE. Not available on some models.

This command sets or queries the data voltage threshold for setup and hold trigger. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then setting the desired Data Level.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:DATa:THReshold \{ECL|TTL|<NR3>\} TRIGger:\{A|B\}:LOGIC:SETHold:DATa:THReshold?

Related Commands TRIGger:\{A|B\}:LOGIc:SETHold:DATa:SOUrce

Arguments ECL specifies the preset ECL high level.
TTL specifies the preset TTL high level. <NR3> is the setup and hold data level in V.

Examples TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD TTL specifies the preset TTL high level as the current data voltage level for the setup and hold trigger.

TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD? might return :TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD 1.2000E+00, indicating that 1.2 V is the current data voltage level for the setup and hold trigger.

## TRIGger:\{A|B\}:LOGIc:SETHold:DATa:THReshold:CH<x>

NOTE. Not available on some models.

This command sets or queries the data voltage threshold for setup and hold trigger.
This command is equivalent to selecting A or B Event Trigger Setup from the Trig menu and then setting the desired Data Level. The value of $x$ can range from 1 through 4.

Group Trigger

```
Syntax TRIGger:{A|B}:LOGIc:SETHold:DATa:THReshold:CH<x>
    {ECL|TTL|<NR3>}
    TRIGger:{A|B}:LOGIc:SETHold:DATa:THReshold:CH<x>?
``` <NR3> is the setup and hold data level in V.

Examples TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD:CH2 TTL specifies the preset TTL high level as the current data voltage level for setup and hold trigger for Channel 2.

TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD:CH2? might return :TRIGGER:A:LOGIC:SETHOLD:DATA:THRESHOLD:CH2 1.2000E+00, indicating that 1.2 V is the current data voltage level for setup and hold trigger for Channel 2.

\title{
TRIGger:\{A|B\}:LOGlc:SETHold:HOLDTime
}

\author{
NOTE. Not available on some models.
}

This command sets or queries the hold time for setup and hold violation triggering. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then setting the desired Hold Time.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:SETHold:HOLDTime <NR3> TRIGger:\{A|B\}:LOGIC:SETHold:HOLDTime?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:SETHold:SETTime

Arguments <NR3> specifies the hold time setting in seconds. Positive values for hold time occur after the clock edge. Negative values occur before the clock edge.

Examples TRIGGER:A:LOGIC:SETHOLD:HOLDTIME \(3.0 \mathrm{E}-3\) sets the hold time for the setup and hold trigger to 3 ms .

TRIGGER:A:LOGIC:SETHOLD:HOLDTIME? might return :TRIGGER:A:LOGIC:SETHOLD:HOLDTIME 2.0000E-09, indicating that the current hold time for the setup and hold trigger is 2 ns .

\section*{TRIGger:\{A|B\}:LOGIc:SETHold:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Setup/Hold Trigger qualification. This is equivalent to selecting Setup/Hold Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Setup/Hold drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B logic setup/hold, the OccursAnd option is not available in the Trigger If Setup/Hold drop-down list box.

\section*{Group Trigger}

Syntax TRIGger:\{A|B\}:LOGIc:SETHold:QUA1ify \{OCCurs|LOGIc|BUS\}
TRIGger:\{A|B\}:LOGIc:SETHold:QUAlify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments occurs specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:INPut: \(\mathrm{CH}<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:LOGIC:SETHOLD:QUALIFY OCCURS sets the trigger qualifier to OCCurs, which initiates a trigger if the instrument detects any setup and hold trigger qualifications.

TRIGGER:A:LOGIC:SETHOLD:QUALIFY? might return :TRIGGER:A: LOGIC: SETHOLD: QUALIFY OCCURS, indicating that a trigger will occur if the instrument detects any of the setup and hold qualifications.

\section*{TRIGger:\{A|B\}:LOGIc:SETHold:SETTime}

NOTE. Not available on some models.

This command sets or queries the setup time for setup and hold violation triggering. This command is equivalent to selecting Setup/Hold Setup from the Trig menu and then setting the desired Setup Time.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:SETHold:SETTime <NR3> TRIGger:\{A|B\}:LOGIC:SETHold:SETTime?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:SETHold:HOLDTime

Arguments <NR3> specifies the setup time for setup and hold violation triggering.

Examples TRIGGER:A:LOGIC:SETHOLD:SETTIME 3.0E-6 specifies that the current setup time for setup and hold trigger is \(3 \mu \mathrm{~s}\).

TRIGGER:A:LOGIC:SETHOLD:SETTIME? might return :TRIGGER:A:LOGIC:SETHOLD:SETTIME \(2.0000 \mathrm{E}-09\), indicating that the current setup time for setup and hold trigger is 2 ns .

\section*{TRIGger:\{A|B\}:LOGIc:STATE? (Query Only)}

NOTE. Not available on some models.

This query-only command returns the data input and trigger criteria for the logic trigger. This command is equivalent to selecting Logic State from the Trig menu and then viewing the current logic state settings.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:STATE?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:STATE:INPut:CH \(<\mathrm{x}>\), TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:STATE: WHEn

Examples TRIGGER:A:LOGIC:STATE? might return :TRIGGER:A:LOGIC:STATE:INPUT:CH4 RISE;:TRIGGER:A:LOGIC:STATE:WHEN TRUE;CLOCK:SOURCE CH4.

\section*{TRIGger:\{A|B\}:LOGIc:STATE:CLOck:SOUrce}

NOTE. Not available on some models. This command is valid only on MSO instruments. DPO instruments do not support it.

This command sets or queries the clock source for the A or B logic trigger.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:STATE:CLOck:SOUrce \{CH4|CQ\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIC: STATE:CLOck: SOUrce?

NOTE. CQ is available only on MSO Series of products.

Arguments CH 4 specifies the analog channel as clock source. CQ specifies the channel/qualifier as clock source.

Examples TRIGGER:A:LOGIC:STATE:CLOCK:SOURCE CQ sets the clock source to channel/qualifier.

TRIGGER:A:LOGIC: STATE:CLOCK: SOURCE? might return :TRIGGER:A:LOGIC:STATE:CLOCK:SOURCE CH4, indicating that the clock source is set to CH4 .

\section*{TRIGger:\{A|B\}:LOGIc:STATE:INPut:CH<x>}

\section*{NOTE. Not available on some models.}

This command sets or queries the slope for the channel specified by x when the logic class is set to State. This command is equivalent to selecting Logic State from the Trig menu, choosing the desired channel input, and then the slope (NEG or POS) from the When Clock is drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:STATE:INPut:CH<x> \{FALL|RISe\} TRIGger:\{A|B\}:LOGIC:STATE:INPut:CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:STATE:WHEn

Arguments FALL specifies the falling edge and the input slope is NEG. RISe specifies the rising edge and the input slope is POS.

Examples TRIGGER:A:LOGIC:STATE:INPUT:CH4 RISE specifies that the A logic trigger input for Channel 4 is the rising edge.

TRIGGER:A:LOGIC:STATE:INPUT:CH4? might return :TRIGGER:A:LOGIC:STATE:INPUT:CH4 RISE, indicating that the A logic trigger input for Channel 4 is the rising edge.

\section*{TRIGger:\{A|B\}:LOGIc:STATE:WHEn}

NOTE. Not available on some models.

This command sets or queries the condition for generating an A or B logic state trigger. This command is equivalent to selecting Logic State from the Trig menu and choosing the desired condition from the Trigger When Pattern drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:STATE:WHEn \{TRUe|FALSe\}
TRIGger:\{A|B\}:LOGIC:STATE:WHEn?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:INPut: \(\mathrm{CH}<\mathrm{x}>\), TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:STATE:INPut: \(\mathrm{CH}<\mathrm{x}>\)

Arguments TRUe specifies that the trigger occurs when the clock transition on channel 4 occurs and the pattern of channels 1-3 are at the desired logic input states.
FALSe specifies that the trigger occurs when the desired clock transition on channel 4 occurs and the desired logic input states on channels 1-3 are not found.

Examples TRIGGER:A:LOGIC:STATE:WHEN TRUE specifies that the logic condition to trigger upon is true.

TRIGGER:A:LOGIC:STATE:WHEN? might return
:TRIGGER:A:LOGIC:STATE:WHEN FALSE, indicating that the logic condition to trigger upon is false.

\section*{TRIGger:\{A|B\}:LOGIc:THReshold? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the threshold voltage for all channels in a logic trigger. This command query is equivalent to selecting Event Trigger Setup from
the Trig menu, choosing a logic trigger type, such as State or Pattern, and viewing the current Input Threshold voltage settings.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIC:THReshold?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:THReshold:CH \(<\mathrm{x}>\), TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:INPut?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:INPut:CH<x>

Examples TRIGGER:A:LOGIC:THRESHOLD? might return :TRIGGER:A:LOGIC:THRESHOLD CH1 24.0000E-03; CH2
\(1.2000 \mathrm{E}+00\); CH3 \(1.2000 \mathrm{E}+00\); CH4 \(1.2000 \mathrm{E}+00\), indicating the threshold voltages for the channels in an A logic trigger are as follows: channel \(1=24 \mathrm{mV}\); channel \(2=1.2 \mathrm{~V}\); channel \(3=1.2 \mathrm{~V}\); channel \(4=1.2 \mathrm{~V}\).

\section*{TRIGger:\{A|B\}:LOGIc:THReshold:CH<x>}

\section*{NOTE. Not available on some models.}

This command sets or queries the A or B logic trigger threshold voltage for the channel, specified by \(x\), which ranges from 1 through 4 . This command is equivalent to selecting A or B Event Trigger Setup from the Trig menu, choosing a logic trigger type, such as State or Pattern, and setting the Input Threshold voltage for the desired channel.

Group Trigger

Syntax TRIGger:\{A|B\}:LOGIc:THReshold:CH<x> <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc: THReshold:CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:INPut?

Arguments <NR3> specifies the threshold voltage.

Examples TRIGGER:A:LOGICTHRESHOLD:CH2 3.0E-3 sets the A logic trigger threshold voltage for Channel 2 to 3 mV .

TRIGGER:A:LOGIC:THRESHOLD:CH3? might return
:TRIGGER:A:LOGIC:THRESHOLD:CH3 1.2000E+00, indicating that the A logic trigger threshold voltage for Channel 3 is 1.2 V .

\section*{TRIGger:\{A|B\}:LOWerthreshold:CH<x>}

NOTE. Not available on some models.

This command sets or queries the A or B lower trigger level for TRIGger:LVLSrcpreferenceTRIGger:LVLSrcpreference SRCDependent or SRCIndependent modes for the channel, specified by x , which ranges from 1 through 4.

Group Trigger

Syntax TRIGger:\{A|B\}:LOWerthreshold:CH<x> \{ECL|TTL|<NR3>\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOWerthreshold:CH<x>?

Related Commands TRIGger:LVLSrcpreference, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :UPPerthreshold:CH<x>

Arguments ECL specifies the preset ECL high level.
TTL specifies the preset TTL high level.
<NR3> specifies the threshold voltage in user units.

Examples TRIGGER:A:LOWERTHRESHOLD:CH2 TTL sets the A trigger threshold voltage for Channel 2 to the TTL low level.

TRIGGER:A:LOWERTHRESHOLD:CH3? might return
:TRIGGER:A:LOWERTHRESHOLD:CH3 1.2000E+00, indicating that the A trigger threshold voltage for Channel 3 is 1.2 V .

\section*{TRIGger:\{A|B\}:PULse? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the pulse trigger parameters.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc?
```

Examples TRIGGER:A:PULSE? might return :TRIGGER:A:PULSE:CLASS
GLITCH;SOURCE CH1; GLITCH:WIDTH 2.0000E-9;TRIGIF
ACCEPT;POLARITY POSITIVE; POLARITY:CH1
POSITIVE;CH2 POSITIVE;CH3 POSITIVE;CH4

2.0000E-9;POLARITY POSITIVE;THRESHOLD:HIGH 1.2000;LOW
800.0000E-3;:TRIGGER:A:PULSE:TRANSITION:WHEN
SLOWERTHAN; :TRIGGER:A:PULSE:WIDTH:LOWLIMIT
2.0000E-9;HIGHLIMIT 2.0000E-9;WHEN WITHIN;POLARITY
POSITIVE;:TRIGGER:A:PULSE:TIMEOUT:POLARITY STAYSHIGH;TIME
2.0000e-9.

```

\section*{TRIGger:\{A|B\}:PULse:CLAss}

NOTE. Not available on some models.

This command sets or queries the type of pulse on which to trigger. This command is equivalent to selecting the setup menu for the pulse type that you want from the Trig menu: Glitch Setup, Width Setup, Runt Setup, Timeout Setup, or Transition Setup.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:CLAss \{GLItch|RUNT|WIDth|
TRANsition|TIMEOut|WINdow\}
TRIGger: \{A|B\}:PULse:CLAss?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TIMEOut?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TRANsition?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) TYPe

Arguments GLItch triggers when a pulse is found that is of the specified polarity and width. These are set with the commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch:POLarity and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch:WIDth.

RUNT triggers when a pulse crosses the first preset voltage threshold but does not cross the second preset threshold before recrossing the first. The thresholds are set with the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:RUNT:THReshold:LOW and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:THReshold:HIGH commands.
wIDth triggers when a pulse is found that has the specified polarity and is either inside or outside the limits as specified by TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth: LOWLimit and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth:HIGHLimit. The polarity is selected using the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth:POLarity command.

TRANsition triggers when a pulse crosses both thresholds in the same direction as the specified polarity and the transition time between the two threshold crossings is greater or less than the specified time delta.

TIMEOut triggers when the pulse train stops in the selected state for longer than the specified time.

WINdow triggers when a pulse is found that meets the conditions set by the A Event window trigger type, specified by the following commands: TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WINdow:THReshold:HIGH, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WINdow:THReshold:LOW, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse: WINdow:THReshold:BOTh, , and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WINdow:WIDTH

Examples TRIGGER:A:PULSE:CLASS WIDTH specifies a width pulse for the A trigger.
TRIGGER:A:PULSE:CLASS? might return :TRIGGER:A:PULSE:CLASS GLITCH, indicating that a pulse was found that is of the specified polarity and width.

\section*{TRIGger:\{A|B\}:PULse:GLltch? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the current glitch pulse trigger parameters. This command query is equivalent to selecting Glitch Setup from the Trig menu and viewing the current glitch trigger settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:GLItch?

\title{
Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:GLItch:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:GLItch:
}

TRIGIF, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:GLItch:WIDth

\author{
Examples TRIGGER:A:PULSE:GLITCH? might return :TRIGGER:A:PULSE:GLITCH:WIDTH 2.0000E-09; FILTER ACCEPT;POLARITY POSITIVE.
}

\section*{TRIGger:\{A|B\}:PULse:GLItch:LOWPASSfilter}

\section*{NOTE. Not available on some models.}

This command turns on or turns off the lowpass filter feature for Glitch trigger. This allows triggering in the presence of highfrequency signal edges.

Group Trigger
```

Syntax TRIGger:{A|B}:PULse:GLItch:LOWPASSfilter {ON|OFF}
TRIGger:{A|B}:PULse:GLItch:LOWPASSfilter?

```

Arguments \(\quad \mathrm{ON}\) enables lowpass filter feature. OFF disables lowpass filter feature.

Examples TRIGGER:A:PULSE:GLITCH:LOWPASSFILTER ON turns on the lowpass filter feature for Glitch trigger.

TRIGGER:A:PULSE:GLITCH:LOWPASSFILTER? might return :TRIGGER:A:PULSE:GLITCH:LOWPASSFILTER OFF, indicating that the lowpass filter feature is disabled for Glitch trigger.

\section*{TRIGger:\{A|B\}:PULse:GLItch:POLarity}

NOTE. Not available on some models.

This command sets or queries the polarity for A or B pulse glitch trigger. This command is equivalent to selecting Glitch Setup from the Trig menu and then choosing the desired Polarity.

Group Trigger
```

Syntax TRIGger:\{A|B\}:PULse:GLItch:POLarity
\{POSITIVe|NEGAtive|EITher\}
TRIGger:\{A|B\}:PULse:GLItch:POLarity?

```

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LEVel, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:GLItch:WIDth

Arguments POSITIVe specifies that the instrument will only trigger when the polarity of the glitch is positive.

NEGAtive specifies that the instrument will only trigger when the polarity of the glitch is negative.

EITher specifies that the instrument will trigger when the polarity of the glitch is either positive or negative.

Examples TRIGGER:A:PULSE:GLITCH:POLARITY EITHER specifies that the polarity of the glitch can be either positive or negative for the A trigger to occur.

TRIGGER:A:PULSE:GLITCH: POLARITY? might return :TRIGGER:A:PULSE:GLITCH:POLARITY POSITIVE, indicating that the polarity of the glitch must be positive for the trigger to occur.

\section*{TRIGger:\{A|B\}:PULse:GLItch:POLarity:CH<x>}

NOTE. Not available on some models.

This command sets or queries the polarity for A or B pulse glitch trigger for the channel.

This command is equivalent to selecting Glitch Setup from the Trig menu and then choosing the desired Polarity.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:GLItch:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\}
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:GLItch:POLarity: CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LEVel, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:GLItch:WIDth

Arguments EITher specifies that the instrument will trigger when the polarity of the glitch is either positive or negative.

NEGAtive specifies that the instrument will only trigger when the polarity of the glitch is negative.

POSITIVe specifies that the instrument will only trigger when the polarity of the glitch is positive.

Examples TRIGGER:A:PULSE:GLITCH:POLARITY:CH2 EITHER specifies that the polarity of the glitch can be either positive or negative for the Channel 2 trigger to occur.

TRIGGER:A:PULSE:GLITCH:POLARITY:CH2? might return :TRIGGER:A:PULSE:GLITCH:POLARITY:CH2 POSITIVE, indicating that the polarity of the glitch must be positive for the Channel 2 trigger to occur.

\section*{TRIGger:\{A|B\}:PULse:GLItch:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Glitch Trigger qualification. This is equivalent to selecting Glitch Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Glitch drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse glitch, the OccursAnd option is not available in the Trigger If Glitch drop-down list box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:GLItch:QUAlify \{OCCurs|LOGIc|BUS\} TRIGger: \{A|B\}:PULse:GLItch:QUAlify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments occurs specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:INPut: \(\mathrm{CH}<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:PULSE:GLITCH:QUALIFY OCCURS This command sets the trigger qualifier to OCCURS, which initiates a trigger if the instrument detects any glitch trigger qualifications.

TRIGGER:A:PULSE:GLITCH:QUALIFY? might return
:TRIGGER:A:PULSE:GLITCH:QUALIFY LOGIC, indicating that a trigger will occur if the instrument detects LOGIC glitch qualifications.

\section*{TRIGger:\{A|B\}:PULse:GLItch:TRIGIF}

\section*{NOTE. Not available on some models.}

This command sets or queries the acceptance or rejection of the glitch pulse trigger, based on width. This command is equivalent to selecting Glitch Setup from the Trig menu and choosing the desired Trig if Width setting.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:GLItch:TRIGIF \{ACCept|REJect\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:GLItch:TRIGIF?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch:WIDth

Arguments ACCept specifies that the instrument will only trigger on pulses that are narrower than the specified width, when the trigger type is set to glitch. The width is specified using the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch:WIDth command.

REJect specifies that the instrument will only trigger on pulses that are wider than the specified width, when the trigger type is set to glitch. The width is specified using the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:GLItch:WIDth command.

Examples TRIGGER:A:PULSE:GLITCH:TRIGIF REJECT specifies that the instrument triggers on pulses that are wider than the specified width.

TRIGGER:A:PULSE:GLITCH:TRIGIF ACCEPT? might return :TRIGGER:A:PULSE:GLITCH:TRIGIF ACCEPT, indicating that the instrument is set to trigger on pulses that are narrower than the specified width.

\section*{TRIGger:\{A|B\}:PULse:GLItch:WIDth}

NOTE. Not available on some models.

This command sets or queries the width for the glitch trigger. This command is equivalent to selecting Glitch Setup from the Trig menu and then setting the desired Width.

For information about using the width value, refer to the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse: GLItch:TRIGIF command.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:GLItch:WIDth <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:GLItch:WIDth?

Related Command

Arguments <NR3> argument specifies the width of the glitch in seconds.

Examples TRIGGER:A:PULSE:GLITCH:WIDTH 15E-6 sets the width of the glitch to \(15 \mu \mathrm{~s}\). TRIGGER:A:PULSE:GLITCH:WIDTH? might return :TRIGGER:A:PULSE:GLITCH:WIDTH \(2.0000 \mathrm{E}-09\), indicating that the width of the glitch is currently set at 2 ns .

\section*{TRIGger:\{A|B\}:PULse:RUNT? (Query Only)}

NOTE. Not available on some models.

This query-only command returns the current runt trigger parameters. This command query is equivalent to selecting Runt Setup from the Trig menu and then viewing the current settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:GLItch?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TIMEOut?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth?

Examples TRIGGER:A:PULSE:RUNT? might return :TRIGGER:A:PULSE:RUNT:POLARITY POSITIVE;POLARITY:CH1 POSITIVE;CH2 POSITIVE;CH3 POSITIVE;CH4
POSITIVE;:TRIGGER:A:PULSE:RUNT:THRESHOLD:HIGH 1.2000;LOW 800.0000E-3;:TRIGGER:A:PULSE:RUNT:WHEN OCCURS;WIDTH \(500.0000 \mathrm{E}-12\);QUALIFY OCCURS.

\section*{TRIGger:\{A|B\}:PULse:RUNT:POLarity}

NOTE. Not available on some models.

This command sets or queries the polarity for the A or B pulse runt trigger. This command is equivalent to selecting Runt Setup from the Trig menu and then choosing the Polarity setting.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:POLarity \{POSITIVe|NEGAtive|EITher\} TRIGger:\{A|B\}:PULse:RUNT:POLarity?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT:THReshold?

Arguments POSITIVe indicates that the rising edge crosses the low threshold and the falling edge recrosses the low threshold without either edge ever crossing the high threshold.

NEGAtive indicates that the falling edge crosses the high threshold and the rising edge recrosses the high threshold without either edge ever crossing the low threshold.

EITher indicates either negative or positive polarity.

Examples TRIGGER:A:PULSE:RUNT:POLARITY NEGATIVE sets the polarity of the A pulse runt trigger to negative.

TRIGGER:A:PULSE:RUNT: POLARITY? might return :TRIGGER:A:PULSE:RUNT:POLARITY POSITIVE, indicating that the polarity of the A pulse runt trigger is set to positive.

\section*{TRIGger:\{A|B\}:PULse:RUNT:POLarity:CH<x>}

NOTE. Not available on some models.

This command sets or queries the polarity for the A or B pulse runt trigger for the channel.

This command is equivalent to selecting Runt Setup from the Trig menu and then choosing the Polarity setting for the channel.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\} TRIGger: \{A|B\}:PULse:RUNT:POLarity:CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:THReshold?

Arguments EITher indicates either negative or positive polarity.
NEGAtive indicates that the falling edge crosses the high threshold and the rising edge recrosses the high threshold without either edge ever crossing the low threshold.
POSITIVe indicates that the rising edge crosses the low threshold and the falling edge recrosses the low threshold without either edge ever crossing the high threshold.

Examples TRIGGER:A:PULSE:RUNT:POLARITY:CH3 NEGATIVE sets the polarity of the Channel 3 A pulse runt trigger to negative.

TRIGGER:A:PULSE:RUNT:POLARITY:CH3? might return :TRIGGER:A:PULSE:RUNT:POLARITY:CH3 POSITIVE, indicating that the polarity of the A pulse runt trigger is set to positive.

\section*{TRIGger:\{A|B\}:PULse:RUNT:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Runt Trigger qualification. This is equivalent to selecting Runt Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Runt drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse runt, the OccursAnd option is not available in the Trigger If Runt drop-down list box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:QUAlify \{occurs|LOGIc|BUS\} TRIGger:\{A|B\}:PULse:RUNT:QUA1ify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments occurs specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the command.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.
\(\begin{array}{ll}\text { Examples } & \text { TRIGGER:A:PULSE:RUNT:QUALIFY OCCURS sets the A trigger to trigger if a } \\ \text { qualifying runt occurs. }\end{array}\)
TRIGGER:A:PULSE:RUNT:QUALIFY? might return :TRIGGER:A:PULSE:RUNT:QUALIFY OCCURS, indicating that a trigger will occur if the instrument detects any of the runt qualifications.

\section*{TRIGger:\{A|B\}:PULse:RUNT:THReshold? (Query Only)}

\author{
NOTE. Not available on some models.
}

This query-only command returns the upper and lower thresholds for the pulse runt trigger. This command query is equivalent to selecting Runt Setup from the Trig menu and then viewing the Upper Level and Lower Level settings.

\section*{Group Trigger}

Syntax TRIGger:\{A|B\}:PULse:RUNT:THReshold?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT: THReshold:BOTh, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT:THReshold:HIGH, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:RUNT:THReshold:LOW

Examples TRIGGER:A:PULSE:RUNT:THRESHOLD? might return :TRIGGER:A:PULSE:THRESHOLD:HIGH 2.0000E+00; LOW 8.0000E-01, indicating that the upper threshold is 2 V and that the lower threshold is set to 0.8 V .

\section*{TRIGger:\{A|B\}:PULse:RUNT:THReshold:BOTh (No Query Form)}

NOTE. Not available on some models.

This command (no query form) sets the upper and lower switching thresholds for the pulse runt trigger. This command is equivalent to selecting Runt Setup from the Trig menu and then setting the Upper Level and Lower Level voltages.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:THReshold:BOTh \{TTL|ECL\}

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT:THReshold?

Arguments TTL sets the upper and lower threshold to the nominal TTL voltage levels. ECL sets the upper and lower threshold to the nominal ECL voltage levels.

Examples TRIGGER:A:PULSE:RUNT:THRESHOLD:BOTH TTL sets the threshold of the pulse runt trigger to the nominal TTL voltage levels.

\section*{TRIGger:\{A|B\}:PULse:RUNT:THReshold:HIGH}

\section*{NOTE. Not available on some models.}

This command sets or queries the upper limit for the pulse runt trigger. This command is equivalent to selecting Runt Setup from the Trig menu and setting the runt trigger Upper Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:THReshold:HIGH <NR3> TRIGger: \{A|B\}:PULse:RUNT:THReshold:HIGH?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:THReshold?

Arguments <NR3> specifies the threshold value in volts.

Examples TRIGGER:A:PULSE:RUNT:THRESHOLD:HIGH 120E-3 sets the upper limit of the pulse runt trigger to 120 mV .

TRIGGER:A:PULSE:RUNT:THRESHOLD:HIGH? might return :TRIGGER:A:PULSE:RUNT:THRESHOLD:HIGH 1.1000E+00, indicating that the upper limit of the pulse runt trigger is currently set to 1.1 V .

\section*{TRIGger:\{A|B\}:PULse:RUNT:THReshold:LOW}

NOTE. Not available on some models.

This command sets or queries the lower limit for the pulse runt trigger. This command is equivalent to selecting Runt Setup from the Trig menu and then setting the Lower Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:THReshold:LOW <NR3> TRIGger:\{A|B\}:PULse:RUNT:THReshold:LOW?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:THReshold?

Arguments <NR3> specifies the threshold value in volts.

Examples TRIGGER:A:PULSE:RUNT:THRESHOLD:LOW 50E-3 sets the lower limit of the pulse runt trigger to 50 mV .

TRIGGER:A:PULSE:RUNT:THRESHOLD:LOW? might return :TRIGGER:A:PULSE:RUNT:THRESHOLD:LOW 1.2000E-01, indicating that the lower limit of the pulse runt trigger is set to 120 mV .

\section*{TRIGger:\{A|B\}:PULse:RUNT:WHEn}

NOTE. Not available on some models.

This command sets or queries the type of pulse width the trigger checks for when it detects a runt. This is equivalent to selecting Runt Setup from the Trig menu and choosing the desired Trigger When setting from the drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:WHEn \{OCCurs|WIDERthan\}
TRIGger:\{A|B\}:PULse:RUNT:WHEn?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:RUNT:WIDth

Arguments occurs argument specifies a trigger event if a runt of any detectable width occurs. WIDERthan specifies a trigger event if a runt greater than the specified width occurs.

Examples TRIGGER:A:PULSE:RUNT:WHEN WIDERTHAN sets the runt trigger to occur when the instrument detects a runt in a pulse wider than the specified width.

TRIGGER:A:PULSE:RUNT:WHEN? might return :TRIGGER:A:PULSE:RUNT:WHEN OCCURS, indicating that a runt trigger will occur if the instrument detects a runt of any detectable width.

\section*{TRIGger:\{A|B\}:PULse:RUNT:WIDth}

NOTE. Not available on some models.

This command sets or queries the minimum width for an Pulse Runt trigger. This command is equivalent to selecting Runt Setup from the Trig menu and then setting the Width.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:RUNT:WIDth <NR3> TRIGger:\{A|B\}:PULse:RUNT:WIDth?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT:WHEn

Arguments <NR3> specifies the minimum width in seconds.

Examples TRIGGER:A:PULSE:RUNT:WIDTH 15E-6 sets the minimum width of the pulse runt trigger to \(15 \mu \mathrm{~s}\).

TRIGGER:A:PULSE:RUNT:WIDTH? might return
:TRIGGER:A:PULSE:RUNT:WIDTH \(2.0000 \mathrm{E}-09\), indicating that the minimum width of a pulse runt trigger is 2 ns .

\section*{TRIGger:\{A|B\}:PULse:SOUrce}

\section*{NOTE. Not available on some models.}

This command sets or queries the source for the pulse trigger. This source parameter applies to all classes of pulse triggers. This command is equivalent to selecting Event Trigger Setup from the Trig menu, selecting the pulse type (Glitch, Width, Runt, Timeout, or Transition), and then choosing the desired channel from the Source pull-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse: Source \(\{C H<x>\mid D<x>\}\) TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse: SOUrce?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:SOUrce

Arguments \(\quad C H<x>\) specifies one of the input channels, which range from 1 through 4. \(\mathrm{D}<\mathrm{x}>\) specifies one of the digital inputs, which range from 0 through 15.

Examples TRIGGER:A:PULSE:SOURCE CH4 sets Channel 4 as the source for the A pulse trigger.

TRIGGER:A:PULSE:SOURCE? might return :TRIGGER:A:PULSE:SOURCE CH2, indicating that the Channel 2 is the source for the A pulse trigger.

\section*{TRIGger:\{A|B\}:PULse:TIMEOut? (Query Only)}

NOTE. Not available on some models.

This query-only command returns the polarity and time-out duration for the pulse timeout trigger. This command is equivalent to selecting Timeout Setup from the Trig menu and viewing the polarity in the Trigger When box and the Timer setting.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TIMEOut?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:TIMEOut:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TIMEOut: TIMe

Examples TRIGGER:A:PULSE:TIMEOUT? might return :TRIGGER:A:PULSE:TIMEOUT:POLARITY STAYSHIGH;TIME
\(2.0000 \mathrm{E}-9\), indicating that the polarity setting for the A pulse trigger is STAYSHIGH (positive) and the timeout duration is 2 ns .

\section*{TRIGger:\{A|B\}:PULse:TIMEOut:LOWPASSfilter}

NOTE. Not available on some models.

This command turns on or turns off the lowpass filter feature for Timeout trigger. This allows triggering in the presence of high frequency signal edges.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TIMEOut:LOWPASSfilter \{ON|OFF\} TRIGger:\{A|B\}:PULse:TIMEOut:LOWPASSfilter?

Arguments \(\quad \mathrm{ON}\) enables lowpass filter feature.
OFF disables lowpass filter feature.

Examples TRIGGER:A:PULSE:TIMEOUT:LOWPASSFILTER ON turns on the lowpass filter feature for Timeout trigger.

TRIGGER:A:PULSE:TIMEOUT:LOWPASSFILTER? might return :TRIGGER:A:PULSE:TIMEOUT:LOWPASSFILTER OFF, indicating that the lowpass filter feature is disabled for Timeout trigger.

\section*{TRIGger:\{A|B\}:PULse:TIMEOut:POLarity}

NOTE. Not available on some models.

This command sets or queries the polarity for the pulse timeout trigger. This command is equivalent to selecting Timeout Setup from the Trig menu and setting the desired polarity in the Trigger When box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TIMEOut:POLarity
\{STAYSHigh|STAYSLow|EITher\}
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) : PULse:TIMEOut:POLarity?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TIMEOut?

Arguments STAYSHigh indicates that a pulse edge must stay high (positive) for the required time period to permit timeout triggering to occur. This is the default polarity.
STAYSLow indicates that a pulse edge must stay low (negative) for the required time period to permit timeout triggering to occur.

EITher indicates that the polarity of the timeout trigger can stay either high or low (positive or negative) for the required time period to permit time out triggering to occur.

Examples TRIGGER:A:PULSE:TIMEOUT: POLARITY STAYSHIGH sets the polarity of the A timeout trigger to positive.

TRIGGER:A:PULSE:TIMEOUT:POLARITY? might return :TRIGGER:A:PULSE:TIMEOUT:POLARITY EITHER, indicating that the polarity of the A timeout trigger can be either positive or negative.

\section*{TRIGger:\{A|B\}:PULse:TIMEOut:POLarity:CH<x>}

NOTE. Not available on some models.

This command sets or queries the polarity for the A or B pulse timeout trigger for the channel.

This command is equivalent to selecting Transition Setup from the Trig menu and then setting the desired Polarity for the channel.

Group Trigger
```

Syntax TRIGger:{A|B}:PULse:TIMEOut:POLarity:CH<x>
{STAYSHigh|STAYSLow|EITher}
TRIGger:{A|B}:PULse:TIMEOut:POLarity:CH<x>?

```

Arguments STAYSHigh indicates that a pulse edge must stay high (positive) for the required time period to permit time out triggering to occur. This is the default polarity.

STAYSLow indicates that a pulse edge must stay low (negative) for the required time period to permit time out triggering to occur.

EITher indicates that the polarity of the time out trigger can stay either high or low (positive or negative) for the required time period to permit time out triggering to occur.

Examples TRIGGER:A:PULSE:TIMEOUT:POLARITY:CH1 STAYSHIGH sets the polarity of the A pulse time out trigger to positive for Channel 1.

TRIGGER:A:PULSE:TIMEOUT: POLARITY:CH1? might return
:TRIGGER:A:PULSE:TIMEOUT:POLARITY:CH1 EITHER, indicating that the polarity of the A pulse time out trigger for Channel 1 can be either positive or negative.

\section*{TRIGger:\{A|B\}:PULse:TIMEOut:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Timeout Trigger qualification.
This is equivalent to selecting Timeout Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Timeout drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse timeout, the OccursAnd option is not available in the Trigger If Timeout drop-down list box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TIMEOut:QUA1ify \{OCCurs|LOGIC|BUS\} TRIGger:\{A|B\}:PULse:TIMEOut:QUA1ify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments occurs specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:INPut: \(\mathrm{CH}<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:PULSE:TIMEOUT:QUALIFY OCCURS sets the trigger qualifier to OCCURS, which initiates a trigger if the instrument detects any timeout trigger qualifications.

TRIGGER:A:PULSE:TIMEOUT:QUALIFY? might return
:TRIGGER:A:PULSE:TIMEOUT:QUALIFY OCCURS, indicating that a trigger will occur if the instrument detects any of the timeout qualifications.

\section*{TRIGger:\{A|B\}:PULse:TIMEOut:TIMe}

NOTE. Not available on some models.

This command sets or queries the pulse timeout trigger time (measured in seconds). This command is equivalent to selecting Timeout Setup from the Trig menu and setting a value for Timer.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TIMEOut:TIMe <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) : PULse:TIMEOut:TIMe?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TIMEOut?

Arguments <NR3> argument specifies the timeout period in seconds.

Examples TRIGGER:A:PULSE:TIMEOUT:TIME \(3.134 \mathrm{E}-6\) sets the timeout to \(3.134 \mu \mathrm{~s}\).
TRIGGER:A:;PULSE:TIMEOUT:TIME? might return :TRIGGER:A:PULSE:TIMEOUT:TIME \(2.0000 \mathrm{E}-9\), indicating that the timeout is currently set to 2 ns.

\section*{TRIGger:\{A|B\}:PULse:TRANsition? (Query Only)}

NOTE. Not available on some models.

This query-only command returns delta time, polarity, and both upper and lower threshold limits for the transition time trigger. This command is equivalent to selecting Transition Setup from the Trig menu and then viewing the current transition settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) TYPe, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:CLAss, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse: GLItch?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:RUNT?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :PULse:TIMEOut?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth?

Examples TRIGGER:A:PULSE:TRANSITION? might return :TRIGGER:A:PULSE:TRANSITION:DELTATIME
2.0000E-9;POLARITY POSITIVE;THRESHOLD:HIGH 1.2000;LOW 800.0000E-3;:TRIGGER:A:PULSE:TRANSITION:WHEN SLOWERTHAN indicating the current transition time trigger settings.

\section*{TRIGger:\{A|B\}:PULse:TRANsition:DELTATime}

NOTE. Not available on some models.

This command sets or queries the delta time used in calculating the transition value for the transition trigger. This is equivalent to selecting Transition Setup from the Trig menu and setting the Time.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:DELTATime <NR3> TRIGger:\{A|B\}:PULse:TRANsition:DELTATime?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse: TRANsition:THReshold?

Arguments <NR3> specifies the delta time in seconds.

Examples TRIGGER:A:PULSE:TRANSITION:DELTATIME 15E-6 sets the delta time of the transition trigger to \(15 \mu \mathrm{~s}\).

TRIGGER:A:PULSE:TRANSITION:DELTATIME? might return :TRIGGER:A:PULSE:TRANSITION:DELTATIME 2.0000E-09, indicating that the delta time of the transition trigger is set to 2 ns .

\section*{TRIGger:\{A|B\}:PULse:TRANsition:POLarity}

NOTE. Not available on some models.

This command sets or queries the polarity for the transition trigger. This command is equivalent to selecting Transition Setup from the Trig menu and choosing from the Polarity drop-down list.

Group Trigger
```

Syntax TRIGger:\{A|B\}:PULse:TRANsition:POLarity
\{POSITIVe|NEGAtive|EITher\}
TRIGger:\{A|B\}:PULse:TRANsition:POLarity?

```

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TRANsition:DELTATime

Arguments POSITIVe indicates that a pulse edge must traverse from the lower (most negative) to higher (most positive) level for transition triggering to occur.

NEGAtive indicates that a pulse edge must traverse from the upper (most positive) to lower (most negative) level for transition triggering to occur.

EITher indicates either positive or negative polarity.

\section*{Examples TRIGGER:A:PULSE:TRANSITION:POLARITY NEGATIVE sets the transition polarity to negative.}

TRIGGER:A:PULSE:TRANSITION:POLARITY? might return :TRIGGER:A:PULSE:TRANSITION:POLARITY EITHER, indicating that the polarity can be either positive or negative.

\section*{TRIGger:\{A|B\}:PULse:TRANsition:POLarity:CH<x>}

\section*{NOTE. Not available on some models.}

This command sets or queries the polarity for the A or B pulse transition trigger for the channel.

This command is equivalent to selecting Transition Setup from the Trig menu and then choosing from the Polarity pull-down list for the channel.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\}
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition: POLarity:CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TRANsition:DELTATime

Arguments EITher indicates either positive or negative polarity.
NEGAtive indicates that a pulse edge must traverse from the upper (most positive) to lower (most negative) level for transition triggering to occur.

POSITIVe indicates that a pulse edge must traverse from the lower (most negative) to higher (post positive) level for transition triggering to occur.

Examples TRIGGER:A:PULSE:TRANSITION: POLARITY NEGATIVE sets the trigger A transition polarity to negative.

TRIGGER:A:PULSE:TRANSITION:POLARITY? might return :TRIGGER:A:PULSE:TRANSITION:POLARITY EITHER, indicating that the transition can be either positive or negative for trigger \(A\).

\section*{TRIGger:\{A|B\}:PULse:TRANsition:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Transition Time Trigger qualification.
This is equivalent to selecting Transition Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Transition drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse transition, the OccursAnd option is not available in the Trigger If Transition drop-down list box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:QUA7ify \{OCCurs|LOGIc|BUS\} TRIGger:\{A|B\}:PULse:TRANsition:QUAlify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments occurs specifies a trigger if any violations occur.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:INPut:CH \(<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:PULSE:TRANSITION:QUALIFY OCCURS sets the trigger qualifier to OCCurs, which initiates an A trigger if the instrument detects any transition violations.

TRIGGER:A:PULSE:TRANSITION:QUALIFY? might return :TRIGGER:A:PULSE:TRANSITION:QUALIFY OCCURS, indicating that an A trigger will occur if the instrument detects any transition violations.

\section*{TRIGger:\{A|B\}:PULse:TRANsition:THReshold? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the upper and lower threshold limits for the transition time trigger. This command is equivalent to selecting Transition Setup from the Trig menu and viewing the Upper Level and Lower Level voltage settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:THReshold?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition:DELTATime, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse: TRANsition:POLarity

Examples TRIGGER:A:PULSE:TRANSITION:THRESHOLD? might return :TRIGGER:A:PULSE:TRANSITION:THRESHOLD:HIGH 1.2000;LOW \(800.0000 \mathrm{E}-3\), indicating that the upper threshold limit to 1.2 V and lower threshold limit for the transition time trigger to 0.8 V .

\section*{TRIGger:\{A|B\}:PULse:TRANsition:THReshold:BOTh (No Query Form)}

NOTE. Not available on some models.

This command (no query form) sets the upper and lower thresholds for the transition trigger. This command is equivalent to selecting Transition Setup from the Trig menu and setting the desired Upper Level and Lower Level voltages.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:THReshold:BOTh \{TTL|ECL\}

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition:THReshold:HIGH, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse: TRANsition:THReshold:LOW

Arguments TTL sets the upper and lower threshold to the nominal TTL voltage levels. ECL sets the upper and the lower threshold to the nominal ECL voltage levels.

Examples TRIGGER:A:PULSE:TRANSITION:THRESHOLD:BOTH TTL sets the thresholds of the transition trigger to the nominal TTL voltage levels.

\section*{TRIGger:\{A|B\}:PULse:TRANsition:THReshold:HIGH}

NOTE. Not available on some models.

This command sets or queries the upper (most positive) transition trigger threshold. This command is equivalent to selecting Transition Setup from the Trig menu and then setting the desired Upper Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:THReshold:HIGH <NR3> TRIGger:\{A|B\}:PULse:TRANsition:THReshold:HIGH?

Related Commands TRIGger:\{A|B\}:PULse:TRANsition:THReshold:LOW

Arguments <NR3> specifies the upper threshold in volts.

Examples TRIGGER:A:PULSE:TRANSITION:THRESHOLD:HIGH 120E-3 sets the upper limit of the pulse transition trigger to 120 mV .

TRIGGER:A:PULSE:TRANSITION:THRESHOLD:HIGH? might return :TRIGGER:A:PULSE:TRANSITION:THRESHOLD:HIGH 2.0000E+00, indicating that the upper limit of the pulse transition trigger is 2 V .

\section*{TRIGger:\{A|B\}:PULse:TRANsition:THReshold:LOW}

NOTE. Not available on some models.

This command sets or queries the lower (most negative) transition trigger threshold. This command is equivalent to selecting Transition Setup from the Trig menu and setting the desired Lower Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:THReshold:LOW <NR3> TRIGger:\{A|B\}:PULse:TRANsition:THReshold:LOW?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:TRANsition:THReshold:HIGH

Arguments <NR3> specifies the lower threshold in volts.

Examples TRIGGER:A:PULSE:TRANSITION:THRESHOLD:LOW 20E-3 sets the lower limit of the transition trigger to 20 mV .

TRIGGER:A:PULSE:TRANSITION:THRESHOLD: LOW? might return :TRIGGER:A:PULSE:TRANSITION:THRESHOLD:LOW 50.0000E-03, indicating that the lower limit of the transition trigger is 50 mV .

\section*{TRIGger:\{A|B\}:PULse:TRANsition:WHEn}

NOTE. Not available on some models.

This command sets or queries whether to check for a transitioning signal that is faster or slower than the specified delta time. This is equivalent to selecting Transition Setup from the Trig menu and choosing the Trigger When Transition Time setting.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:TRANsition:WHEn \{FASTERthan|SLOWERthan\} TRIGger:\{A|B\}:PULse:TRANsition:WHEn?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TRANsition:DELTATime, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse: TRANsition:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:TRANsition:THReshold?

Arguments FASTERthan sets the trigger to occur when the transitioning signal is faster than the set volts/second rate.

SLOWERthan sets the trigger to occur when the transitioning signal is slower than the set volts/second rate.

Examples
TRIGGER:A:PULSE:TRANSITION:WHEN SLOWERTHAN sets the trigger to occur when the transitioning signal is slower than the set volts/second rate.

TRIGGER:A:PULSE:TRANSITION:WHEN? might return :TRIGGER:A:PULSE:TRANSITION:WHEN FASTERTHAN, indicating that the transition triggers when the transitioning signal is faster than the set volts/second rate.

\section*{TRIGger:\{A|B\}:PULse:WIDth? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the width parameters for the pulse width trigger. This command is equivalent to selecting Width Setup from the Trig menu and then viewing the current pulse width trigger Lower Limit, Upper Limit, Trig When and Polarity settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth:HIGHLimit, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth: LOWLimit, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth:POLarity, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse: WIDth:WHEn

Examples TRIGGER:A:PULSE:WIDTH? might return :TRIGGER:A:PULSE:WIDTH:LOWLIMIT 2.0000E-9; HIGHLIMIT
2.0000E-9;WHEN WITHIN; POLARITY POSITIVE as the current A width trigger parameters.

\section*{TRIGger:\{A|B\}:PULse:WIDth:HIGHLimit}

NOTE. Not available on some models.

This command sets or queries the upper limit for the width trigger. This command is equivalent to selecting Width Setup from the Trig menu and setting the Upper Limit.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:HIGHLimit <NR3> TRIGger:\{A|B\}:PULse:WIDth:HIGHLimit?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth?

Arguments <NR3> specifies the width trigger upper limit in seconds.

Examples TRIGGER:A:PULSE:WIDTH:HIGHLIMIT 5.0E-6 sets the upper limit of the width trigger to \(5 \mu \mathrm{~s}\).

TRIGGER:A:PULSE:WIDTH:HIGHLIMIT? might return :TRIGGER:A:PULSE:WIDTH:HIGHLIMIT \(2.0000 \mathrm{E}-9\), indicating that the upper limit of the width trigger is set to 2 ns .

\section*{TRIGger:\{A|B\}:PULse:WIDth:LOWLimit}

NOTE. Not available on some models.

This command sets or queries the lower limit for the width trigger. This command is equivalent to selecting Width Setup from the Trig menu and setting the pulse Lower Limit.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:LOWLimit <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth: LOWLimit?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth?

Arguments <NR3> specifies the A pulse width trigger lower limit in seconds.

Examples TRIGGER:A:PULSE:WIDTH:LOWLIMIT 2.0E-6 sets the lower limit of the width trigger to \(2 \mu \mathrm{~s}\).

TRIGGER:A:PULSE:WIDTH:LOWLIMIT? might return :TRIGGER:A:PULSE:WIDTH:LOWLIMIT 1.0000E-9, indicating that the lower limit of the width trigger is set to 1 ns .

\section*{TRIGger:\{A|B\}:PULse:WIDth:LOWPASSfilter}

\section*{NOTE. Not available on some models.}

This command turns on or turn off the lowpass filter feature for pulse width trigger. This allows triggering in the presence of high frequency signal edges.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:LOWPASSfilter \{ON|OFF\} TRIGger:\{A|B\}:PULse:WIDth:LOWPASSfilter?

Arguments \(\quad\) ON enables lowpass filter feature.
OFF disables lowpass filter feature.

\section*{Examples TRIGGER:A:PULSE:WIDTH:LOWPASSFILTER ON turns on the lowpass filter feature for pulse width trigger. \\ TRIGGER:A:PULSE:WIDTH:LOWPASSFILTER? might return :TRIGGER:A:PULSE:WIDTH:LOWPASSFILTER OFF, indicating that the lowpass filter feature is disabled for pulse width trigger.}

\section*{TRIGger:\{A|B\}:PULse:WIDth:POLarity}

NOTE. Not available on some models.

This command sets or queries the polarity for the width trigger. This command is equivalent to selecting Width Setup from the Trig menu and selecting the Polarity.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:POLarity \{NEGAtive|POSITIVe\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth:POLarity?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth?

Arguments NEGAtive specifies a negative pulse. POSITIVe specifies a positive pulse.

Examples TRIGGER:A:PULSE:WIDTH:POLARITY NEGATIVE sets the pulse polarity to negative.

TRIGGER:A:PULSE:WIDTH:POLARITY? might return :TRIGGER:A:PULSE:WIDTH:POLARITY POSITIVE, indicating that the pulse polarity is set to positive.

\section*{TRIGger:\{A|B\}:PULse:WIDth:POLarity:CH<x>}

NOTE. Not available on some models.

This command sets or queries the polarity for the A or B pulse width trigger for the channel.

This command is equivalent to selecting Width Setup from the Trig menu and then selecting the pulse width trigger Polarity for the channel.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:POLarity:CH<x> \{NEGAtive|POSITIVe\} TRIGger:\{A|B\}:PULse:WIDth:POLarity:CH<x>?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth?

Arguments NEGAtive specifies a negative pulse.
POSITIVe specifies a positive pulse.

Examples TRIGGER:A:PULSE:WIDTH:POLARITY:CH4 NEGATIVE sets the pulse polarity to negative for Channel 4.

TRIGGER:A:PULSE:WIDTH:POLARITY:CH4? might return :TRIGGER:A:PULSE:WIDTH:POLARITY:CH4 POSITIVE, indicating that the pulse polarity is set to positive for Channel 4.

\section*{TRIGger:\{A|B\}:PULse:WIDth:QUAlify}

\section*{NOTE. Not available on some models.}

This command sets or queries the Width Trigger qualification.
This is equivalent to selecting Width Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Width drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse width, the OccursAnd option is not available in the Trigger If Width drop-down list box.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:QUAlify \{occurs|LOGIc|BUS\} TRIGger:\{A|B\}:PULse:WIDth:QUAlify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments OCCURS specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:INPut: \(\mathrm{CH}<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:PULSE:WIDTH:QUALIFY OCCURS sets the A trigger qualifier to OCCURS, which initiates a trigger if the instrument detects any width trigger qualifications.

TRIGGER:A:PULSE:WIDTH:QUALIFY? might return :TRIGGER:A:PULSE:WIDTH:QUALIFY OCCURS, indicating that an A trigger will occur if the instrument detects any of the width qualifications.

\section*{TRIGger:\{A|B\}:PULse:WIDth:WHEn}

NOTE. Not available on some models.

This command sets or queries whether to trigger on a pulse width that falls outside (or within) the specified range of limits. You can define or query trigger pulse width upper and lower limits using the TRIGger:A:PULse:WIDth:HIGHLimit and TRIGger:A:PULse:WIDth:LOWLimit commands.

This command is equivalent to selecting Width Setup from the Trig menu and then choosing from the Trig When drop-down list.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WIDth:WHEn \{OUTside|WIThin\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth:WHEn?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WIDth:HIGHLimit, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WIDth: LOWLimit

Arguments OUTside argument causes a trigger event the duration of the pulse is greater than the high limit or less than the low limit specified. The high and low limits are specified with the TRIGger:A:PULse:WIDth:HIGHLimit and TRIGger:A:PULse:WIDth:LOWLimit commands respectively.

WIThin argument causes a trigger event when the duration of the pulse is within the high and low limits. The high and low limits are specified with the TRIGger:A:PULse:WIDth:HIGHLimit and TRIGger:A:PULse:WIDth:LOWLimit command respectively.

\section*{Examples}

TRIGGER:A:PULSE:WIDTH:WHEN WITHIN specifies that the duration of the A pulse will fall within defined high and low limits.

TRIGGER:A:PULSE:WIDTH:WHEN? might return :TRIGGER:A:PULSE:WIDTH:WHEN OUTSIDE, indicating the conditions for generating a width trigger.

\section*{TRIGger:\{A|B\}:PULse:WINdow? (Query Only)}

NOTE. Not available on some models.

This query-only command returns the current window trigger parameters.
```

            Group Trigger
            Syntax TRIGger:{A|B}:PULse:WINdow?
    Examples TRIGGER:A:PULSE:WINDOW? might return
:TRIGGER:A:PULSE:WINDOW:TYPE INSIDE; WHEN OCCURS;WIDTH
2.0000e-9; LOGIC:INPUT:CH1 HIGH;CH2 X; CH3 X; CH4
LOW; :TRIGGER:A:PULSE:WINDOW:LOGIC:THRESHOLD:CH1
1.2000;CH2 1.2000;CH3 1.2000;CH4 1.2000;
:TRIGGER:A:PULSE:WINDOW:THRESHOLD:HIGH 1.2000;LOW
800.0000E-3.

```

\section*{TRIGger:\{A|B\}:PULse:WINdow:EVENT}

NOTE. Not available on some models.

This command sets or queries the window trigger event. This command is equivalent to selecting Window Setup from the Trig menu and selecting from the Window Event box.

Group Trigger
```

Syntax TRIGger:\{A|B\}:PULse:WINdow:EVENT
\{OUTSIDEGreater|INSIDEGreater|ENTERSWindow|EXITSWindow\}
TRIGger: \{A|B\}: PULse:WINdow:EVENT?

```

Arguments OUTSIDEGreater specifies a trigger event when the signal leaves the window defined by the threshold levels for the time specified by Width.

INSIDEGreater specifies a trigger event when the signal enters the window defined by the threshold levels for the time specified by Width.

ENTERSWindow specifies a trigger event when the signal enters the window defined by the threshold levels.

EXITSWi ndow specifies a trigger event when the signal leaves the window defined by the threshold levels.

Examples TRIGGER:A:PULSE:WINDOW:WHEN OCCURS sets the widow violation qualifier to OCCURS, which causes a trigger to occur when the instrument detects any window violation.

TRIGGER:A:PULSE:WINDOW:WHEN? might return
:TRIGGER:A:PULSE:WINdow:WHEN OCCURS, indicating that a trigger will occur if the instrument detects any window violation.

\section*{TRIGger:\{A|B\}:PULse:WINdow:POLarity} NOTE. Not available on some models.

This command sets or queries the pulse trigger window polarity of the selected trigger Source. The instrument triggers when the signal exits the window. The command is available only when the option Inside \(>\mathrm{t}\) is selected in the Window Event drop-dowm list and not available for the rest of the window events. The logic selection is available only when the polarity is set to Either.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:POLarity \{EITher|NEGAtive|POSITIVe\}
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) : PULse:WINdow: POLarity?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:WINdow:EVENT

Arguments EITher specifies positive or negative polarity.
NEGAtive specifies a negative polarity.
POSITIVe specifies a positive polarity.

Examples TRIGGER:A:PULSE:WINDOW:POLARITY POSITIVE sets the window polarity to positive.

TRIGGER:A:PULSE:WINDOW: POLARITY? might return :TRIGGER:A:PULSE:WINDOW:POLARITY EITHER, indicating that the window polarity is either positive or negative.

\section*{TRIGger:\{A|B\}:PULse:WINdow:POLarity:CH<x>}

\section*{NOTE. Not available on some models.}

This command sets or queries the pulse trigger window polarity of the specified channel. The oscilloscope triggers only when the signal exits the window. The command is available only when the Window Event is set to Inside \(>\mathrm{t}\) and not available for the rest of the window events. The logic selection is available only when the polarity is set to Either. \(\langle x\rangle\) is the search number or channel number.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:POLarity:CH<x> \{EITher|NEGAtive|POSITIVe\}
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WINdow: POLarity:CH<x>?

Arguments EITher specifies positive or negative polarity.
NEGAtive specifies a negative polarity.
POSITIVe specifies a positive polarity.

Examples TRIGGER:A:PULSE:WINDOW:POLARITY:CH1 POSITIVE sets the window polarity to positive.

TRIGGER:A:PULSE:WINDOW:POLARITY:CH1? might return :TRIGGER:A:PULSE:WINDOW:POLARITY:CH1 EITHER, indicating that the window polarity is either positive or negative.

\section*{TRIGger:\{A|B\}:PULse:WINdow:QUAlify}

NOTE. Not available on some models.

This command sets or queries the Window Trigger qualification. This is equivalent to selecting Window Setup from the Trig menu and selecting Occurs, Logic, or Bus in the Trigger If Window drop-down list box.

NOTE. If you use the LOGIc argument, you must specify the channel logic conditions.

BUS is same as OccursAnd in the user interface.

NOTE. In Trigger B pulse window, the OccursAnd option is not available in the Trigger If Window drop-down list box.

\section*{Group Trigger}

Syntax TRIGger:\{A|B\}:PULse:WINdow:QUAlify \{OCCurs|LOGIC|BUS\} TRIGger: \{A|B\}:PULse:WINdow:QUAlify?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments OCCurs specifies a trigger if any detectable event occurs.
LOGIC specifies a trigger if the individual channel qualifications meet the logic patterns and thresholds set by the TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:INPut:CH \(<\mathrm{x}>\) and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc:THReshold: \(\mathrm{CH}<\mathrm{x}>\) commands.

BUS specifies a trigger if the bus input qualifications meet the pattern set by the TRIGger:QUALification:BUS:VALue command.

Examples TRIGGER:A:PULSE:WINDOW: QUALIFY OCCURS sets the trigger qualifier to OCCURS, which causes an A trigger to occur if the instrument detects any of the window trigger qualifications.

TRIGGER:A:PULSE:WINDOW:QUALIFY? might return :TRIGGER:A:PULSE:WINDOW:QUALIFY OCCURS, indicating that an A trigger will occur if the instrument detects any of the window qualifications.

\title{
TRIGger:\{A|B\}:PULse:WINdow:THReshold? (Query Only)
}

\author{
NOTE. Not available on some models.
}

This query-only command returns the upper and lower thresholds for the window trigger. This command query is equivalent to selecting Window Setup from the Trig menu and viewing the window trigger Upper Level and Lower Level settings.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:THReshold?

Examples TRIGGER:A:PULSE:WINDOW:THRESHOLD? might return :TRIGGER:A:PULSE:WINDOW:THRESHOLD:HIGH 1.2000;LOW \(800.0000 \mathrm{E}-3\), indicating that the upper threshold is 1.2 V and that the lower threshold is 800 mV .

\section*{TRIGger:\{A|B\}:PULse:WINdow:THReshold:BOTh (No Query Form)}

NOTE. Not available on some models.

This command (no query form) sets the upper and lower switching thresholds for the window trigger. This command is equivalent to selecting Window Setup from the Trig menu and then setting the Upper Level and Lower Level voltages.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:THReshold:BOTh \{TTL|ECL\}

Arguments TTL argument sets the upper and the lower threshold to the nominal TTL voltage levels.

ECL argument sets the upper and the lower threshold to the nominal ECL voltage levels.

Examples TRIGGER:A:PULSE:WINDOW:THRESHOLD: BOTH TTL sets the threshold of the window trigger to the nominal TTL voltage levels.

\section*{TRIGger:\{A|B\}:PULse:WINdow:THReshold:HIGH}

NOTE. Not available on some models.

This command sets or queries the upper limit for the pulse window trigger. This command is equivalent to selecting Window Setup from the Trig menu and setting the window trigger Upper Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:THReshold:HIGH <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WINdow:THReshold:HIGH?

Arguments <NR3> specifies the threshold value in volts.

Examples TRIGGER:A:PULSE:WINDOW:THRESHOLD:HIGH 2.0, sets the upper limit of the pulse window trigger to 2 V .

TRIGGER:A:PULSE:WINDOW:THRESHOLD:HIGH? might return :TRIGGER:A:PULSE:WINDOW:THRESHOLD:HIGH \(1.1000 \mathrm{E}+00\), indicating that the upper limit of the window trigger is set to 1.1 V .

\section*{TRIGger:\{A|B\}:PULse:WINdow:THReshold:LOW}

NOTE. Not available on some models.

This command sets or queries the lower limit for the window trigger. This command is equivalent to selecting Window Setup from the Trig menu and setting the Lower Level voltage.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:THReshold:LOW <NR3> TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse:WINdow:THReshold:LOW?

Arguments <NR3> specifies the threshold value in volts.

Examples TRIGGER:A:PULSE:WINDOW:THRESHOLD:LOW 0.8 sets the lower threshold of the window trigger to 0.8 V .

TRIGGER:A:PULSE:WINDOW:THRESHOLD:LOW? might return :TRIGGER:A:PULSE:WINDOW:THRESHOLD:LOW 1.2000E-01, indicating that the lower limit of the window trigger is currently set to 120 mV .

\section*{TRIGger:\{A|B\}:PULse:WINdow:WIDTH}

\section*{NOTE. Not available on some models.}

This command sets or queries the minimum width for a window violation. This command is equivalent to selecting Window Setup from the Trig menu, selecting Wider than in the Trigger When box, and setting the Width.

Group Trigger

Syntax TRIGger:\{A|B\}:PULse:WINdow:WIDTH <NR3> TRIGger:\{A|B\}:PULse:WINdow:WIDTH?

Arguments <NR3> argument specifies the minimum width in seconds.

\section*{Examples TRIGGER:A:PULSE:WINDOW:WIDTH 15E-9 sets the minimum width of a valid window violation to 15 ns . \\ TRIGGER:A:PULSE:WINDOW:WIDTH? might return :TRIGGER:A:PULSE:WINdow:WIDTH \(2.0000 \mathrm{E}-09\) indicating that the minimum width of a valid window violation is 2 ns .}

\section*{TRIGger:\{A|B\}:READY? (Query Only)}

\section*{NOTE. Not available on some models.}

This command queries the trigger ready state and provides the immediate state from the trigger system. It is a more synchronous means of determining when the oscilloscope is ready to trigger. The TRIGger:STATE? reflects a less-frequently updated status of the trigger LEDs on the instrument front panel.

NOTE. A delay or B trigger can become 'ready' under different circumstances. If delay by time is enabled, the \(B\) trigger becomes ready after the "trigger after time" has elapsed. If delay by events is enabled, the B trigger becomes ready after the A trigger has occurred. Also, a 'ready' state cannot be guaranteed when Reset Events are used in an \(A\) to \(B\) Event Sequence trigger.

Group Trigger

Syntax TRIGger:\{A|B\}:READY?

Related Commands TRIGger:STATE?, TRIGger:B:BY, TRIGger:B:TIMe, TRIGger:B:EVENTS: COUNt

Examples TRIGGER:\{A|B\}:READY? might return :TRIGGER:\{A|B\}:READY 1, indicating that all pretrigger information is acquired and that the instrument is ready to accept a trigger

TRIGGER: \(\{\mathrm{A} \mid \mathrm{B}\}:\) READY? might return :TRIGGER: \(\{\mathrm{A} \mid \mathrm{B}\}:\) READY 0 , indicating that the instrument is not yet ready to accept a trigger

\section*{TRIGger:\{A|B\}:TYPe}

This command sets or queries the type of A or B trigger. Logic and Pulse triggers contain classes. Logic triggers consist of State and Pattern classes; Pulse triggers consist of Glitch, Runt, Width, Transition, Timeout, and Window classes. Once you have set the trigger type, you might also need to identify the associated trigger class. For details on selecting Logic and Pulse trigger classes, see TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LOGIc:CLAss and TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :PULse:CLAss respectively. This command is similar to selecting Event Trigger Setup from the Trig menu and then selecting the desired Trigger Type.

Some trigger types are not available on some instruments.

Group Trigger

Syntax TRIGger:\{A|B\}:TYPe \{EDGE|LOGIc|PULse|VIDeo|
I2C|CAN|SPI|COMMunication|SERIAL|RS232\}\}

NOTE. Arguments EDGE, LOGIC, PULse, VIDeo, I2C, CAN, SPI, COMMunication, SERIAL, or RS232 are supported by A trigger events.

NOTE. Arguments EDGE, LOGIC, or PULse are supported by B trigger events.

TRIGger:\{A|B\}:TYPe?

Related Commands
TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :EDGE?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :LOGIc:CLAss, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) : PULse:CLAss

EDGE is a normal trigger. A trigger event occurs when a signal passes through a specified voltage level in a specified direction and is controlled by the TRIGger:A:EDGE commands.

LOGIC specifies that a trigger occurs when specified conditions are met and is controlled by the TRIGger:A:LOGIc commands.

PULse specifies that a trigger occurs when a specified pulse is found and is controlled by the TRIGger:A:PULse commands.

VIDeo specifies that the trigger occurs when a video signal is found. Requires an instrument with video hardware.

I2C specifies that a trigger occurs when an Inter-IC Control signal is found.
CAN specifies that a trigger occurs when a Controller Area Network frame signal is found.

SPI specifies that a trigger occurs when a Serial Peripheral Interface signal is found.

COMMunication (Option MTM) specifies that a trigger occurs when a communications signal is found. Supports AMI, HDB3, B3ZS, B6ZS, B8ZS, CMI, MLT3, Manchester, and NRZ encoded communications signals. COMMunication is available only if Option MTM is installed.

SERIAL specifies that a trigger occurs when NRZ-encoded data is found, providing a 32-bit serial word. This argument is available with instruments with Option PTM.

RS232 takes a signal on a data source and allows you to trigger on data within the RS232 bitstream. The data is only one byte wide.

Examples TRIGGER:A:TYPE EDGE sets the A trigger type to EDGE.
TRIGGER:A:TYPE? might return :TRIGGER:A:TYPE PULSE indicating that the A trigger type is a pulse trigger.

\section*{TRIGger:\{A|B\}:UPPerthreshold:CH<x>}

This command sets or queries the \(\mathrm{CH}<\mathrm{x}>\) upper trigger level for TRIGger:LVLSrcpreference SRCDependent. The CH \(<x>\) range is 1 to 4 .

\author{
Group Trigger \\ Syntax TRIGger:\{A|B\}:UPPerthreshold:CH<x> \{ECL|TTL|<NR3>\} TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) UPPerthreshold:CH<x>? \\ Related Commands TRIGger:LVLSrcpreference, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :OWerthreshold: \(\mathrm{CH}<\mathrm{x}>\) \\ Arguments ECL specifies the ECL high level. \\ TTL specifies the TTL high level. \\ <NR3> specifies the trigger level in user units (usually volts). \\ Examples TRIGGER:A:UPPERTHRESHOLD:CH1 TTL This command sets the A trigger level for Channel 1 to TTL high level. \\ TRIGGER:A:UPPERTHRESHOLD:CH2? might return :TRIGGER:A:UPPERTHRESHOLD:CH2 \(1.3000 \mathrm{E}+00\), indicating that the A trigger level for Channel 2 is set to 1.3 V .
}

\section*{TRIGger:A}

Group Trigger

Syntax TRIGger:A SETLeve1
TRIGger:A?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LOGIc?, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) PULse?

Arguments

\section*{Examples}

SETLeve 1 sets the trigger level to \(50 \%\) of the range of the minimum and maximum values of the trigger input signal.

TRIGGER : A SETLEVEL sets the trigger level to \(50 \%\) of the range of the minimum and maximum values of the trigger input signal.

TRIGGER:A? might return the following trigger parameters:

\section*{TRIGger:A:BUS:CAN:CONDition}

This command sets or queries the CAN bus trigger condition.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:CONDition \{ERRor|DATA|IDANDDATA|EOF|IDentifier|ACKMISS|SOF|FRAMEtype\} TRIGger:A:BUS:CAN:CONDition?

Arguments Arguments are the available trigger conditions.

Examples TRIGger:A:BUS:CAN:CONDition EOF sets the trigger condition to end of frame.

TRIGger:A:BUS:CAN:CONDition? might return
:TRIGGER:A:BUS:CAN: CONDITION SOF, indicating that the trigger condition is set to a start of frame.

\section*{TRIGger:A:BUS:CAN:DATa:DIRection}

This command sets or queries the CAN bus trigger data direction.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:DATa:DIRection \{DONTCare|READ|WRITE\} TRIGger:A:BUS:CAN:DATa:DIRection?

Arguments DONTCare specifies the direction is a don't care.
READ specifies the read direction.
WRITE specifies the write direction.

Examples TRIGger:A:BUS:CAN:DATa:DIRection READ sets the data direction to read.
TRIGger:A:BUS:CAN:DATa:DIRection? might return
:TRIGGER:A:BUS:CAN:DATA:DIRECTION DONTCARE indicating the data direction is don't care.

\section*{TRIGger:A:BUS:CAN:DATa:FORMat}

This command sets or queries the CAN bus trigger data format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:DATa:FORMat \{BINary|HEX\}
TRIGger:A:BUS:CAN:DATa:FORMat?

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGger:A:BUS:CAN:DATa:FORMat BINARY sets the data format to binary.
TRIGger:A:BUS:CAN:DATa:FORMat? might return
:TRIGGER:A:BUS:CAN:DATA:FORMAT BINARY indicating the data format is set to binary.

\section*{TRIGger:A:BUS:CAN:DATa:QUALifier}

This command sets or queries CAN bus trigger data qualifier.
\begin{tabular}{|c|c|}
\hline & NOTE. Not available on some models. \\
\hline Group & Low Speed Serial Trigger \\
\hline Syntax & TRIGger:A:BUS:CAN:DATa:QUALifier \{EQUa1|LESSEQual|MOREEQual|UNEQua1|LESSthan|MOREthan\} TRIGger:A:BUS:CAN:DATa:QUALifier? \\
\hline
\end{tabular}

Arguments Arguments are the available data qualifiers.

Examples TRIGger:A:BUS:CAN:DATa:QUALifier UNEQ sets the data qualifier to unequal.

TRIGger:A:BUS:CAN:DATa:QUALifier? might return :TRIGGER:A:BUS:CAN:DATA:QUALIFIER EQUAL indicating that the data qualifier is equal.

\section*{TRIGger:A:BUS:CAN:DATa:SIZe}

This command sets or queries the CAN bus trigger data size (the number of contiguous data bytes to trigger on).

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:DATa:SIZe <nr3> TRIGger:A:BUS:CAN:DATa:SIZe?

Arguments <nr3> specifies the data size.

Examples TRIGger:A:BUS:CAN:DATa:SIZe 2 sets the data size to 2 bytes.
TRIGger:A:BUS:CAN:DATa:SIZe? might return :TRIGGER:A:BUS:CAN:DATA:SIZE 1 indicating that the data size is 1 byte.

\section*{TRIGger:A:BUS:CAN:DATa:VALue}

This command sets or queries CAN bus trigger data value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:DATa:VALue <string> TRIGger:A:BUS:CAN:DATa:VALue?

Arguments <string> specifies the data value.

Examples TRIGger:A:BUS:CAN:DATa:VALue 1010 sets the data value to XXXX1010.
TRIGger:A:BUS:CAN:DATa:VALue? might return
:TRIGGER:A:BUS:CAN:DATA:VALUE "XXXX1010", indicating the data value is "XXXX1010".

\section*{TRIGger:A:BUS:CAN:FRAMEtype}

This command sets or queries CAN bus trigger frame type.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN:FRAMEtype \{DATa|ERRor|OVERLoad|REMote\} TRIGger:A:BUS:CAN:FRAMEtype?

Arguments Arguments are the available frame types.

Examples TRIGger:A:BUS:CAN:FRAMEtype ERROR sets the frame type to error.
TRIGger:A:BUS:CAN:FRAMEtype? might return
:TRIGGER:A:BUS:CAN: FRAMETYPE DATA, indicating the frame type is data.

\section*{TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:DIRection}

This command sets or queries the CAN bus trigger identifier direction.

NOTE. Not available on some models.

Group Low Speed Serial Trigger
\(\begin{array}{ll}\text { Syntax } & \text { TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:DIRection } \\ & \text { \{DONTCare|READ|WRITE\} } \\ & \text { TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:DIRection? }\end{array}\)

Arguments Arguments are the available identifier directions.

Examples TRIGger:A:BUS:CAN:IDentifier:DIRection READ sets the identifier direction to read.

TRIGger:A:BUS:CAN:IDentifier:DIRection? might return :TRIGGER:A:BUS:CAN:IDENTIFIER:DIRECTION DONTCARE, indicating the identifier direction is don't care.

\section*{TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:FORMat}

This command sets or queries the CAN bus identifier format.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:FORMat \{BINary|HEX\} TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:FORMat?

Arguments BINary specifies the identifier format as binary. HEX specifies the identifier format as hexadecimal.

Examples TRIGger:A:BUS:CAN:IDentifier:FORMat HEX sets the identifier format to hexadecimal.

TRIGger:A:BUS:CAN:IDentifier:FORMat? might return :TRIGGER:A:BUS:CAN:IDENTIFIER:FORMAT BINARY, indicating the identifier format is binary.

\section*{TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:MODe}

This command sets or queries CAN bus trigger identifier mode.
NOTE. Not available on some models.

Group Low Speed Serial Trigger
```

Syntax TRIGger:A:BUS:CAN{:IDentifier|:ADDRess}:MODe
{EXTENDed|STandard}
TRIGger:A:BUS:CAN{:IDentifier|:ADDRess}:MODe?

```

Arguments EXTENDed specifies the extended identifier mode.
STandard specifies the standard identifier mode.

Examples TRIGger:A:BUS:CAN:IDentifier:MODe EXTEND sets the identifier mode to extended.

TRIGger:A:BUS:CAN:IDentifier:MODe? might return :TRIGGER:A:BUS:CAN:IDENTIFIER:MODE STANDARD, indicating the identifier mode is set to standard.

\section*{TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:VALue}

This command sets or queries the CAN bus trigger identifier value.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:VALue <string> TRIGger:A:BUS:CAN\{:IDentifier|:ADDRess\}:VALue?

Arguments <string> specifies the identifier value.

Examples TRIGger:A:BUS:CAN:IDentifier:VALue 01 sets the identifier value to XXXXXXXXX01,

TRIGger:A:BUS:CAN:IDentifier:VALue? might return :TRIGGER:A:BUS:CAN:IDENTIFIER:VALUE "XXXXXXXXX01", indicating the identifier value is set to 01 .

\section*{TRIGger:A:BUS:DATa:FORMat}

This command sets or queries the trigger data format for the bus.

Group Trigger

Syntax TRIGger:A:BUS:DATa:FORMat \{BINary|HEXadecimal|SYMBolic\} TRIGger:A:BUS:DATa:FORMat?

Arguments BINary specifies the trigger data format to Binary.
HEXadecima1 specifies the trigger data format to Hexadecimal.
SYMBolic specifies the trigger data format as Symbolic.

Examples TRIGGER:A:BUS:DATA:FORMAT HEX sets the trigger data format for the bus to HEXadecimal.

TRIGGER:A:BUS:DATA:FORMAT? might return
:TRIGGER:A:BUS:DATA:FORMAT BIN, indicating that the trigger data format for the bus is set to BINary.

\section*{TRIGger:A:BUS:DATa:VALue}

This command sets or queries the trigger data value depending on the format selected for the bus. The data value varies depending on the bus type and the number of input signals.

Group Trigger

Syntax TRIGger:A:BUS:DATa:VALue <string> TRIGger:A:BUS:DATa:VALue?

Arguments <string> is the data value in binary or hexadecimal format. The valid characters are \(0-9\), A-F, and X for addresses in hexadecimal format and 0,1 , and X otherwise.

Examples TRIGGER:A:BUS:DATA:VALUE "656565XX65656AF37565" sets the trigger data value for the bus to 656565XX65656AF37565 in hexadecimal format.

TRIGGER:A:BUS:DATA:VALUE? might return :TRIGGER:A:BUS:DATA:VALUE "0100x0xx101", indicating that the trigger data value for the value is set to 0100X0XX101 in binary format.

\section*{TRIGger:A:BUS:ETHERnet:CONDition}

This command specifies a field or condition within an Ethernet frame to trigger on. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger
```

Syntax TRIGger:A:BUS:ETHERnet:CONDition
\{SFD|MACADDRess|MACLENgth|IPHeader|TCPHeader|DATa|EOP
|FCSError|QTAG|TCPData\}
TRIGger:A:BUS:ETHERnet:CONDition?

```

Related Commands Most of the other TRIGger:A:BUS: \(\mathrm{B}\langle\mathrm{X}\rangle\) : ETHERnet commands are impacted by the setting of this command.

TRIGger:A:BUS:ETHERnet:QUALifier

Arguments SFD - Start of frame delimiter.
MACADDRess - MAC addresses field.
MACLENgth - MAC length/type field.
IPHeader - IP header field. .
TCPHeader - TCP header field.
DATa - TCP/IPv4 or MAC protocol client data field.
EOP - End of Packet field.
IDLe - Idle field.
FCSError - Frame Check Sequence Error (CRC) field.
QTAG - IEEE 802.1Q (VLAN) control information field.

Examples TRIGGER:A:BUS:ETHERNET:CONDITION MACADDRESS specifies MACADDRess as the field within an Ethernet frame to trigger on.

TRIGGER:A:BUS:ETHERNET:CONDITION? might return DATA, indicating that DATA is the currently specified field within an Ethernet frame to trigger on.

\section*{TRIGger:A:BUS:ETHERnet:DATa:FORMat}

This command and query sets the format of the data to either binary or hex.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:DATa:FORMat \{BINARY | HEX\} TRIGger:A:BUS:ETHERnet:DATa:FORMat?

Arguments BINARY sets the format to binary.
HEX sets the format to hexadecimal.

Returns TRIGger:A:BUS:ETHERnet:DATa:FORMat? might return :TRIGGER:A:BUS:ETHERNET:DATA:FORMAT BINARY indicating the Ethernet data format is set to binary.

\section*{TRIGger:A:BUS:ETHERnet:DATa:OFFSet}

This command specifies the data offset value, in bytes, to use when triggering on the Ethernet data field. The trigger condition needs to be set to DATa. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:DATa:OFFSet <NR1>
TRIGger:A:BUS:ETHERnet:DATa:OFFSet?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:DATa:SIZe
TRIGger:A:BUS:ETHERnet:DATa:VALue

Arguments <NR1> is an integer whose minimum and default values are -1 (don't care) and maximum is 1,499 .

Examples TRIGGER:A:BUS:ETHERNET:DATA:OFFSET 36 sets the data offset to 36 bytes. TRIGGER:A:BUS:ETHERNET:DATA:OFFSET? might return -1 , indicating that the data offset value is the default value, -1 , meaning "don't care".

\section*{TRIGger:A:BUS:ETHERnet:DATa:SIZe}

This command specifies the number of contiguous TCP/IPv4/MAC client bytes to use when triggering on the Ethernet data field. The default is all X's (don't care). The trigger condition needs to be set to DATa. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:DATa:SIZe<NR1> TRIGger:A:BUS:ETHERnet:DATa:SIZe?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:QUALifier

Arguments The minimum and default values are 1 , and the maximum value is 16 .

Examples TRIGGER:A:BUS:ETHERNET:DATA:SIZE 4 specifies 4 as the number of contiguous TCP/IPv4/MAC client data bytes to use when triggering on the Ethernet data field.

TRIGGER:A:BUS:ETHERNET:DATA:SIZE? might return 6, indicating that 6 is the currently specified number of contiguous TCP/IPv4/MAC client data bytes to use when triggering on the Ethernet data field.

\section*{TRIGger:A:BUS:ETHERnet:DATa:VALue}

This command specifies the binary value to use when triggering on the Ethernet binary data field. The default is all X's (don't care). The trigger condition needs to be set to DATa. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:DATa:VALue <QString> TRIGger:A:BUS:ETHERnet:DATa:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:QUALifier
TRIGger:A:BUS:ETHERnet:DATa:OFFSet
TRIGger:A:BUS:ETHERnet:DATa:SIZe

Arguments QString is a quoted string where the allowable characters are 0,1 , and X . The allowable number of characters depends on the setting for size (using

TRIGger:A:BUS:ETHERnet:DATa:SIZe). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:DATA:VALUE "00001000" specifies 00001000 as the value to use when triggering on the Ethernet binary data field, assuming that TRIGGER:A:BUS:ETHERNET:DATA:SIZe is set to 1 byte.

TRIGGER:A:BUS:ETHERNET:DATA:VALUE? might return "00001000", indicating 0000100 is the currently specified value used when triggering on the Ethernet binary data field.

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv 4 header address destination field. The trigger condition needs to be set to IPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:FORMat \{BINary|HEX|DECIma1\}
TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECIma1 specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:FORMAT HEX specifies HEX as the data format to use when triggering on the Ethernet \(\operatorname{IPv} 4\) header address destination field.

TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:FORMAT? might return BINARY, indicating binary is the currently specified data format used when triggering on the Ethernet IPv4 header address destination field.

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:VALue}

This command specifies the 32 -bit IPv4 value to use when triggering on the Ethernet \(\operatorname{IPv} 4\) header address destination field. The default is all X's (don't care). The trigger condition needs to be set to IPHeader. (MSO/DPO5000/B series only.)

Conditions

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:VALue <QString> TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:DESTinationaddr:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and \(X\). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:VALUE "11000000101010000000000000000001" specifies 192.168.0.1 as the value to use when triggering on the Ethernet IPv 4 header address destination field.

TRIGGER:A:BUS:ETHERNET:IPHEADER:DESTINATIONADDR:VALUE? might return " 11000000101010000000000000000001 ", indicating that 192.168.0.1 is the currently specified value used when triggering on the Ethernet IPv4 header address destination field.

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:FORMat}

This command specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv4 header protocol field. The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:FORMat \{BINary|HEX\} TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:FORMAT HEX specifies HEX as the data format to use when triggering on the Ethernet IPv4 header protocol field.
TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:FORMAT? might return BINARY, indicating that binary is the currently specified data format used when triggering on the Ethernet IPv4 header protocol field.

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:VALue}

This command specifies the 8 -bit binary value to use when triggering on the Ethernet IPv4 header protocol field. The default is all X's (don't care). The trigger condition needs to be set to IPHeader. (MSO/DPO5000/B series only.)

NOTE. Commonly used protocol values are 1 (ICMP), 2 (IGMP), 6 (TCP) and 17 (UDP).

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:VALue <QString> TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:PROTOcol:FORMat

Arguments QString is a quoted string of up to 8 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:VALUE "01010010" specifies 01010010 as the value to use when triggering on the Ethernet IPv4 header protocol field.

TRIGGER:A:BUS:ETHERNET:IPHEADER:PROTOCOL:VALUE? might return "XXXXXXXX", indicating that the trigger value has been set to "don't care".

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:FORMat}

This command specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet IPv4 header address source field. The trigger condition needs to be set to IPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:FORMat \{BINary|HEX|DECIma1\}
TRIGger:A:BUS:ETHERnet:IPHeader:Sourceaddr:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECIma1 specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet IPv4 header address source field.

TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:VALue}

This command specifies the 32 -bit value to use when triggering on the Ethernet IPv4 header address source field. The default is all X's (don't care). The trigger condition needs to be set to IPHeader.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:VALue <QString> TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:IPHeader:SOUrceaddr:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:VALUE " 1100000010101000000000000000001 " specifies to use the value of 192.168.0.1 when triggering on the Ethernet IPv 4 header address source field.

TRIGGER:A:BUS:ETHERNET:IPHEADER:SOURCEADDR:VALUE? might return " 11000000101010000000000000000001 ", indicating that the trigger value has been set to 192.168.0.1.

\section*{TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:FORMat}

This command specifies the data format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC address destination field. The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:FORMat \{BINary|HEX\}
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:VALue
\begin{tabular}{ll} 
Arguments & BINary specifies the data format as binary. \\
& HEX specifies the data format as hexadecimal. \\
Examples & \begin{tabular}{l} 
TRIGGER : A: BUS : ETHERNET:MAC: ADDRESS : DESTINATION: FORMAT HEX \\
\\
specifies to use the HEX data format when triggering on the Ethernet MAC address \\
destination field.
\end{tabular} \\
& TRIGGER:A: BUS: ETHERNET:MAC: ADDRESS :DESTINATION: FORMAT? might \\
return BINARY, indicating that the data format is set to binary.
\end{tabular}

\section*{TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:VALue}

This command specifies the 48 -bit value to use when triggering on the Ethernet MAC address destination field. The default is all X's (don't care). The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

NOTE. MAC Addresses are 48-bit values such as 08:00:11:1E:C9:AE hex.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:VALue <QString>
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:DESTination:FORMat

Arguments
QString is a quoted string of up to 48 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION:VALUE "XXXXXXXX0011010111111100000001111010101011001000" specifies to use the value of \(\mathrm{XX}: 35: \mathrm{FC}: 07: \mathrm{AA}: \mathrm{C} 8\) hex when triggering on the Ethernet MAC address destination field.

TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION:VALUE? might return "XXXXXXXX0011010111111100000001111010101011001000", indicating a MAC address destination field value of \(\mathrm{XX}: 35: \mathrm{FC}: 07: \mathrm{AA}: \mathrm{C} 8\) hex.

\section*{TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC address source field. The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:FORMat \{BINary|HEX\}
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:VALue

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS: SOURCE:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet MAC address source field.

TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS: SOURCE:FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:VALue}

This command specifies the 48 -bit value to use when triggering on the Ethernet MAC address source field. The default is all X's (don't care). The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

NOTE. MAC Addresses are 48-bit values such as 08:00:11:1E:C9:AE hex.

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:VALue <QString> TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC:ADDRess:SOUrce:FORMat

Arguments QString is a quoted string of up to 48 characters where the allowable characters are 0,1 , and \(X\). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:SOURCE:VALUE "XXXXXXXX0011010111111100000001111010101011001000" specifies to use the value of XX:35:FC:07:AA:C8 hex when triggering on the Ethernet MAC address source field.

TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:SOURCE:VALUE? might return "XXXXXXXX0011010111111100000001111010101011001000", indicating a MAC address source field value of XX:35:FC:07:AA:C8 hex.

\section*{TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet MAC length or type. The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:FORMat \{BINary|HEX\} TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC \(\{:\) LENgth \(\mid: T Y P e\}: V A L u e ~\)

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:ETHERNET:MAC:LENGTH:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet MAC length.

TRIGGER:A:BUS:ETHERNET:MAC:LENGTH:FORMAT? might return BINARY, indicating that the data format to use when triggering on the Ethernet MAC length is set to binary.

\section*{TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:VALue}

This command specifies the 16 -bit value to use when triggering on the Ethernet MAC length/type. The default is all X's (don't care). The trigger condition needs to be set to MACADDRess. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:VALue <QString> TRIGger:A:BUS:ETHERnet:MAC\{:LENgth|:TYPe\}:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:MAC \{:LENgth|:TYPe \(\}\) :FORMat

Arguments QString is a quoted string of up to 16 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:MAC:TYPE:VALUE "XXXXXXXX00001000" specifies to use the hexadecimal value XX08 when triggering on the Ethernet MAC type.

TRIGGER:A:BUS:ETHERNET:MAC:TYPE:VALUE? might return "XXXXXXXX00001000", indicating an Ethernet MAC type value of XX08 hex.

\section*{TRIGger:A:BUS:ETHERnet:QTAG:FORMat}

This command specifies the data format (binary or hex) to use when triggering on the Q-Tag field. The trigger condition needs to be set to QTAG. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:QTAG:FORMat \{BINary|HEX\}
TRIGger:A:BUS:ETHERnet:QTAG:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:QTAG:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:ETHERNET:QTAG:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet Q-Tag field.

TRIGGER:A:BUS:ETHERNET:QTAG:FORMAT? might return BINARY, indicating that the data format to use for triggering on the Ethernet Q-Tag field has been set to binary.

\section*{TRIGger:A:BUS:ETHERnet:QTAG:VALue}

This command specifies the 32-bit value to use when triggering on the Ethernet Q-Tag field. The default is all X's (don't care). The trigger condition needs to be set to QTAG. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:QTAG:VALue <QString> TRIGger:A:BUS:ETHERnet:QTAG:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:QTAG:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:QTAG:VALUE "XXXXXXXXXXXXXXXXXXXX010010001010" specifies to use the value of hexadecimal XXXXX48A when triggering on the Ethernet Q-Tag field.

TRIGGER:A:BUS:ETHERNET:QTAG:VALUE? might return "XXXXXXXXXXXXXXXXXXXX010010001010", indicating that hexadecimal XXXXX48A has been set as the Ethernet Q-Tag field trigger value.

\section*{TRIGger:A:BUS:ETHERnet:QUALifier}

This command specifies the qualifier to be used with the Ethernet trigger condition is set to MACLENgth or DATa. Normally, the Ethernet qualifier is set to "equal to". (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:QUALifier \{LESSthan|MOREthan|EQual|UNEQual|LESSEQual|MOREEQual\} TRIGger:A:BUS:ETHERnet:QUALifier?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition

Arguments LESSthan sets the qualifier to less than. MOREthan sets the qualifier to greater than. EQual sets the qualifier to equal. UNEQual sets the qualifier to not equal. LESSEQual sets the qualifier to less than or equal. MOREEQua 1 sets the qualifier to greater than or equal.

Examples TRIGGER:A:BUS:ETHERNET:QUALIFIER LESSTHAN sets the qualifier to "less than".

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header acknowledgement number. The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:FORMat \{BINary|HEX|DECIma1\} TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum: FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECImal specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM: FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet TCP header acknowledgement number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:FORMAT? might return BINARY, indicating that the data format to use when triggering on the Ethernet TCP header acknowledgement number has been set to binary.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue}

This command specifies the 32 -bit value to use when triggering on the Ethernet TCP header acknowledgement number. The default is all X's (don't care). The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

\title{
Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue <QString> TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:VALue?
}

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:ACKnum:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:VALUE "XXXXXXXXXXXXXXXXXXXX00001000" specifies hexadecimal XXXXXX08 as the value to use when triggering on the Ethernet TCP header acknowledgement number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:ACKNUM:VALUE? might return "XXXXXXXXXXXXXXXXXXXX00001000", indicating that hexadecimal XXXXXX08 has been specified as the value to use when triggering on the Ethernet TCP header acknowledgement number.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header destination port number. The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

\hline & HEX specifies the data format as hexadecimal. \\
\hline
\end{tabular}

DECIma1 specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:DESTINATIONPORT:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet TCP header destination port number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:DESTINATIONPORT:FORMAT? might return BINARY, indicating that the data format to use when triggering on the Ethernet TCP header destination port number has been set to binary.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:VALue}

This command specifies the 16 -bit value to use when triggering on the Ethernet TCP header destination port number. The default is all X's (don't care). The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:VALue <QString>
TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:DESTinationport:FORMat

Arguments QString is a quoted string of up to 16 characters where the allowable characters are 0,1 , and \(X\). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:DESTINATIONPORT:VALUE "XXXXXXXX00100010" specifies to use the value of hexadecimal XX22 when triggering on the Ethernet TCP header destination port number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:DESTINATIONPORT:VALUE? might return "XXXXXXXX00100010", indicating that hexadecimal XX22 has been set as the value to use when triggering on the Ethernet TCP header destination port number.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header sequence number. The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:FORMat \{BINary|HEX|DECIma1\} TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.
DECIma1 specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:SEQNUM:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet TCP header sequence number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:SEQNUM: FORMAT? might return BINARY, indicating that the binary data format has been specified to use when triggering on the Ethernet TCP header sequence number.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:VALue}

This command specifies the 32-bit value to use when triggering on the Ethernet TCP header sequence number. The default is all X's (don't care). The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:VALue <QString> TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:SEQnum:FORMat

Arguments QString is a quoted string of up to 32 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:SEQNUM:VALUE "XXXXXXXXXXXXXXXXXXXX000100010001" specifies to use the value of hexadecimal XXXXX111 when triggering on the Ethernet TCP header sequence number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:SEQNUM:VALUE? might return "XXXXXXXXXXXXXXXXXXXXX000100010001", indicating that hexadecimal XXXXX111 has been specified as the value to use when triggering on the Ethernet TCP header sequence number.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the Ethernet TCP header source port number. The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:FORMat \{BINary|HEX|DECImal\} TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:FORMat?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

DECImal specifies the data format as decimal.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER: SOURCEPORT:FORMAT HEX specifies to use the HEX data format when triggering on the Ethernet TCP header source port number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:SOURCEPORT:FORMAT? might return BINARY, indicating that binary is the currently specified data format for triggering on the Ethernet TCP header source port number.

\section*{TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:VALue}

This command specifies the 16 -bit value to use when triggering on the Ethernet TCP header source port number. The default is all X's (don't care). The trigger condition needs to be set to TCPHeader. (MSO/DPO5000/B series only.)

Conditions Requires the SR-ENET Triggering and Analysis application.

Group Trigger

Syntax TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:VALue <QString> TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:VALue?

Related Commands TRIGger:A:BUS:ETHERnet:CONDition
TRIGger:A:BUS:ETHERnet:TCPHeader:SOUrceport:FORMat

Arguments QString is a quoted string of up to 16 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:ETHERNET:TCPHEADER:SOURCEPORT:VALUE "XXXX000010100110" specifies to use the value of hexadecimal X0A6 when triggering on the Ethernet TCP header source port number.

TRIGGER:A:BUS:ETHERNET:TCPHEADER:SOURCEPORT:VALUE? might return "XXXXX01001010110", indicating that hexadecimal X0A6 has been specified as the value to use when triggering on the Ethernet TCP header source port number.

\section*{TRIGger:A:BUS:FLEXRAY:CONDition}

This command sets or queries the FLEXRAY bus trigger condition.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:CONDition
\{SOF|FRAMEtype|IDentifier|CYCLEcount|HEADer|DATA|IDANDDATA|EOF|ERRor\} TRIGger:A:BUS:FLEXRAY:CONDition?

Arguments Arguments are the available trigger conditions.

\section*{Examples TRIGger:A:BUS:FLEXRAY:CONDition EOF sets the trigger condition to end of frame. \\ TRIGger:A:BUS:FLEXRAY:CONDition? might return \\ :TRIGGER:A:BUS:FLEXRAY:CONDITION SOF, indicating the trigger condition is start of frame.}

\section*{TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat}

This command sets or queries FLEXRAY bus trigger cycle count format.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat \{BINary|HEX\} TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat?

Arguments BINary specifies the cycle count format as binary.
HEX specifies the cycle count format as hexadecimal.

\section*{Examples TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat HEX sets the cycle count format to hexadecimal. \\ TRIGger:A:BUS:FLEXRAY:CYCLEcount:FORMat? might return :TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:FORMAT BINARY, indicating the cycle count format is binary.}

\section*{TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier}

This command sets or queries FLEXRAY bus trigger cycle count qualifier.

NOTE. Not available on some models.

Group Low Speed Serial Trigger
\begin{tabular}{ll} 
Syntax & TRIGger:A:BUS:FLEXRAY:CYCLECount:QUALifier \\
& \{EQUa1|LESSEQua1|MOREEQual|UNEQual|LESSthan|MOREthan\} \\
& TRIGger:A:BUS:FLEXRAY:CYCLECOunt:QUALifier?
\end{tabular}

Arguments Argument are the available cycle count qualifiers.

Examples TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier LESSTHAN sets the cycle count qualifier to less than.

TRIGger:A:BUS:FLEXRAY:CYCLEcount:QUALifier? might return :TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:QUALIFIER EQUAL, indicating the cycle count qualifier is equal.

\section*{TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue}

This command sets or queries the FLEXRAY bus trigger cycle count value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue <STRING> TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue?

Arguments <STRING> specifies the cycle count value.

Examples TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue "1010" sets the cycle count value to XX1010.

TRIGger:A:BUS:FLEXRAY:CYCLEcount:VALue? might return :TRIGGER:A:BUS:FLEXRAY:CYCLECOUNT:VALUE "XXXXXX", indicating the cycle count value has not been set.

\section*{TRIGger:A:BUS:FLEXRAY:DATa:FORMat}

This command sets or queries the FLEXRAY bus trigger data format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:DATa:FORMat \{BINary|HEX\} TRIGger:A:BUS:FLEXRAY:DATa:FORMat?

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGger:A:BUS:FLEXRAY:DATa:FORMat HEX sets the data format to hexadecimal.

TRIGger:A:BUS:FLEXRAY:DATa:FORMat? might return :TRIGGER:A:BUS:FLEXRAY:DATA:FORMAT BINARY, indicating the data format is binary.

\section*{TRIGger:A:BUS:FLEXRAY:DATa:OFFSet}

This command sets or queries the FLEXRAY bus trigger data offset.

> NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:DATa:OFFSet <NR3>
TRIGger:A:BUS:FLEXRAY:DATa:OFFSet?

Arguments <NR3> specifies the data offset in bytes.

Examples TRIGger:A:BUS:FLEXRAY:DATa:OFFSet 1 sets the data offset to 1 byte.
TRIGger:A:BUS:FLEXRAY:DATa:OFFSet? might return :TRIGGER:A:BUS:FLEXRAY:DATA:OFFSET -1 , indicating the data offset is don't care.

\section*{TRIGger:A:BUS:FLEXRAY:DATa:QUALifier}

This command sets or queries the FLEXRAY bus trigger data qualifier.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:DATa:QUALifier
\{EQUa1|LESSEQual|MOREEQual|UNEQual|LESSthan|MOREthan\}
TRIGger:A:BUS:FLEXRAY:DATa:QUALifier?

Arguments Arguments are the available data qualifiers.

Examples TRIGger:A:BUS:FLEXRAY:DATa:QUALifier LESSTHAN sets the data qualifier to less than.

TRIGger:A:BUS:FLEXRAY:DATa:QUALifier? might return :TRIGGER:A:BUS:FLEXRAY:DATA:QUALIFIER EQUAL, indicating the data qualifier is equal.

\section*{TRIGger:A:BUS:FLEXRAY:DATa:SIZe}

This command sets or queries the FLEXRAY bus trigger data size in bytes.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:DATa:SIZe <NR3>
TRIGger:A:BUS:FLEXRAY:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes. A setting of X/Don’t care is accomplished by setting the size to -1 .

Examples TRIGger:A:BUS:FLEXRAY:DATa:SIZe 2 sets the data size to 2 bytes. TRIGger:A:BUS:FLEXRAY:DATa:SIZe? might return :TRIGGER:A:BUS:FLEXRAY:DATA:SIZE 1, indicating the data size is 1 byte.

\section*{TRIGger:A:BUS:FLEXRAY:DATa:VALue}

This command sets or queries the FLEXRAY bus trigger data value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:DATa:VALue <STRING> TRIGger:A:BUS:FLEXRAY:DATa:VALue?

Arguments <STRING> specifies the data value.

Examples TRIGger:A:BUS:FLEXRAY:DATa:VALue "1010" sets the data value to XXXX1010.

TRIGger:A:BUS:FLEXRAY:DATa:VALue? might return :TRIGGER:A:BUS:FLEXRAY:DATA:VALUE "XXXXXXXX", indicates the data value is don't care.

\section*{TRIGger:A:BUS:FLEXRAY:EOFTYPE}

This command sets or queries the FLEXRAY bus trigger end of file type.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:EOFTYPE \{ALL|STATIC|DYNAMIC\} TRIGger:A:BUS:FLEXRAY:EOFTYPE?

Arguments ALL specifies either end of file type. STATIC specifies the static end of file type. DYNAMIC specifies the static end of file type.

Examples TRIGger:A:BUS:FLEXRAY:EOFTYPE STATIC sets the end of file type to static.
TRIGger:A:BUS:FLEXRAY:EOFTYPE? might return :TRIGGER:A:BUS:FLEXRAY:EOFTYPE ALL, indicating the end of file type static or dynamic.

\section*{TRIGger:A:BUS:FLEXRAY:ERRTYPE}

This command sets or queries the FLEXRAY bus trigger error type.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:ERRTYPE
\{CRCHEADer|CRCTRAILer|NULLFRSTATIC|NULLFRDYNAMIC
| SYNCFRAME | STARTUPNOSYNC\}
TRIGger:A:BUS:FLEXRAY:ERRTYPE?

Arguments Arguments are the available error types.

Examples TRIGger:A:BUS:FLEXRAY:ERRTYPE SYNCFRAME sets the error type to SYNCFRAME.

TRIGger:A:BUS:FLEXRAY:ERRTYPE? might return
:TRIGGER:A:BUS:FLEXRAY:ERRTYPE CRCHEADER, indicating the error type is set to CRCHEADER.

\section*{TRIGger:A:BUS:FLEXRAY:FRAMEType}

This command sets or queries the FLEXRAY bus trigger frame type.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger
\begin{tabular}{ll} 
Syntax & TRIGger:A:BUS:FLEXRAY:FRAMEType \\
& \{NORMa1|PAYload|NULL|SYNC|STARTup\} \\
& TRIGger:A:BUS:FLEXRAY:FRAMEType?
\end{tabular}

Arguments Argument are the available frame types.

Examples TRIGger:A:BUS:FLEXRAY:FRAMEType NULL sets the frame type to NULL.
TRIGger:A:BUS:FLEXRAY:FRAMEType? might return :TRIGGER:A:BUS:FLEXRAY:FRAMETYPE NORMAL, indicating the frame type is normal.

\section*{TRIGger:A:BUS:FLEXRAY:HEADER:CRC}

This command sets or queries the FLEXRAY bus trigger header CRC.

> NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:HEADER:CRC <string> TRIGger:A:BUS:FLEXRAY:HEADER:CRC?

Arguments <string> specifies the cyclic redundancy code.

Examples TRIGger:A:BUS:FLEXRAY:HEADER:CRC"1011" sets the CRC to XXXXXXX1011.

TRIGger:A:BUS:FLEXRAY:HEADER:CRC? might return :TRIGGER:A:BUS:FLEXRAY:HEADER:CRC "XXXXXXXXXXX", indicating the CRC is a don't care.

\section*{TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount}

This command sets or queries the FLEXRAY bus trigger header cycle count.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount <string> TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount?

Arguments <string> specifies the header cycle count.

Examples TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount "1010" sets the header cycle count to XX1010.

TRIGger:A:BUS:FLEXRAY:HEADER:CYCLECount? might return :TRIGGER:A:BUS:FLEXRAY:HEADER:CYCLECOUNT "XXXXXX", indicating the cycle count is not set.

\section*{TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID}

This command sets or queries the FLEXRAY bus trigger header frame ID.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID <string> TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID?

Arguments <string> specifies the header frame ID.

Examples TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID "1010" sets the header frame ID to XXXXXXX1010.

TRIGger:A:BUS:FLEXRAY:HEADER:FRAMEID? might return :TRIGGER:A:BUS:FLEXRAY:HEADER:FRAMEID "XXXXXXXXXXX", indicating the header frame ID is don't care.

\section*{TRIGger:A:BUS:FLEXRAY:HEADER:INDBits}

This command sets or queries the FLEXRAY bus trigger header Indicator Bits.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:HEADER:INDBits <string> TRIGger:A:BUS:FLEXRAY:HEADER:INDBits?
\begin{tabular}{ll} 
Arguments & <string> specifies the header Indicator Bits. \\
Examples & \\
& TRIGger:A:BUS: FLEXRAY:HEADER:INDBits "1010" sets the header \\
& Indicator Bits to X1010. \\
& TRIGger:A:BUS: FLEXRAY:HEADER:INDBits? might return \\
& :TRIGGER:A:BUS: FLEXRAY:HEADER:INDBITS "XXXXX", indicating the \\
& Indicator Bits have not been set.
\end{tabular}

\section*{TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth}

This command sets or queries the FLEXRAY bus trigger header Payload Length.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth <string> TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth?

Arguments <string> specifies the header Payload Length.

Examples TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth "1010" sets the header Payload Length to XXX1010.

TRIGger:A:BUS:FLEXRAY:HEADER:PAYLENgth? might retrun :TRIGGER:A:BUS:FLEXRAY:HEADER:PAYLENGTH "XXXXXXX" indicating the header Payload Length has is a don't care.

\section*{TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat}

This command sets or queries the FLEXRAY bus trigger identifier format.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat \{BINary|HEX\} TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat?

Arguments BINary specifies the identifier format as binary.
HEX specifies the identifier format as hexadecimal.

Examples TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat HEX sets the identifier format to hexadecimal.

TRIGger:A:BUS:FLEXRAY:IDentifier:FORMat? might return :TRIGGER:A:BUS:FLEXRAY:IDENTIFIER:FORMAT BINARY, indicating the identifier format is binary.

\section*{TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier}

This command sets or queries the FLEXRAY bus trigger identifier qualifier.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier \{EQUal|LESSEQual|MOREEQual|UNEQual|LESSthan|MOREthan\} TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier?

Arguments Arguments are the available qualifiers.

Examples TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier LESSTHAN sets the identifier qualifier to less than.

TRIGger:A:BUS:FLEXRAY:IDentifier:QUALifier? might return :TRIGGER:A:BUS:FLEXRAY:IDENTIFIER:QUALIFIER EQUAL, indicating the identifier qualifier is equal.

\section*{TRIGger:A:BUS:FLEXRAY:IDentifier:VALue}

This command sets or queries the FLEXRAY bus trigger identifier value.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:FLEXRAY:IDentifier:VALue <string> TRIGger:A:BUS:FLEXRAY:IDentifier:VALue?

Arguments <string> specifies the identifier value.

Examples TRIGger:A:BUS:FLEXRAY:IDentifier:VALue "1010" sets the identifier value to XXXXXXX1010.

TRIGger:A:BUS:FLEXRAY:IDentifier:VALue? might return :TRIGGER:A:BUS:FLEXRAY:IDENTIFIER:VALUE "XXXXXXXXXXXX", indicating the identifier value is don't care.

\section*{TRIGger:A:BUS:I2C:ADDress:FORMat}

NOTE. Not available on some models.

This command sets or queries the address format for the I2C bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:ADDress:FORMat \{BINary|HEXadecima1\} TRIGger:A:BUS:I2C:ADDress:FORMat?

Related Commands TRIGger:A:BUS:I2C:ADDress:MODe
\begin{tabular}{ll} 
Arguments & BINary specifies the address format for the I2C bus trigger as Binary. \\
& HEXadecimal specifies the address format for the I2C bus trigger as Hexadecimal. \\
Examples & TRIGGER : A: BUS :I2C:ADDRESS : FORMAT BIN sets the address format for the \\
& I2C bus trigger to BINary. \\
& TRIGGER:A:BUS:I2C:ADDRESS: FORMAT? might return \\
& :TRIGGER:A:BUS:I2C:ADDRESS: FORMAT HEX, indicating that the \\
address format for the I2C bus trigger is set to HEXadecimal.
\end{tabular}

\section*{TRIGger:A:BUS:I2C:ADDress:MODe}

NOTE. Not available on some models.

This command sets or queries the address mode for the I2C bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:ADDress:MODe \{ADDR7|ADDR10\} TRIGger:A:BUS:I2C:ADDress:MODe?

Arguments ADDR7 specifies the address mode as ADDR7. ADDR10 specifies the address mode as ADDR10.

Examples TRIGGER:A:BUS:I2C:ADDRESS:MODE ADDR7 sets the address mode for the I2C bus trigger to ADDR7.

TRIGGER:A:BUS:I2C:ADDRESS:MODE? might return
:TRIGGER:A:BUS:I2C:ADDRESS:MODE ADDR10, indicating that the address mode for the I2C bus trigger is set to ADDR10.

\section*{TRIGger:A:BUS:I2C:ADDress:TYPe}

\section*{NOTE. Not available on some models.}

This command sets or queries the address type for the I2C bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:ADDress:TYPe \{NONe|STARtbyte|HSMODe|GENeralcall|EEPROM|CBUS\} TRIGger:A:BUS:I2C:ADDress:TYPe?

Arguments NONe specifies the address type as None.
STARtbyte specifies the address type as Start byte.
HSMODe specifies the address type as High Speed mode
GENeralcal1 specifies the address type as General Call.
EEPROM specifies the address type as EEPROM.
CBUS specifies the address type as CBUS.

Examples TRIGGER:A:BUS:I2C:ADDRESS TYPE CBUS sets the address type for the I2C bus trigger to CBUS.

TRIGGER:A:BUS:I2C:ADDRESS TYPE? might return :TRIGGER:A:BUS:I2C:ADDRESS:TYPE GENERALCALL, indicating that the address type for the bus trigger is set to GENeralcall.

\section*{TRIGger:A:BUS:I2C:ADDress:VALue}

NOTE. Not available on some models.

This command sets or queries the binary address string used for the I2C trigger of the bus.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:ADDress:VALue <string> TRIGger:A:BUS:I2C:ADDress:VALue?

Arguments <string> specifies the address value. This is either 7 bits or 10 bits depending on the address mode. The valid characters are \(0-9, \mathrm{~A}-\mathrm{F}\), and X for addresses in hexadecimal format and 0,1 , and X otherwise.

Examples TRIGGER:A:BUS:I2C:ADDRESS:VALUE "011xx11" sets the 7-bit address value to "011XX11".

TRIGGER:A:BUS:I2C:ADDRESS:VALUE? might return :TRIGGER:A:BUS:I2C:ADDRESS:VALUE "A45X1CX", indicating that the 7-bit address value is set to "A45X1CX".

\section*{TRIGger:A:BUS:I2C:CONDition}

NOTE. Not available on some models.

This command sets or queries the trigger condition for the I2C bus.

Group Low Speed Serial Trigger
```

Syntax TRIGger:A:BUS:I2C:CONDition
\{ACKMISS|ADDress|ADDRANDDATA|DATa|REPEATstart|STARt|STOP\} TRIGger:A:BUS:I2C:CONDition?

```

Arguments ACKMISS sets the trigger condition to Missing Acknowledgement. ADDRess sets the trigger condition to Address. ADDRANDDATA sets the trigger condition to Address and Data.

DATA sets the trigger condition to data.
REPEATstart sets the trigger condition to Repeat of Start.
STARt sets the trigger condition to Start.
STOP sets the trigger condition to Stop.

Examples TRIGGER:A:BUS:I2C:CONDITION START sets the trigger condition for the I2C bus to start.

TRIGGER:A:BUS:I2C:CONDITION? might return
:TRIGGER:A:BUS:I2C:CONDITION STOP, indicating that the trigger condition for the I2C bus is set to stop.

\section*{TRIGger:A:BUS:I2C:DATa:DIRection}

\section*{NOTE. Not available on some models.}

This command sets or queries the data direction for the I2C bus.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:DATa:DIRection \{DONTCare|READ|WRITE\} TRIGger:A:BUS:I2C:DATa:DIRection?

Related Commands TRIGger:A:BUS:I2C:DATa:FORMat

Arguments DONTCare sets the data direction for the I2C bus to Don't Care.
READ sets the data direction for the I2C bus to Read.
WRITE sets the data direction for the I2C bus to Write.

Examples TRIGGER:A:BUS:I2C:DATA:DIRECTION WRITE sets data direction for the I2C bus to write.

TRIGGER:A:BUS:I2C:DATA:DIRECTION? might return :TRIGGER:A:BUS:I2C:DATA:DIRECTION READ, indicating that data direction for the I2C bus is set to read.

\section*{TRIGger:A:BUS:I2C:DATa:FORMat}

\section*{NOTE. Not available on some models.}

This command sets or queries the trigger data format for the I2C bus.

\author{
Group Low Speed Serial Trigger \\ Syntax TRIGger:A:BUS:I2C:DATa:FORMat \{BINary|HEXadecimal\} TRIGger:A:BUS:I2C:DATa:FORMat? \\ Related Commands TRIGger:A:BUS:I2C:DATa:DIRection, TRIGger:A:BUS:I2C:DATa:SIZe, TRIGger:A:BUS:I2C:DATa:VALue
}

Arguments BINary specifies the data format for the I2C bus trigger as Binary. HEXadecima1 specifies the data format for the I2C bus trigger as Hexadecimal.

Examples TRIGGER:A:BUS:I2C:DATA:FORMAT BINARY sets the data format of the I2C bus trigger to BINary.

TRIGGER:A:BUS:I2C:DATA:FORMAT? might return :TRIGGER:A:BUS:IC2:DATA:FORMAT HEX, indicating that the data format of the I2C bus trigger is set to HEXadecimal.

\section*{TRIGger:A:BUS:I2C:DATa:SIZe}

NOTE. Not available on some models.

This command sets or queries the length of the data string in bytes to be used for an I2C bus trigger when the trigger condition is Data or Addr + Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:DATa:SIZe <NR3> TRIGger:A:BUS:I2C:DATa:SIZe?

Related Commands TRIGger:A:BUS:I2C:DATa:DIRection, TRIGger:A:BUS:I2C:DATa:FORMat, TRIGger:A:BUS:I2C:DATa:VALue

Arguments <NR3> specifies the data size in bytes.

Examples TRIGGER:A:BUS:I2C:DATA:SIZE 3 sets the I2C bus trigger data size to one byte.

TRIGGER:A:BUS:I2C:DATA:SIZE? might return :TRIGGER:A:BUS:I2C:DATA:SIZE 1, indicating that the data size for the I2C bus trigger is set to one byte.

\section*{TRIGger:A:BUS:I2C:DATa:VALue}

NOTE. Not available on some models.

This command sets or queries the data value of the data token for an I2C trigger when the trigger condition is Data or Addr + Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:I2C:DATa:VALue <string> TRIGger:A:BUS:I2C:DATa:VALue?

Arguments <string> specifies the data value. The valid characters are 0,1 , or X representing a binary number.

Examples TRIGGER:A:BUS:I2C:DATA:VALUE"00001111" sets the I2C bus trigger data value to "00001111".

TRIGGER:A:BUS:I2C:DATA:VALUE? might return :TRIGGER:A:BUS:I2C: DATA: VALUE " \(\mathrm{XXXXXX01}\) ", indicating that the data value for the I2C bus trigger is set to "XXXXXX01".

\section*{TRIGger:A:BUS:LIN:CONDition}

This command sets or queries the LIN bus trigger condition.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:CONDition \{DATA|IDANDDATA|ERRor|IDentifier|SLEEP|SYNC|WAKEup\} TRIGger:A:BUS:LIN:CONDition?

Arguments Arguments are the available trigger conditions.

Examples TRIGger:A:BUS:LIN:CONDition DATA sets the trigger condition to DATA.
TRIGger:A:BUS:LIN:CONDition? might return :TRIGGER:A:BUS:LIN:CONDITION SYNC, indicating the trigger condition is SYNC.

\section*{TRIGger:A:BUS:LIN:DATa:FORMat}

This command sets or queries the LIN bus trigger data format.
\begin{tabular}{ll}

& is binary.
\end{tabular}

\section*{TRIGger:A:BUS:LIN:DATa:QUALifier}

This command sets or queries the LIN bus trigger data qualifier.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:DATa:QUALifier
\{EQUa1|LESSEQual|MOREEQual|UNEQua1|LESSthan|MOREthan\} TRIGger:A:BUS:LIN:DATa:QUALifier?

Arguments Arguments specify the available data qualifiers.

Examples TRIGger:A:BUS:LIN:DATa:QUALifier LESSTHAN sets the data qualifier to less than the data value.

TRIGger:A:BUS:LIN:DATa:QUALifier? might return :TRIGGER:A:BUS:LIN:DATA:QUALIFIER EQUAL, indicating the data qualifier is set to equal the data value.

\section*{TRIGger:A:BUS:LIN:DATa:SIZe}

This command sets or queries the LIN bus trigger data size (the number of contiguous CAN data bytes to trigger on).

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:DATa:SIZe <nr3> TRIGger:A:BUS:LIN:DATa:SIZe?

Arguments <nr3> specifies the data size.

Examples TRIGger:A:BUS:LIN:DATa:SIZe 2 sets the data size to 2 .
TRIGger:A:BUS:LIN:DATa:SIZe? might return :TRIGGER:A:BUS:LIN:DATA:SIZE 1, indicating the data size is 1 .

\section*{TRIGger:A:BUS:LIN:DATa:VALue}

This command sets or queries the LIN bus trigger data value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:DATa:VALue <string> TRIGger:A:BUS:LIN:DATa:VALue?

Arguments <string> specifies the data value.

Examples TRIGger:A:BUS:LIN:DATa:VALue 1010 sets the data value to XXXX1010.
TRIGger:A:BUS:LIN:DATa:VALue? might return :TRIGGER:A:BUS:LIN:DATA:VALUE "XXX10101", indicating the data value is set to XXX10101.

\section*{TRIGger:A:BUS:LIN:ERRTYPE}

This command sets or queries the LIN bus trigger error type.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:ERRTYPE \{CHecksum|PARity|SYNC\} TRIGger:A:BUS:LIN:ERRTYPE?

Arguments CHecksum specifies the error type is checksum.
PARity specifies the error type is parity.
SYNC specifies the error type is sync.

Examples TRIGger:A:BUS:LIN:ERRTYPE CHECKsum sets the error type to checksum.
TRIGger:A:BUS:LIN:ERRTYPE? might return :TRIGGER:A:BUS:LIN:ERRTYPE SYNC, indicating the error type is sync.

\section*{TRIGger:A:BUS:LIN:IDentifier:FORMat}

This command sets or queries the LIN bus trigger identifier format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:IDentifier:FORMat \{BINary|HEX\} TRIGger:A:BUS:LIN:IDentifier:FORMat?

Arguments BINary specifies the identifier format as binary. HEX specifies the identifier format as hexadecimal.

Examples TRIGger:A:BUS:LIN:IDentifier:FORMat HEX sets the identifier format to hexadecimal.

TRIGger:A:BUS:LIN:IDentifier:FORMat? might return :TRIGGER:A:BUS:LIN:IDENTIFIER:FORMAT BINARY, indicating the identifier format is binary.

\section*{TRIGger:A:BUS:LIN:IDentifier:VALue}

This command sets or queries the LIN trigger identifier value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:LIN:IDentifier:VALue <string> TRIGger:A:BUS:LIN:IDentifier:VALue?

Arguments <string> specifies the identifier value.

Examples TRIGger:A:BUS:LIN:IDentifier:VALue "1001" sets the identifier value to XX1001.

TRIGger:A:BUS:LIN:IDentifier:VALue? might return :TRIGGER:A:BUS:LIN:IDENTIFIER:VALUE "X11001", indicating the identifier value is X1101.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:FORMat}

This command sets the data format of the address (either binary or hex) to use in a MIL-STD-1553 bus command word trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:FORMat \{BINary|HEX\} TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:FORMat?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS: FORMAT HEX sets the data format to HEX.

TRIGGER:A:BUS:MIL1553B:COMMAND:ADDRESS:FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:QUALifier}

This command specifies the qualifier to use when triggering on a MIL-STD-1553 bus command word remote terminal address field. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:QUALifier \{LESSthan|MOREthan|EQual|UNEQual|LESSEQual|MOREEQual\}

TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:QUALifier?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:VALue

Arguments LESSthan sets the Command Address qualifier to less than. MOREthan sets the Command Address qualifier to greater than. EQual sets the Command Address qualifier to equal. UNEQual sets the Command Address qualifier to not equal. LESSEQual sets the Command Address qualifier to less than or equal. mOREEQua 1 sets the Command Address qualifier to greater than or equal.

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS:QUALIFIER EQual sets the qualifier to be used with the remote terminal address to equal.
TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS:QUALIFIER? might return EQUAL.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:VALue}

This command specifies the value of the 5-bit remote terminal address to use in a MIL-STD-1553 bus command word trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:VALue <QString> TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:VALue?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:COMMAND:ADDRess:QUALifier

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X . The default is all X's (don't care). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS:VALUE "01000" sets the remote terminal address to be used in the trigger to 01000.

TRIGGER:A:BUS:B1:MIL1553B:COMMAND:ADDRESS:VALUE? might return 01000.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:COUNt}

This command specifies the bit pattern for the 5 -bit Word Count/Mode Code sub-address field to use in a MIL-STD-1553 bus command word trigger. (Use the command TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress to specify Word Count or Mode Code.) In Word Count mode, this field defines the number of data words to be transmitted or received, depending on the T/R bit setting. (Use the command TRIGger:A:BUS:MIL1553B:COMMAND:TRBit to set the T/R bit.) A word count value of 0 actually indicates a transfer of 32 data words. The trigger condition needs to be set to COMMAND.

\author{
Conditions Requires the SR-AERO Serial Triggering and Analysis Application. \\ Group Trigger \\ Syntax TRIGger:A:BUS:MIL1553B:COMMAND:COUNt <QString> TRIGger:A:BUS:MIL1553B:COMMAND:COUNt? \\ Related Commands TRIGger:A:BUS:MIL1553B:CONDition \\ TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress \\ TRIGger:A:BUS:MIL1553B:COMMAND:TRBit
}

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 and X .

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:COUNT "01000" sets the bit pattern for the Word Count/Mode Code field to 01000.

TRIGGER:A:BUS:B1:MIL1553B:COMMAND:COUNT? might return "XXXXX".

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:COUNt:FORMat}

This command specifies the data format (binary or hex) of the bit pattern for the 5-bit Word Count/Mode Code field to use in a MIL-STD-1553 bus command word trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:COUNt:FORMat \{BINary|HEX\} TRIGger:A:BUS:MIL1553B:COMMAND:COUNt:FORMat?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:MIL1553B:COMMAND:COUNT: FORMAT sets the data format to HEX.

TRIGGER:A:BUS:MIL1553B:COMMAND:COUNT: FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:PARity}

This command specifies the parity to use in a MIL-STD-1553 bus command word trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:PARity \{0|1|X|ZERo|ONE|NOCARE|OFF|ON|DONTCare\} TRIGger:A:BUS:MIL1553B:COMMAND:PARity?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0
1
X sets the value to X ("don't care"), which is the default.
ZERO sets the value to 0 .

ONE sets the value to 1 .
NOCARE sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:PARITY ZERo sets the Command word parity bit to 0 .

TRIGGER:A:BUS:B1:MIL1553B:COMMAND: PARITY? might return 0,1 or X.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress}

This command specifies the 5 bit sub-address to use in a MIL-STD- 1553 bus command word sub-address trigger. When the sub-address value is set to 00000 or 11111 binary, it specifies that the command is a "Mode Code" command. Any other value specifies that it is a "Word Count" command. The default is all X's (don't care). The trigger condition needs to be set to COMMAND.

NOTE. The sub-address field is used to direct data to different functions within the subsystem for values 1-30.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress <QString> TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:COMMAND:COUNt

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:SUBADDRESS "01000" sets the trigger sub-address to 01000 , which means that it is a "Word Count" command.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress:FORMat}

This command specifies the data format (binary or hex) of the sub-address field bit pattern to use in a MIL-STD-1553 bus command word sub-address trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND: SUBADdress:FORMat \{BINary|HEX\} TRIGger:A:BUS:MIL1553B:COMMAND:SUBADdress:FORMat?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:MIL1553B:COMMAND: SUBADDRESS:FORMAT HEX sets the data format to HEX.

TRIGGER:A:BUS:MIL1553B:COMMAND: SUBADDRESS:FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:TRBit}

This command specifies a trigger on either a "transmit" or a "receive" signal for the transmit/receive bit (bit 9) for a MIL-STD-1553 bus command word trigger. The trigger condition needs to be set to COMMAND.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:COMMAND:TRBit \{RX|TX|X|DONTCare\} TRIGger:A:BUS:MIL1553B:COMMAND:TRBit?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

\section*{TRIGger:A:BUS:MIL1553B:COMMAND:COUNt}

Arguments TX (logic 1) directs the instrument to trigger on a TX or "transmit" from a remote terminal .

RX (logic 0 ) directs the instrument to trigger on an RX or "receive" from a remote terminal.
x, DONTCare indicates "don't care".

Examples TRIGGER:A:BUS:B1:MIL1553B:COMMAND:TRBIT TX directs the instrument to trigger on a TX or "transmit" signal from a remote terminal.

TRIGGER:A:BUS:B1:MIL1553B:COMMAND:TRBIT TX? might return TX.

\section*{TRIGger:A:BUS:MIL1553B:CONDition}

This command specifies which word type or condition within a MIL-STD-1553 bus word to trigger on.

NOTE. There are three types of MIL-STD-1553 (Aircraft) bus words: Command, Status, and Data, all sharing a common structure twenty bits in length. The first three bits are used as a synchronization field. The last bit is the odd parity of the previous 16 bits.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:CONDition \{SYNC|COMMAND|STATUS|DATA|TIMe|ERRor\}

TRIGger:A:BUS:MIL1553B:CONDition?

Related Commands Most of the other TRIGger:A:BUS: B<x>:MIL1553B commands are impacted by the setting of this command.

BUS:B<x>:MIL1553B:POLarity
BUS:B<x>:MIL1553B:SOUrce

Arguments SYNC refers to the 3-bit sync pulse that precedes each word.
COMMAND is one of 3 16-bit word types.
STATUS is one of 316 -bit word types.
DATA is one of 316 -bit word types.
TIMe specifies a trigger on either the RT (remote terminal response time), or the IMG (Inter-message Gap). Use the commands TRIGger:A:BUS:MIL1553B: TIME:QUALifier, TRIGger:A:BUS:MIL1553B:TIME:LESSLimit, and TRIGger:A:BUS:MIL1553B:TIME:MORELimit to specify the time parameters.

ERRor specifies to trigger upon a signaling error. (You can specify which type of error - Parity, Sync, Manchester or Non-contiguous Data - by using the TRIGger:A:BUS:MIL1553B:ERRTYPE command.)

\section*{NOTE.}

Use the TRIGger:A:BUS:B<X>:MIL1553B:CONDition:STATUS:BIT commands to set the following bits:

9 - message error
TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME
10 - instrumentation
TRIGger:A:BUS:MIL1553B:STATUS:BIT:INSTR
\(11-S R Q\) (service request)
TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ
\(15-B C R\) (broadcast command received)
TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR
16 - busy
TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY
17 - subsystem flag
TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF
18 - DBCA (dynamic bus control acceptance)
TRIGger:A:BUS:MIL1553B:STATUS:BIT:DBCA
19 - terminal flag
TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF

Examples TRIGGER:A:BUS:B1:MIL1553B:CONDITION STATUS specifies to trigger on the word type STATUS.

TRIGGER:A:BUS:B1:MIL1553B:CONDITION? might return DATA.

\section*{TRIGger:A:BUS:MIL1553B:DATA:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use for a MIL-STD-1553 bus data word trigger. The trigger condition needs to be set to DATA.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:DATA:FORMat \{BINary|HEX\} TRIGger:A:BUS:MIL1553B:DATA:FORMat?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition, TRIGger:A:BUS:MIL1553B:DATA: PARity, TRIGger:A:BUS:MIL1553B:DATA:VALue

Arguments BINary specifies the data format as binary.
HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:MIL1553B:DATA:FORMAT sets the data format to HEX.
TRIGGER:A:BUS:MIL1553B:DATA:FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:MIL1553B:DATA:PARity}

This command specifies the parity to use when triggering on a MIL-STD-1553 bus data word parity bit. The trigger condition must be set to DATA.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:DATA:PARity \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\} TRIGger:A:BUS:MIL1553B:DATA:PARity?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:DATA:VALue

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, nocare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:MIL1553B:DATA:PARITY 1 sets the data parity bit to be used in a MIL-STD-1553 bus trigger to 1 .

TRIGGER:A:BUS:MIL1553B:DATA: PARITY? might return 0 , indicating that the data parity bit to be used in a MIL-STD-1553 bus trigger is set to 0 .

\section*{TRIGger:A:BUS:MIL1553B:DATA:VALue}

This command specifies the value to use for a MIL-STD-1553 bus data word trigger. This is a 16-bit field. The default is all X's (don't care). The trigger condition must be set to DATA.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:DATA:VALue <QString> TRIGger:A:BUS:MIL1553B:DATA:VALue?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:DATA:PARity

Arguments QString is a quoted string of up to 16 characters, where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:B1:MIL1553B:DATA:VALUE " 01000 " sets the data binary pattern to be used in a MIL-STD-1553 bus trigger to 01000 .
TRIGGER:A:BUS:B1:MIL1553B:DATA:VALUE? might return XXXXXXXXXXX01000.

\section*{TRIGger:A:BUS:MIL1553B:ERRTYPE}

This command specifies the signaling error type to use for a MIL-STD-1553 bus data word trigger: Parity, Sync, Manchester, or Data. The trigger condition must be set to ERRor.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:ERRTYPE \{PARity|SYNC|MANCHester|DATA\} TRIGger:A:BUS:MIL1553B:ERRTYPE?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments PARity - a failed parity check.
SYNc - the high to low, or low to high transition doesn't happen in the middle of the sync time as it should.

MANCHester - no transition in a bit time.
DATA - a non-contiguous data error.

Examples TRIGGER:A:BUS:B1:MIL1553B:ERRTYPE PARITY sets the error type to be used in the trigger to PARITY.

TRIGger:A:BUS:B1:MIL1553B:ERRTYPE? might return SYNC.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:FORMat}

This command specifies the format (binary or hex) of the bit pattern to use when triggering on the MIL-STD-1553 status address field. The trigger condition needs to be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:FORMat \{BINary|HEX\} TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:FORMat?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue

Arguments BINary specifies the data format as binary. HEX specifies the data format as hexadecimal.

Examples TRIGGER:A:BUS:MIL1553B:STATUS:ADDRESS: FORMAT HEX sets the data format to HEX.

TRIGGER:A:BUS:MIL1553B: STATUS:ADDRESS: FORMAT? might return BINARY, indicating that the data format is set to binary.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier}

This command specifies the qualifier to use when triggering on the MIL-STD-1553 status address field. The default is EQUAL. The trigger condition must be set to sTATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier \{LESSthan|MOREthan|EQual|UNEQual|LESSEQual|MOREEQual\}

TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue

Arguments LESSthan sets the Status Address qualifier to less than. MOREthan sets the Status Address qualifier to greater than. EQual sets the Status Address qualifier to equal. UNEQual sets the Status Address qualifier to not equal. LESSEQua1 sets the Status Address qualifier to less than or equal.

MOREEQua1 sets the Status Address qualifier to greater than or equal.

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS:QUALIFIER MORETHAN sets the qualifier to be used with the address field to greater than.

TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS:QUALIFIER? might return MORETHAN.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue}

This command specifies the value of the 5-bit remote terminal address to use when triggering on the MIL-STD-1553 status address field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue <QString> TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:VALue?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:STATUS:ADDRess:QUALifier

Arguments QString is a quoted string of up to 5 characters, where the allowable characters are 0,1 , and X (don't care). The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS:VALUE "01000" sets the value of the 5 -bit remote terminal address to be used in the trigger, when the qualifier has been set to LESSthan, MOREthan, EQual, UNEQual, LESSEQual or MOREEQual.

TRIGGER:A:BUS:B1:MIL1553B:STATUS:ADDRESS:VALUE? might return "01000".

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR}

This command specifies the status word broadcast command received (BCR) bit value (bit 15) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\}

TRIGger:A:BUS:MIL1553B:STATUS:BIT:BCR?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
x, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:BCR NOCARE sets the BCR trigger bit value to X .

TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:BCR? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY}

This command specifies the status word busy bit value (bit 16) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\} TRIGger:A:BUS:MIL1553B:STATUS:BIT:BUSY?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:BUSY NOCARE sets the status word busy bit trigger value to X .

TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:BUSY? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:DBCA}

This command specifies the status word dynamic bus control acceptance (DBCA) bit value (bit 18) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:DBCA \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\} TRIGger:A:BUS:MIL1553B:STATUS:BIT:DBCA?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:DBCA NOCARE sets the status word dynamic bus control acceptance (DBCA) bit trigger value to X .

TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:DBCA? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:INSTR}

This command specifies the status word instrumentation bit value (bit 10) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:INSTR \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\} TRIGger:A:BUS:MIL1553B:STATUS:BIT:INSTR?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1, ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:INSTR ZERo sets the status word instrumentation bit trigger value to 0 .

TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:INSTR? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME}

This command specifies the status word message error bit value (bit 9) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\}

TRIGger:A:BUS:MIL1553B:STATUS:BIT:ME?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0, ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:ME NOCARE sets the status word message error bit trigger value to X .

TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:ME? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:PARity}

This command specifies the parity to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Group Trigger
\(\begin{array}{ll}\text { Syntax } & \text { TRIGger:A:BUS:MIL1553B:STATUS:BIT:PARity } \\ & \text { \{0|1|X|ZERo|ONE|NOCARE|DONTCare|ON|OFF } \\ & \text { TRIGger:A:BUS:MIL1553B:STATUS:BIT:PARity? }\end{array}\)

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:PARITY NOCARE sets the trigger parity to X .

TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:PARITY? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ}

This command specifies the status word service request (SRQ) bit value (bit 11) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\} TRIGger:A:BUS:MIL1553B:STATUS:BIT:SRQ?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:SRQ NOCARE sets the status word SRQ bit trigger value to X .

TRIGGER:A:BUS:B1:MIL1553B:STATUS:BIT:SRQ? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF}

This command specifies the status word subsystem flag bit value (bit 17) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\}

TRIGger:A:BUS:MIL1553B:STATUS:BIT:SUBSF?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
X, NOCARE, DONTCare sets the value to X ("don't care"), which is the default. OFF sets the value to 0 .

ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:SUBSF NOCARE sets the status word subsystem flag bit trigger value to X .

TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:SUBSF? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF}

This command specifies the status word terminal flag bit value (bit 19) to use when triggering on the MIL-STD-1553 status bit field. The default is all X's (don't care). The trigger condition must be set to STATUS.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF \{0|1|X|ZERo|ONE|NOCARE|DONTCare|OFF|ON\}

TRIGger:A:BUS:MIL1553B:STATUS:BIT:TF?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition

Arguments 0 , ZERO sets the value to 0 .
1 , ONE sets the value to 1 .
x, nocare, DONTCare sets the value to X ("don't care"), which is the default.
OFF sets the value to 0 .
ON sets the value to 1 .

Examples TRIGGER:A:BUS:B1:MIL1553B:STAT:BIT:TF NOCARE sets the status word terminal flag bit trigger value to \(X\).

TRIG:A:BUS:B1:MIL1553B:STAT:BIT:TF? might return 1.

\section*{TRIGger:A:BUS:MIL1553B:TIME:LESSLimit}

This command specifies either the minimum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit or the minimum inter-message gap (IMG). The instrument will trigger when it finds an RT or IMG that meets the specified conditions. The trigger condition must be set to TIMe.

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:TIME:LESSLimit <NR3> TRIGger:A:BUS:MIL1553B:TIME:LESSLimit?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:TIME:MORELimit

Arguments <NR3> is a floating point number that specifies either the minimum remote terminal response time (RT) or the inter-message gap (IMG) in seconds.

Examples TRIGGER:A:BUS:B1:MIL1553B:TIME:LESSLIMIT 3.0000E-6 would set either the minimum remote terminal response time (RT) or the minimum inter-message gap (IMG) to 3 microseconds.

TRIGGER:A:BUS:B1:MIL1553B:TIME:LESSLIMIT? might return 2.0000e-6, indicating that the minimum RT or IMG has been set to 2 microseconds.

\section*{TRIGger:A:BUS:MIL1553B:TIME:MORELimit}

This command specifies either the maximum remote terminal response time (RT) limit, in seconds, for the amount of time the terminal has to transmit or the maximum inter-message gap (IMG). The instrument will trigger when it finds an RT or IMG that meets the specified conditions. The trigger condition must be set to TIMe,

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:TIME:MORELimit <NR3> TRIGger:A:BUS:MIL1553B:TIME:MORELimit?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:TIME:LESSLimit

Arguments <NR3> is a floating point number that specifies either the maximum remote terminal response time (RT) or the maximum inter-message gap (IMG) in seconds.

Examples TRIGGER:A:BUS:B1:MIL1553B:TIME:MORELIMIT 80.0000E-6 would set either the maximum remote terminal response time (RT) or the inter-message gap (IMG) to be used in the trigger to 80 microseconds.

TRIGGER:A:BUS:B1:MIL1553B:TIME:MORELIMIT? might return 100.0000e-6, indicating that the maximum RT or IMG has been set to 100 microseconds.

\section*{TRIGger:A:BUS:MIL1553B:TIME:QUALifier}

This command specifies the qualifier to use when triggering on either the remote terminal response time (RT) or the inter-message gap (IMG). The instrument will trigger when it finds an RT or IMG that meets the specified conditions. The trigger condition must be set to TIMe,

Conditions Requires the SR-AERO Serial Triggering and Analysis Application.

Group Trigger

Syntax TRIGger:A:BUS:MIL1553B:TIME:QUALifier \{LESSthan|MOREthan|INrange|OUTrange\}

TRIGger:A:BUS:MIL1553B:TIME:QUALifier?

Related Commands TRIGger:A:BUS:MIL1553B:CONDition
TRIGger:A:BUS:MIL1553B:TIME:LESSLimit
TRIGger:A:BUS:MIL1553B:TIME:MORELimit

Arguments LESSthan sets the time qualifier to less than minimum.
MOREThan sets the time qualifier to greater than maximum
INrange sets the time qualifier to inside range.
OUTrange sets the time qualifier to out of range.

Examples TRIGGER:A:BUS:B1:MIL1553B:TIME:QUALIFIER LESSthan sets the time qualifier to less than minimum.

TRIGGER:A:BUS:B1:MIL1553B:TIME:QUALIFIER? might return MORETHAN.

\section*{TRIGger:A:BUS:PCIE:CHARacter:CHAR}

This command sets or queries the PCIE bus trigger character.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:CHARacter:CHAR <string> TRIGger:A:BUS:PCIE:CHARacter:CHAR?

\author{
Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<x>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS \(<x>\), TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus
}

Arguments <string> specifies the trigger character.

Examples TRIGger:A:BUS:PCIE:CHARacter:CHAR "D10.2" sets the trigger character to D10.2.

TRIGger:A:BUS:PCIE:CHARacter:CHAR? might return :TRIGGER:A:BUS:PCIE:CHARACTER:CHAR "K28.5", indicating the trigger character is K28.5.

\section*{TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus}

This command sets or queries the PCIE bus trigger character symbol minus (negative disparity).

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus <string> TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus?

Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR<x>, TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS<x>, TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

Arguments <string> specifies the minus character symbol.

Examples TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus "10000010" sets the minus character symbol to 10000010 .

TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus? might return :TRIGGER:A:BUS:PCIE:CHARACTER:SYMBOL:MINUS "0011111010", indicating the minus character symbol is 0011111010 .

\section*{TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS}

This command sets or queries PCIE bus trigger character symbol plus (positive disparity).

NOTE. Not available on some models.

\author{
Group Low Speed Serial Trigger \\ Syntax TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS <string> TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS? \\ Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<x>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS<x>, TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus \\ Arguments <string> specifies the character symbol plus. \\ Examples TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS "10110010" sets the character symbol plus to 10110010 . \\ TRIGger:A:BUS:PCIE:CHARacter:SYMbo1:PLUS? might return :TRIGGER:A:BUS:PCIE:CHARACTER:SYMBOL:PLUS "1100000101", indicates that the character symbol plus is 1100000101 .
}

\section*{TRIGger:A:BUS:PCIE:CONDition}

This command sets or queries the PCIE bus trigger condition.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:CONDition
\{ANYControl|CHARacter|ERROR|PATtern\}
TRIGger:A:BUS:PCIE:CONDition?

Arguments Arguments are the available trigger conditions.
\[
\begin{array}{ll}
\text { Examples } & \text { TRIGger:A:BUS:PCIE:CONDition ERROR sets the trigger condition to error. } \\
& \text { TRIGger:A:BUS:PCIE:CONDition? might return } \\
& \text { :TRIGGER:A:BUS:PCIE:CONDITION PATTERN, indicating the trigger } \\
& \text { condition is pattern. }
\end{array}
\]

\section*{TRIGger:A:BUS:PCIE:DISParity}

This command sets or queries the PCIE bus trigger disparity.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:DISParity \{EITher|NEGAtive|POSITIVe\} TRIGger:A:BUS:PCIE:DISParity?

Arguments NEGative specifies negative disparity. POSITIVe specifies positive disparity.

EITher specifies either disparity.

Examples TRIGger:A:BUS:PCIE:DISParity NEGATIVE sets the disparity to negative.
TRIGger:A:BUS:PCIE:DISParity? might return
:TRIGGER:A:BUS:PCIE:DISPARITY EITHER, indicates that the disparity to either.

\section*{TRIGger:A:BUS:PCIE:ERROR}

This command sets or queries the PCIE bus trigger error.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:ERROR \{CHARacter|DISParity\} TRIGger:A:BUS:PCIE:ERROR?

Arguments CHARACTER sets the instrument to trigger on a character error. DISPARITY sets the instrument to trigger on a disparity error.

Examples TRIGger:A:BUS:PCIE:ERROR Disparity sets the instrument to trigger on a disparity error.

TRIGger:A:BUS:PCIE:ERROR? might return :TRIGGER:A:BUS:PCIE:ERROR CHARACTER, indicating the instrument is set to trigger on a character error..

\section*{TRIGger:A:BUS:PCIE:FORMat}

This command sets or queries the PCIe bus trigger format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:FORMat \{ORDERedset|SYMbol|CHAR\}
TRIGger:A:BUS:PCIE:FORMat?

Arguments Arguments are the available trigger formats.

Examples TRIGger:A:BUS:PCIE:FORMat Symbol sets the trigger format to symbol.
TRIGger:A:BUS:PCIE:FORMat? might return :TRIGGER:A:BUS:PCIE:FORMAT ORDEREDSET, indicating the trigger format is set to format.

\section*{TRIGger:A:BUS:PCIE:PATtern:CHAR<x>}

This command sets or queries the PCIE bus trigger pattern character. The x specifies the character and can be 1 through 4 .

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:PATtern:CHAR<x> <string> TRIGger:A:BUS:PCIE:PATtern:CHAR<x>?

Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<x>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS \(<x>\), TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

Arguments <string> specifies the trigger pattern character. Valid characters are any valid PCIe/8b10b character (KCodes, DCodes, and KCode mnemonics like COM and SKP) or X, the don't care character.

Examples TRIGger:A:BUS:PCIE:PATtern:CHAR3 "COM" sets the trigger patter character to COM, or K28.5.

TRIGger:A:BUS:PCIE:PATtern:CHAR1? might return :TRIGGER:A:BUS:PCIE:PATTERN:CHAR1 "END", indicating the trigger pattern character is END, or K29.7.

TRIGger:A:BUS:PCIE:PATtern:CHAR2? might return :TRIGGER:A:BUS:PCIE:PATTERN:CHAR2 " X ", indicating the trigger pattern character is X , or don't care.

\section*{TRIGger:A:BUS:PCIE:PATtern:ORDERedset}

This command sets or queries the PCIE bus trigger pattern ordered set.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:PATtern:ORDERedset \{EI|FTS|SKP\}
TRIGger:A:BUS:PCIE:PATtern:ORDERedset?

Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<\mathrm{x}>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS<x>, TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

Arguments Arguments are the available ordered sets.
INVALID is an additional argument that can be returned by a query.

\section*{Examples TRIGger:A:BUS:PCIE:PATtern:ORDERedset SKP sets the trigger pattern ordered set to SKP. \\ TRIGger:A:BUS:PCIE:PATtern:ORDERedset? might return :TRIGGER:A:BUS:PCIE:PATTERN:ORDEREDSET SKP, indicates the ordered set is set to SKP.}

\section*{TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>}

This command sets or queries the PCIE bus trigger pattern symbol minus (negative disparity). The x specifies the minus character and can be 1 through 4 .

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x> <string> TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus<x>?

Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<\mathrm{x}>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS<x>, TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

Arguments <string> specifies the trigger pattern minus symbol.

Examples TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus1 "1010101011" sets the trigger pattern symbol minus to 1010101011.

TRIGger:A:BUS:PCIE:PATtern:SYMbol:MINus1? might return :TRIGGER:A:BUS:PCIE:PATTERN:SYMBOL:MINUS1 "0011111010", indicating the plus symbol is 0011111010 .

\section*{TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS<x>}

This command sets or queries the PCIE bus trigger pattern plus symbol (positive disparity). The x specifies the plus character and can be 1 through 4.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS<x> <string> TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS<x>?

Related Commands TRIGger:A:BUS:PCIE:PATtern:ORDERedset, TRIGger:A:BUS:PCIE: PATtern:CHAR \(<\mathrm{x}>\), TRIGger:A:BUS:PCIE:CHARacter:CHAR, TRIGger: A:BUS:PCIE:PATtern:SYMbol:PLUS \(<x>\), TRIGger:A:BUS:PCIE:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:PCIE:CHARacter:SYMbol:MINus

Arguments <string> specifies the pattern symbol plus.

Examples TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS1 "1010101011" sets the trigger pattern symbol plus to 1010101011.

TRIGger:A:BUS:PCIE:PATtern:SYMbol:PLUS1? might return :TRIGGER:A:BUS:PCIE:PATTERN:SYMBOL:PLUS1 "1100000101", indicating the plus symbol is 1100000101 .

\section*{TRIGger:A:BUS:RS232C:CONDition}

NOTE. Not available on some models.

This command sets or queries the condition for an RS-232C bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:RS232C:CONDition \{DATa|EOp|PARItyerror|STARt\} TRIGger:A:BUS:RS232C:CONDition?

Arguments DATa sets the Trigger on condition to Data.
EOp sets the Trigger on condition to End of Packet.
PARItyerror sets the Trigger on condition to Parity Error.
STARt sets the Trigger on condition to Start.

\section*{Examples TRIGGER:A:BUS:RS232C:CONDITION DATA sets the RS-232C trigger on condition to Data. \\ TRIGGER:A:BUS:RS232C:CONDITION? might return :TRIGGER:A:BUS:RS232C:CONDITION START, indicating that the RS-232C trigger on condition is set to Start.}

\section*{TRIGger:A:BUS:RS232C:DATa:FORMat}

NOTE. Not available on some models.

This command sets or queries the data format for the RS232C bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:RS232C:DATa:FORMat \{BINary|HEXadecimal\} TRIGger:A:BUS:RS232C:DATa:FORMat?

Arguments BINary specifies that the data format for the RS232C bus trigger is Binary. HEXadecima1 specifies that the data format for the RS232C bus trigger is Hexadecimal.

Examples TRIGGER:A:BUS:RS232C:DATA:FORMAT BINARY sets the data format to BINary.

TRIGGER:A:BUS:RS232C:DATA:FORMAT? might return :TRIGGER:A:BUS:RS232C:DATA:FORMAT BINARY, indicating that the data format for the RS232C bus trigger is set to BINary.

\section*{TRIGger:A:BUS:RS232C:DATa:SIZe}

\section*{NOTE. Not available on some models.}

This command sets or queries the length of the data string in bytes to be used for an RS-232C trigger when the trigger condition is Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:RS232C:DATa:SIZe <NR3> TRIGger:A:BUS:RS232C:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes.

Examples TRIGGER:A:BUS:RS232C:DATA:SIZE 3 sets three bytes data size for the RS-232C bus trigger.

TRIGGER:A:BUS:RS232C:DATA:SIZE? might return :TRIGGER:A:BUS:RS232C:DATA:SIZE 2, indicating that the data size for the RS-232C bus trigger is set to two bytes.

\section*{TRIGger:A:BUS:RS232C:DATa:VALue}

\section*{NOTE. Not available on some models.}

This command sets or queries the data address string used for the RS-232 bus trigger when the trigger condition is set to Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:RS232C:DATa:VALue <string> TRIGger:A:BUS:RS232C:DATa:VALue?

Arguments <string> specifies the address value. The argument is a string of 0,1 , or X representing a binary number.

Examples TRIGGER:A:BUS:RS232C:DATA:VALUE "011xX11" sets the data address string used for the RS-232 bus trigger to 011XX11.

TRIGGER:A:BUS:RS232C:DATA:VALUE? might return :TRIGGER:A:BUS:RS232C:DATA:VALUE "XXXXXX01", indicating that the data address string used for the RS-232 bus trigger is set to "XXXXXX01"

\section*{TRIGger:A:BUS:S8B10B:CHARacter:CHAR}

Sets or queries the 8B10B character when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:CHARacter:CHAR <string> TRIGger:A:BUS:S8B10B:CHARacter:CHAR?

Related Commands TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:CHARacter: SYMbol:MINus, TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS

Arguments <string> is the 8B10B character.

Examples TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR"K28.5" sets the character to K28.5.

TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR? might return :TRIGGER:A:BUS:S8B10B:CHARACTER:CHAR "K28.3", indicating that the character is set to K28.3.

\section*{TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus}

Sets or queries the 8B10B character bit pattern (negative disparity) when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus <string> TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:mINus?

Related Commands TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:CHARacter: CHAR, TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS

Arguments <string> is the 8B10B character bit pattern.

Examples TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS "0011111010" sets the character bit pattern to 0011111010 .

TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS? might return :TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:MINUS "0011110011", indicating that the character bit pattern is set to 0011110011 .

\section*{TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS}

Sets or queries the Character bit pattern (positive disparity view) when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS <string> TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:PLUS?

Related Commands TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:CHARacter: CHAR, TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus

Arguments <string> is the 8B10B character bit pattern.

Examples TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS "1100000101" sets the character bit pattern to 1100000101 .

TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS? might return :TRIGGER:A:BUS:S8B10B:CHARACTER:SYMBOL:PLUS "1100001100", indicating that the character bit pattern is 1100001100 .

\section*{TRIGger:A:BUS:S8B10B:CONDition}

Sets or queries the trigger condition for the 8B10B bus.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:CONDition
\{ANYControl|CHARacter|ERROR|PATtern\}
TRIGger:A:BUS:S8B10B:CONDition?

Related Commands TRIGger:A:BUS:S8B10B:CHARacter:CHAR, TRIGger:A:BUS:S8B10B: ERROR, TRIGger:A:BUS:S8B10B:CHARacter:SYMbol:MINus, TRIGger: A:BUS:S8B10B:CHARacter:SYMbol:PLUS, TRIGger:A:BUS:S8B10B: PATtern:CHAR<x>, TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus \(<x>\), TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>

Arguments ANYControl
CHARACter
ERROR
PATtern

Examples TRIGGER:A:BUS:S8B10B:CONDITION ERROR sets the oscilloscope to trigger on an error.

TRIGGER:A:BUS:S8B10B:CONDITION? might return:TRIGGER:A:BUS:S8B10B:CONDITION PATtern, indicating that the oscilloscope will trigger on a pattern.

\section*{TRIGger:A:BUS:S8B10B:DISParity}

Sets or queries the type of disparity that the 8B10B bus will trigger on.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:DISParity \{NEGAtive|POSITIVe|EITher\} TRIGger:A:BUS:S8B10B:DISParity?

Related Commands TRIGger:A:BUS:S8B10B:ERROR,

Arguments NEGative specifies negative disparity. POSITIVe specifies positive disparity. EITher specifies either disparity.

Examples TRIGGER:A:BUS:S8B10B:DISPARITY NEGATIVE sets the disparity type to trigger on to negative.

TRIGGER:A:BUS:S8B10B:DISPARITY? might return :TRIGGER:A:BUS:S8B10B:DISPARITY EITHER, indicating that the oscilloscope will trigger on both negative and positive disparity.

\section*{TRIGger:A:BUS:S8B10B:ERROR}

Sets or queries whether the oscilloscope will trigger on a character error or a disparity error.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:ERROR \{CHARacter|DISParity\} TRIGger:A:BUS:S8B10B:ERROR?

Related Commands TRIGger:A:BUS:S8B10B:DISParity

Arguments CHARACTER sets the oscilloscope to trigger on a character error. DISPARITY sets the oscilloscope to trigger on a disparity error.

Examples TRIGGER:A:BUS:S8B10B:ERROR CHARACTER sets the oscilloscope to trigger on a character error.

TRIGGER:A:BUS:S8B10B:ERROR? might return :TRIGGER:A:BUS:S8B10B:ERROR DISPARITY, indicating that the oscilloscope is set to trigger on a disparity error.

\section*{TRIGger:A:BUS:S8B10B:FORMat}

Sets or queries the pattern editing format.
NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:FORMat \{CHAR|SYMbol\} TRIGger:A:BUS:S8B10B:FORMat?

Arguments CHAR indicates that the pattern editing format is set to character.
SYMBOL indicates that the pattern editing format is set to symbol.

Examples TRIGGER:A:BUS:S8B10B:FORMAT CHAR sets the pattern editing format to character.

TRIGGER:A:BUS:S8B10B:FORMAT? might return:TRIGGER:A:BUS:S8B10B:FORMAT SYMBOL, indicating that the pattern editing format is symbol.

\section*{TRIGger:A:BUS:S8B10B:PATtern:CHAR<x>}

Sets or queries the specified 8B10B character when the Trigger Condition is set to Pattern.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:PATtern:CHAR<x> <string> TRIGger:A:BUS:S8B10B:PATtern:CHAR<x>?

Related Commands TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:PATtern: SYMbol:MINus<x>, TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>

Arguments <string> is the character.

Examples TRIGger:A:BUS:S8B10B:PATtern:CHAR1 "K28.5" sets the first character to K28.5.

TRIGger:A:BUS:S8B10B:PATtern:CHAR3? might return :TRIGger:A:BUS:S8B10B:PATtern:CHAR3 "K28.3", indicating that the third character is set to K28.3

\section*{TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus<x>}

Sets or queries the specified 8B10B character bit pattern (negative disparity) when the Trigger Condition is set to Pattern.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus<x> <string> TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINuS<x>?

Related Commands TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:PATtern: CHAR \(<x>\), TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>

Arguments <string> is the character bit pattern.

Examples TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:MINUS2"0011111010" sets the second character bit pattern to 0011111010 .
:TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:MINUS3? might return :TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:MINUS3 0011110011, indicating that the third character bit pattern is set to 0011110011.

\section*{TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>}

Sets or queries the specified 8B10B character bit pattern (positive disparity) when the Trigger Condition is set to Pattern.

NOTE. Not available on some models.
\begin{tabular}{cl} 
Group & Trigger \\
\multirow{2}{*}{ Syntax } & \begin{tabular}{l} 
TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x> \\
TRIGger:A:BUS:S8B10B:PATtern:SYMbol:PLUS<x>?
\end{tabular} \\
Related Commands & \begin{tabular}{l} 
TRIGger:A:BUS:S8B10B:CONDition, TRIGger:A:BUS:S8B10B:PATtern: \\
CHAR \(<x>\), TRIGger:A:BUS:S8B10B:PATtern:SYMbol:MINus<x>
\end{tabular}
\end{tabular}

Arguments <string> is the character bit pattern.

Examples TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:PLUS2 "1100000101" sets the second character bit pattern to 1100000101 .
:TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:PLUS3? might return :TRIGGER:A:BUS:S8B10B:PATTERN:SYMBOL:PLUS3 "1100001100", indicating that the third character bit pattern is set to 1100001100 .

\section*{TRIGger:A:BUS:SOUrce}

NOTE. Not available on some models.

This command sets or returns the source for a bus trigger.

Group Trigger

Syntax TRIGger:A:BUS:SOUrce \{B1|B2|B3|B4|B5|B6|B7|B8|B9|B10|B11|B12| B13|B14|B15|B16\} TRIGger:A:BUS:SOUrce?

Arguments B1-B16 sets the selected source to the bus.

Examples TRIGGER:A:BUS:SOURCE B2 sets the selected source for the bud trigger to Bus 2.

TRIGGER:A:BUS:SOURCE? might return TRIGGER:A:BUS:SOURCE B1, indicating that the selected source for the bus trigger is set to Bus 1.

\section*{TRIGger:A:BUS:SPI:CONDition}

NOTE. Not available on some models.

This command sets or queries the trigger condition for the SPI bus.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:SPI:CONDition \{DATA|SS\} TRIGger:A:BUS:SPI:CONDition?

Arguments DATA sets the trigger condition to Master-In Slave-Out and Master-Out Slave-In. SS sets the trigger condition to Slave selection.

Examples TRIGGER:A:BUS:SPI:CONDITION SS sets the trigger condition to Slave selection.

TRIGGER:A:BUS:SPI:CONDITION? might return :TRIGGER:A:BUS:SPI:CONDITION SS, indicating that the trigger condition is set to Slave selection.

\section*{TRIGger:A:BUS:SPI:DATa:FORMat}

\section*{NOTE. Not available on some models.}

This command sets or queries the format of the data to be used for an SPI trigger when the trigger condition is Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:SPI:DATa:FORMat \{BINary|HEXadecimal\} TRIGger:A:BUS:SPI:DATa:FORMat?

Related Commands TRIGger:A:BUS:SPI:DATa:SIZe, TRIGger:A:BUS:SPI:DATa:VALue

Arguments BINary specifies binary as the data format for the SPI bus. HEXadecima1 specifies hexadecimal as the data format for the SPI bus.

Examples TRIGGER:A:BUS:SPI:DATA:FORMAT: BINARY sets the data format for the SPI bus to binary.

TRIGGER:A:BUS:SPI:DATA:FORMAT? might return :TRIGGER:A:BUS:SPI:DATA:FORMAT BINARY, indicating that the data format for the SPI bus is set to binary.

\section*{TRIGger:A:BUS:SPI:DATa:SIZe}

NOTE. Not available on some models.

This command sets or queries the length of the data string in bytes to be used for an SPI trigger when the trigger condition is Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:SPI:DATa:SIZe <NR3> TRIGger:A:BUS:SPI:DATa:SIZe?

Related Commands
TRIGger:A:BUS:SPI:DATa:FORMat, TRIGger:A:BUS:SPI:DATa:VALue

Arguments <NR3> specifies the number of contiguous data bytes to trigger on.

Examples TRIGGER:A:BUS:SPI:DATA:SIZE 1 sets the SPI bus trigger data size to one byte.

TRIGGER:A:BUS:SPI:DATA:SIZE? might return :TRIGGER:A:BUS:SPI:DATA:SIZE 2, indicating that the data size for the SPI bus trigger is set to two bytes.

\section*{TRIGger:A:BUS:SPI:DATa:VALue}

NOTE. Not available on some models.

This command sets or queries the data value of the data token for an SPI trigger when the trigger condition is Data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:SPI:DATa:VALue <string> TRIGger:A:BUS:SPI:DATa:VALue?

Related Commands TRIGger:A:BUS:SPI:DATa:FORMat, TRIGger:A:BUS:SPI:DATa:SIZe

Arguments <string> specifies the data value in the specified valid format. The valid characters are \(0-9\), A-F, and X for hexadecimal format; and 0,1 , and X for a binary number.

Examples TRIGGER:A:BUS:SPI:DATA:VALUE "00001111" sets the SPI bus trigger data value to "00001111".

TRIGGER:A:BUS:SPI:DATA:VALUE? might return :TRIGGER:A:BUS:SPI: DATA:VALUE "01", indicating that the data value for the SPI bus trigger is set to "01".

\section*{TRIGger:A:BUS:USB:ADDress:FORMat}

\section*{NOTE. Not available on some models.}

This command sets or queries the address format for the USB bus trigger normal token.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ADDress:FORMat \{BINary|HEXadecimal|SYMBolic\} TRIGger:A:BUS:USB:ADDress:FORMat?

\section*{Related Commands TRIGger:A:BUS:USB:ADDress:HIVALue, TRIGger:A:BUS:USB:ADDress: VALue}

Arguments TRIGger:A:BUS:USB:ADDress:FORMat BINary specifies the address format for the normal token as Binary.

TRIGger:A:BUS:USB:ADDress:FORMat HEXadecima1 specifies the address format for the normal token as Hexadecimal.

TRIGger:A:BUS:USB:ADDress:FORMat SYMBolic specifies the address format for the normal token as Symbolic.

Examples TRIGGER:A:BUS:USB:ADDRESS:FORMAT SYMBOLIC sets the address format for the normal token to SYMBolic.

TRIGGER:A:BUS:USB:ADDRESS:FORMAT? might return :TRIGGER:A:BUS:USB:ADDRESS:FORMAT BINARY, indicating that the address format is set to BINary.

\section*{TRIGger:A:BUS:USB:ADDress:HIVALue}

NOTE. Not available on some models.

This command sets or queries the address value for normal token to be used with In Range and Out of Range qualifiers. The Trigger on Condition is set to Token (Address) Packet.

The VALue and HIVALue set a range that the INrange and OUTrange qualifiers used to decide when to trigger. For example, if the QUALIFER is set to INrange, and the address is within the range set by VALue and HIVALue, then a trigger can be generated.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ADDress:HIVALue <string> TRIGger:A:BUS:USB:ADDress:HIVALue?

Related Commands TRIGger:A:BUS:USB:ADDress:VALue
TRIGger:A:BUS:USB:QUAlifier, TRIGger:A:BUS:USB:ADDress:FORMat

Arguments <string> specifies the data value in the specified valid format (binary, hex, or decimal).

Examples TRIGGER:A:BUS:USB:ADDRESS:HIVALUE "1111111" sets the upper limit of the address value for normal token to "1111111".

TRIGGER:A:BUS:USB:ADDRESS:HIVALUE? might return
:TRIGGER:A:BUS:USB:ADDRESS:HIVALUE "0001111", indicating that the upper limit of the address value for normal token is set to " 0001111 ".

\section*{TRIGger:A:BUS:USB:ADDress:VALue}

NOTE. Not available on some models.

This command sets or queries the address value for normal token.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ADDress:VALue <string> TRIGger:A:BUS:USB:ADDress:VALue?

Related Commands TRIGger:A:BUS:USB:ADDress:HIVALue
TRIGger:A:BUS:USB:QUAlifier, TRIGger:A:BUS:USB:ADDress:FORMat

Arguments <string> specifies the data value in the specified valid format (binary, hex, or symbolic).

Examples TRIGGER:A:BUS:USB:ADDRESS:VALUE "1110000" sets the address value for the normal token to "1110000".

TRIGGER:A:BUS:USB:ADDRESS:VALUE? might return :TRIGGER:A:BUS:USB:ADDRESS:VALUE "0000000", indicating that the address value for the normal token is set to " 0000000 ".

\section*{TRIGger:A:BUS:USB:CHARacter:CHAR}

Sets or queries the USB character when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:CHARacter:CHAR <string> TRIGger:A:BUS:USB:CHARacter:CHAR?

Arguments <string> is the character bit pattern.

Examples TRIGGER:A:BUS:USB:CHARACTER:CHAR "0011111010" will trigger on the 0011111010 character.

TRIGGER:A:BUS:USB:CHARACTER:CHAR? may return "1100000101" indicating the instrument will trigger on the 1100000101 character.

\section*{TRIGger:A:BUS:USB:CHARacter:SYMbol:MINus}

Sets or queries the character bit pattern (negative disparity) when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:CHARacter:SYMbol:MINus <string> TRIGger:A:BUS:USB:CHARacter:SYMbol:MINus?

Arguments <string> is the character bit pattern.

Examples TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:MINUS "0011111010" sets the character bit pattern to 0011111010 .

TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:MINUS? might return :TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:MINUS "0011110011", indicating that the character bit pattern is set to 0011110011 .

\section*{TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS}

Sets or queries the Character bit pattern (positive disparity view) when the Trigger Condition is set to Character.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:CHARacter:SYMbol:PLUS <string> TRIGger:A:BUS:USB:CHARacter:SYMbo1:PLUS?

Arguments <string> is the character bit pattern.

Examples TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:PLUS "1100000101" sets the character bit pattern to 1100000101 .

TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:PLUS? might return :TRIGGER:A:BUS:USB:CHARACTER:SYMBOL:PLUS "1100001100", indicating that the character bit pattern is 1100001100 .

\section*{TRIGger:A:BUS:USB:CONDition}

\section*{NOTE. Not available on some models.}

This command sets or returns the condition for a USB trigger, where x is the Trigger on condition..

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:CONDition \{DATAPacket|EOP|ERROR|HANDSHAKEPacket|RESET|RESUME| SPECIALPacket|SUSPEND|SYNC|TOKENPacket\} TRIGger:A:BUS:USB:CONDition?

Arguments DATAPacket sets the Trigger on condition to Data Packet.
EOP sets the Trigger on condition to End of Packet.
ERROR sets the Trigger on condition to Error.
HANDSHAKEPacket sets the Trigger on condition to Handshake Packet.
RESET sets the Trigger on condition to Reset.
RESUME sets the Trigger on condition to Resume.
SPECIALPacket sets the Trigger on condition to Special Packet.
SUSPEND sets the Trigger on condition to Suspend.
SYNC sets the Trigger on condition to Sync.
TOKENPacket sets the Trigger on condition to Token (Address) Packet.

Examples TRIGGER:A:BUS:USB:CONDITION RESET sets the USB trigger on condition to Reset.

TRIGGER:A:BUS:USB:CONDITION? might return :TRIGGER:A:BUS:USB:CONDITION SYNC, indicating that the USB trigger on condition is set to Sync.

\section*{TRIGger:A:BUS:USB:DATa:FORMat}

This command sets or queries the data format for the USB bus trigger.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:FORMat \{BINary|hexadecimal\} TRIGger:A:BUS:USB:DATa:FORMat?

Related Commands TRIGger:A:BUS:USB:DATa:HIVALue
\begin{tabular}{ll} 
Arguments & BINary specifies the data format for the USB bus trigger as Binary. \\
& HEXadecimal specifies the data format for the USB bus trigger as Hexadecimal.
\end{tabular}

\section*{TRIGger:A:BUS:USB:DATa:HIVALue}

\section*{NOTE. Not available on some models.}

This command sets or queries data value for data token to be used with In Range and Out of Range qualifiers. The Trigger on Condition is set to Data Packet.

The VALue and HIVALue set a range that the INrange and OUTrange qualifiers used to decide when to trigger. For example, if the QUALIFER is set to INrange, and the address is within the range set by VALue and HIVALue, then a trigger can be generated.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:HIVALue <string> TRIGger:A:BUS:USB:DATa:HIVALue?

Related Commands TRIGger:A:BUS:USB:DATa:VALue
TRIGger:A:BUS:USB:QUAlifier

Arguments <string> specifies the data value in the specified valid format (binary, hex, or decimal).

Examples TRIGGER:A:BUS:USB:DATA:HIVALUE "00001000" sets the upper limit of the data value for data token to 00001000 ( 08 hex).

TRIGGER:A:BUS:USB:DATA:HIVALUE? might return :TRIGGER:A:BUS:USB:DATA:HIVALUE "01111111", indicating that the upper limit of the data value for data token is set to 01111111 ( 7 F hex).

\section*{TRIGger:A:BUS:USB:DATa:OFFSet}

NOTE. Not available on some models.

This command sets or queries data offset for the USB bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:OFFSet \{<NR3>|DONTCare\} TRIGger:A:BUS:USB:DATa:OFFSet?

Arguments <NR3> specifies the data offset in bytes. DONTCare specifies the data offset as Don't Care.

Examples TRIGGER:A:BUS:USB:DATA:OFFSET2 sets two bytes data offset for the USB bus trigger.

TRIGGER:A:BUS:USB:DATA:OFFSET? might return :TRIGGER:A:BUS:USB:DATA:OFFSET 1, indicating that the data offset for the USB bus trigger is set to 1 byte.

\section*{TRIGger:A:BUS:USB:DATa:SIZe}

\section*{NOTE. Not available on some models.}

This command sets or queries the number of contiguous data bytes to USB bus trigger.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:SIZe <NR3> TRIGger:A:BUS:USB:DATa:SIZe?

Arguments <NR3> specifies the data size in bytes.

Examples TRIGGER:A:BUS:USB:DATA:SIZE 3 sets three bytes data size for the USB bus trigger.

TRIGGER:A:BUS:USB:DATA:SIZE? might return
:TRIGGER:A:BUS:USB:DATA:SIZE 1, indicating that the data size for the USB bus trigger is set to 1 byte.

\section*{TRIGger:A:BUS:USB:DATa:TYPe}

\section*{NOTE. Not available on some models.}

This command sets or queries the data packet type when USB bus trigger condition is Data Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:TYPe \{ANY|DATA0|DATA1|DATA2|MDATA\} TRIGger:A:BUS:USB:DATa:TYPe?

Arguments ANY specifies the data packet type to ANY.
DATA0 specifies the data packet type to DATA0.
DATA1 specifies the data packet type to DATA1.
DATA2 specifies the data packet type to DATA2.

MDATA specifies the data packet type to MDATA.

Examples TRIGGER:A:BUS:USB:DATA:TYPEMDATA sets the data packet type to MDATA.
TRIGGER:A:BUS:USB:DATA:TYPE? might return
:TRIGGER:A:BUS:USB:DATA:TYPE ANY, indicating that the data packet type is set to ANY when the USB bus trigger on condition is Data Packet.

\section*{TRIGger:A:BUS:USB:DATa:VALue}

NOTE. Not available on some models.

This command sets or queries the USB bus trigger data value for data token.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DATa:VALue <string> TRIGger:A:BUS:USB:DATa:VALue?

Related Commands TRIGger:A:BUS:USB:DATa:HIVALue
TRIGger:A:BUS:USB:QUAlifier

Arguments <string> specifies the data value. The valid characters are 0,1 , or X representing a binary number.

Examples TRIGGER:A:BUS:USB:DATA:VALUE "00001111" sets the USB bus trigger data value for data token to " 00001111 ".

TRIGGER:A:BUS:USB:DATA:VALUE? might return :TRIGGER:A:BUS:USB:DATA:VALUE "XXXX", indicating that the USB bus trigger data value is " XXXX ".

\section*{TRIGger:A:BUS:USB:DISParity}

Sets or queries the type of disparity that the bus will trigger on.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:DISParity \{NEGAtive|POSITIVe|EITher\} TRIGger:A:BUS:USB:DISParity?

Arguments NEGative specifies negative disparity.
POSITIVe specifies positive disparity.
EITher specifies either disparity.

Examples TRIGGER:A:BUS:USB:DISPARITY NEGATIVE set the instrument to trigger on negative disparity.

TRIGGER:A:BUS:USB:DISPARITY? may return POSITIVE indicating the instrument will trigger on positive disparity.

\section*{TRIGger:A:BUS:USB:ENDPoint:FORMat}

\section*{NOTE. Not available on some models.}

This command sets or queries the endpoint format for data token to be used with in range and out of range qualifiers.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ENDPoint:FORMat \{BINary|HEXadecimal\}
TRIGger:A:BUS:USB:ENDPoint:FORMat?

Related Commands TRIGger:A:BUS:USB:ENDPoint:HIVALue, TRIGger:A:BUS:USB:ENDPoint: VALue

Arguments BINary specifies the endpoint format for data token as Binary. HEXadecima 1 specifies the endpoint format for data token as Hexadecimal

Examples TRIGGER:A:BUS:USB:ENDPOINT: FORMAT BINARY sets the endpoint format for the data token to binary.

TRIGGER:A:BUS:USB:ENDPOINT:FORMAT? might return :TRIGGER:A:BUS:USB:ENDPOINT:FORMAT SYMBOLIC, indicating that the endpoint format for the data token is set to symbolic.

\section*{TRIGger:A:BUS:USB:ENDPoint:HIVALue}

NOTE. Not available on some models.

This command sets or queries the endpoint value for data token to be used with in range and out of range qualifiers. The VALue and HIVALue set a range that the INrange and OUTrange qualifiers used to decide when to trigger. For example, if the QUALIFIER is set to INrange, and the address is within the range set by VALue and HIVALue, then a trigger can be generated.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ENDPoint:HIVALue <string> TRIGger:A:BUS:USB:ENDPoint:HIVALue?

Related Commands TRIGger:A:BUS:USB:ENDPoint:VALue
TRIGger:A:BUS:USB:QUAlifier, TRIGger:A:BUS:USB:ENDPoint:FORMat

Arguments <string> specifies the endpoint value in the specified valid format (binary, hex, or symbolic).

Examples TRIGGER:A:BUS:USB:ENDPOINT: HIVALUE "0010" sets the upper limit of the endpoint value for data token to " 0010 ".

TRIGGER:A:BUS:USB:ENDPOINT:HIVALUE? might return :TRIGGER:A:BUS:USB:ENDPOINT:HIVALUE "XXXXXX01", indicating that the USB bus trigger endpoint value for data token is "XXXXXX01".

\section*{TRIGger:A:BUS:USB:ENDPoint:VALue}

\section*{NOTE. Not available on some models.}

This command sets or queries the endpoint value for normal token.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ENDPoint:VALue <string> TRIGger:A:BUS:USB:ENDPoint:VALue?

Related Commands TRIGger:A:BUS:USB:QUAlifier, TRIGger:A:BUS:USB:ENDPoint:HIVALue, TRIGger:A:BUS:USB:ENDPoint:FORMat

Arguments <string> specifies the data value in the specified valid format (binary, hex, or symbolic).

Examples TRIGGER:A:BUS:USB:ENDPOINT:VALUE "11111111" sets the endpoint value for normal token to "11111111".

TRIGGER:A:BUS:USB:ENDPOINT:VALUE? might return :TRIGGER:A:BUS:USB:ENDPOINT:VALUE "1111", indicating that the USB bus trigger endpoint value for data token is "1111".

\section*{TRIGger:A:BUS:USB:ERROR}

Sets or queries whether the oscilloscope will trigger on a character error or a disparity error.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ERROR \{CHARacter|DISParity\} TRIGger:A:BUS:USB:ERROR?

Arguments CHARACTER sets the oscilloscope to trigger on a character error. DISPARITY sets the oscilloscope to trigger on a disparity error.

\section*{Examples TRIGGER:A:BUS:USB:ERROR CHAR sets the oscilloscope to trigger on a character error. \\ TRIGGER:A:BUS:USB:ERROR? may return DISP indicating that the instrument is set to trigger on a disparity error.}

\section*{TRIGger:A:BUS:USB:ERRTYPE}

\section*{NOTE. Not available on some models.}

This command sets or queries the error type when USB bus trigger on condition is set to Error.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:ERRTYPE \{BITSTUFFing|CRC5|CRC16|PID\} TRIGger:A:BUS:USB:ERRTYPE?

Arguments BITSTUFFing specifies the error type Bit Stuffing . CRC5 specifies the error type as Token CRC5 (Cyclic Redundancy Check 5). CRC16 specifies the error type as Data CRC16 (Cyclic Redundancy Check 16). PID specifies the error type as PID Check Bits.

Examples TRIGGER:A:BUS:USB:ERRTYPE CRC16 sets the USB bus trigger on to Data CRC16 error type.

TRIGGER:A:BUS:USB:ERRTYPE? might return :TRIGGER:A:BUS:USB:ERRTYPE PID, indicating that the USB bus trigger on is set to PID Check Bits error type.

\section*{TRIGger:A:BUS:USB:FORMat}

Sets or queries the pattern editing format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:FORMat \{CHAR|SYMbol\}
TRIGger:A:BUS:USB:FORMat?

Arguments CHAR indicates that the pattern editing format is set to character. SYMBOL indicates that the pattern editing format is set to symbol.

Examples TRIGGER:A:BUS:USB:FORMAT SYMBOL indicates the pattern editing format is set to SYMBOL.

TRIGGER:A:BUS: USB: FORMAT? may return CHAR indicating that the pattern editing format is set to character.

\section*{TRIGger:A:BUS:USB:HANDShaketype}

NOTE. Not available on some models.

This command sets or queries the handshake type when USB bus trigger on condition is set to Handshake Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:HANDShaketype \{ACK|ANY|NAK|NYET|STALL\} TRIGger:A:BUS:USB:HANDShaketype?

Arguments ACK specifies the handshake type as Acknowledge (XX10). ANY specifies the handshake type as Any (0010). NAK specifies the handshake type as Negative Acknowledge (1010). NYET specifies the handshake type as No response Yet (0110). STALL specifies the handshake type as Stall (1110).

Examples TRIGGER:A:BUS:USB:HANDSHAKETYPE NAK sets the handshake type to NAK.
TRIGGER:A:BUS:USB:HANDSHAKETYPE? might return :TRIGGER:A:BUS:USB:HANDSHAKETYPE ANY, indicating that the handshake type is set to ANY.

\section*{TRIGger:A:BUS:USB:PATtern:CHAR<x>}

Sets or queries the specified character when the Trigger Condition is set to Pattern.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:PATtern:CHAR<x> <string> TRIGger:A:BUS:USB:PATtern:CHAR<x>?

Arguments <string> is the specified character.

Examples TRIGger:A:BUS:USB:PATtern:CHAR2"0011111010" will trigger on the 0011111010 character when it is character 2 ..

TRIGger:A:BUS:USB:PATtern:CHAR1? may return "1100000101" indicating the instrument will trigger on 1100000101 when it is character 1.

\section*{TRIGger:A:BUS:USB:PATtern:NUMSymbols}

Sets or queries the number of symbols to trigger on when USB trigger type is in pattern mode.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:PATtern:NUMSymbols <NR1> TRIGger:A:BUS:USB:PATtern:NUMSymbols?

Arguments \(<\) NR1> is the number 2, 3, or 4..

Examples TRIGGER:A:BUS:USB:PATTERN:NUMSYMBOLS 2 sets the number of symbols to 2.

TRIGGER:A:BUS:USB:PATTERN:NUMSYMBOLS? might return :TRIGGER:A:BUS:USB:PATTERN:NUMSYMBOLS 2.

\section*{TRIGger:A:BUS:USB:PATtern:ORDERedset}

This command sets or queries the state of triggering on an ordered set.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:PATtern:ORDERedset \{OFF|ON|0|1\} TRIGger:A:BUS:USB:PATtern:ORDERedset?

Arguments OFF disables triggering on an ordered set.
ON enables triggering on an ordered set.
0 disables triggering on an ordered set.
1 enables triggering on an ordered set.

Examples TRIGGER:A:BUS:USB:PATTERN:ORDEREDSET ON enables triggering on an ordered set.

TRIGGER:A:BUS:USB:PATTERN:ORDEREDSET? may return OFF indicating that triggering on an ordered set is disabled.

\section*{TRIGger:A:BUS:USB:PATtern:SYMbol:MINus<x>}

Sets or queries the specified character bit pattern (negative disparity) when the Trigger Condition is set to Pattern.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:PATtern:SYMbol:MINus<x> <string> TRIGger:A:BUS:USB:PATtern:SYMbol:MINus<x>?

Arguments <string> is the specified character bit pattern.

Examples TRIGger:A:BUS:USB:PATtern:SYMbo1:MINus3 "0011111010" sets the third character bit pattern to 0011111010 .

TRIGger:A:BUS:USB:PATtern:SYMbol:MINus2? might return :TRIGGER:A:BUS:USB:PATTERN:SYMBOL:MINUS2 "0011110011", indicating that the second character bit pattern is set to 0011110011 .

\section*{TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x>}

Sets or queries the specified character bit pattern (positive disparity) when the Trigger Condition is set to Pattern.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x> <string> TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS<x>?

Arguments <string> is the specified character bit pattern.

Examples TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS3"0011111010" sets the third character bit pattern to 0011111010 .

TRIGger:A:BUS:USB:PATtern:SYMbol:PLUS2? might return :TRIGGER:A:BUS:USB:PATTERN:SYMBOL:PLUS2 "0011110011", indicating that the second character bit pattern is set to 0011110011 .

\section*{TRIGger:A:BUS:USB:QUAlifier}

NOTE. Not available on some models.

This command sets or queries the USB bus trigger qualifier for address, endpoint, and data.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:QUAlifier
\{EQUa1|INrange|LESSEQual|MOREEQual|OUTrange|UNEQual| LESSThan|MOREThan\} TRIGger:A:BUS:USB:QUAlifier?

Related Commands TRIGger:A:BUS:USB:ADDress:HIVALue
TRIGger:A:BUS:USB:ADDress:VALue
TRIGger:A:BUS:USB:DATa:HIVALue
TRIGger:A:BUS:USB:DATa:VALue
TRIGger:A:BUS:USB:ENDPoint:HIVALue
TRIGger:A:BUS:USB:ENDPoint:VALue

Arguments EQUa1 specifies \(=\) trigger qualifier.
INrange specifies Inside Range trigger qualifier.

LESSEQual specifies \(<=\) trigger qualifier.
MOREEQual specifies \(>=\) trigger qualifier.
OUTrange specifies \(=\) trigger qualifier.
UNEQua1 specifies != trigger qualifier.
LESSThan specifies \(<\) trigger qualifier.
MOREThan specifies > trigger qualifier.

Examples TRIGGER:A:BUS:USB:QUALIFIER EQUAL sets the trigger qualifier to EQUal.
TRIGGER:A:BUS:USB:QUALIFIER? might return
:TRIGGER:A:BUS:USB:QUALIFIER INRANGE, indicating that the trigger qualifier is INrange.

\section*{TRIGger:A:BUS:USB:SOF:FORMat}

\section*{NOTE. Not available on some models.}

This command sets or queries the format for the Start of Frame frame number.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SOF:FORMat \{BINary|HEXadecimal|SYMBolic\} TRIGger:A:BUS:USB:SOF:FORMat?

Related Commands TRIGger:A:BUS:USB:SOF:FRAMENUMber

Arguments BINary specifies the Start of Frame frame number format as Binary.
HEXadecima 1 specifies the Start of Frame frame number format as Hexadecimal. symbolic specifies the Start of Frame frame number format as Symbolic.

\author{
Examples TRIGGER:A:BUS:USB:SOF:FORMAT SYMBOLIC sets the SOF frame number format to symbolic. \\ TRIGGER:A:BUS:USB:SOF:FORMAT? might return :TRIGGER:A:BUS:USB:SOF:FORMAT BINARY, indicating that the format of the SOF frame number is set to binary.
}

\section*{TRIGger:A:BUS:USB:SOF:FRAMENUMber}

NOTE. Not available on some models.

This command sets frame number for the USB bus trigger when the condition is Start of Frame (SOF).

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SOF:FRAMENUMber <string> TRIGger:A:BUS:USB:SOF:FRAMENUMber?

Related Commands TRIGger:A:BUS:USB:SOF:FORMat

Arguments <string> specifies the frame number for the SOF in the specified valid format.

Examples TRIGGER:A:BUS:USB:SOF:FRAMENUMBER "01" sets the frame number to 01.
TRIGGER:A:BUS:USB:SOF:FRAMENUMBER? might return :TRIGGER:A:BUS:USB:SOF:FRAMENUMBER "XXXXXXXXX01", indicating that the frame number is set to 01 , in the format of binary.

\section*{TRIGger:A:BUS:USB:SPECIALType}

NOTE. Not available on some models.

This command sets or queries the PID value when USB bus Trigger on condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPECIALType \{ANY|ERR|PING|PRE|RESERVED|SPLIT\} TRIGger:A:BUS:USB:SPECIALType?

Arguments ANY specifies Any (XX00) PID value. ERR specifies ERR (1100) PID value.

PING specifies PING (0100) PID value.
PRE specifies PRE (1100) PID value.
RESERVED specifies Reserved (0000) PID value.
SPLIT specifies Split (1000) PID value.

Examples TRIGGER:A:BUS:USB:SPECIALTYPE Reserved sets the PID value to Reserved (0000).

TRIGGER:A:BUS:USB:SPECIALTYPE? might return
:TRIGGER:A:BUS:USB:SPECIALTYPE ANY, indicating that the PID value is set to ANY (XX00).

\section*{TRIGger:A:BUS:USB:SPLIT:ET:VALue}

\section*{NOTE. Not available on some models.}

This command sets or queries the Endpoint Type value for SPLIT token. The USB Speed is set to High \((480 \mathrm{Mbps})\) and the Trigger condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:ET:VALue
\{DONTCare|CONTRo1|ISOchronous|BULK|INTERRUPT\}
TRIGger:A:BUS:USB:SPLIT:ET:VALue?

Arguments DONTCare specifies the End Point Type value as don't care (XX). CONTRo1 specifies the End Point Type value as Control (00). ISOchronous specifies the End Point Type value as Isochronous (01). bULK specifies the End Point Type value as Bulk (10). INTERRUPT specifies the End Point Type value as Interrupt (11).

\section*{Examples TRIGGER:A:BUS:USB:SPLIT:ET:VALUE control sets the End Point Type value to Control. \\ TRIGGER:A:BUS:USB:SPLIT:ET:VALUE? might return :TRIGGER:A:BUS:USB:SPLIT:ET:VALUE DONTCARE, indicating that the End Point Type value is set to DONTCare.}

\section*{TRIGger:A:BUS:USB:SPLIT:HUB:FORMat}

This command sets or queries the format for the hub address of the USB bus trigger on split token field.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:HUB:FORMat \{BINary|HEXadecimal\} TRIGger:A:BUS:USB:SPLIT:HUB:FORMat?

Related Commands TRIGger:A:BUS:USB:SPLIT:HUB:VALue

Arguments BINary specifies hub address format as Binary. HEXadecima 1 specifies hub address format as Hexadecimal.

Examples TRIGGER:A:BUS:USB:SPLIT:HUB:FORMAT BINARY sets the format for the hub address to binary.

TRIGGER:A:BUS:USB:SPLIT:HUB:FORMAT? might return :TRIGGER:A:BUS:USB:SPLIT:HUB:FORMAT HEX, indicating that the format for the hub address is set to hexadecimal.

\section*{TRIGger:A:BUS:USB:SPLIT:HUB:VALue}

NOTE. Not available on some models.

This command sets or queries the hub address of the USB bus trigger on split token field. The USB Speed is set to High ( 480 Mbps ) and the Trigger condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:HUB:VALue <string> TRIGger:A:BUS:USB:SPLIT:HUB:VALue?

Related Commands TRIGger:A:BUS:USB:SPLIT:HUB:FORMat

Arguments <string> specifies the hub address in the specified valid format.

Examples TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE "0001" sets the hub address to "0001".

TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE? might return :TRIGGER:A:BUS:USB:SPLIT:HUB:VALUE "XX", indicating that the hub address is set to "XX" and is in hexadecimal format.

\section*{TRIGger:A:BUS:USB:SPLIT:PORT:FORMat}

NOTE. Not available on some models.

This command sets the port address format for the USB bus trigger on split token field.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:PORT:FORMat \{BINary|HEXadecimal\} TRIGger:A:BUS:USB:SPLIT:PORT:FORMat?

Related Commands TRIGger:A:BUS:USB:SPLIT:HUB:VALue

Arguments BINary sets the port address format to Binary. HEXadecima 1 sets the port address format to Hexadecimal.

Examples TRIGGER:A:BUS:USB:SPLIT:PORT:FORMAT HEXADECIMAL sets the port address format to hexadecimal.

TRIGGER:A:BUS:USB:SPLIT:PORT:FORMAT? might return :TRIGGER:A:BUS:USB:SPLIT:PORT:FORMAT BINARY, indicating that the port address format is set to binary.

\section*{TRIGger:A:BUS:USB:SPLIT:PORT:VALue}

NOTE. Not available on some models.

This command sets or queries the port address for the USB bus trigger on split token field. The USB Speed is set to High ( 480 Mbps ) and the Trigger condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:PORT:VALue <string> TRIGger:A:BUS:USB:SPLIT:PORT:VALue?

\section*{Related Commands}

TRIGger:A:BUS:USB:SPLIT:PORT:FORMat

Argument

Examples TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE "1111" sets the port address for SPLIT token to "1111".

TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE? might return :TRIGGER:A:BUS:USB:SPLIT:PORT:VALUE "XX", indicating that the port address for SPLIT token is set to "XX".

\section*{TRIGger:A:BUS:USB:SPLIT:SC:VALue}

\section*{NOTE. Not available on some models.}

This command sets or queries the Start/Complete value for the USB bus trigger on split token field. The USB Speed is set to High ( 480 Mbps ) and the Trigger condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:SC:VALue \{CSPLIT|SSPLIT|DONTcare\} TRIGger:A:BUS:USB:SPLIT:SC:VALue?

Arguments DONTcare specifies the Start/Complete value as don't care (X).
SSPLIT specifies the Start/Complete value as Start (SSPLIT) (0).
CSPLIT specifies the Start/Complete value as Complete (CSPLIT)(1).

Examples TRIGGER:A:BUS:USB:SPLIT:SC:VALUE csplit sets the Start/Complete value to CSPLIT.

TRIGGER:A:BUS:USB:SPLIT:SC:VALUE? might return :TRIGGER:A:BUS:USB:SPLIT:SC:VALUE DONTCARE, indicating that the Start/Complete value is DONTCare.

\section*{TRIGger:A:BUS:USB:SPLIT:SE:VALue}

NOTE. Not available on some models.

This command sets or queries the Start/End value for the USB bus trigger on split token field. The USB Speed is set to High ( 480 Mbps ) and the Trigger condition is set to Special Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:SPLIT:SE:VALue
\{DONTCare|FULLSPeed|LOWSPeed|ISOMID|ISOEND|ISOSTART|ISOALL\}
TRIGger:A:BUS:USB:SPLIT:SE:VALue?

Arguments DONTCARE specifies the Start/End bit value as don't care (X).
FULLSPeed specifies the Start/End bit value as Control/Bulk/Interrupt Full Speed device (0X).

LowsPeed specifies the Start/End bit value as Control/Bulk/Interrupt Low Speed device (1X).

ISOMID specifies the Start/End bit value as Isochronous Data is Middle (00).
ISOEND specifies the Start/End bit value as Isochronous Data is End (01).
ISOSTART specifies the Start/End bit value as Isochronous Data is Start (10). ISOALL specifies the Start/End bit value as Isochronous Data is All (11).

\section*{Examples TRIGGER:A:BUS:USB:SPLIT:SE:VALUE ISOALL sets the start/end bit value to Isochronous Data is All (11). \\ TRIGGER:A:BUS:USB:SPLIT:SE:VALUE? might return :TRIGGER:A:BUS: USB:SPLIT:SE:VALUE DONTCARE, indicating that the start/end bit value is set to don't care (X).}

\section*{TRIGger:A:BUS:USB:TOKENType}

NOTE. Not available on some models.

This command sets or queries the Token Type when USB Trigger condition is set to Token (Address) Packet.

Group Low Speed Serial Trigger

Syntax TRIGger:A:BUS:USB:TOKENType \{ANY|IN|OUT|SOF|SETUP\} TRIGger:A:BUS:USB:TOKENType?

Arguments ANY specifies ANY (XX01) token type. IN specifies IN (1001) token type. OUT specifies OUT (0001) token type. SOF specifies SOF (0101) token type. SETUP specifies SETUP (1101) token type.

Examples TRIGGER:A:BUS:USB:TOKENTYPE in sets the token type to IN (1001). TRIGGER:A:BUS:USB:TOKENTYPE? might return :TRIGGER:A:BUS:USB:TOKENTYPE ANY, indicating that the token type is set to ANY.

\section*{TRIGger:A:CAN:CONDition}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or returns the CAN condition.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:CONDition
\{SOF|FRAMEtype|IDENTifier|DATA|IDANDDATA|EOF|ACKMISS\}
TRIGger:A:CAN:CONDition?

Arguments SOF enables triggering on the start of frame.
FRAMEtype enables triggering on the type of frame.
IDENTifier enables triggering on a matching identifier.
DATA enables triggering on matching data.
IDANDDATA enables triggering on a matching identifier and matching data.
EOF enables triggering on the end of frame.
ACKMISS enables triggering on a missing acknowledge.
ERROR enables triggering on an error within a frame.

\section*{Examples}

TRIGGER:A:CAN: CONDITION DATA enables triggering on matching CAN data.
TRIGGER:A:CAN:CONDITION? might return :TRIGGER:A:CAN:CONDITION EOF, indicating that the triggering is set on the end of frame.

\section*{TRIGger:A:CAN:DATa:DIRection}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN trigger condition to be valid on a READ, WRITE, or either.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:DATa:DIRection \{READ|WRITE|NOCARE\} TRIGger:A:CAN:DATa:DIRection?

Arguments READ sets the CAN data direction to Read. WRITE sets the CAN data direction to Write. NOCARE sets the CAN data direction to either.

\section*{Examples TRIGGER:A:CAN:DATA:DIRECTION WRITE sets the CAN data direction to Write. \\ TRIGGER:A:CAN:DATA:DIRECTION? might return :TRIGGER:A:CAN:DATA:DIRECTION READ, indicating that the CAN data direction is set to Read.}

\section*{TRIGger:A:CAN:DATa:LEVel}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN Trigger threshold for the CAN data source.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:DATa:LEVe1 <NR3> TRIGger:A:CAN:DATa:LEVe1?

Arguments <NR3> specifies the CAN trigger data level. The level can be \(\pm 12.0\) divisions.

Examples TRIGGER:A:CAN:DATA:LEVEL 0.0 sets the CAN trigger data level to 0.0 Volts. TRIGGER:A:CAN:DATA:LEVEL? might return :TRIGGER:A:CAN:DATA:LEVEL 5.0000 , indicating that the CAN trigger data level is set to 5.0 volts.

\section*{TRIGger:A:CAN:DATa:SOUrce}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN data source.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:DATa:Source CH<x> TRIGger:A:CAN:DATa:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) specifies the source for the CAN trigger. x can be \(1,2,3\), or 4 .

Examples TRIGGER:A:CAN:DATA: SOURCE CH1 sets the CAN trigger data source to channel CH1.

TRIGGER:A:CAN:DATA: SOURCE? might return :TRIGGER:A:CAN:DATA:SOURCE CH4, indicating that the CAN trigger data source is set to channel CH4.

\section*{TRIGger:A:CAN:DATa:VALue}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or quires the binary data string used for CAN Trigger if the trigger condition is ID or IDANDDATA.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:DATa:VALue <QString> TRIGger:A:CAN:DATa:VALue?

Arguments <QString> is up to 32 bits specifying the CAN data value.

Examples TRIGGER:A:CAN:DATA:VALUE "1011" sets the CAN data value to 1011.
TRIGGER:A:CAN:DATA:VALUE? might return
:TRIGGER:A:CAN:DATA: SOURCE 10111, indicating that the CAN data value is set to 10111 .

\section*{TRIGger:A:CAN:FORMat}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN data format.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:FORMat \{BINary|HEX\} TRIGger:A:CAN:FORMat?

Arguments BINary specifies binary as the CAN data format.
HEX specifies hexadecimal as the CAN data format.

Examples TRIGGER:A:CAN: FORMAT BINARY sets the CAN trigger data format to binary. TRIGGER: A: CAN: FORMAT? might return :TRIGGER:A:CAN:DATA: FORMAT HEX, indicating that the CAN data format is set to hexadecimal.

\section*{TRIGger:A:CAN:FRAMEtype}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN trigger frame type.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:FRAMEtype \{DATA|REMote|ERROR|OVERLOAD\} TRIGger:A:CAN:FRAMEtype?

Arguments DATA specifies a data frame type.
REMote specifies a remote frame type.
ERROR specifies an error frame type.
OVERLOAD specifies an overload frame type.

Examples TRIGGER:A:CAN: FRAMETYPE DATA sets the CAN trigger frame type to data. TRIGGER:A:CAN:FRAMETYPE? might return :TRIGGER:A:CAN:DATA:FRAMETYPE REMOTE, indicating that the CAN trigger frame type is set to remote.

\section*{TRIGger:A:CAN:IDENTifier:MODe}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the CAN trigger identifier mode.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:IDENTifier:MODe \{STANdard|EXTENded\} TRIGger:A:CAN:IDENTifier:MODe?

Arguments STANdard sets the CAN trigger identifier mode to standard mode.
EXTENded sets the CAN trigger identifier mode to extended mode.

Examples TRIGGER:A:CAN:IDENTIFIER:MODE STANDARD sets the CAN trigger identifier mode to standard.

TRIGGER:A:CAN:IDENTIFIER:MODE? might return :TRIGGER:A:CAN:IDENTIFIER:MODE EXECUTE, indicating that the CAN trigger identifier mode is set to extended.

\section*{TRIGger:A:CAN:IDENTifier:VALue}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the binary address string used for the CAN trigger if the trigger condition is ID or IDANDDATA.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:IDENTifier:VALue <QString> TRIGger:A:CAN:IDENTifier:VALue?

Arguments <QString> is up to 29 bits specifying the CAN identifier value.

Examples TRIGGER:A:CAN:IDENTIFIER:VALUE "1011" sets the CAN trigger identifier value to 1011 .

TRIGGER:A:CAN:IDENTIFIER:VALUE? might return :TRIGGER:A:CAN:IDENTIFIER:VALUE "10111", indicating that the CAN trigger identifier value is set to 10111 .

\section*{TRIGger:A:CAN:PROBE}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the probing method used to probe the CAN signal.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:PROBE \{CANL|CANH|DIFFerential|TX|RX\} TRIGger:A:CAN:PROBE?

Arguments CANL specifies that the probing method is CANL. CANH specifies that the probing method is CANH. DIFFerential specifies that the probing method used is differential. TX specifies that the probing method is TX. \(R X\) specifies that the probing method is RX.

\section*{Examples TRIGGER:A:CAN: PROBE CANH sets the method used to probe the CAN signal to} CANH.

TRIGGER:A:CAN:PROBE? might return TRIGGER:A:CAN:PROBE DIFFERENTIAL, indicating that the probing method is differential.

\section*{TRIGger:A:CAN:SPEed}

NOTE. This trigger is available only when the Option LSA is ordered.

CAN option only: This command sets or queries the bit rate of the CAN system.

Group Low Speed Serial Trigger

Syntax TRIGger:A:CAN:SPEed <NR3> TRIGger:A:CAN:SPEed?

Arguments <NR3> specifies the bit rate of the CAN system. Possible values are \(1 \mathrm{M}, 800 \mathrm{~K}\), \(500 \mathrm{~K}, 250 \mathrm{~K}, 125 \mathrm{~K}, 100 \mathrm{~K}, 83.3 \mathrm{~K}, 62,5 \mathrm{~K}, 50 \mathrm{~K}, 33 \mathrm{~K}, 20 \mathrm{~K}\), and 10 K .

Examples TRIGGER:A:CAN:SPEED 33 K sets the CAN systems with a bit rate of 33 K .
TRIGGER:A:CAN:SPEED? might return TRIGGER:A:CAN:SPEED 50K, indicating that the bit rate of the CAN system is set to 50 K .

\title{
TRIGger:A:COMMunication:\{AM||HDB3|B3ZS|B6ZS|B8ZS\}:PULSEForm
}

This entry covers five separate commands, one each for AMI and AMI subtypes. The commands set or query the AMI pulse form to one of three possibilities.

Conditions This command is only valid if the instrument has Option MTM installed.

Group Trigger

Syntax TRIGger:A:COMMunication:\{AMI|HDB3|B3ZS|B6ZS|B8ZS \(\}\) :PULSEForm \{PLUSOne|MINUSOne| EYEdiagram\} TRIGger:A:COMMunication:\{AMI|HDB3|B3zS|B6ZS|B8ZS\} :PULSEForm?

Arguments PLUSOne corresponds to the Isolated +1 on the front panel menu.
MINUSOne corresponds to the Isolated -1 on the front panel menu. EYEDiagram positions the trigger point off screen to display the eye.

Examples TRIGGER:A:COMMUNICATION:AMI:PULSEFORM PLUSONE sets the pulse form to PLUSONE.

TRIGGER:A:COMMUNICATION:AMI:PULSEFORM? might return :TRIGGER:A:COMMUNICATION:AMI:PULSEFORM PLUSONE, indicating that the AMI PULSFORM is set to PLUSONE.

\section*{TRIGger:A:COMMunication:\{AMI|HDB3|B3ZS|B6ZS|B8ZS\}:THReshold:HIGH}

This entry covers five separate commands, one each for AMI and AMI subtypes. This command sets or queries the threshold high level.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:\{AMI|HDB3|B3ZS|B6ZS|B8ZS\}:THReshold: HIGH <NR3>
TRIGger:A:COMMunication: \{AMI|HDB3|B3ZS|B6ZS|B8ZS\}:THReshold: HIGH?

Arguments <NR3> is the high threshold parameter expressed in volts.

Examples TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:HIGH 2.8E-2 sets the threshold high level to \(2.8 \mathrm{E}-2\).

TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:HIGH? might return :TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:HIGH 2.8E-2, indicating the threshold high level in volts.

\section*{TRIGger:A:COMMunication:\{AMI|HDB3|B3ZS|B6ZS|B8ZS\}:THReshold:LOW}

This entry covers five separate commands, one each for AMI and AMI subtypes. This command sets or queries the threshold low level.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:\{AMI|HDB3|B3ZS|B6ZS|B8ZS \(:\) THReshold: LOW <NR3>
TRIGger: A: COMMunication: \{AMI|HDB3|B3ZS|B6ZS|B8ZS :THReshold: LOW?

Arguments <NR3> specifies the high threshold parameter, expressed in volts.

Examples TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:LOW 2.8E-2 sets the threshold low level to \(2.8 \mathrm{E}-2\).

TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:LOW? might return :TRIGGER:A:COMMUNICATION:AMI:THRESHOLD:LOW \(2.8 \mathrm{E}-2\), indicating the threshold low level in volts.

\section*{TRIGger:A:COMMunication:BITRate}

NOTE. Not available on some models.

This command sets or queries the bit rate.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:BITRate <NR3> TRIGger: A: COMMunication:BITRate?

Arguments <NR3> is a non-negative number greater than one and expressed as bits per second.

Examples TRIGGER:A:COMMUNICATION:BITRATE 1.544 E 6 sets the bit rate to \(1.544 \mathrm{Mb} / \mathrm{s}\).

TRIGGER:A:COMMUNICATION: BITRATE? might return :TRIGGER:A:COMMUNICATION:BITRATE 1.544e6, indicating a bit rate of \(1.544 \mathrm{Mb} / \mathrm{s}\).

\section*{TRIGger:A:COMMunication:CLOCk:POLarity}

This command sets or queries the communication clock polarity

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:CLOCk:POLarity \{RISe|FALL\} TRIGger:A:COMMunication:CLOCk: POLarity?

Arguments RISe specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:A:COMMUNICATION:CLOCK:POLARITY RISE sets RISE as the clock polarity.

TRIGGER:A:COMMUNICATION:CLOCK:POLARITY? might return :TRIGGER:A:COMMUNICATION:CLOCK:POLARITY RISE, indicating that the polarity is to trigger on the rising edge of the clock.

\section*{TRIGger:A:COMMunication:CMI:PULSEForm}

This command sets or queries the CMI pulse form.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:CMI:PULSEForm \{PLUSOne|MINUSOne|ZERO|EYEdiagram\} TRIGger:A:COMMunication:CMI:PULSEForm?

Arguments PLUSOne triggers on a positive mark. MINUSOne triggers on a negative mark. ZERO triggers on the bit representing zero.

EYEdiagram positions the trigger point off screen to display the eye.

Examples TRIGGER:A:COMMUNICATION:CMI: PULSEFORM PLUSONE sets triggering to occur on a positive mark.

TRIGGER:A:COMMUNICATION:CMI:PULSEFORM? might return
:TRIGGER:A:COMMUNICATION:CMI:PULSEFORM PLUSONE, indicating that the pulse form is PLUSONE.

\section*{TRIGger:A:COMMunication:CODe}

This command sets or queries the signal code that the communications trigger should expect on the incoming signal.

Conditions This command is valid only if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:CODe
\{AMI|HDB3|B3ZS|B6ZS|B8ZS|CMI|NRZ|MLT3|MANChester\}
TRIGger:A:COMMunication:CODe?

Arguments AMI
HDB3
B3ZS
B6zs
B8zs
CMI

NRZ
MLT3
MANChester

Examples TRIGGER:A: COMMUNICATION: CODE AMI sets the AMI as the line code that the communications trigger expects on the incoming signal.

TRIGGER:A:COMMUNICATION:CODE? might return
:TRIGGER:A:COMMUNICATION: CODE AMI, indicating that the code is AMI.

\section*{TRIGger:A:COMMunication:SOUrce}

This command sets or queries the source channel.

Conditions This command is valid only if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:SOUrce \(\{\mathrm{CH} 1|\mathrm{CH} 2| \mathrm{CH} 3 \mid \mathrm{CH} 4\}\)
TRIGger:A:COMMunication:SOUrce?

Arguments CH 1 argument selects CH 1 as the source channel.
CH 2 argument selects CH 2 as the source channel.
CH 3 argument selects CH 3 as the source channel.
CH 4 argument selects CH 4 as the source channel.

Examples TRIGGER:A:COMMUNICATION:SOURCE CH1 sets Channel 1 as the source channel.

TRIGGER:A:COMMUNICATION:SOURCE? might return
:TRIGGER:A:COMMUNICATION:SOURCE CH1, indicating that the source is Channel 1.

\section*{TRIGger:A:COMMunication:SOUrce:TYPe}

This command sets or queries the source type. This command works only when the Eye Diagram pulseform is selected.

Conditions This command is only valid if the instrument has Option MTM is installed.

Group Trigger

Syntax TRIGger:A:COMMunication:SOUrce:TYPe \{DATa|CLOCk|RECOVered\} TRIGger:A:COMMunication:SOUrce:TYPe?

Arguments DATa causes the instrument to trigger and shift five unit intervals to form the expected eye pattern.

CLOCk causes the instrument to trigger but no shift occurs. The clock type causes random triggers with respect to the data channel, which must be one of the other three channels.

RECOVered causes the instrument to trigger on the recovered clock from the data signal attached to communication source forming an eye pattern on the source.

Examples TRIGGER:A:COMMUNICATION:SOURCE:TYPE CLOCK sets the source type to clock.

TRIGGER:A:COMMUNICATION: SOURCE:TYPE? might return :TRIGGER:A:COMMUNICATION:SOURCE:TYPE DATA, indicating that the source type is data.

\section*{TRIGger:A:COMMunication:STANdard}

This command sets or queries the standard that identifies the code and bit rate. The bit rate is used to compute the Unit Interval, which is the inverse of the bit rate. The Unit Interval influences time skew in an Eye Diagram, where you perform post processing on AMI isolated pulses, and pulse width settings if CMI.

Conditions This command is valid only if the instrument has Option MTM is installed.

Examples TRIGGER:A:COMMUNICATION: STANDARD E4 sets the standard to E4.
TRIGGER:A:COMMUNICATION: STANDARD? might return
:TRIGGER:A:COMMUNICATION:SOURCE:STANDARD DS1.

\section*{TRIGger:A:EDGE:ENVelope}

This command sets or queries whether the A edge trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:A:EDGE:ENVe7ope <ON|OFF> TRIGger:A:EDGE:ENVelope?

Arguments OFF disables edge envelope triggering. ON enables edge envelope triggering.

Examples TRIGGER:A:EDGE:ENVELOPE ON enables edge envelope triggering.
TRIGGER:A: EDGE: ENVELOPE? may return ON or OFF.

\section*{TRIGger:A:HOLDoff? (Query Only)}

NOTE. Not available on some models.

This query-only command returns the A trigger holdoff parameters. These parameters specify the time period during which the trigger circuitry is not looking to generate a trigger event. This command is equivalent to selecting Holdoff from the Trig menu and then viewing the current settings.

Group Trigger

Syntax TRIGger:A:HOLDoff?

Related Commands TRIGger:A:HOLDoff:ACTUal?, TRIGger:A:HOLDoff:BY, TRIGger:A: HOLDoff:TIMe

Examples TRIGGER:A:HOLDOFF? might return :TRIGGER:A:HOLDOFF:TIME \(900.0000 \mathrm{E}-09\); BY DEFAULT, indicating that the A edge trigger holdoff time (by default) is set to 900 ns .

\section*{TRIGger:A:HOLDoff:ACTUal? (Query Only)}

\section*{NOTE. Not available on some models.}

This query-only command returns the holdoff time actually used (expressed in seconds) by the A trigger. This command is equivalent to selecting Holdoff from the Trig menu and then viewing the current Trig Holdoff value.

Group Trigger

Syntax TRIGger:A:HOLDoff:ACTUa1?

Related Commands TRIGger:A:HOLDoff?, TRIGger:A:HOLDoff:BY, TRIGger:A:HOLDoff:TIMe

Examples TRIGGER:A:HOLDOFF:ACTUAL? might return :TRIGGER:A:HOLDOFF:ACTUAL \(4.0000 \mathrm{E}-06\), indicating that the holdoff time is set to \(4 \mu \mathrm{~s}\).

\section*{TRIGger:A:HOLDoff:BY}

This command sets or queries the type of holdoff for the A trigger. Holdoff types are expressed as either user-specified time (TIMe) or by an internally calculated
minimum time value (DEFAult/AUTO). This command is equivalent to selecting Holdoff from the Trig menu and then setting the Holdoff type.

\author{
Group Trigger \\ Syntax TRIGger:A:HOLDoff:BY \{TIMe|DEFAu7t|RANDom|AUTO\} TRIGger:A:HOLDoff:BY? \\ Related Commands TRIGger:A:HOLDoff:TIMe
}

Arguments TIMe enables you to set the holdoff time via the TRIGger:A:HOLDoff:TIMe command.

DEFAu7t automatically calculates a holdoff time to use. This time is typically equivalent to the greater of \(1 / 2\) screen ( 5 divisions) of time or 250 ns . The maximum value is 12 s . For example, if the instrument is set to \(1 \mathrm{~ms} /\) division then the default holdoff will be \(1 \mathrm{~ms} /\) division \(\times 25\) divisions \(=25 \mathrm{~ms}\).

RANDom
AUTO

Examples TRIGGER:A: HOLDOFF: BY TIME sets the holdoff to the "by time" setting. This enables you to set the holdoff time.

TRIGGER:A:HOLDOFF:BY? might return :TRIGGER:A:HOLDOFF:BY TIME, indicating that you will set the holdoff time.

\section*{TRIGger:A:HOLDoff:TIMe}

This command sets or queries the A trigger holdoff time. This command is equivalent to selecting Holdoff from the Trig menu and then choosing the desired Trig Holdoff.

Group Trigger

Syntax TRIGger:A:HOLDoff:TIMe <NR3> TRIGger:A:HOLDoff:TIMe?

Related Commands TRIGger:A:HOLDoff:BY

Arguments <NR3> specifies the holdoff time in seconds. The range is from 250 ns through 12.0 s .

Examples TRIGGER:A:HOLDOFF:TIME 10 sets the A trigger holdoff time to 10 s .
TRIGGER:A:HOLDOFF:TIME? might return :TRIGGER:A: HOLDOFFTIME \(1.2000 \mathrm{E}-06\), indicating that the A trigger holdoff time is set to \(1.2 \mu \mathrm{~s}\).

\section*{TRIGger:A:I2C:ADDRess:MODe}

DPO7000 Series only: This command sets or queries the I2C address mode to 7 or 10 bit .

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:ADDRess:MODe \{ADDR7|ADDR10\}
TRIGger:A:I2C:ADDRess:MODe?

Arguments ADDR7 specifies the 7-bit I2C address mode. ADDR10 specifies the 10 -bit I2C address mode.

Examples TRIGGER:A:I2C:ADDRESS:MODE ADDR10 sets the I2C address mode to 10 bit. TRIGGER:A:I2C:ADDRESS:MODE? might return :TRIGGER:A:I2C:ADDRESS:MODE ADD7, indicating that the I2C address mode is set to 7 bit.

\section*{TRIGger:A:I2C:ADDRess:RWINClude}

Sets the I2C read/write bit to address type.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:ADDRess:RWINClude \{OFF|ON\}
TRIGger:A:I2C:ADDRess:RWINClude?

Arguments ON specifies the I2C read/write bit to address type.
OFF specifies to stop the I2C read/write bit to address type.

Examples TRIGGER:A:I2C:ADDRESS:RWINCLUDE ON sets the read/write bit to address type.

TRIGGER:A:I2C:ADDRESS:RWINCLUDE? might return :TRIGGER:A:I2C:ADDRESS:RWINCLUDE OFF, indicating that the read/write bit stops specifying the address type.

\section*{TRIGger:A:I2C:ADDRess:TYPe}

DPO7000 Series only: This command sets or queries the I2C address type.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:ADDRess:TYPe
\{GENeralcal1|STARtbyte|TENbit|NONe\}
TRIGger:A:I2C:ADDRess:TYPe?

Arguments GENERALCALL specifies a generalcall address type.
STARTBYTE specifies a startbyte address type.
TENBIT specifies a tenbit address type.
NONE specifies I2C address type of none.

Examples TRIGGER:A:I2C:ADDRESS:TYPE NONE sets the I2C address type to none.
TRIGGER:A:I2C:ADDRESS:TYPE? might return
:TRIGGER:A:I2C:ADDRESS:TYPE TENBIT, indicating that the I2C address type is set to tenbit.

\section*{TRIGger:A:I2C:ADDRess:VALue}

DPO7000 Series only: This command sets or queries the binary address string used for the I2C trigger if the trigger condition is ADDR or ADDRANDDATA.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:ADDRess:VALue <QString> TRIGger:A:I2C:ADDRess:VALue?

Arguments <QString> is up to 7 bits or 10 bits depending on the address mode that specifies the address.

Examples TRIGGER:A:I2C:ADDRESS:VALUE "1011" sets the I2C address value to 1011 . TRIGGER:A:I2C:ADDRESS:VALUE? might return :TRIGGER:A:I2C:ADDRESS:VALUE "10111", indicating that the I2C address value is set to 10111 .

\section*{TRIGger:A:I2C:CLOCk:LEVel}

DPO7000 Series only: This command sets or queries the clock source for the I2C Serial Trigger.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:CLOCk:LEVe1 <NR3> TRIGger:A:I2C:CLOCk:LEVe1?

Arguments <NR3> specifies the I2C clock level. The clock level range is \(\pm 5\).

Examples TRIGGER:A:I2C:CLOCK:LEVELO. 0 sets the I2C clock level to 0.0 . TRIGGER:A:I2C:CLOCK:LEVEL? might return :TRIGGER:A:I2C:CLOCK:LEVEL 5.0000, indicating that the I2C clock level is set to 5 .

\section*{TRIGger:A:I2C:CLOCk:SOUrce}

DPO7000 Series only: This command sets or queries the clock source for the I2C Serial Trigger.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:CLOCk:SOUrce CH<x>
TRIGger:A:I2C:CLOCk:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) specifies the clock source. x can be 1 through 4 .

Examples TRIGGER:A:I2C:CLOCK: SOURCE CH1 sets the I2C clock source to channel CH1.
TRIGGER:A:I2C:CLOCK:SOURCE? might return
:TRIGGER:A:I2C:CLOCK: SOURCE CH3, indicating that the I2C clock source is set to CH3.

\section*{TRIGger:A:I2C:CONDition}

DPO7000 Series only: This command sets or queries the trigger condition for the I2C trigger.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:CONDition
\{STARt|STOP|REPEATstart|ACKMISS|ADDRess|DATA|ADDRANDDATA\} TRIGger:A:I2C:CONDition?

\section*{Arguments}

START specifies triggering on the start of a packet.
STOP specifies triggering on the stop packet.
REPEATstart specifies triggering on a repeated start of packet.
ACKMISS specifies triggering on a missing acknowledgement.
ADDRess specifies triggering on the address.
DATA specifies triggering on the specified data.
ADDRANDDATA specifies triggering on the specified data and address.

Examples TRIGGER:A:I2C:CONDITION START sets the trigger condition for the I2C trigger on the start of the packet.

TRIGGER:A:I2C:CONDITION? might return :TRIGGER:A:I2C:CONDITION DATA, indicating that the trigger condition for the I2C trigger is set on specified data.

\section*{TRIGger:A:I2C:DATa:DIRection}

DPO7000 Series only: This command sets or queries the I2C trigger condition valid on a READ, WRITE, or either.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:DATa:DIRection \{READ|WRITE|NOCARE\} TRIGger:A:I2C:DATa:DIRection?

Arguments READ specifies read as the data direction.
WRITE specifies write as the data direction.
NOCARE specifies either as the data direction.

Examples TRIGGER:A:I2C:DATA:DIRECTION WRITE sets the I2C data direction to write. TRIGGER:A:I2C:DATA:DIRECTION? might return :TRIGGER:A:I2C:DATA:DIRECTION READ, indicating that the I2C data direction is set on read.

\section*{TRIGger:A:I2C:DATa:LEVel}

DPO7000 Series only: This command sets or queries the threshold level for the I2C data source.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:DATa:LEVel <NR3> TRIGger:A:I2C:DATa:LEVel?

Arguments <NR3> specifies the I2C data level with a range of \(\pm \% .0\).

Examples TRIGGER:A:I2C:DATA:LEVEL 0.0 sets the I2C data level to 0.0 .
TRIGGER:A:I2C:DATA:LEVEL? might return :TRIGGER:A:I2C:DATA:LEVEL 0.0 , indicating that the I2C data level is set on 0.0 .

\section*{TRIGger:A:I2C:DATa:SOUrce}

DPO7000 Series only: This command sets or queries the data source for the I2C serial trigger.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:DATa:SOUrce CH<x>
TRIGger:A:I2C:DATa:SOUrce?

Arguments \(\mathrm{CH}<\mathrm{x}>\) specifies the data source. x can be 1 through 4 .

Examples TRIGGER:A:I2C:DATA:SOURCE CH1 sets the data source for the I2C serial trigger to channel CH1.

TRIGGER:A:I2C:DATA:SOURCE? might return
:TRIGGER:A:I2C:DATA:SOURCE CH4, indicating that the data source for the I2C serial trigger is set on channel CH4.

\section*{TRIGger:A:I2C:DATa:STARt}

DPO7000 Series only: This command sets or queries the data start byte. This byte is only needed if triggering on data. This byte is the first byte that pattern matching uses. The byte is a destination offset from the start of the packet.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:DATa:STARt <NR3> TRIGger:A:I2C:DATa:STARt?

Arguments <NR3> specifies the data start byte (offset), with a range of 0 to 65535 .

Examples TRIGGER:A:I2C:DATA:START 0 specifies the I2C data start byte offset to 0 .
TRIGGER:A:I2C:DATA:START? might return :TRIGGER:A:I2C:DATA:START 5 , indicating that the I2C data start byte offset is set to 5 .

\section*{TRIGger:A:I2C:DATa:VALue}

DPO7000 Series only: This command sets or queries the binary data string used for I2C triggering if the trigger condition is DATA or ADDRANDDATA.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:DATa:VALue <QString> TRIGger:A:I2C:DATa:VALue?

Arguments <QString> sets the I2C data value. This value can be 1 to 32 bits.

Examples TRIGGER:A:I2C:DATA:VALUE "1011" sets the I2C data value to 1011 .
TRIGGER:A:I2C:DATA:VALUE? might return :TRIGGER:A:I2C:DATA:VALUE "10111", indicating that the I2C data value is set to 10111 .

\section*{TRIGger:A:I2C:FORMat}

DPO7000 Series only: This command sets or queries the display format for the I2C data value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:I2C:FORMat \{BINary|HEX\} TRIGger:A:I2C:FORMat?

Arguments BINary specifies binary format for I2C triggering.
HEX specifies hexadecimal format for I2C triggering.

Examples TRIGGER:A:I2C:FORMAT HEX sets the I2C trigger format to hexadecimal.
TRIGGER:A:I2C:FORMAT? might return :TRIGGER:A:I2C:FORMAT BINARY, indicating that the I2C trigger format is set to binary.

\section*{TRIGger:A:MODe}

Group Trigger

Syntax TRIGger:A:MODe \{AUTO|NORMa1\} TRIGger:A:MODe?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :LEVel

Arguments AUTO generates a trigger if one is not detected within a specified time period. NORMa1 waits for a valid trigger event.

Examples TRIGGER:A:MODE NORMAL sets the trigger mode to normal.
TRIGGER:A:MODE? might return :TRIGGER:A:MODE AUTO, indicating that the trigger mode is auto.

\section*{TRIGger:A:PULse:GLItch:ENVelope}

This command sets or queries whether the A glitch trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:A:PULse:GLItch:ENVelope <OFF|ON> TRIGger:A:PULse:GLItch: ENVelope?

Arguments OFF disables glitch envelope triggering. ON enables glitch envelope triggering.

Examples TRIGGER:A:PULSE:GLITCH:ENVELOPE ON enables glitch envelope triggering. TRIGGER:A:PULSE:GLITCH: ENVELOPE? may return ON or OFF.

\section*{TRIGger:A:PULse:PERiod? (Query Only)}

This query-only command returns the Pulse Trigger settings specific to Period/Frequency trigger. These include the array of high and low limits, the "trigger when" enumeration, the polarity enumeration, the qualification enumeration, and the view enumeration. The view enumeration controls whether the high and low limits are expressed in units of time (Seconds) or frequency \((\mathrm{Hz})\). The qualification enumeration determines if the trigger is state-qualified by additional signals (channels). The polarity enumeration determines whether the rising or falling edges of the signal are used to initiate the trigger. The trigger when enumeration determines if the trigger should occur when the period (frequency) is greater than or less than a single (low) limit value, or within or outside the period (frequency) of a high-low limit period (frequency) pair.

The Period/Frequency Trigger is similar to Width Trigger, but instead of triggering on a single pulse of a given width, it triggers on the period (two back-to-back pulses, one up and one down) of a given width. As a convenience the period limits (Seconds) can be expressed as frequency limits \((\mathrm{Hz})\) by changing the view enumeration. It is often used to determine if oscillators are operating within specification.

Group Trigger

Syntax TRIGger:A:PULse:PERiod?

Related Commands TRIGger:A:PULse:PERiod?TRIGger:A:PULse:PERiod:HIGHLimitTRIGger: A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod:POLarityTRIGger:A: PULse:PERiod:QUAlifyTRIGger:A:PULse:PERiod:VIEWTRIGger:B:PULse: PERiod?TRIGger:B:PULse:PERiod:HIGHLimitTRIGger:B:PULse:PERiod: WHEnTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: QUAlifyTRIGger:B:PULse:PERiod:VIEW

Examples TRIGGER:A:PULSE:PERIOD? might return :TRIGGER:A:PULSE:PERIOD: '90.0000E-9;10.0000;GREATERTHAN; POSITIVE;OCCURS \(\backslash\) n', indicating the period limits, when enumeration, polarity, and so forth.

\section*{TRIGger:A:PULse:PERiod:HIGHLimit}

This command sets or queries the Period/Frequency high limit. When the VIEW is PERiod the units of this number are time (Seconds). When the VIEW is FREQuency, the units of this number are frequency ( Hz ). The high limit is used in combination with the low limit to define a range if the WHEn enumeration is WITHin or OUTside. These limits specify the most significant characteristic of the signal for this Pulse Trigger Type.

Group Trigger

Syntax TRIGger:A:PULse:PERiod:HIGHLimit <NR3> TRIGger:A:PULse:PERiod:HIGHLimit?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: POLarityTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod: POLarity

Arguments <NR3> is the period (in Seconds) or frequency (in Hz).

Examples TRIGGER:A: PULSE: PERIOD:HIGHLIMIT 101.0e-9 sets the Pulse Period Trigger High Limit to one hundred one nanoseconds, which, in combination with a Low Limit of \(99.0 \mathrm{e}-9\), is suitable for triggering on a 10 MHz clock if the WHEn enumeration is set to WITHin.

TRIGGER:A:PULSE:PERIOD:HIGHLIMIT? might return
:TRIGGER:A:PULSE:PERIOD:HIGHLIMIT 101.0e-9 (if View is
Period), or :TRIGGER:A:PULSE:PERIOD:HIGHLIMIT 10.1e6 (if View is Frequency).

\section*{TRIGger:A:PULse:PERiod:LOWLimit}

This command sets or queries the Period/Frequency low limit. When the VIEW is PERiod the units of this number are time (Seconds). When the VIEW is FREQuency, the units of this number are frequency ( Hz ). The low limit is used alone when the WHEn enumeration is LESSthan or GREATerthan, and is used in combination with the high limit to define a range if the WHEn enumeration is WITHin or OUTside. The limits specify the most significant characteristic of the signal for this Pulse Trigger Type.

Group Trigger
```

Syntax TRIGger:A:PULse:PERiod:LOWLimit <NR3> TRIGger:A:PULse:PERiod:LOWLimit?

```

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: POLarityTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod: POLarity

Arguments <NR3> is the period (in Seconds) or frequency (in Hz).

Examples TRIGGER:A:PULSE:PERIOD:LOWLIMIT 101.0e-9 sets the Pulse Period Trigger Low Limit to one hundred one nanoseconds, which is suitable for triggering on a 10 MHz clock if the WHEn enumeration is set to LESSthan.

TRIGGER:A:PULSE:PERIOD:LOWLIMIT? might return :TRIGGER:A: PULSE:PERIOD:LOWLIMIT 101.0e-9 (if View is Period), or might return :TRIGGER:A:PULSE:PERIOD:LOWLIMIT 101.0e-9 (if View is Period), or :TRIGGER:A:PULSE: PERIOD:LOWLIMIT 9900990. (if View is Frequency), (if View is Frequency).

\section*{TRIGger:A:PULse:PERiod:POLarity}

This command sets or queries the polarity for the Pulse Period trigger. It refers to the polarity of the edges that begin and end a given period of the signal, and thus allows duty-cycle testing of clock signals.

Group Trigger

Syntax TRIGger:A:PULse:PERiod:POLarity \{NEGAtive|POSITIVe\} TRIGger:A:PULse:PERiod:POLarity?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:POLarityTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: VIEW

Arguments POSITIVe specifies to trigger on the rising or positive edge of a signal.
NEGAtive specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:A:PULSE:PERIOD:POLARITY POSITIVE sets the A pulse period trigger slope to positive, which triggers on the rising edge of the signal.

TRIGGER:A:PULSE:PERIOD:POLARITY? might return :TRIGGER:A:PULSEL:PERIOD:POLARITY NEGATIVE, indicating that the A pulse period trigger polarity is negative.

\section*{TRIGger:A:PULse:PERiod:QUAlify}

This command sets or queries the Qualification setup for Pulse Period Trigger. The high/low state of one or more other signals (channels) may be used to qualify whether the trigger should occur or not. The BUS option is not available on the SX series instruments at this time.

When the QUALify enumeration is OCCurs, no qualification is done.
When the QUALify enumeration is LOGIC, the scope triggers using the pulse period trigger definition as qualified by the high/low states of the qualifying signals. Additional description is given elsewhere in this document under the term "logic qualification."

Group Trigger

Syntax TRIGger:A:PULse:PERiod:QUAlify \{OCCurs | LOGIC | BUS\}
TRIGger:A:PULse:PERiod:QUAlify?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod:VIEW

Arguments occurs specifies the no other signals are used to qualify the pulse period trigger. LOGIC specifies that other analog signals (channels) are used to qualify the pulse period trigger.

BUS specifies that other digital signals (digital channels) are used to qualify the pulse period trigger.

\section*{Examples TRIGGER:A:PULSE:PERIOD:QUALIFY LOGIC specifies that one or more other analog signals (channels) are used to qualify the pulse period trigger.}

TRIGGER:A:PULSE:PERIOD:QUALIFY? might return :TRIGGER:A:PULSE:PERIOD:QUALIFY OCCURS, indicating that the A pulse period trigger is not qualified by any other signals (channels).

\section*{TRIGger:A:PULse:PERiod:VIEW}

This command sets or queries the "view" for the pulse period trigger. When PERiod is selected the LOWLimit and HIGHLimit values are in units of time (Seconds). When FREQuency is selected, the units are in frequency \((\mathrm{Hz})\). This two methods are equivalent, so the alternative views are provided as a convenience.

Group Trigger

Syntax TRIGger:A:PULse:PERiod:VIEW \{PERiod|FREQuency\} TRIGger:A:PULse:PERiod:VIEW?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:SOUrceTRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:COUPling

Arguments RISe specifies to trigger on the rising or positive edge of a signal. FALL specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:A:PULSE:PERIOD:VIEW PERIOD sets the interpretation of the high and low limits to units of time (Seconds).

TRIGGER:A:PULSE:PERIOD:VIEW? might return :TRIGGER:A:PULSE:PERIOD:VIEW FREQUENCY, indicating that the interpretation of the high and low limits is in units of frequency (Hz).

\section*{TRIGger:A:PULse:PERiod:WHEn}

This command sets or queries the "trigger when" enumeration for the Pulse Period Trigger.

If the argument is LESSthan, the scope triggers on the signal when the period (frequency) of the signal is less than the period (frequency) of the Low Limit.

If the argument is GREATerthan, the scope triggers on the signal when the period (frequency) of the signal is greater than the period (frequency) of the Low Limit.

If the argument is WITHin, the scope triggers on the signal when the period (frequency) of the signal is within the range defined by the Low Limit and the High Limit.

If the argument is OUTside, the scope triggers on the signal when the period (frequency) of the signal is outside of the range defined by the Low Limit and the High Limit.

\author{
Group Trigger \\ Syntax TRIGger:A:PULse:PERiod:WHEn \{LESSthan | GREATerthan | WITHin | OUTside\} TRIGger:A:PULse:PERiod:WHEn? \\ Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:POLarityTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: VIEW
}

Arguments LESSthan tells the scope to trigger when the period (frequency) of the signal is less than the low limit value.

GREATerthan tells the scope to trigger when the period (frequency) of the signal is greater than the low limit value.

WITHin tells the scope to trigger when the period (frequency) of the signal is inside the range set by the low and high limit values.

OUTside tells the scope to trigger when the period (frequency) of the signal is outside of the range set by the low and high limit values.

Examples TRIGGER:A:PULSE:PERIOD:WHEN LESSTHAN tells the scope to trigger when the period (frequency) of the signal is less than the low limit value.

TRIGGER:A:PULSE:PERIOD:WHEN WITHin tells the scope to trigger when the period (frequency) of the signal is inside the range set by the low and high limit values.

TRIGGER:A:PULSE:PERIOD:WHEN? might return GREATERTHAN indicating the instrument will trigger when the period (frequency) of the signal is less than the low limit value.

\section*{TRIGger:A:PULse:TIMEOut:ENVelope}

This command sets or queries whether the A timeout trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:A:PULse:TIMEOut:ENVelope <OFF|ON> TRIGger:A:PULse:TIMEOut:ENVelope?

Arguments OFF disables timeout envelope triggering. ON enables timeout envelope triggering.

Examples TRIGGER:A:PULSE:TIMEOUT:ENVELOPE ON enables timeout envelope triggering.

TRIGGER:A:PULSE:TIMEOUT:ENVELOPE? may return ON or OFF.

\section*{TRIGger:A:PULse:WIDth:ENVelope}

This command sets or queries whether the A width trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:A:PULse:WIDth:ENVelope <OFF|ON>
TRIGger:A:PULse:WIDth:ENVelope?

Arguments OFF disables width envelope triggering. ON enables width envelope triggering.

Examples TRIGGER:A:PULSE:WIDTH:ENVELOPE OFF disables width envelope triggering. TRIGGER:A:PULSE:WIDTH:ENVELOPE? may return ON or OFF.

\section*{TRIGger:A:RS232:BAUd}

DPO7000 Series only: This command sets or queries the baud rate for RS232 triggering.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:RS232:BAUd <x> TRIGger:A:RS232:BAUd?

Arguments \(<x>\) specifies the baud rate for RS232 triggering. X can be: 1500000,921600 . \(750000,460800,115200,57600,38400,19200,9600,7200,4800,2400,2000\), \(1800,1200,600,300,150\), or 75 .

Examples TRIGGER:A:RS232: BAUD 2000 sets the RS232 triggering baud rate to 2000.
TRIGGER:A:RS232:BAUD? might return :TRIGGER:A:RS232:BAUD 1800, indicating that the RS232 triggering baud rate is set to 1800 .

\section*{TRIGger:A:RS232:DATa:LEVel}

DPO7000 Series only: This command sets or queries the threshold for the RS232 data source.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:RS232:DATa:LEVe1 <NR3> TRIGger:A:RS232:DATa:LEVe1?

Arguments \(<N R 3>\) specifies the threshold level with a range of \(\pm 5.0\).

Examples TRIGGER:A:RS232:DATA:LEVEL 0.0 sets the threshold for the RS232 data source to 0.0 .

TRIGGER:A:RS232:DATA:LEVEL? might return
:TRIGGER:A:RS232:DATA:LEVEL 5.0, indicating that the threshold for the RS232 data source is set to 5.0.

\section*{TRIGger:A:RS232:DATa:SOUrce}

DPO7000 Series only: This command sets or queries the RS232 data source.
\begin{tabular}{ll} 
& \begin{tabular}{ll} 
NOTE. Not available on some models. \\
Group & Low Speed Serial Trigger \\
Syntax & \begin{tabular}{l} 
TRIGger:A:RS232:DATa: Source CH<x> \\
\\
\\
TRIGger:A:RS232:DATa: SOUrce?
\end{tabular}
\end{tabular}.
\end{tabular}

Arguments \(\mathrm{CH}<\mathrm{x}>\) specifies the RS232 data source. x can be \(1,2,3\), or 4 .

Examples TRIGGER:A:RS232:DATA: SOURCE CH2 sets the RS232 data source to channel CH2.

TRIGGER:A:RS232:DATA:SOURCE? might return :TRIGGER:A:RS232:DATA:SOURCE CH1, indicating that the RS232 data source is set to channel CH1.

\section*{TRIGger:A:RS232:DATa:VALue}

DPO7000 Series only: This command sets or queries the binary data string used for RS232 triggering.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:RS232:DATa:VALue <QString> TRIGger:A:RS232:DATa:VALue?

Arguments <QString> specifies the RS232 data value. The value can be up to 8 bits.

Examples TRIGGER:A:RS232:DATA:VALUE "1011" sets the RS232 triggering data value to 1011.

TRIGGER:A:RS232:DATA:VALUE? might return :TRIGGER:A:RS232:DATA:VALUE "10111", indicating that the RS232 data value is set to 10111 .

\section*{TRIGger:A:RS232:FORMat}

DPO7000 Series only: This command sets or queries the display format for the RS232 data value.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:RS232:FORMat \{BINary|HEX\}
TRIGger:A:RS232:FORMat?

Arguments BINary specifies binary for the display format.
HEX specifies hexadecimal for the display format.

Examples TRIGGER:A:RS232:FORMAT HEX sets the display format for the RS232 data to hexadecimal.

TRIGGER:A:RS232:FORMAT? might return
:TRIGGER:A:RS232:DATA:FORMAT BINARY, indicating that the display format for the RS232 data is set to binary.

\section*{TRIGger:A:RS232:PARity}

DPO7000 Series only: This command sets or queries the state of the RS232 parity bit.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:RS232:PARity \{NONe|EVEN|ODD\}
TRIGger:A:RS232:PARity?

Arguments NONe specifies no parity.
EVEN specifies even RS232 parity.
ODD specifies odd RS232 parity.

Examples TRIGGER:A:RS232: PARITYEVEN sets the RS232 parity to even.
TRIGGER:A:RS232:PARITY? might return :TRIGGER:A:RS232:PARITY ODD, indicating that the RS232 parity is set to odd.

\section*{TRIGger:A:SERIAL:BITRate}

This command sets or queries the clock/data bit rate. Changing the bit rate causes the standard to become "custom". It remains "custom" until another standard is chosen.

Group Trigger

Syntax TRIGger:A:SERIAL:BITRate <NR3> TRIGger:A:SERIAL:BITRate?

Arguments <NR3> This is the series bit rate and is expressed in bits per second. The range is 1.5 e 6 to 1.25 e 9 .

Examples TRIGGER:A:SERIAL:BITRATE 51.8400E +6 sets the bit rate to 51.84 Mbits/second.

TRIGGER:A:SERIAL:BITRATE? might return :TRIGGER:A:SERIAL:BITRATE \(51.8400 \mathrm{E}+6\), indicating that the bit rate is set to 51.84 Mbits/second.

\section*{TRIGger:A:SERIAL:CLOCk:LEVel}

This command sets or queries the serial trigger clock level.

Group Trigger

Syntax TRIGger:A:SERIAL:CLOCk:LEVe] <NR3> TRIGger:A:SERIAL:CLOCk:LEVe1?

Arguments <NR3> is a value in the range of 9.9E37 and is expressed in volts.

Examples TRIGGER:A:SERIAL:CLOCK:LEVEL 0.0 sets the clock level to 0 V . TRIGGER:A:SERIAL:CLOCK:LEVEL? might return :TRIGGER:A:SERIAL:CLOCK:LEVEL 51.8400E+6, indicating that the \(32.0000 \mathrm{E}-3\) indicating that the serial trigger clock level is set to 51.84 E 6 volts.

\section*{TRIGger:A:SERIAL:CLOCk:POLarity}

This command sets or queries the serial clock polarity.
```

Group Trigger
Syntax TRIGger:A:SERIAL:CLOCk:POLarity {RISe|FALL}
TRIGger:A:SERIAL:CLOCk:POLarity?

```

Arguments RISe specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:A:SERIAL:CLOCK:POLARITY RISE sets the clock polarity to rise.
TRIGGER:A:SERIAL:CLOCK: POLARITY? might return :TRIGGER:A:SERIAL:CLOCK:POLARITY FALL, indicating that the clock polarity is set to fall.

\section*{TRIGger:A:SERIAL:CLOCk:SOUrce}

This command sets or queries the serial data source channel.

Group Trigger

Syntax TRIGger:A:SERIAL:CLOCk:SOUrce \{CH<x>|RECOVered\} TRIGger:A:SERIAL:CLOCk:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) specifies one of the input channels. x can be \(1,2,3\), or 4 .
RECOVered specifies clock polarity and level are extracted from the serial data stream and other clock parameters are ignored.

Examples TRIGGER:A:SERIAL:CLOCK:SOURCE CH1 sets the serial source channel to CH1.

TRIGGER:A:SERIAL:CLOCK:SOURCE? might return :TRIGGER:A:SERIAL:CLOCK:SOURCE CH3, indicating that the serial source channel is set to CH3.

\section*{TRIGger:A:SERIAL:CODe}

This command sets or queries the signal code.

Group Trigger

Syntax TRIGger:A:SERIAL:CODe \{NRZ|S8B10B\}
TRIGger:A:SERIAL:CODe?

Arguments NRZ sets the code to NRZ.
S8B10B sets the code to S 8 B 0 B .

Examples TRIGGER:A:SERIAL:CODE NRZ sets the signal code to NRZ.
TRIGGER:A:SERIAL:CODE? might return :TRIGGER:A:SERIAL:CODE S8B10B, indicating that the signal code is set to S8B0B.

\section*{TRIGger:A:SERIAL:DATa:FORMat}

This command sets or queries how the Pattern string is formatted.

Group Trigger

Syntax TRIGger:A:SERIAL:DATa:FORMat \{BINary|HEX\} TRIGger:A:SERIAL:DATa:FORMat?

Arguments BINary pattern symbols are: \{‘SPACE’ \(|0| 1 \mid X\}\) ‘SPACE' is white space and can be included to make the 32 -bit pattern easier to read when setting the pattern.

HEX pattern symbols are used only with NRZ. They are: \{" ' \(|0| 1|2| 3|4| 5|6| 7|8| 9|\mathrm{~A} \backslash \mathrm{~B}| \mathrm{C}|\mathrm{D} \backslash E| \mathrm{F}|\mathrm{X}|\) ? \} Hex ' X ' represents the bit pattern ' XXXX '. Hex '?' represents any other binary bit pattern which doesn't have a hex representation, such as ' 00 X 1 '.

Examples TRIGGER:A:SERIAL:DATA:FORMAT BINARY sets the Pattern string to a binary format.

TRIGGER:A:SERIAL:DATA:FORMAT? might return :TRIGGER:A:SERIAL:CODE HEX, indicating that the Pattern string is set to a hexadecimal format.

\section*{TRIGger:A:SERIAL:DATa:PATtern}

This command sets or queries the data pattern to allow up to 64-bit serial patterns.

\author{
Group Trigger \\ Syntax TRIGger:A:SERIAL:DATa:PATtern <QString> TRIGger:A:SERIAL:DATa:PATtern? \\ Related Commands TRIGger:A:SERIAL:DATa:PATtern:NRZ \\ TRIGger:A:SERIAL:DATa:PATtern:S8B10B
}

\section*{Arguments}
<QString> specifies the serial pattern to trigger on. The default value is " 01 ", such that there are up to 64 characters total.

Examples If one sets the data format to binary with a TRIGGER: A:SERIAL:DATA: FORMAT command, as follows: TRIGger:A:SERIAL:DATA:FORMAT BIN then the following query: TRIGger:A:SERIAL:DATA:PATTERN? might return the following characters: 1101XXXX10.

If one next sets the data format to hexadecimal with the TRIGGER:A:SERIAL:DATA:FORMAT commands as follows: TRIGger:A:SERIAL:DATA:FORMAT HEX then the following query: TRIGger:A:SERIAL:DATA:PATTERN? might return the following characters: 3?? Showing, in this case, 3 followed by two "?". Each hex character has replaced four binary characters. The hex "??" has replaced the binary "01XXXX10". The "?" was used because " 01 XX " and "XX10" do not have exact hex representations.

If one sends: TRIGger:A:SERIAL:DATA:PATTERN "XXXX XXXa" this will set the pattern to eight hex digits. The space in the middle only serves to make the pattern easier to read.

Now, if one sends the following query: TRIGger:A:SERIAL:DATA:PATTERN? this might return: XXXXXXXA showing the effect of the pattern sent in example 3 . The cosmetic space from example 3 is not returned.

Finally, one could change the data format back to binary with the TRIGGER:A:SERIAL:DATA:FORMAT command, as follows: TRIGGER:A:SERIAL:DATA: FORMAT BIN then one could query the instrument using the pattern command, as follows: TRIGGER:A:SERIAL:DATA:PATTERN? This could return: \(\operatorname{XXXXXXXXXXXXXXXXXXXXXXXXXXXX1010~showing~the~}\) response due to the binary format. Four binary characters " 1010 " now replace the hex character " A ".

\section*{TRIGger:A:SERIAL:DATa:PATtern:NRZ}

This command sets or queries the data pattern to allow up to 64-bit serial patterns.

\author{
Group Trigger \\ Syntax TRIGger:A:SERIAL:DATa:PATtern:NRZ <QString> TRIGger:A:SERIAL:DATa:PATtern:NRZ?
}

Related Commands TRIGger:A:SERIAL:DATa:PATtern
TRIGger:A:SERIAL:DATa:PATtern:S8B10B

Arguments <QString> specifies the serial pattern to trigger on. The default value is " 01 ", such that there are up to 64 characters total.

Examples If one sets the data format to binary with a TRIGGER: A:SERIAL:DATA: FORMAT command, as follows: TRIGger:A:SERIAL:DATA:FORMAT BIN then the following query: TRIGGER:A:SERIAL:DATA:PATTERN:NRZ? might return the following characters: \(1101 \times \mathrm{XXX10}\).

If one next sets the data format to hexadecimal with the TRIGGER:A:SERIAL:DATA:FORMAT commands as follows: TRIGger:A:SERIAL:DATA:FORMAT HEX then the following query: TRIGGER:A:SERIAL:DATA:PATTERN:NRZ? might return the following characters: 3 ?? Showing, in this case, 3 followed by two "?". Each hex character has replaced four binary characters. The hex "??" has replaced the binary "01XXXX10". The "?" was used because "01XX" and "XX10" don't have an exact hex representations.

If one sends: TRIGger:A:SERIAL:DATA:PATTERN:NRZ "XXXX XXXa" this will set the pattern to eight hex digits. The space in the middle only serves to make the pattern easier to read.

Now, if one sends the following query:
TRIGGER:A:SERIAL:DATA:PATTERN:NRZ? this might return: XXXXXXXA showing the effect of the pattern sent in example 3. The cosmetic space from example 3 is not returned.

Finally, one could change the data format back to binary with the TRIGGER:A:SERIAL:DATA:FORMAT command, as follows: TRIGGER:A:SERIAL:DATA:FORMAT BIN then one could query the instrument using the pattern command, as follows: TRIGGER:A:SERIAL:DATA:PATTERN:NRZ? This could return: XXXXXXXXXXXXXXXXXXXXXXXXXXXXX1010 showing the response due to the binary format. Four binary characters " 1010 " now replace the hex character "A".

\title{
TRIGger:A:SERIAL:DATa:PATtern:S8B10B
}

NOTE. Not available on some models.

This command sets or queries the data pattern to allow up to 64-bit serial patterns.

Group Trigger

Syntax TRIGger:A:SERIAL:DATa:PATtern:S8B10B <QString> TRIGger:A:SERIAL:DATa:PATtern:S8B10B?

Related Commands TRIGger:A:SERIAL:DATa:PATtern
TRIGger:A:SERIAL:DATa:PATtern:NRZ

Arguments <QString> specifies the serial pattern to trigger on. The default value is " 0011111010 ", such that there are up to 64 characters total.

Examples If one sets the data format to binary with a TRIGGER: A:SERIAL:DATA: FORMAT command, as follows: TRIGger:A:SERIAL:DATA:FORMAT BIN then the following query: TRIGGER:A:SERIAL:DATA:PATTERN: S8B10B? might return the following characters: 1101xxxx10.

If one next sets the data format to hexadecimal with the TRIGGER:A:SERIAL:DATA:FORMAT commands as follows: TRIGger:A:SERIAL:DATA:FORMAT HEX then the following query: TRIGGER:A:SERIAL:DATA:PATTERN:S8B10B? might return the following characters: 3?? Showing, in this case, 3 followed by two "?". Each hex character has replaced four binary characters. The hex "??" has replaced the binary "01XXXX10". The "?" was used because "01XX" and "XX10" don't have an exact hex representations.

If one sends: TRIGGER:A:SERIAL:DATA:PATTERN:S8B10B "XXXX XXXa" this will set the pattern to eight hex digits. The space in the middle only serves to make the pattern easier to read.

Now, if one sends the following query:
TRIGGER:A:SERIAL:DATA: PATTERN: S8B10B? this might return: XXXXXXXXA showing the effect of the pattern sent in example 3. The cosmetic space from example 3 is not returned.

Finally, one could change the data format back to binary with the TRIGGER:A:SERIAL:DATA:FORMAT command, as follows: TRIGGER:A:SERIAL:DATA:FORMAT BIN then one could query the instrument using the pattern command, as follows:

TRIGGER:A:SERIAL:DATA:PATTERN:S8B10B? This could return: XXXXXXXXXXXXXXXXXXXXXXXXXXXX1010 showing the response due to the binary format. Four binary characters " 1010 " now replace the hex character "A".

\section*{TRIGger:A:SERIAL:LOCKLen}

This command sets or queries the length in bits of the repeating bit pattern for pattern lock trigger.

Group Trigger

Syntax TRIGger:A:SERIAL:LOCKLen <NR1> TRIGger:A:SERIAL:LOCKLen?

Arguments <NR1> specifies the length in bits. The valid values are 1 to 2147483647.

Examples TRIGGER:A:SERIAL:LOCKLEN 2640 sets the repeating bit pattern length to 2640 bits.

TRIGGER:A:SERIAL: LOCKLEN? might return :TRIGGER:A:SERIAL: LOCKLEN 10000 , indicating that the pattern string is 10000 bits.

\section*{TRIGger:A:SERIAL:LOCKOffset}

This command sets or queries the current bit offset into the pattern lock trigger bit pattern.

Group Trigger

Syntax TRIGger:A:SERIAL:LOCKOffset <NR1> TRIGger:A:SERIAL:LOCKOffset?

Arguments <NR1> specifies the bit offset. The valid values are 1 to 2147483646 .

Examples TRIGGER:A:SERIAL:LOCKOFFSET 10 sets the current bit offset to 10 bits.
TRIGGER:A:SERIAL:LOCKOFFSET? might return
:TRIGGER:A: SERIAL: LOCKOFFSET 20, indicating that the current bit offset is 20 bits.

\section*{TRIGger:A:SERIAL:SOUrce}

This command sets or queries the serial data source channel.

Group Trigger

Syntax TRIGger:A:SERIAL: Source \(\{\mathrm{CH} 1|\mathrm{CH} 2| \mathrm{CH} 3 \mid \mathrm{CH} 4\}\)
TRIGger:A:SERIAL:SOUrce?

Arguments \(\mathrm{CH} 1-\mathrm{CH} 4\) specifies one of the input channels.

Examples TRIGGER:A:SERIAL:SOURCE CH1 sets the serial data source channel to CH1.
TRIGGER:A:SERIAL:SOURCE? might return :TRIGGER:A:SERIAL:SOURCE CH 4 , indicating that the serial data source channel is CH 4 .

\section*{TRIGger:A:SERIAL:STANdard}

This command sets or queries the standard that identifies the code and bit rate.

Group Trigger

Syntax TRIGger:A:SERIAL:STANdard
\{FC133|FC266|FC531|FC1063|D1|D2|VIDEO270|VIDE0360|OC1|OC3|
oc12|ENET1250|FW1394bS400b|FW1394BS800b|CUSTom|ENET100FX|

Examples TRIGGER:A:SERIAL:STANDARD OC1 sets the standard that identifies the code and bit rate to NRZ, \(51.84 \mathrm{Mb} / \mathrm{s}\).

TRIGGER:A:SERIAL:STANDARD? might return
:TRIGGER:A:SERIAL:STANDARD CUSTOM, indicating that the standard that identifies the code and bit rate is set to NRZ, \(155.5 \mathrm{Mb} / \mathrm{s}\).

\section*{TRIGger:A:SERIAL:TRIGgeron}

This command sets or queries the trigger on a designated arbitrary bit pattern or lock on a repeating pattern of known length.

Group Trigger

Syntax TRIGger:A:SERIAL:TRIGgeron \{PATtern|LOck\} TRIGger:A:SERIAL:TRIGgeron?

Arguments PATtern specifies the trigger on a designated arbitrary bit pattern.
LOck specifies the trigger locks a repeating pattern of known length.

Examples TRIGGER:A:SERIAL:TRIGGERON PATTERN sets trigger on a designated arbitrary bit pattern.

TRIGGER:A:SERIAL:TRIGGERON? might return :TRIGGER:A:SERIAL:TRIGGERON LOCK, indicating that the trigger locks a repeating pattern of known length.

\section*{TRIGger:A:SPI:CONDition}

This command sets or queries the trigger condition for SPI triggering.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:CONDition \{MISO|MOSI|MISOMOSI\} TRIGger:A:SPI:CONDition?

Arguments MISO specifies the MISO condition for SPI triggering. MOSI specifies the MISI condition for SPI triggering.

MISOMOSI specifies either the MISO or MISI condition for SPI triggering.

Examples TRIGGER:A:SPI:CONDITION MOSI sets the SPI trigger condition to MOSI.
TRIGGER:A:SPI:CONDITION? might return :TRIGGER:A:SPI:CONDITION MISI, indicating that the SPI trigger condition is set to MISI.

\section*{TRIGger:A:SPI:DATa:MISO:ACTIVE}

This command sets or queries the SPI MISO polarity.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MISO:ACTIVE \{HIGH|LOW\}
TRIGger:A:SPI:DATa:MISO:ACTIVE?

Arguments HIGH specifies HIGH polarity.
Low specifies LOW polarity.

Examples TRIGGER:A:SPI:DATA:MISO:ACTIVE HIGH sets the SPI trigger MISO polarity to high.

TRIGGER:A:SPI:DATA:MISO:ACTIVE? might return
:TRIGGER:A:SPI:DATA:MISO:ACTIVE LOW, indicating that the SPI MISO polarity is set to low.

\section*{TRIGger:A:SPI:DATa:MISO:LEVeI}

This command sets or queries the threshold for the SPI MISO data source.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MISO:LEVe1 <NR3> TRIGger:A:SPI:DATa:MISO:LEVe1?

Arguments <NR3> specifies the threshold for the SPI trigger MISO data source. The range is \(\pm 5.0\).

Examples TRIGGER:A:SPI:DATA:MISO:LEVEL 0.0 sets the threshold for the SPI trigger MISO data source to 0.0 .

TRIGGER:A:SPI:DATA:MISO:LEVEL? might return
:TRIGGER:A:SPI:DATA:MISO:LEVEL 5.0 , indicating that the threshold for the SPI MISO data source is set to 5.0.

\section*{TRIGger:A:SPI:DATa:MISO:SOUrce}

This command sets or queries the MISO data source for the SPI trigger.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger
\(\begin{array}{ll}\text { Syntax } & \text { TRIGger:A:SPI:DATa:MISO: SOUrce CH<x> } \\ \text { TRIGger:A:SPI:DATa:MISO: SOUrce? }\end{array}\)
TRIGger:A:SPI:DATa:MISO:SOUrce?

Arguments \(\mathrm{CH}<\mathrm{x}>\) specifies the source for the SPI trigger MISO data source. x can be 1 , 2,3 , or 4 .

Examples TRIGGER:A:SPI:DATA:MISO: SOURCE CH2 sets the SPI trigger MISO data source to channel CH2.

TRIGGER:A:SPI:DATA:MISO:SOURCE? might return
:TRIGGER:A:SPI:DATA:MISO:SOURCE CH1, indicating that the SPI trigger MISO data source is set to CH1.

\section*{TRIGger:A:SPI:DATa:MISO:VALue}

This command sets or queries the binary data string used for the SPI trigger if the trigger condition is set to MISO or MISOMOSI.

NOTE. Not available on some models.

Group Low Speed Serial Trigger
\(\begin{array}{ll}\text { Syntax } & \text { TRIGger:A:SPI:DATa:MISO:VALue <QString> } \\ & \text { TRIGger:A:SPI:DATa:MISO:VALue? }\end{array}\)

Arguments <QString> specifies the binary data string for the SPI data. You can specify up to 32 bits.

Examples TRIGGER:A:SPI:DATA:MISO:VALUE "1011" sets the binary data string used for the SPI trigger to 1011.

TRIGGER:A:SPI:DATA:MISO:VALUE? might return :TRIGGER:A:SPI:DATA:MISO:VALUE "10111", indicating that the binary data string used for the SPI trigger is set to 10111.

\section*{TRIGger:A:SPI:DATa:MOSI:ACTIVE}

This command sets or queries the SPI MOSI polarity.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MOSI:ACTIVE \{HIGH|LOW\}
TRIGger:A:SPI:DATa:MOSI:ACTIVE?

Arguments HIGH specifies HIGH polarity.
Low specifies LOW polarity.

Examples TRIGGER:A:SPI:DATA:MOSI:ACTIVE HIGH sets the SPI trigger MOSI polarity to HIGH.

TRIGGER:A:SPI:DATA:MOSI:ACTIVE? might return :TRIGGER:A:SPI:DATA:MISO:ACTIVE LOW, indicating that the SPI MOSI polarity is set to LOW.

\section*{TRIGger:A:SPI:DATa:MOSI:LEVel}

This command sets or queries the threshold for the SPI MOSI data source.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MOSI:LEVe1<NR3> TRIGger:A:SPI:DATa:MOSI:LEVe1?

Arguments <NR3> specifies the threshold for the SPI trigger MOSI data source. The range is \(\pm 5.0\).

Examples TRIGGER:A:SPI:DATA:MOSI:LEVEL 0.0 sets the threshold for the SPI trigger MOSI data source to 0.0 .

TRIGGER:A:SPI:DATA:MOSI:LEVEL? might return :TRIGGER:A:SPI:DATA:MISO:LEVEL 5.0, indicating that the threshold for the SPI MOSI data source is set to 5.0 .

\section*{TRIGger:A:SPI:DATa:MOSI:SOUrce}

This command sets or queries the MOSI data source for the SPI trigger.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MOSI:SOUrce CH<x> TRIGger:A:SPI:DATa:MOSI:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) specifies the source for the SPI trigger MOSI data source. x can be 1 , 2,3 , or 4 .

Examples TRIGGER:A:SPI:DATA:MOSI:SOURCE CH2 sets the SPI trigger MOSI data source to channel CH2.

TRIGGER:A:SPI:DATA:MOSI:SOURCE? might return :TRIGGER:A:SPI:DATA:MOSI:SOURCE CH1, indicating that the SPI trigger MOSI data source is set to channel CH 1 .

\section*{TRIGger:A:SPI:DATa:MOSI:VALue}

This command sets or queries the binary data string used for the SPI trigger if the trigger condition is set to MOSI or MISOMOSI.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:MOSI:VALue <QString> TRIGger:A:SPI:DATa:MOSI:VALue?

Arguments <QString> specifies the binary data string for the SPI data. You can specify up to 32 bits.

Examples TRIGGER:A:SPI:DATA:MOSI:VALUE "1011" sets the binary data string used for the SPI trigger to 1011.

TRIGGER:A:SPI:DATA:MOSI:VALUE? might return
:TRIGGER:A:SPI:DATA:MOSI:VALUE "10111", indicating that the binary data string used for the SPI trigger is set to 10111.

\section*{TRIGger:A:SPI:DATa:STARt}

This command sets or queries the nth data byte on the data source after the signal on the enable slave source switches to the polarity specified by the Slave Select Polarity. The instrument triggers if the pattern Matches beginning at this point.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:DATa:STARt <NR3> TRIGger:A:SPI:DATa:STARt?

Arguments <NR3> specifies the SPI start byte data. The data can range from 0 to \(2^{16-1}\).

Examples TRIGGER:A:SPI:DATA:START 0 sets the SPI trigger data start to 0 .
TRIGGER:A:SPI:DATA:START? might return :TRIGGER:A:SPI:DATA:START 1 , indicating that the SPI trigger data is set to 1 .

\section*{TRIGger:A:SPI:FORMat}

This command sets or queries the SPI trigger data format.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:FORMat \{BINary|HEX\}
TRIGger:A:SPI:FORMat?

Arguments BINary specifies a binary data format.
HEX specifies a hexadecimal data format.

Examples TRIGGER:A:SPI:FORMAT BINARY sets the SPI trigger data format to binary.
TRIGGER:A:SPI:FORMAT? might return :TRIGGER:A:SPI:FORMAT 1, indicating that the SPI trigger data format is set to HEX.

\section*{TRIGger:A:SPI:SCLK:ACTIVE}

This command sets or queries the SPI SCLK polarity.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SCLK:ACTIVE \{RISe|FALL\} TRIGger:A:SPI:SCLK:ACTIVE?

Arguments RISe specifies rising clock polarity.
FALL specifies falling clock polarity.

Examples TRIGGER:A:SPI:SCLK:ACTIVE FALL sets the SPI SCLK polarity to fall.
TRIGGER:A:SPI:SCLK:ACTIVE? might return
:TRIGGER:A:SPI:SCLK:ACTIVE FALL, indicating that the SPI SCLK polarity is set to FALL.

\section*{TRIGger:A:SPI:SCLK:LEVel}

This command sets or queries the threshold for the SPI trigger SCLK.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SCLK:LEVe1 <NR3> TRIGger:A:SPI:SCLK:LEVe1?

Arguments <NR3> specifies the SPI trigger SCLK threshold.

Examples TRIGGER:A:SPI:SCLK:LEVEL 0.0 sets the SPI SCLK threshold to 0.0 .
TRIGGER:A:SPI:SCLK:LEVEL? might return :TRIGGER:A:SPI:SCLK:LEVEL 5.0, indicating that the SPI SCLK threshold is set to 5.0.

\section*{TRIGger:A:SPI:SCLK:SOUrce}

This command sets or queries the SPI SCLK source.

NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SCLK:SOUrce CH<x> TRIGger:A:SPI:SCLK:SOUrce?

Arguments \(\quad C H<x>\) specifies the SPI SCLK source. \(x\) can be \(1,2,3\), or 4 .

Examples TRIGGER:A:SPI:SCLK:SOURCE CH2 sets the SPI SCLK trigger source to channel CH2.

TRIGGER:A:SPI:SCLK:SOURCE? might return :TRIGGER:A:SPI:SCLK:SOURCE CH4, indicating that the SPI SCLK trigger source is set to channel CH4.

\section*{TRIGger:A:SPI:SS:ACTIVE}

This command sets or queries the SPI trigger Slave Select (SS) polarity.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SS:ACTIVE \{HIGH|LOW\} TRIGger:A:SPI:SS:ACTIVE?

Arguments HIGH specifies HIGH for SS polarity.
Low specifies LOW for SS polarity.

Examples TRIGGER:A:SPI:SS:ACTIVE HIGH sets the SPI trigger SS polarity to HIGH.
TRIGGER:A:SPI:SS:ACTIVE? might return :TRIGGER:A:SPI:SS:ACTIVE LOW, indicating that the SPI trigger SS polarity is set to LOW.

\section*{TRIGger:A:SPI:SS:LEVel}

This command sets or queries the threshold for the SPI trigger Slave Select (SS) signal.

\section*{NOTE. Not available on some models.}

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SS:LEVe1 <NR3> TRIGger:A:SPI:SS:LEVe1?

Arguments <NR3> specifies the threshold for the SPI trigger SS line. The threshold range is \(\pm 5.0\).

Examples TRIGGER:A:SPI:SS:LEVELO.0 sets the threshold level for the SPI trigger SS to 0.0 .

TRIGGER:A:SPI:SS:LEVEL? might return :TRIGGER:A:SPI:SS:LEVEL 5.0000, indicating that the threshold level for the SPI trigger SS is set to 5.0.

\section*{TRIGger:A:SPI:SS:SOUrce}

This command sets or queries the SPI trigger Slave Select (SS) source.
NOTE. Not available on some models.

Group Low Speed Serial Trigger

Syntax TRIGger:A:SPI:SS:SOUrce CH<x> TRIGger:A:SPI:SS:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) specifies the source for the SPI SS signal. x can be \(1,2,3\), or 4 .

Examples TRIGGER:A:SPI:SS: SOURCE CH2 sets the SPI trigger Slave Select (SS) source to channel CH2.

TRIGGER:A:SPI:SS: SOURCE? might return :TRIGGER:A:SPI:SS:SOURCE CH 1 , indicating that the SPI trigger Slave Select (SS) source is set to channel CH1.

\section*{TRIGger:A:VIDeo? (Query Only)}

This query-only command returns the A trigger video parameters.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:VIDeo?

Examples TRIGGER:A:VIDEO? might return :TRIGGER:A:VIDEO:CUSTOM:FORMAT INTERLACED; SCAN RATE1; :TRIGGER:A:VIDEO:FIELD ALLFIELDS; HOLDOFF:FIELD 1.0000;TIME 20.0000E-3; :TRIGGER:A:VIDEO:LINE 1;SCAN RATE1; SOURCE CH1;STANDARD NTSC.

\section*{TRIGger:A:VIDeo:CUSTom? (Query Only)}

This query-only command returns the A trigger custom video parameters.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:VIDeo:CUSTom?

\title{
Examples TRIGGER:A:VIDEO:CUSTOM? might return the parameters :TRIGGER:A:VIDEO:CUSTOM:FORMAT INTERLACED; SCAN RATE1.
}

\section*{TRIGger:A:VIDeo:CUSTom:FORMat}

This command sets or queries the video trigger format. Use this command only when the video format is set to custom.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo:CUSTom:FORMat \{INTERLAced|PROGressive\} TRIGger:A:VIDeo:CUSTom:FORMat?

Arguments INTERLAced argument sets the format for interlaced video lines.
PROGressive argument sets the format for progressive video lines.

Examples TRIGGER:A:VIDEO:CUSTOM: FORMATPROGRESSIVE sets the custom format for the A video trigger to progressive lines.

TRIGGER:A:VIDEO:CUSTOM: FORMAT? might return
:TRIGGER:A:VIDEO:CUSTOM: FORMAT INTERLACED, indicating that interlaced is selected as the custom format for the A video trigger.

\section*{TRIGger:A:VIDeo:CUSTom:LINEPeriod}

This command sets or queries the period horizontal line scan. Use this command only when the video format is set to Bilevel or Trilevel. This is equivalent to selecting Video Setup from the Trig menu, setting Bilevel or Trilevel for Format, and setting the Line Period.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:VIDeo:CUSTom:LINEPeriod <NR3> TRIGger:A:VIDeo:CUSTom:LINEPeriod?

Arguments <NR3> is the time for each horizontal scan line.

Examples TRIGGER:A:VIDEO:CUSTOM:LINEPERIOD 63.6E-6 sets the custom line period to 63.6 microseconds.

TRIGGER:A:VIDEO:CUSTOM:LINEPERIOD? might return TRIGGER:A:VIDEO: CUSTOM: LINEPERIOD63.6000E-6, indicating that the line period is set to 63 microseconds.

\section*{TRIGger:A:VIDeo:CUSTom:SYNCInterval}

This command sets or queries the horizontal line scan rate of the A video trigger. Use this command only when the video format is set to Bilevel. This is equivalent to selecting Video Setup from the Trig menu, setting Bilevel for Format, and setting the sync interval.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo:CUSTom:SYNCInterval <NR3> TRIGger:A:VIDeo:CUSTom:SYNCInterval?

Arguments <NR3> is the sync interval for the Bilevel format.

Examples TRIGGER:A:VIDEO:CUSTOM:SYNCINTERVAL 4.7E-6 sets the sync interval to 4.7 microseconds.

TRIGGER:A:VIDEO:CUSTOM:SYNCINTERVAL? might return TRIGGER:A: VIDEO: CUSTOM: SYNCINTERVAL \(4.7000 \mathrm{E}-6\), indicating that the custom sync interval is set to 4.7 microseconds.

\section*{TRIGger:A:VIDeo:FIELD}

This command sets or queries the video field or line that the trigger detects.
NOTE. Not available on some models.

Group Trigger
```

Syntax TRIGger:A:VIDeo:FIELD
\{ODD|EVEN|FIELD1|FIELD2|ALLFie1ds|ALLLines|NUMERic\} TRIGger:A:VIDeo:FIELD?

```

Arguments ODD argument sets the instrument to trigger on interlaced video odd fields.
EVEN argument sets the instrument to trigger on interlaced video even fields.
FIELD1 argument sets the instrument to trigger on interlaced video odd fields (same as ODD).

FIELD2 argument sets the instrument to trigger on interlaced video even fields (same as EVEN).

ALLFields argument sets the instrument to trigger on all fields.
ALLLines argument sets the instrument to trigger on all video lines.
NUMERic argument sets the instrument to trigger on the video signal line specified by the TRIGger:A:VIDeo:LINE command.

Examples TRIGGER:A:VIDEO: FIELDEVEN sets the A video trigger so that it will trigger on even fields.

TRIGGER:A:VIDEO:FIELD? might return :TRIGGER:A:VIDEO:FIELD ALLFIELDS, indicating that the A video will trigger on all video fields.

\section*{TRIGger:A:VIDeo:HOLdoff:FIELD}

This command sets or queries the video trigger holdoff in terms of video fields.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:VIDeo:HOLdoff:FIELD <NR3> TRIGger:A:VIDeo:HOLdoff:FIELD?

Arguments
<NR3> argument is a real number from 0.0 to 8.5 in increments of 0.5 . The argument sets the number of fields that the instrument waits before rearming the video trigger.

Examples TRIGGER:A:VIDEO: HOLDOFF:FIELD 4.5 sets the instrument to wait 4.5 video fields before rearming the trigger.

TRIGGER:A:VIDEO:HOLDOFF:FIELD? might return :TRIGGER:A:VIDEO:HOLDOFF:FIELD 5, indicating that the instrument is set to wait 5 video fields before rearming the trigger.

\section*{TRIGger:A:VIDeo:LINE}

This command sets or queries the video line number on which the instrument triggers. This command is equivalent to selecting Video Setup from the Trig menu, selecting Line \# in the Trigger on box, and setting the line number. Use the TRIGger:A:VIDeo:FIELD command to actually trigger the instrument on the line that you specify with this command.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo:LINE <NR1>
TRIGger:A:VIDeo:LINE?

Related Commands TRIGger:A:VIDeo:FIELD

Arguments <NR1> argument is an integer that sets the video line number on which the instrument triggers. The following table lists the valid choices, depending on the active video standard.

Table 2-50: Video Line Numbering Ranges
\begin{tabular}{ll} 
Video Standard & Line Number Range \\
\hline CUSTOM & \(4-3000\) \\
\hline NTSC & \(1-263\) (odd) and 264-525 (even) \\
\hline PAL & \(1-625\) \\
\hline SECAM & \(1-625\) \\
\hline HD480P60 & \(1-520\) \\
\hline HD720P60 & \(1-750\) \\
\hline HD1080150 & \(1-1125\) \\
\hline HD1080160 & \(1-1125\) \\
\hline HD1080P24 & \(1-1125\) \\
\hline HD1080P25 & \(1-1125\) \\
\hline HD1080SF24 & \(1-1125\) \\
\hline
\end{tabular}

Examples TRIGGER:A:VIDEO:LINE 23 sets the instrument to trigger on the line 23.
TRIGGER:A:VIDEO:LINE? might return :TRIGGER:A:VIDEO:LINE 10, indicating that the instrument is set to trigger on line 10 .

\section*{TRIGger:A:VIDeo:POLarity}

This command sets or queries the polarity of the A video trigger.

\section*{NOTE. Not available on some models.}

Group Trigger

Syntax TRIGger:A:VIDeo:POLarity \{INVERTed|NORMa1\} TRIGger:A:VIDeo:POLarity?

Arguments INVERTed argument sets the instrument to trigger on a positive video sync pulse. NORMa 1 argument sets the instrument to trigger on a negative video sync pulse.

Examples TRIGGER:A:VIDEO: POLARITY NORMAL sets the instrument to trigger on a negative video pulse.

TRIGGER:A:VIDEO: POLARITY? might return :TRIGGER:A:VIDEO: POLARITY INVERTED, indicating that the instrument is set to trigger on a positive video sync pulse.

\section*{TRIGger:A:VIDeo:SCAN}

This command sets or queries the video trigger horizontal line scan rate. This command is for compatibility with earlier instruments.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo:SCAN \{RATE1|RATE2|RATE3|RATE4|RATE5\} TRIGger: A:VIDeo: SCAN?

Arguments RATE1 argument sets the range of the video line scan rate to 15 kHz through 20 kHz . This is the standard broadcast rate.

RATE2 argument sets the range of the video line scan rate to 20 kHz through 25 kHz .

RATE3 argument sets the range of the video line scan rate to 25 kHz through 35 kHz .

RATE4 argument sets the range of the video line scan rate to 35 kHz through 50 kHz .

RATE5 argument sets the range of the video line scan rate to 50 kHz through 65 kHz .

Examples TRIGGER:A:VIDEO:SCAN RATE1 sets the scan rate of the A video trigger to Rate 1 , which is 15 kHz to 20 kHz (standard broadcast rate).

TRIGGER:A:VIDEO:SCAN? might return :TRIGGER:A:VIDEO:SCAN RATE2, indicating that the video line rate for the A trigger is set to Rate 2, which is 20 kHz to 23 kHz .

\section*{TRIGger:A:VIDeo:SOUrce}

This command sets or queries the source for the A video trigger. This command is equivalent to selecting Video Setup from the Trig menu and selecting a channel from the Source drop-down menu.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo: SOUrce CH<x> TRIGger:A:VIDeo:SOUrce?

Arguments \(\quad \mathrm{CH}<\mathrm{x}>\) argument specifies one of the input channels of the instrument as the A video trigger. The value of \(x\) ranges from 1 through 4.

Examples TRIGGER:A:VIDEO: SOURCECH1 sets the source for A video trigger to Channel 1. TRIGGER:A:VIDEO:SOURCE? might return :TRIGGER:A:VIDEO: SOURCE CH2, indicating that the source for the A video trigger is set to Channel 2.

\section*{TRIGger:A:VIDeo:STANdard}

This command sets or queries the video standard.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:A:VIDeo:STANdard
\{BILeve1custom|TRILeve1custom|NTSC|PAL|
SECAM |HD480P60|HD576P50|HD875I60|HD720P30|HD720P50|
HD720P60|HD1080I50|HD1080I60|HD1080P24|
HD1080P25|HD1080P30|HD1080P50|HD1080P60| HD1080SF24\} TRIGger:A:VIDeo:STANdard?

Arguments BILevelcustom argument sets the instrument to use custom video parameters that you set with the TRIGger:A:VIDeo:CUSTom:SYNCInterval command.

TRILeve1custom argument sets the instrument to use custom video horizontal scan rate parameters that you set with the TRIGger:A:VIDeo:CUSTom: LINEPeriod command.

NTSC argument sets the instrument to trigger on video signals that meet the NTSC \(525 / 60 / 2: 1\) standard (a line rate of 525 lines per frame and a field rate of 60 Hz ).

PAL argument sets the instrument to trigger on video signals that meet the NTSC \(625 / 50 / 2: 1\) standard (a line rate of 625 lines per frame and a field rate of 50 Hz ).

SECAM argument sets the instrument to trigger on video signals that meet the SECAM standard.

HD480P60 argument sets the instrument to trigger on the HDTV 480/60 progressive format.

HD576P50 argument sets the instrument to trigger on the HDTV 576/50 progressive format.

HD875I60 argument sets the instrument to trigger on the HDTV 875/60 format.
HD720P30 argument sets the instrument to trigger on the HDTV 720/30 progressive format.

HD720P50 argument sets the instrument to trigger on the HDTV 720/50 progressive format.

HD720P60 argument sets the instrument to trigger on the HDTV 720/60 progressive format.

HD1080I50 argument sets the instrument to trigger on HDTV 1080/50 interlaced format.

HD1080I60 argument sets the instrument to trigger on HDTV 1080/60 interlaced format.

HD1080P24 argument sets the instrument to trigger on HDTV 1080/24 progressive format.

HD1080P25 argument sets the instrument to trigger on HDTV 1080/25 progressive format.

HD1080P30 argument sets the instrument to trigger on HDTV 1080/30 progressive format.

HD1080P50 argument sets the instrument to trigger on HDTV 1080/50 progressive format.

HD1080P60 argument sets the instrument to trigger on HDTV 1080/60 progressive format.

HD1080SF24 argument sets the instrument to trigger on HDTV 1080/24 segmented frame format.

\section*{Examples TRIGGER:A:VIDEO:STANDARD NTSC sets the instrument to trigger on} NTSC-standard video signals.

TRIGGER:A:VIDEO:STANDARD? might return :TRIGGER:A:VIDEO: STANDARD NTSC, indicating that the standard for the A video trigger is set to NTSC.

\section*{TRIGger:AUXLevel}

This command sets or queries the auxiliary (Aux) level for the edge trigger. This command supersedes any other argument that sets the auxiliary trigger level.

Group Trigger

Syntax TRIGger:AUXLeve1 \{<NR3>|ECL|TTL\}
TRIGger: AUXLeve1?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:SLOpe, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:SOUrce

Arguments <NR3> is the auxiliary level in volts.
ECL specifies a preset ECL level.
TTL specifies a preset TTL level.

Examples TRIGGER:AUXLEVEL TTL sets the auxiliary level for the edge trigger to TTL.
TRIGGER:AUXLEVEL? might return :TRIGGER:AUXLEVEL TTL, indicating that the auxiliary level for the edge trigger is set to TTL.

\section*{TRIGger:B (No Query Form)}

This command sets the B trigger level to \(50 \%\) of minimum and maximum. The query form of this command returns the B trigger parameters. This command is similar to selecting B Event (Delayed) Trigger Setup from the Trig menu and then viewing the current setups.

Group Trigger

Syntax TRIGger:B SETLeve1

Related Commands TRIGger:A TRIGger:B:STATE
```

Arguments SETLeve 1 sets the B trigger level to $50 \%$ of MIN and MAX.
Examples TRIGGER: B SETLEVEL sets the B trigger level to $50 \%$ of MIN and MAX.
TRIGGER:B? might return the following B trigger parameters:
:TRIGGER:B:STATE 0;TYPE EDGE; LEVEL -220.0000E-3;BY
TIME;EDGE:SOURCE CH1;SLOPE RISE;COUPLING DC; :TRIGGER:B:TIME 16.0000E-9;EVENTS:COUNT 2.

```

\section*{TRIGger:B:BY}

This command selects or returns whether the B trigger occurs after a specified number of events or a specified period of time after the A trigger. This is equivalent to selecting B Event (Delayed) Trigger Setup from the Trig menu, selecting the \(\mathrm{A} \rightarrow \mathrm{B}\) Seq tab, and then choosing Trig After Time or Trig on nth event.

NOTE. The traditional Runs After functionality is now served by the Horizontal Delay function. For details, see the HORizontal[:MAIn]:DELay:MODe and HORizontal[:MAIn]:DELay:TIMe commands.

Group Trigger

Syntax TRIGger:B:BY \{EVENTS|TIMe\}
TRIGger: \(\mathrm{B}: \mathrm{BY}\) ?

Related Commands TRIGger:B:EVENTS:COUNt, TRIGger:B:TIMe, HORizontal[:MAIn]:DELay: MODe, HORizontal[:MAIn]:DELay:TIMe TRIGger:B:STATE

Arguments EVENTS sets the B trigger to take place following a set number of trigger events after the A trigger occurs. The number of events is specified by TRIGger:B:EVENTS:COUNt.

TIMe sets the B trigger to occur a set time after the A trigger event. The time period is specified by TRIGger:B:TIMe.

Examples TRIGGER:B:BY TIME sets the B trigger to occur at a set time after the A trigger event.

TRIGGER:B:BY? might return :TRIGGER:B:BY EVENTS, indicating that the B trigger takes place following a set number of trigger events after the A trigger occurs.

\section*{TRIGger:B:EDGE:ENVelope}

This command sets or queries whether the B edge trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger: B: EDGE:ENVelope <OFF|ON> TRIGger:B:EDGE:ENVelope?

Arguments OFF disables edge envelope triggering. \(O N\) enables edge envelope triggering.

Examples TRIGGER:B:EDGE:ENVELOPE ON enables edge envelope triggering. TRIGGER:B:EDGE:ENVELOPE? may return ON or OFF.

\section*{TRIGger:B:EVENTS? (Query Only)}

This query-only command returns the current B trigger events parameter. This command is equivalent to selecting B Event (Delayed) Trigger Setup from the

Trig menu, selecting the \(\mathrm{A} \rightarrow \mathrm{B}\) Seq tab, choosing Trig on nth event, and viewing the Trig Event setting.

Group Trigger

Syntax TRIGger:B:EVENTS?

Related Commands TRIGger:B:EVENTS:COUNt, TRIGger:B:STATE

Examples TRIGGER:B:EVENTS? might return
:TRIGGER:B:EVENTS:COUNT 2, indicating that the two events must occur before the B trigger occurs.

\section*{TRIGger:B:EVENTS:COUNt}

This command sets or queries the number of events that must occur before the B trigger (when TRIG:DELay:BY is set to EVENTS). This command is equivalent to selecting B Event (Delayed) Trigger Setup from the Trig menu, selecting the A \(\rightarrow\) B Seq tab, choosing Trig on nth event, and setting the desired Trig Event value.

Group Trigger

Syntax TRIGger:B:EVENTS:COUNt <NR1> TRIGger:B:EVENTS:COUNt?

Related Commands TRIGger:B:EVENTS?, TRIGger:B:STATE

Arguments <NR1> is the number of B trigger events, which can range from 1 to \(10,000,000\).

Examples TRIGGER:B:EVENTS: COUNT 4 sets the number of \(B\) trigger events to four.
TRIGGER:B:EVENTS:COUNT? might return :TRIGGER:B:EVENTS:COUNT 2, indicating that two events must occur after the A trigger before the B trigger can occur.

\section*{TRIGger:B:PULse:GLItch:ENVelope}

This command sets or queries whether the B glitch trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:B:PULse:GLItch:ENVelope <OFF|ON> TRIGger:B:PULse:GLItch: ENVelope?

Arguments OFF disables glitch envelope triggering. ON enables glitch envelope triggering.

Examples TRIGGER:B:PULSE:GLITCH:ENVELOPE ON enables glitch envelope triggering. TRIGGER:B:PULSE:GLITCH:ENVELOPE? may return ON or OFF.

\section*{TRIGger:B:PULse:PERiod? (Query Only)}

This query-only command returns the Pulse Trigger settings specific to Period/Frequency trigger. These include the array of high and low limits, the trigger when enumeration, the polarity enumeration, the qualification enumeration, and the view enumeration. The view enumeration controls whether the high and low limits are expressed in units of time (Seconds) or frequency (Hz). The qualification enumeration determines if the trigger is state-qualified by additional signals (channels). The polarity enumeration determines whether the rising or falling edges of the signal are used to initiate the trigger. The trigger when enumeration determines if the trigger should occur when the period (frequency) is greater than or less than a single (low) limit value, or within or outside the period (frequency) of a high-low limit period (frequency) pair.

The Period/Frequency Trigger is similar to Width Trigger, but instead of triggering on a single pulse of a given width, it triggers on the period (two back-to-back pulses, one up and one down) of a given width. As a convenience the period limits (Seconds) can be expressed as frequency limits ( Hz ) by changing the view enumeration. It is often used to determine if oscillators are operating within specification.

Group Trigger

Syntax TRIGger:B:PULse:PERiod?

Related Commands TRIGger:A:PULse:PERiod?TRIGger:A:PULse:PERiod:HIGHLimitTRIGger: A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod:POLarityTRIGger:A: PULse:PERiod:QUAlifyTRIGger:A:PULse:PERiod:VIEWTRIGger:B:PULse: PERiod?TRIGger:B:PULse:PERiod:HIGHLimitTRIGger:B:PULse:PERiod:

WHEnTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: QUAlifyTRIGger:B:PULse:PERiod:VIEW

Examples TRIGGER:B:PULSE:PERIOD? might return :TRIGGER:B:PULSE:PERIOD:
'90.0000E-9;10.0000;GREATERTHAN; POSITIVE;OCCURS \(\backslash\) n', indicating the period limits, when enumeration, polarity, and so forth.

\section*{TRIGger:B:PULse:PERiod:HIGHLimit}

This command sets or queries the Period/Frequency high limit. When the VIEW is PERiod the units of this number are time (Seconds). When the VIEW is FREQuency, the units of this number are frequency \((\mathrm{Hz})\). The high limit is used in combination with the low limit to define a range if the WHEn enumeration is WITHin or OUTside. These limits specify the most significant characteristic of the signal for this Pulse Trigger Type.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:HIGHLimit <NR3>
TRIGger:B:PULse:PERiod:HIGHLimit?
\(\begin{array}{ll}\text { Related Commands } & \text { TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: } \\ & \text { HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: } \\ & \text { POLarityTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: } \\ & \text { HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod: } \\ & \text { POLarity }\end{array}\)

Arguments <NR3> is the period (in Seconds) or frequency (in Hz).

Examples TRIGGER:B:PULSE:PERIOD:HIGHLIMIT 101.0e-9 sets the Pulse Period Trigger High Limit to one hundred one nanoseconds, which, in combination with a Low Limit of \(99.0 \mathrm{e}-9\), is suitable for triggering on a 10 MHz clock if the WHEn enumeration is set to WITHin.

TRIGGER:B:PULSE:PERIOD:HIGHLIMIT? might return
:TRIGGER:B:PULSE:PERIOD:HIGHLIMIT 101.0e-9 (if View is
Period), or :TRIGGER:B:PULSE:PERIOD:HIGHLIMIT 10.1e6 (if View is Frequency).

\section*{TRIGger:B:PULse:PERiod:LOWLimit}

This command sets or queries the Period/Frequency low limit. When the VIEW is PERiod the units of this number are time (Seconds). When the VIEW is FREQuency, the units of this number are frequency ( Hz ). The low limit is used alone when the WHEn enumeration is LESSthan or GREATerthan, and is used in combination with the high limit to define a range if the WHEn enumeration is WITHin or OUTside. The limits specify the most significant characteristic of the signal for this Pulse Trigger Type.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:LOWLimit <NR3> TRIGger:B:PULse:PERiod:LOWLimit?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: POLarityTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod: POLarity

Arguments <NR3> is the period (in Seconds) or frequency (in Hz).

Examples TRIGGER:B:PULSE:PERIOD:LOWLIMIT 101.0e-9 sets the Pulse Period Trigger Low Limit to one hundred one nanoseconds, which is suitable for triggering on a 10 MHz clock if the WHEn enumeration is set to LESSthan.

TRIGGER:B:PULSE:PERIOD:LOWLIMIT? might return
:TRIGGER:B:PULSE:PERIOD:LOWLIMIT 101.0e-9 (if View is Period), or :TRIGGER:B:PULSE:PERIOD:LOWLIMIT 9900990,(if View is Frequency).

\section*{TRIGger:B:PULse:PERiod:POLarity}

This command sets or queries the polarity for the Pulse Period trigger. It refers to the polarity of the edges that begin and end a given period of the signal, and thus allows duty-cycle testing of clock signals.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:POLarity \{NEGAtive|POSITIVe\} TRIGger:B:PULse:PERiod:POLarity?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:POLarityTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: VIEW

Arguments POSITIVe specifies to trigger on the rising or positive edge of a signal. NEGAtive specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:B:PULSE:PERIOD:POLARITY POSITIVE sets the B pulse period trigger slope to positive, which triggers on the rising edge of the signal.

TRIGGER:B:PULSE:PERIOD:POLARITY? might return :TRIGGER:A:PULSEL:PERIOD:POLARITY NEGATIVE, indicating that the B pulse period trigger polarity is negative.

\section*{TRIGger:B:PULse:PERiod:QUAlify}

This command sets or queries the Qualification setup for Pulse Period Trigger. The high/low state of one or more other signals (channels) may be used to qualify whether the trigger should occur. The BUS option is not available on the 77 K scope family at this time.

When the QUALify enumeration is OCCurs, no qualification is done.
When the QUALify enumeration is LOGIC, the scope triggers using the pulse period trigger definition as qualified by the high/low states of the qualifying signals. Additional description is given elsewhere in this document under the term logic qualification.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:QUAlify \{occurs | LOGIC | BUS\} TRIGger:B:PULse:PERiod:QUAlify?

Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:WHEnTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:WHEnTRIGger:B:PULse:PERiod:VIEW

Arguments occurs specifies the no other signals are used to qualify the pulse period trigger. LOGIC specifies that other analog signals (channels) are used to qualify the pulse period trigger.

BUS specifies that other digital signals (digital channels) are used to qualify the pulse period trigger.

Examples TRIGGER:B:PULSE:PERIOD:QUALIFY LOGIC specifies that one or more other analog signals (channels) are used to qualify the pulse period trigger.

TRIGGER:B:PULSE:PERIOD:QUALIFY? might return :TRIGGER:B:PULSE:PERIOD:QUALIFY OCCURS, indicating that the B pulse period trigger is not qualified by any other signals (channels).

\section*{TRIGger:B:PULse:PERiod:VIEW}

This command sets or queries the view for the pulse period trigger. When PERiod is selected the LOWLimit and HIGHLimit values are in units of time (Seconds). When FREQuency is selected, the units are in frequency (Hz). This two methods are equivalent, so the alternative views are provided as a convenience.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:VIEW \{PERiod|FREQuency\} TRIGger:B:PULse:PERiod:VIEW?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) :EDGE:SOUrceTRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}\) :EDGE:COUPling

Arguments RISe specifies to trigger on the rising or positive edge of a signal.
FALL specifies to trigger on the falling or negative edge of a signal.

Examples TRIGGER:B:PULSE:PERIOD:VIEW PERIOD sets the interpretation of the high and low limits to units of time (Seconds).

TRIGGER:B:PULSE:PERIOD:VIEW? might return :TRIGGER:B:PULSE:PERIOD:VIEW FREQUENCY, indicating that the interpretation of the high and low limits is in units of frequency \((\mathrm{Hz})\).

\section*{TRIGger:B:PULse:PERiod:WHEn}

This command sets or queries the trigger when enumeration for the Pulse Period Trigger.

If the argument is LESSthan , the scope triggers on the signal when the period (frequency) of the signal is less than the period (frequency) of the Low Limit.

If the argument is GREATerthan, the scope triggers on the signal when the period (frequency) of the signal is greater than the period (frequency) of the Low Limit.

If the argument is WITHin, the scope triggers on the signal when the period (frequency) of the signal is within the range defined by the Low Limit and the High Limit.

If the argument is OUTside, the scope triggers on the signal when the period (frequency) of the signal is outside of the range defined by the Low Limit and the High Limit.

Group Trigger

Syntax TRIGger:B:PULse:PERiod:WHEn \{LESSthan | GREATerthan | WITHin | OuTside\}
TRIGger:B:PULse:PERiod:WHEn?

\section*{Related Commands TRIGger:A:PULse:PERiod:LOWLimitTRIGger:A:PULse:PERiod: HIGHLimitTRIGger:A:PULse:PERiod:POLarityTRIGger:A:PULse:PERiod: VIEWTRIGger:B:PULse:PERiod:LOWLimitTRIGger:B:PULse:PERiod: HIGHLimitTRIGger:B:PULse:PERiod:POLarityTRIGger:B:PULse:PERiod: VIEW}

Arguments LESSthan tells the scope to trigger when the period (frequency) of the signal is less than the low limit value.

GREATerthan tells the scope to trigger when the period (frequency) of the signal is greater than the low limit value.

WITHin tells the scope to trigger when the period (frequency) of the signal is inside the range set by the low and high limit values.

OUTside tells the scope to trigger when the period (frequency) of the signal is outside of the range set by the low and high limit values.

Examples TRIGGER:B:PULSE:PERIOD:WHEN LESSTHAN tells the scope to trigger when the period (frequency) of the signal is less than the low limit value.

TRIGGER:B:PULSE: PERIOD:WHEN WITHin tells the scope to trigger when the period (frequency) of the signal is inside the range set by the low and high limit values.

TRIGGER:B:PULSE:PERIOD:WHEN? might return LESSTHAN indicating the instrument will trigger when the period (frequency) of the signal is less than the low limit value.

\section*{TRIGger:B:PULse:TIMEOut:ENVelope}

This command sets or queries whether the B timeout trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:B:PULse:TIMEOut:ENVelope <OFF|ON> TRIGger:B:PULse:TIMEOut:ENVelope?

Arguments OFF disables timeout envelope triggering. ON enables timeout envelope triggering.

Examples TRIGGER:B:PULSE:TIMEOUT:ENVELOPE ON enables timeout envelope triggering.

TRIGGER:B:PULSE:TIMEOUT: ENVELOPE? may return ON or OFF.

\section*{TRIGger:B:PULse:WIDth:ENVelope}

This command sets or queries whether the B width trigger will use envelope triggering. DPO70000SX Series only.

Group Trigger

Syntax TRIGger:B:PULse:WIDth:ENVelope <OFF|ON> TRIGger: B:PULse:WIDth:ENVelope?

Arguments OFF disables width envelope triggering. ON enables width envelope triggering.

Examples TRIGGER:B:PULSE:WIDTH:ENVELOPE OFF disables width envelope triggering.
TRIGGER:B:PULSE:WIDTH:ENVELOPE? may return ON or OFF.

\section*{TRIGger:B:RESET:ACCEPTCOUNT? (Query Only)}

This command queries the Reset Accept Count for a sequence trigger reset by the ACCept and REJect Reset Types. These are often referred to as the Validation/Invalidation Triggers. The AcceptCount is equivalent to the number of acquired waveforms, and is part of the equation TotalCount \(=\) AcceptCount + RejectCount used to form the ratio of accepted to total triggers that is optionally displayed when Validation/Invalidation Triggers are employed. The Accept Count is always equal the Acquisition Count.

For example, if the Reset Type Accept is active, the AcceptCount is the number of triggers that have been accepted, a query only value determined by the trigger system. Any acquired waveform obtained by Reset Type Accept or Reject is positioned at the A-Event.

For example, if Reset Type Reject is active, the AcceptCount is still the number of triggers that have been accepted, a query only value determined by the trigger system. Any acquired waveform obtained by Reset Type Accept or Reject is positioned at the A-Event.

Group Trigger

Syntax TRIGger:B:RESET:ACCEPTCOUNT?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:RATIO?, TRIGger: B:RESET:RATIOENable, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:REJECTCOUNT?, TRIGger:B:RESET:TOTALCOUNT?

Arguments None

Examples TRIGGER:B:RESET:ACCEPTCOUNT? might return zero or any positive integer that represents the number of triggers accepted when Reset by Accept or Reset by Reject are active. The Accept Count is always equal the Acquisition Count.

\section*{TRIGger:B:RESET:ACCEPTTIMEout}

This command sets or queries the Reset Accept Time Out timer for a sequence trigger reset by the ACCept Reset Type. This is often referred to as the Validation Trigger. The Accept Time Out indicates the time, as measured from the A-Event
to the B-Event, in which the B-Event must occur in order to accept the A-Event. When the B-Event occurs within the Accept Time Out, the scope triggers on the A-Event, because the B-Event is interpreted as a validation of the A-Event. Note that the acquired waveform trigger position is location at the A-Event, contrary to the behavior of most A->B Sequence triggers. In this way, the B-Event validates the A-Event. If the B-Event does not occur within the Accept Time Out, the scope again starts waiting for an A-Event to occur, i.e., no trigger occurs and the acquisition is not retained.

For example, if the Accept Time Out is set to \(5.2 \mu \mathrm{~s}\), the A-Event will trigger the scope only if the B-Event occurs before \(5.2 \mu\) s has elapsed after the A-Event. Any acquired waveform is positioned at the A-Event.

Group Trigger

Syntax TRIGger:B:RESET:ACCEPTTIMEout <NR3> TRIGger:B:RESET:ACCEPTTIMEout?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:RATIO?, TRIGger: B:RESET:RATIOENable, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?, TRIGger:B:RESET:REJECTCOUNT?, TRIGger:B:RESET:TOTALCOUNT?

Arguments <NR3> specifies the Accept Time Out time.

Examples TRIGGER:B:RESET:ACCEPTTIMEout 5.2E-6 sets the trigger Accept Time Out to 5.2e-6 seconds.

TRIGGER:B:RESET:ACCEPTTIMEout? might return :TRIGGER:B:RESET:ACCEPTTIMEout 5.2E-06, indicating Accept Time Out is \(5.2 \mu \mathrm{~s}\).

\section*{TRIGger:B:RESET:RATIO? (Query Only)}

This command queries the (floating point) Ratio of accepted to total triggers for a sequence trigger reset by the ACCepts and REJects Reset Types. These are often referred to as the Validation/Invalidation Triggers. The Ratio \(=\) Accepted Count / Total Count, and is a query only value generated by the trigger system. The TotalCount \(=\) AcceptCount + RejectCount.

For example, if the Reset Type Accept is active, and 100 triggers have been accepted and 100 trigger have been rejected, then the ratio \(=\) acceptCount \(/\) totalCount, then the ratio is \(50 \%\). The ratio is expressed in scientific notation.

Group Trigger

Syntax TRIGger:B:RESET:RATIO?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:REJECTCOUNT?, TRIGger:B:RESET:RATIOENable, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:ACCEPTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?

Arguments None

Examples TRIGGER:B:RESET:RATIO? may return zero or any positive floating point value less than 1 . If you display the ratio using the user interface, the ratio is displayed as a percent.

\section*{TRIGger:B:RESET:RATIOENable}

This command sets or queries the Ratio Enable enumerated value (OFF/ON). If ON, a ratio is displayed in the graticule area. The displayed value represents the ratio of accepted to total triggers for a sequence trigger reset by the ACCept and REJect Reset Types. These are often referred to as the Validation/Invalidation Triggers. The default value is ON.

For example, if the Reset Type Accept is active, and RatioEnable is ON, the ratio of accepted to total triggers is displayed in the graticule area as a percent.

Group Trigger

Syntax TRIGger:B:RESET:RATIOENable <ON/OFF> TRIGger:B:RESET:RATIOENable?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:REJECTCOUNT?, TRIGger:B:RESET:RATIO?, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:ACCEPTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?

Arguments ON enables the display of the ratio of accepted to total triggers in the graticule area.

OFF does not display the ratio of accepted triggers.

Examples TRIGGER:B:RESET:RATIOENable? may return OFF or ON.

\section*{TRIGger:B:RESET:REJECTCOUNT? (Query Only)}

This command queries the Reset Reject Count for a sequence trigger reset by the ACCept and REJect Reset Types. These are often referred to as the Validation/Invalidation Triggers. The RejectCount is the number of triggers rejected when these triggers are active, and is part of the equation TotalCount \(=\) AcceptCount + RejectCount used to form the ratio of accepted to total triggers that is optionally displayed when Validation/Invalidation Triggers are employed.

For example, if the Reset Type Accept is active, the RejectCount is the number of triggers that have been rejected, a query only value determined by the trigger system.

For example, if Reset Type Reject is active, the RejectCount is the number of triggers that have been rejected, a query only value determined by the trigger system.

Group Trigger

Syntax TRIGger:B:RESET:REJECTCOUNT?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:RATIO?, TRIGger:
B:RESET:RATIOENable, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?, TRIGger:B:RESET:TOTALCOUNT?

Arguments None

Examples TRIGGER:B:RESET:REJECTCOUNT? query may return zero or any positive integer that represents the number of triggers rejected when the Accept or Reject Reset Types are active. Any acquired waveform obtained by Accept or Reject Reset Types is positioned at the A-Event.

\section*{TRIGger:B:RESET:REJECTTIMEout}

This command sets or queries the Reset Reject Time Out timer for a sequence trigger reset by the REJect Reset Type. This is often referred to as the Invalidation Trigger. The Reject Time Out indicates the time measured from the A-Event in which the B-Event must occur in order to reject the A-Event. When the B-Event does not occur within the Reject Time Out, the scope triggers on the A-Event, because the B-Event is interpreted as an invalidation or rejection of the A-Event. If the B-Event does occur within the Reject Time Out, the scope again starts waiting for an A-Event to occur, i.e., no trigger occurs and no acquisition is retained. Note that the acquired waveform trigger position is located at the A-Event, contrary to the behavior of most A->B Sequence triggers.

For example, if the Reject Time Out is set to \(5.2 \mu \mathrm{~S}\), the A-Event will trigger the scope only if the B-Event does not occur before \(5.2 \mu \mathrm{~S}\) has elapsed after the A-Event. The acquired waveform is positioned at the A-Event. When the B-Event does occur before the \(5.2 \mu\) s has elapsed, then the scope does not trigger, and again starts waiting for an A-Event to occur. In this way the B-Event invalidates an A-Event.

Group Trigger

Syntax TRIGger:B:RESET:REJECTTIMEout <NR3> TRIGger:B:RESET:REJECTTIMEOut?

\author{
Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:RATIO?, TRIGger: B:RESET:RATIOENable, TRIGger:B:RESET:ACCEPTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?, TRIGger:B:RESET:REJECTCOUNT?, TRIGger:B:RESET:TOTALCOUNT?
}

Arguments <NR3> specifies the Reject Time Out time.

Examples TRIGGER:B:RESET:REJECTTIMEout 5.2E-6 sets the trigger reset Reject Time Out to 5.2e-6 seconds.

TRIGGER:B:RESET:REJECTTIMEout? might return :TRIGGER:B:RESET:REJECTTIMEout 5.2E-06, indicating the Reject Time Out is \(5.2 \mu \mathrm{~s}\).

\section*{TRIGger:B:RESET:SOUrce}

This command sets or queries the trigger source for the \(\mathrm{A} \rightarrow \mathrm{B}\) sequential trigger reset feature, except for the Timeout trigger type.
\begin{tabular}{|c|c|}
\hline Group & Trigger \\
\hline Syntax & ```
TRIGger:B:RESET:SOUrce {CH<x>|AUXiliary}
TRIGger:B:RESET:SOUrce?
``` \\
\hline Related Commands & TRIGger:B:RESET:TYPe, TRIGger:B:RESET:THReshold \\
\hline Arguments & \(\mathrm{CH}<\mathrm{x}>\) specifies one of the input channels as the reset source. Input channels are specified by x and can be \(1,2,3\), or 4 . \\
\hline
\end{tabular}

AUXiliary specifies an external trigger (using the Auxiliary Trigger Input connector) as the reset source.

Examples TRIGGER:B:RESET: SOURCE CH4 sets Channel 4 as the input source for the trigger reset.

TRIGGER:B:RESET:SOURCE? might return :TRIGGER:B:RESET: SOURCE CH1, indicating that the current input source for the trigger reset is Channel 1.

\section*{TRIGger:B:RESET:STATE}

This command sets or queries the trigger reset state for the \(\mathrm{A} \rightarrow \mathrm{B}\) sequential State trigger reset feature.

Group Trigger

Syntax TRIGger:B:RESET:STATE \{HIGH|LOW\} TRIGger:B:RESET:STATE?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:SOUrce, TRIGger:B:RESET: THReshold

Arguments HIGH sets the condition for the state sequential trigger reset to high. LOW sets the condition for the state sequential trigger reset to low.

Examples TRIGGER:B:RESET:STATE LOW sets the condition for the state sequential trigger reset to Low.

TRIGGER:B:RESET:STATE? might return :TRIGGER:B:RESET:STATE HIGH, indicating that High is the condition for the state sequential trigger reset.

\section*{TRIGger:B:RESET:THReshold}

This command sets or queries the trigger threshold for the \(\mathrm{A} \rightarrow \mathrm{B}\) sequential trigger reset, except for the Timeout reset type.

Group Trigger

Syntax TRIGger:B:RESET:THReshold \{ECL|TTL|<NR3>\} TRIGger:B:RESET:THReshold?

Related Commands

Arguments ECL sets the reset threshold to ECL voltage levels.
TTL sets the reset threshold to TTL voltage levels.
<NR3> sets the reset threshold in volts.

Examples TRIGGER:B:RESET:THRESHOLD TTL sets the trigger reset threshold level to TTL.
TRIGGER:B:RESET:THRESHOLD? might return
:TRIGGER:B:RESET:THRESHOLD TTL, indicating that the trigger reset threshold level is set to TTL.

\section*{TRIGger:B:RESET:TIMEOut}

This command sets or queries the reset timer for a sequential timeout trigger reset. For example, if the timeout is set to 1 s , this additional reset time begins following an A trigger event and runs sequentially with any B Trigger Delay. If a B trigger event is not found before it expires, the instrument searches for a new A event trigger sequence.

Group Trigger

Syntax TRIGger:B:RESET:TIMEOut <NR3> TRIGger:B:RESET:TIMEOut?

Related Commands TRIGger:B:RESET:TYPe

Arguments <NR3> specifies the reset time.

Examples TRIGGER:B:RESET:TIMEOUT 1.0E-6 sets the trigger reset timeout to 1 s .
TRIGGER:B:RESET:TIMEOUT? might return :TRIGGER:B:RESET:TIMEOUT \(2.0000 \mathrm{E}-09\), indicating that the trigger reset timeout is 2 ns .

\section*{TRIGger:B:RESET:TOTALCOUNT? (Query Only)}

This command queries the Reset Total Count for a sequence trigger reset by the ACCept and REJect Reset Types. These are often referred to as the Validation/Invalidation Triggers. The TotalCount is the sum of the accepted and rejected triggers when the Reset or Accept Reset Types are active, and is part of
the equation TotalCount \(=\) AcceptCount + RejectCount used to form the ratio of accepted to total triggers that is optionally displayed when Validation/Invalidation Triggers are employed.

For example, if the Reset Type Accept is active, the TotalCount is the sum of the accepted and rejected triggers processed by the Accept Reset Type, a query only value determined by the trigger system. Any acquired waveform obtained by Accept or Reject Reset Types is positioned at the A-Event.

For example, if the Reset Type Reject is active, the TotalCount is the sum of the accepted and rejected triggers processed by the Reject Reset Type, a query only value determined by the trigger system. Any acquired waveform obtained by Accept or Reject Reset Types is positioned at the A-Event.

Group Trigger

Syntax TRIGger:B:RESET:TOTALCOUNT?

Related Commands TRIGger:B:RESET:TYPe, TRIGger:B:RESET:RATIO?, TRIGger:
B:RESET:RATIOENable, TRIGger:B:RESET:REJECTTIMEout, TRIGger:B:RESET:ACCEPTTIMEout, TRIGger:B:RESET:ACCEPTCOUNT?

Arguments None

Examples TRIGGER:B:RESET:TOTALCOUNT? query may return zero or any positive integer that represents the sum of the number of triggers accepted and rejected when the Accept or Reject Reset Types are active. Any acquired waveform obtained by Accept or Reject Reset Types is positioned at the A-Event.

\section*{TRIGger:B:RESET:TRANsition}

This command sets or queries the type of transition required for a Transition trigger reset.

Group Trigger

Syntax TRIGger:B:RESET:TRANsition \{RISe|FALL\} TRIGger:B:RESET:TRANsition?

Related Commands TRIGger:B:RESET:SOUrce, TRIGger:B:RESET:THReshold, TRIGger:B: RESET:TYPe
\begin{tabular}{ll} 
Arguments & RISe indicates that a reset occurs when the trigger rises above the threshold level. \\
FALL indicates that a reset occurs when the trigger falls below the threshold level.
\end{tabular} Examples \begin{tabular}{l} 
TRIGGER:B:RESET:TRANSITION RISE allows the reset to occur if the trigger \\
rises above the threshold level. \\
TRIGGER:B:RESET:TRANSITION? might return \\
:TRIGGER:B:RESET:TRANSITION FALL, indicating that the reset will occur if \\
the trigger falls below the threshold level.
\end{tabular}

\section*{TRIGger:B:RESET:TYPe}

This command sets or queries the type of \(A \rightarrow B\) sequential trigger reset. If the \(B\) trigger reset is active, the reset criteria are part of the B triggering sequence. If the reset conditions defined by the reset type are not met, the instrument must start over searching for a new occurrence of the A event.

You must identify a trigger Source and Threshold for each reset type, except for the Timeout, Accept, and Reject trigger types.

NOTE. Special considerations for Reset Type Accept: Reset Type Accept requires an accompanying Accept Timeout value. See TRIGger:B:RESET: ACCEPTTIMEout.

NOTE. Special considerations for Reset Type Reject: Reset Type Reject requires an accompanying Reject Timeout value. See TRIGger:B:RESET:REJECTTIMEout.

NOTE. The Reset Types Accept and Reject are only available on 70K Model D or later oscilloscopes.

NOTE. If a reset condition occurs, the reset criteria itself is reset and must start over.

Group Trigger

Syntax TRIGger:B:RESET:TYPe
\{NONe|TIMEOut|STATE|TRANsition|ACCepts|REJects\}
TRIGger:B:RESET:TYPe?

Arguments NONe defeats the trigger reset feature.
TIMEOut initiates a reset if the timeout conditions specified by TRIGger:B:RESET:TIMEOut are met.

STATE initiates a reset if the state conditions specified by TRIGger: B:RESET:SOUrce, TRIGger:B:RESET:STATE, and TRIGger:B:RESET:THReshold are met.

TRANsition initiates a reset if the transition conditions specified by TRIGger:B:RESET:SOUrce, TRIGger:B:RESET:TRANsition, and TRIGger:B:RESET:THReshold are met.

ACCepts initiates a trigger at the A-Event if the B-Event occurs before the Accept Timeout, as measured from the A- to the B-Event. That is, the B-Event Accepts (validates) the A-Event. Otherwise the oscilloscope does not trigger. The trigger location is at the A-Event.

REJects initiates a trigger if the Reject Timeout expires before the B-Event occurs, as measured from the A- to the B-Event. That is, reception of the B-Event Rejects (invalidates) the A-Event. Otherwise the oscilloscope does not trigger (if the B-Event occurs before the Reject Timeout). The trigger location is at the A-Event.

Examples TRIGGER:B:RESET:TYPE NONE deactivates the sequential trigger reset.
TRIGGER:B:RESET:TYPE? This query might return :TRIGGER:B:RESET:TYPe TIMEOUT, indicating that the sequential trigger reset is active following a timeout.

\section*{TRIGger:B:SCAN:ADVANCEafter}

This command sets or queries the B-Event Scan advance after value. Advance After advances the B-Event value after the specified number of acquisitions have occurred. The B-Events value is updated in a sequential, random, or toggle mode.

Group Trigger

Syntax TRIGger:B:SCAN:ADVANCEafter <NR1> TRIGger:B:SCAN:ADVANCEafter?

Arguments
<NR1> is the value that advances the B-Event after the given number of acquisitions have occurred. The default value is 1 and ranges from 1 to 2 e 9 (2000000000).

Examples TRIGGER:B:SCAN:ADVANCEAFTER 1 with B-Event scan enabled, the B-Event advances after each acquisition.

TRIGGER:B:SCAN:ADVANCEAFTER? might return :TRIGGER:B:SCAN:ADVANCEAFTER:2, indicating that with B-Event scan enabled, the B-Event advances after two acquisitions.

\section*{TRIGger:B:SCAN:ENAble}

This command sets or queries if the B-Event Scan is on or off. The B-Events value is updated in a sequential, random, or toggle Advance mode.

NOTE. Not available on some models.

Group Trigger

Syntax TRIGger:B:SCAN: ENAb7e
TRIGger:B:SCAN:ENAb7e \{ON|OFF\}
TRIGger: B: SCAN: ENAble?

Arguments on with A->B Sequence mode set to Trig on nth Event, the B-Event count is determined by the other B Scan triggering parameters such as Start Event value, End Event value, Advance After value, and the Advance mode.

OFF with A->B Sequence mode set to Trig on nth Event, behaves in a conventional way.

Examples TRIGGER:B:SCAN:ENABLE ON enables the B-Event Scan option.
TRIGGER:B:SCAN:ENABLE? might return :TRIGGER:B:SCAN:ENABLE:OFF, indicating that the B-Event Scan option is not enabled.

\section*{TRIGger:B:SCAN:ENDevent}

This command sets or queries the end event value of B-Event Scan. The end event value is greater than or equal to the start event value.

Group Trigger

Syntax TRIGger:B:SCAN:ENDevent <NR1> TRIGger: B: SCAN: ENDevent?

\section*{Related Commands TRIGger:B:SCAN:STARTevent}

Arguments <NR1> is the end event value of B-Event Scan. The default value is 8 and ranges from 1 to 2 e 9 .

Examples TRIGGER:B:SCAN:ENDEVENT 8 sets the end event value of B-Event Scan to 8 . At this point the \(B\)-Event value is set to the start event value again.

TRIGGER: B: SCAN: ENDEVENT? might return :TRIGGER:B:SCAN: ENDEVENT 10 , indicating that the end event value of \(B\)-Event scan is set to 10 .

\section*{TRIGger:B:SCAN:MODE}

This command sets or queries the sequence advance mode of B-Event Scan.

Group Trigger

Syntax TRIGger:B:SCAN:MODE \{SEQUENTIAL|RANDOM|TOGGLE\} TRIGger: B: SCAN:MODE?

Arguments SEQUENTIAL, where the B-Event Scan is initialized at start event. This value is incremented after each set of Advance After triggers have occurred, until the B-Event exceeds the end event value. Then the B-Event count is again set to the start event value.

RANDOM, where the B-Event value is changed to a random value such that start event value \(<=\) BEvent \(<=\) end event value), and after Advance After triggers have occurred.

TOGGLE, where the B-Event count is first set to the start event value and then changed to the end event value after additional Advance After triggers have occurred, and then B-Event is set back to the start event value.

Examples TRIGGER:B:SCAN:MODE SEQUENTIAL sets the advance mode of the B-Event Scan to sequential.

TRIGGER:B:SCAN:MODE? might return :TRIGGER:B:SCAN:MODE SEQUENTIAL, indicating that the advance mode of the B-Event Scan is set to sequential.

\section*{TRIGger:B:SCAN:STARTevent}

This command sets or queries the start event value of B-Event Scan.

Group Trigger

Syntax TRIGger:B:SCAN:STARTevent <NR1> TRIGger:B:SCAN:STARTevent?

Related Commands TRIGger:B:SCAN:ENDevent

Arguments <NR1> is the start event value of B-Event Scan. The default value is 1 and ranges from 1 to 2 e 9 .

Examples TRIGGER:B:SCAN:STARTEVENT 1 initializes the start event value of B-Event Scan at 1.

TRIGGER:B:SCAN:STARTEVENT? might return :TRIGGER:B:SCAN:STARTEVENT 2, indicating that the start event value of \(B\)-Event scan is initialized at 2.

\section*{TRIGger:B:STATE}

Group Trigger

Syntax TRIGger: B: STATE \{ON|OFF|<NR1>\}
TRIGger:B:STATE?

Related Commands TRIGger:A:MODe

\section*{Arguments \(\quad \mathrm{ON}\) indicates that the B trigger is active and causes trigger events with the A trigger. OFF indicates that only the A trigger causes trigger events. \\ <NR1> \\ A 0 turns off the B trigger; any other value activates the B trigger. \\ Examples TRIGGER:B:STATE ON sets the B trigger to active, making it capable of causing trigger events.}

TRIGGER:B:STATE? might return :TRIGGER:B:STATE 0 , indicating that the B trigger is inactive and that only the A trigger causes trigger events.

\section*{TRIGger:B:TIMe}

Group Trigger

Syntax TRIGger:B:TIMe <NR3> TRIGger:B:TIMe?

Related Commands TRIGger:B:BY, TRIGger:B:EVENTS:COUNt TRIGger:B:STATE

Arguments <NR3> is the B trigger delay time in seconds.

Examples TRIGGER:B:TIME \(4 \mathrm{E}-6\) sets the B trigger delay time to \(4 \mu \mathrm{~s}\).
TRIGGER:B:TIME? might return :TRIGGER:B:TIME 16.0000E-9, indicating that the B trigger time is set to 16 ns .

\section*{TRIGger:ENHanced}

This command sets or queries the state of trigger position enhancement. When on, the instrument improves the trigger positioning to more closely match the acquired data. This is equivalent to selecting Enhanced Triggering from the Trigger Mode menu.

Group Trigger

Syntax TRIGger:ENHanced \{<NR1>|OFF|ON\}
TRIGger: ENHanced?

Arguments <NR1> = 0 disables trigger position enhancement, any other value enables trigger position enhancement.

OFF disables trigger position enhancement.

ON enables trigger position enhancement.

\section*{Examples TRIGGER: ENHANCED ON enables trigger position enhancement.}

TRIGGER:ENHANCED? might return :TRIGGER:ENHANCED 0, indicating that trigger position enhancement is disabled.

\section*{TRIGger:EQUation<1..1>}

Sets the Visual Trigger Equation string, which defines the behavior of the areas.
There can be only one equation, which can be up to 128 characters. You can enter the command as TRIGGER: EQUATION or TRIGGER: EQUATION1.

Each area is assigned a single source (analog channel 1, 2, 3, or 4). Any analog channel can be used as the source for one or more areas.

Some basic equations are:
- (C1 IN A1) - The channel 1 waveform must intersect with Area 1.
- (C2 OUT A2) - The channel 2 waveform must NOT intersect with Area 2.
- ((C1 IN A1) and (C2 OUT A2)) - Combines the previous two examples.

Group Trigger

Syntax TRIGger:EQUation<1..1> <string> TRIGger:EQUation<1..1>?

Related Commands VISual:ENAble, TRIGger:SHOWEQuation
```

Arguments <string> is the equation that you want to use for visual triggering. This equation is shown on the oscilloscope screen when visual triggering is enabled.
Examples TRIGger:EQUATION1"((C1 IN A1) and (C2 OUT A2))" provides the equation that will control how areas 1 and 2 are used for visual triggering.
TRIGger:EQUATION? might return :TRIGger:EQUATION "((C1 IN A2) and (C2 OUT A3))", providing the equation that will control how areas 2 and 3 are used for visual triggering.

```

\section*{TRIGger:LVLSrcpreference}

This command sets or queries the dependent source/level trigger feature. SRCIndependent is the default value.

Group Trigger

Syntax TRIGger:LVLSrcpreference \{SRCDependent|SRCIndependent\} TRIGger:LVLSrcpreference?

Related Commands TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) LEVel: \(\mathrm{CH}<\mathrm{x}>\),

Arguments SRCDependent sets the level of all trigger sources to the value you currently select, regardless of the last value selected.

SRCIndependent sets each trigger source to the level you are currently selecting.

Examples TRIGGER:LVLSRCPREFERENCE SRCIINDEPENDENT allows you to set the level of each source to the value you are currently selecting.

TRIGGER:LVLSRCPREFERENCE? might return :TRIGGER:LVLSRCPREFERENCE SRCDEPENDENT, indicating that the level of all sources changes to the value you currently select.

\section*{TRIGger:QUALification:BUS:FORMat}

This command sets or queries the format of the bit pattern for the bus qualification. The command is available only when the Trigger Type is set to Glitch, Runt, Setup/Hold, Timeout, Transition, Width, or Window and the trigger qualification is set to Occurs And.

Group Trigger

Syntax TRIGger:QUALification:BUS:FORMat \{BINary|HEX|SYMBolic\} TRIGger: QUALification:BUS:FORMat?

Related Commands TRIGger:QUALification:BUS:SOUrce, TRIGger:QUALification:BUS:VALue

Arguments BINary specifies the pattern format as binary. HEX specifies the pattern format as hexadecimal.

SYMBolic specifies the pattern format as symbolic.

Examples TRIGGER:QUALIFICATION:BUS:FORMAT HEX sets the bit pattern format to hexadecimal.

TRIGGER:QUALIFICATION:BUS:FORMAT? might return :TRIGGER:
QUALIFICATION:BUS: FORMAT BINARY indicating that the bit pattern format to binary.

\section*{TRIGger:QUALification:BUS:SOUrce}

This command sets or queries the source for the bus qualification. The command is available only when the Trigger Type is set to Glitch, Runt, Setup/Hold, Timeout, Transition, Width, or Window and the trigger qualification is set to Occurs And.

Group Trigger

Syntax TRIGger:QUALification:BUS:SOUrce \{B0|B1|B2|B3|B4|B5|B6|B7|B8|B9|B10|B11|B12|B13|B14|B15|B16\} TRIGger:QUALification:BUS:SOUrce?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:VALue

Arguments \(\quad \mathrm{B} 0-\mathrm{B} 16\) specifies the bus source from B 0 to B 16 .

Examples TRIGGER:QUALIFICATION: BUS: SOURCE B1 sets the source for bus qualification to B 1 .

TRIGGER:QUALIFICATION:BUS: SOURCE? might return :TRIGGER:
QUALIFICATION: BUS: SOURCE B5 indicating that the source for bus qualification is set to B 5 .

\section*{TRIGger:QUALification:BUS:VALue}

This command sets or queries the bit pattern for the bus qualification. The command is available only when the Trigger Type is set to Glitch, Runt, Setup/Hold, Timeout, Transition, Width, or Window and the trigger qualification is set to Occurs And. The pattern assigned is in the order D15 D14 D13 D12 D11 D10 D9 D8 D7 D6 D5 D4 D3 D2 D1 D0 Ch1 Ch2 Ch3 Ch4.

Group Trigger

Syntax TRIGger:QUALification:BUS:VALue <String> TRIGger: QUALification: BUS:VALue?

Related Commands TRIGger:QUALification:BUS:FORMat, TRIGger:QUALification:BUS:SOUrce

Arguments <String> sets the bus value.

Examples TRIGGER:QUALIFICATION:BUS:VALUE "1 XXXX" sets the bus value to 1xxx (a logic high on D0 and CH1 through CH4 to "don't care" value).

TRIGGER:QUALIFICATION:BUS:VALUE? might return :TRIGGER: QUALIFICATION:BUS:VALUE "01XXXX" indicating that the value for bus qualification is set to 01XXXX (a logic low is expected on D1, logic high on D0, and a "don't care" value on CH1 through CH4).

\section*{TRIGger:SENSITivity}

This command set or queries the state of trigger sensitivity. When on, the instrument calculates a rolling average for trigger position enhancement to suppress trigger jitter in noisy signals. This is equivalent to selecting Higher Sensitivity for Noisy Signals from the Trigger Mode menu. This is available only when TRIGger:ENHanced or the equivalent check box control is also on.

Group Trigger

Syntax TRIGger:SENSITivity \{<NR1>|OFF|ON\}
TRIGger:SENSITivity?

Related Commands TRIGger:ENHanced

Arguments <NR1> = 0 disables rolling averaging, any other value enables rolling averaging for trigger position enhancement.

OFF disables rolling averaging for trigger position enhancement.
ON enables rolling averaging for trigger position enhancement.

Examples TRIGGER:SENSITIVITY ON enables the trigger sensitivity feature when TRIGger:ENHanced is enabled.

TRIGGER:SENSITIVITY? might return :TRIGGER:SENSITIVITY 1, indicating that the TRIGGER:SENSITIVITY feature is enabled.

\section*{TRIGger:SHOWEQuation}

Causes the Visual Trigger Equation to be displayed in the upper left portion of the oscilloscope graticule.

Group Trigger

Syntax TRIGger:SHOWEQuation \{ON|OFF\}
TRIGger:SHOWEQuation?

Related Commands TRIGger:EQUation<1..1>

Arguments ON causes the equation to appear on screen.
off hides the equation.

Examples TRIGGER:SHOWEQUATION ON displays the equation.
TRIGGER:SHOWEQUATION? might return :TRIGGER:SHOWEQUATION OFF, indicating that the equation is not set to display.

\section*{TRIGger:STATE? (Query Only)}

This query-only command returns the current state of the triggering system. This command is equivalent to viewing the trigger status LEDs on the instrument front panel, and updates on a periodic, timed basis. For immediate, synchronous, querying of the trigger status, see TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) READY?

Group Trigger

Syntax TRIGger: STATE?

Related Commands TRIGger:A:MODe, TRIGger: \(\{\mathrm{A} \mid \mathrm{B}\}:\) READY?

Returns ARMED indicates that the instrument is acquiring pretrigger information.
AUTO indicates that the instrument is in the automatic mode and acquires data even in the absence of a trigger.

DPO indicates that the instrument is in DPO mode.

PARTIAL indicates that the A trigger has occurred and the instrument is waiting for the B trigger to occur.

READY indicates that all pretrigger information is acquired and that the instrument is ready to accept a trigger.

SAVE indicates that the instrument is in save mode and is not acquiring data.
TRIGGER indicates that the instrument triggered and is acquiring the post trigger information.

Examples TRIGGER:STATE? might return :TRIGGER:STATE ARMED, indicating that the pretrigger data is being acquired.

\section*{*TST? (Query Only)}

This query-only command tests (self-test) the GPIB interface and returns a 0 .

Group Miscellaneous

Syntax *TST?

Examples *TST? always returns 0 .

\section*{UNLock (No Query Form)}

This command (no query form) unlocks the front panel. The command is equivalent to LOCk NONe.

NOTE. If the instrument is in the Remote With Lockout State (RWLS), the UNLock command has no effect. For more information, see the ANSI-IEEE Std 488.1-1987 Standard Digital Interface for Programmable Instrumentation, section 2.8.3 on RL State Descriptions.

Group Miscellaneous

Syntax UNLock ALL

Related Commands LOCk

Arguments ALL specifies that all front panel buttons and knobs are unlocked.

Examples UNLOCK ALL unlocks all front panel buttons and knobs.

\section*{USBTMC:PRODUCTID:DECimal? (Query Only)}

This command queries the USBTMC product ID in decimal. The product ID numbers vary for each instrument family and model.

Group Miscellaneous

Syntax USBTMC:PRODUCTID:DECima1?

Examples USBTMC:PRODUCTID:DECIMAL? might return :USBTMC:PRODUCTID:DECIMAL 0 , indicating that the USBTMC product ID in decimal is 0 .

\section*{USBTMC:PRODUCTID:HEXadecimal? (Query Only)}

This command queries the USBTMC product ID in hexadecimal. The product ID numbers vary for each instrument family and model.

Group Miscellaneous

Syntax USBTMC:PRODUCTID: HEXadecimal?

Examples USBTMC:PRODUCTID:HEXADECIMAL? might return :USBTMC: PRODUCTID: HEXADECIMAL \(0 \times 0000\), indicating that the USBTMC product ID in hexadecimal is \(0 \times 0000\).

\section*{USBTMC:SERIALnumber? (Query Only)}

This command queries the instrument serial number.

Group Miscellaneous

Syntax USBTMC:SERIALnumber?

Examples USBTMC:SERIALNUMBER? might return :USBTMC:SERIALNUMBER Q100001, indicating that the instrument serial number is Q100001.

\section*{USBTMC:VENDORID:DECimal? (Query Only)}

This command queries the USBTMC product ID in decimal. The product ID numbers vary for each instrument family and model.

Group Miscellaneous

Syntax USBTMC:VENDORID:DECimal?

Examples USBTMC:VENDORID:DECIMAL? might return :USBTMC:VENDORID:DECIMAL 0, indicating that the USBTMC product ID in decimal is 0 .

\section*{USBTMC:VENDORID:HEXadecimal? (Query Only)}

This command queries the USBTMC product ID in hexadecimal. The product ID numbers vary for each instrument family and model.
```

Group Miscellaneous
Syntax USBTMC:VENDORID:HEXadecima1?
Examples USBTMC:VENDORID:HEXADECIMAL? might return :USBTMC:VENDORID:HEXADECIMAL 0x0000, indicating that the USBTMC product ID in hexadecimal is $0 x 0000$.

```

\section*{VERBose}

This command sets or queries the Verbose state that controls the length of keywords on query responses. Keywords can be both headers and arguments.

NOTE. This command does not affect IEEE Std 488.2-1987 Common Commands (those starting with an asterisk). However, this command does make a corresponding change in the Response Header Enable State of the opposite interface (physical or virtual GPIB interface). Refer to Introduction for more information.

Group Miscellaneous

Syntax VERBose \(\{<\) NR1>|OFF|ON\}

Related Commands HEADer, *LRN?, SET?

Arguments <NR1>
OFF sets the Verbose state to false, which returns minimum-length keywords for applicable setting queries.

ON sets the Verbose state to true, which returns full-length keywords for applicable setting queries.

A 0 returns minimum-length keywords for applicable setting queries; any other value returns full-length keywords.

Examples VERBOSE ON sets the Verbose state to true and return the full length keyword for the applicable setting queries.

VERbOSE? might return : VERbOSE OFF, indicating that the Verbose state is set to false and return the minimum-length keywords for the applicable setting queries.

\section*{VISual? (Query Only)}

This query-only command returns the settings for each visual trigger area.

Group Trigger

Syntax VISual?

Examples VISUAL:ENABLE might return :VISUAL: ENABLE 1;AREA1:LABEL "";DISPLAY 1;SHOWLOGIC 1;ROTATION 0.0000;SOURCE1 CH1;OPERATION1 IN;XPOSITION -6.0000E-6;YPOSITION 719.0000E-3;WIDTH 10.8000E-6;HEIGHT 1.2540;:VISUAL:AREA2:LABEL "";DISPLAY 1;SHOWLOGIC 1;ROTATION 0.0000 ; SOURCE1 CH1; OPERATION1 IN, listing the settings for visual areas 1 and 2.

\section*{VISual:AREACOLOr}

This command sets or queries the colors used by visual trigger areas.

Group Trigger

Syntax VISual:AREACOLOr \{DEFAULT|INHERIT\} VISual:AREACOLOr?

Arguments DEFAULT sets visual trigger areas to use the default blue color. INHERIT sets visual trigger areas to inherit the color of the channel.

Examples VISUAL:AREACOLOR inherit causes visual trigger areas to inherit the color of the channel.

VISUAL:AREACOLOR? might return :VISUAL:AREACOLOR DEFAULT, indicating that visual trigger areas will use the default blue color.

\section*{VISual:AREA<x>? (Query Only)}

This query-only command returns the settings for the specified visual trigger area. The area is specified by x . The value of x can range from 1 through 8 .

Group Trigger

Syntax VISual:AREA<x>?

Examples VISUAL:AREA1:LABEL? might return :VISUAL:AREA1:LABEL "";DISPLAY 1;SHOWLOGIC 1;ROTATION 0.0000;SOURCE1 CH1;OPERATION1 IN;XPOSITION -6.0000E-6;YPOSITION 719.0000E-3;WIDTH
\(10.8000 \mathrm{E}-6\); HEIGHT 1.2540 , listing the settings for visual area 1.

\section*{VISual:AREA<x>:DISplay}

Causes the areas to be hidden or displayed on the oscilloscope screen. Queries the status of the area display.

All areas are set On or Off together. The \(<x>\) in the command is reserved for future use.

Group Trigger

Syntax VISual:AREA<x>:DISplay \{ON|OFF\}
VISual:AREA<x>:DISplay?

\section*{Related Commands VISual:AREA \(<x>\) :SHOWLOGic}

Arguments

Examples VISual:AREA1:DISplay ON turns on the graphical display of the areas on the oscilloscope screen.

VISual:AREA1:DISplay? might return :VISUAL:AREA1:DISPLAY OFF, indicating that the areas are not displayed on the screen.

\section*{VISual:AREA〈x>:FLIP (No Query Form)}

This command flips the specified visual trigger area. The area is specified by x . The value of \(x\) can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:FLIP \{HORIZONTAL|VERTICAL\}

Arguments HORIZONTAL specifies to flip the area in the horizontal direction.
VERTICAL specifies to flip the area in the vertical direction.

Examples VISual:AREA1:FLIP VERTICAL flips visual trigger area 1 vertically.

\section*{VISual:AREA<x>:HEIGHT}

This command sets or queries the height of the specified visual trigger area. The area is specified by \(x\). The value of \(x\) can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:HEIGHT <nr3> VISUa1:AREA<X>:HEIGHT?

Arguments <NR3> specifies the height of the specified visual trigger area.

Examples VISual:AREA1:HEIGHT 1.0 sets the height of visual trigger area 1 to 1.0 V .
VISua1:AREA1:HEIGHT? might return :VISUAL:AREA1:HEIGHT 1.0480, indicating the that height of visual trigger area 1 is 1.048 V .

\section*{VISual:AREA<x>:LABel}

This command sets or queries the label of the specified visual trigger area. The area is specified by x . The value of x can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:LABe1 <string> VISual:AREA<x>:LABe1?

Arguments <string> specifies the label for the area.

Examples VISUAL:AREA1:LABEL "Glitch 1" labels visual trigger area 1 as Glitch 1. :VISUAL:AREA1:LABEL? might return :VISUAL:AREA1:LABEL " ", indicating that area 1 is not labeled.

\section*{VISual:AREA<x>:OPERATION<1..1>}

Sets or queries the operation of the area specified by \(\langle x>\).
You can enter the command as VISUAL:AREA<x>:OPERATION or VISUAL:AREA<x>:OPERATION1.

Group Trigger

Syntax VISual:AREA<x>:OPERATION<1..1> \{IN|OUT\}
VISual:AREA<x>:OPERATION<1..1>?

Related Commands VISual:AREA \(<x>:\) SOURCE \(<1 . .1>\)

Arguments IN specifies that the selected source must pass through the specified area. OUT specifies that the selected source must NOT pass through the specified area.

Examples VISua1:AREA1:OPERATION OUT specifies that the selected source must NOT pass through area 1.

VISUa1:AREA5:OPERATION? might return :VISUAL:AREA5:OPERATION IN, indicating that the selected source must pass through area 5.

\section*{VISual:AREA〈x>:ROTAtion}

This command sets or queries the rotation angle of the specified visual trigger area. The area is specified by \(x\). The value of \(x\) can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:ROTAtion <nr3>
VISual:AREA<x>:ROTAtion?

Arguments <NR3> specifies the rotation angle of the specified visual trigger area.

Examples VISual:AREA1:ROTAtion 45 rotates visual trigger area 1 by 45 degrees.
VISua1:AREA1: ROTAtion? might return :VISUAL:AREA1: ROTATION 0.0000 , indicating that visual trigger area is not rotated.

\section*{VISual:AREA<x>:SHAPE}

Selects the initial shape of area \(\langle x\rangle\).

Group Trigger

Syntax VISual:AREA<x>:SHAPE \{HEXAgon|RECTangle|TRAPezoid|TRIAng1e\} VISual:AREA<x>:SHAPE?

Related Commands VISual:AREA \(<x>\) :DISplay, VISual:AREA \(<x>\) :VERTICES

Arguments HEXAGON sets the initial shape of the selected area to a hexagon.
RECTANGLE sets the initial shape of the selected area to a rectangle.
TRAPEZOID sets the initial shape of the selected area to a trapezoid.
TRIANGLE sets the initial shape of the selected area to a triangle.

Examples VISual:AREA2:SHAPE RECTANGLE sets the initial shape of area 2 to a rectangle.
VISual:AREA3:SHAPE? might return :VISUAL:AREA3:SHAPE HEXAGON, indicating that the shape of area 3 is a hexagon. This can be used with an eye diagram.

\section*{VISual:AREA〈x>:SHOWLOGic}

Causes area Source and Operation indicators to be hidden or displayed on screen. Queries the status of this feature.

All areas are turned on and off together. The \(<\mathrm{x}>\) is reserved for future use.

Group Trigger

Syntax VISual:AREA<x>:SHOWLOGic \{ON|OFF\}
VISual:AREA<x>:SHOWLOGic?

Related Commands VISual:AREA \(<\mathrm{x}>\) :DISplay

Arguments ON shows the definition (source, operation, and area label) of each area within the graphical display of that area.

OFF removes the definitions from the display.

Examples VISual:AREA:SHOWLOGic ON sets the oscilloscope to display the definitions for the areas.

VISual:AREA:SHAPE? might return :VISUAL:AREA:SHOWLOGIC OFF, indicating that the area definitions are not displayed.

\section*{VISual:AREA<x>:SOURCE<1..1>}

Selects or queries the signal source for the area \(\langle\mathrm{x}\rangle\). The source can only be an analog channel.

You can enter the command as VISUAL:AREA<x>:SOURCE or VISUAL:AREA<x>:SOURCE1.

Group Trigger

Syntax VISual:AREA<x>:SOURCE<1..1> \{WFMCH1|WFMCH2|WFMCH3|WFMCH4\} VISual:AREA<x>:SOURCE<1..1>?

\title{
Related Commands VISual:AREA<x>:OPERATION<1..1>
}

Arguments

Examples VISual:AREA4: SOURCE WFMCH1 indicates that the signal source for area 4 is the channel 1 waveform.

VISual:AREA5:SOURCE? might return :VISua1:AREA5:SOURCE WFMCH4, indicating that the signal source for area 5 is the channel 4 waveform.

\section*{VISual:AREA<x>:VERTICES}

Sets or queries the polygon vertex x and y coordinate values for an area. You must set vertex values in pairs; you can set 3,4 , or 6 pairs (no pentagons are allowed).

Group Trigger

Syntax VISual:AREA<x>:VERTICES \{<NR3>, <NR3>, <NR3>, <NR3>, <NR3>, <NR3> [, <NR3>, <NR3>, <NR3>, <NR3> [, <NR3>, <NR3>]]\}
VISual:AREA<x>:VERTICES?

Related Commands VISual:AREA \(<\mathrm{x}>\) :DISplay, VISual:AREA \(<\mathrm{x}>:\) SHAPE

Arguments \(<\) NR3> is entered in pairs; the first value is \(x\) (time) and the second value is \(y\) (amplitude). The units of measure are determined by the oscilloscope settings; the amplitude is generally in volts.

Examples VISual:AREA:3:VERTICES "-1.0e-9, -1.0e-3, -1.0e-9, 1.0e-3, \(1.0 e-9,1.0 e-3,1.0 e-9,-1.0 e-3\) " defines area 3 as a rectangle that is 200 ns wide by 200 mV high, centered on the display.

VISual:AREA:3:VERTICES? might return"-1.0e-9, -1.0e-3, -1.0e-9, \(1.0 \mathrm{e}-3,1.0 \mathrm{e}-9,1.0 \mathrm{e}-3,1.0 \mathrm{e}-9,-1.0 \mathrm{e}-3\) ", indicating that area 3 is defined as in the preceding example.

\section*{VISual:AREA<x>:WIDTH}

This command sets or queries the width of the specified visual trigger area. The area is specified by x . The value of x can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:WIDTH <nr3> VISual:AREA<X>:WIDTH?

Arguments <NR3> specifies the width of the visual trigger area.

Examples VISual:AREA \(<\mathrm{x}>\) :WIDTH 0.0000045 sets the width to \(4.5 \mu \mathrm{~s}\). VISual:AREA<x>:WIDTH? might return :VISUAL:AREA1:WIDTH 6.8000E-6, indicating the width of the area is set to \(6.8 \mu \mathrm{~s}\).

\section*{VISual:AREA<x>:XPOSition}

This command sets or queries horizontal position of specified visual trigger area. The area is specified by x . The value of x can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:XPOSition <nr3> VISual:AREA<x>:XPOSition?

Arguments <NR3> specifies the horizontal position of the center of the visual trigger area.

Examples VISua1:AREA1:XPOSition -6.9 sets the horizontal center of the visual trigger area to \(-6.9 \mu \mathrm{~s}\) from the trigger point.

VISual:AREA1:XPOSition? might return :VISUAL:AREA1:XPOSITION \(-5.1000 \mathrm{E}-6\), indicating that the x position of the area is \(-5.1 \mu \mathrm{~s}\) from the trigger point.

\section*{VISual:AREA<x>:YPOSition}

This command sets or queries vertical position of the specified visual trigger area. The area is specified by x . The value of x can range from 1 to 8 .

Group Trigger

Syntax VISual:AREA<x>:YPOSition <nr3> VISual:AREA<x>:YPOSition?

Arguments <NR3> specifies the vertical position of the center of the visual trigger area.

Examples VISual:AREA1:YPOSition 0.5 sets the vertical position of the area to 500 mV .
VISual:AREA1:YPOSition? might return :VISUAL:AREA1:YPOSITION
\(532.0000 \mathrm{E}-3\), indicating that the vertical position of the area is set to 532 mV .

\section*{VISual:ASPECTratio}

This command sets or queries the aspect ratio setting of the visual trigger system.

Group Trigger

Syntax VISual:ASPECTratio \{<NR1>|OFF|ON\} VISual:ASPECTratio?

Arguments <NR1> \(=0\) disables the function; any other value enables it.
OFF disables the function.
ON enables keeping the aspect ratio constant.

Examples VISUAL:ASPECTRATIO ON enables keeping the aspect ratio constant.
VISUAL:ASPECTRATIO? might return :VISUAL:ASPECTRATIO 0, indicating that the aspect ratio will not be kept constant.

\section*{VISual:DELETEAREA (No Query Form)}

This command deletes the specified visual trigger area. The area is specified by x . The value of \(x\) can range from 1 to 8 .

Group Trigger

Syntax VISual:DELETEAREA <1-8>

Examples VISUAL: DELETEAREA 3 deletes visual trigger area 3.

\section*{VISual:ENAble}

Enables or disables the visual triggering. Queries the status (on or off) of the visual triggering. This does not refer to the option key.

Group Trigger

Syntax VISual:ENAb7e \{ON|OFF\} VISual:ENAble?

Arguments \(\quad \mathrm{ON}\) enables the visual triggering feature.
OFF disables the visual triggering feature.

Examples VISUAL: ENABLEON turns on the visual triggering.
VISUAL: ENABLE? might return :VISUAL: ENABLE OFF, indicating that visual triggering will not occur.

\section*{VISual:FILE:RECALL (No Query Form)}

Recalls a file of Visual Trigger Parameters, updating the database appropriately. The file is stored in the form of programmer interface commands, which are human readable.

Group Trigger

Syntax VISual:FILE:RECALL <string>

Related Commands VISual:FILE:SAVE

Arguments <string> is the complete path and name of the visual trigger parameters file you want to recall. This can be on a local or network drive.

Examples VISUAL:FILE:RECALL
C: \users \username\Tektronix\TekScope\Visua1Setups \} visualsetup3.txt" provides the name and location of the visual trigger parameters file that will be recalled.

\section*{VISual:FILE:SAVE (No Query Form)}

Saves only the Visual Trigger Parameters, to a file that you name in the \(<\) string \(>\). The file is stored in the form of programmer interface commands, which are human readable.

Group Trigger

Syntax VISual:FILE:SAVE <string>

Related Commands VISual:FILE:RECALL
\(\begin{array}{ll}\text { Arguments } & \begin{array}{l}\text { <string> is the complete path and file name where you want to store the vis } \\ \text { trigger parameters. This can be a local or network drive. }\end{array} \\ \text { Examples } \quad \begin{array}{l}: \text { VISUAL: FILE:SAVE } \\ \text { "C: \users } \backslash \text { username } \backslash \text { Tektronix } \backslash \text { TekScope } \backslash \text { Vi sual setups } \backslash \\ \text { mysetup.txt" sets that path and file name as the place to store the visual } \\ \text { trigger parameters. }\end{array}\end{array}\)

\section*{*WAI (No Query Form)}

The *WAI (Wait) command (no query form) prevents the instrument from executing further commands or queries until all pending commands that generate an OPC message are complete. This command allows you to synchronize the operation of the instrument with your application program. For more information, refer to Synchronization Methods.

Group Status and Error

Syntax *WAI

Related Commands BUSY?, *OPC

Examples *WAI prevents the instrument from executing any further commands or queries until all pending commands that generate an OPC message are complete.

\section*{WAVFrm? (Query Only)}

This query-only command returns WFMOutpre? and CURVe? data for the waveform as specified by the DATa:SOUrce command. This command is equivalent to sending both WFMOutpre? and CURVe?, with the additional provision that the response to WAVFrm? is guaranteed to provide a synchronized preamble and curve.

Group Waveform Transfer

\section*{Syntax WAVFrm?}

Related Commands CURVe, DATa:SOUrce, WFMOutpre?

Examples WAVFRM? might return the waveform data as: :WFMOUTPRE:BIT_NR
8;BN_FMT RI;BYT_NR 1; BYT_OR MSB;ENCDG ASC;NR_PT
500;PT_FMT Y; PT_ORDER LINEAR;PT_OFF 0;XINCR 400.0000e-12; XZero 0.0000;XUNIT "s";YMULT 4.0000e-3; YOFF 0.0000;YZERO 0.0000;YUNIT "V"; WFID "Ch1,DC coupling, \(100.0 \mathrm{mV} / \mathrm{div}, 200.0 n s / d i v, 5000\) points,samp1 mode"; :CURVE51, 50, 51, 48, 51, 48, 50, 49, 51, 49, 51, 48, 51, 48, 51, 49, \(50,49,50,48,49,49,52,49,49,50,50,48,50,49,49\), \(49,49,49,50,47,49,47,50,48,49,48,50,48,49,47\), \(49,48,51,48,49,47,50,48,50,47,51,47,49,48,48\), \(48,50,46,50,46,48,45,48,47,49,47,49,48,49,48\), \(49,45,49,47,48,46,48,48,49,45,49,45,47,46,46\), \(46,49,47,48,46,48,46,48,47,47,46,47,47,48,46\), \(48,45,48,46,47,46,47,47,46,45,46,45,47,47,47\), \(46,46,44,47,45,45,45,46,43,46,45,46,44,46,45\), \(48,45,45,44,46,45,46,45,45,45,45,43,45,44,46\), \(44,47,44,44,44,45,43,44,44,45,44,46,43,46,43\), \(45,44,45,44,45,41,44,43,45,42,44,43,44,43,44\), \(42,43,42,44,41,44,41,44,42,43,42,43,42,45,42\), \(43,41,42,41,43,42,44,42,43,42,43,40,42,40,42\), \(40,42,41,43,41,42,41,42,39,41,41,42,42,43,41\), \(42,39,41,39,41,40,41,40,41,39,41,38,41,39,41\), \(38,42,39,41,37,40,38,40,38,39,38,39,38,41,39\), \(39,38,40,37,38,37,38,38,39,38,40,36,39,37,39\), 37,39,37,39,36,40,38,38,35,38,36,38,37,39,37, \(38,37,38,37,37,36,38,35,38,36,37,36,38,36,38\), \(35,39,34,36,36,36,35,38,35,36,34,37,34,37,35\), 37,36,37,35,37,35,36,34,36,33,36,35,36,34,36, \(33,34,33,34,34,34,34,36,33,36,34,36,33,34,33\), \(34,32,34,32,34,33,33,31,33,32,34,32,33,32,32\), \(31,33,31,31,32,33,31,32,31,32,30,32,30,32,31\),
\(31,30,31,30,31,29,31,29,32,31,31,30,30,29,30\), \(29,30,30,31,29,30,28,30,29,31,28,30,28,30,29\), 29, 27, 29, 28, 29, 27, 30, 27, 30, 26, 28, 28, 29, 27, 28, \(27,28,27,28,28,28,27,28,27,28,26,28,26,28,26\), \(26,25,27,25,28,27,28,26,25,25,26,25,25,25,25\), 25, 26, 25, 27, 25, 25, 24, 25, 25, 26, 24, 26, 24, 24, 23, 25,24,24,22,25,23,24,23,24,22,24,22,23,22,25, \(24,24,21,23,22,22,21,24,22,22,22,22,21,22,20,23,21,21,20\).

\section*{WAVFRMStream? (Query Only)}

This query only command returns WFMQUTPRE? and CURVESTREAM? data for the waveforms specified by the DATASOURCE command. This command is similar to sending both WFMOUTPRE? and CURVESTREAM?, with the additional provision that each CURVESTREAM response to WAVFRMS? has a WFMOUTPRE response prepended to it. This helps guarantee a continuous synchronized preamble and curve.

Group Waveform Transfer

Syntax WAVFRMStream?

Returns WFMOUTPRE? and CURVESTREAM? query responses.

Examples Single data source ( 1 channel, record length 1000). WAVFRMSTREAM? might return :WFMOUTPRE <WFMOUTPRE branch query>;:CURVE \#41000<binary data>;<newline>
:WFMOUTPRE <WFMOUTPRE branch query>;:CURVE \#41000<binary data>;<newline>

Multiple data source (record length 1000). WAVFRMSTREAM? might return ( \(\mathrm{wf}<\mathrm{x}>\) denotes one of each waveform source specified by :DATA: SOURCE WF1,WF2,WF3)
:WFMOUTPRE <WF1 WFMOUTPRE branch query>;:CURVE \#41000<binary data>;<newline>
:WFMOUTPRE <WF2 WFMOUTPRE branch query>;:CURVE \#41000<binary data>; <newline>
:WFMOUTPRE <WF3 WFMOUTPRE branch query>;:CURVE \#41000<binary data>; <newline>
:WFMOUTPRE <WF1 WFMOUTPRE branch query>;:CURVE \#41000<binary data>; <newline>
:WFMOUTPRE <WF2 WFMOUTPRE branch query>;:CURVE \#41000<binary data>; <newline>
:WFMOUTPRE <WF3 WFMOUTPRE branch query>;:CURVE \#41000<binary data>; <newline>

\section*{WFMInpre? (Query Only)}

This query-only command returns the waveform formatting specification to be applied to the next incoming CURVe command data.

Group Waveform Transfer

Syntax WFMInpre?

Related Commands WFMOutpre?

Examples WFMINPRE? might return the waveform formatting as :WFMINPRE:BIT_NR 8;BN_FMTRI;BYT_NR 1; BYT_OR MSB;ENCDG BIN;NR_PT 500;PT_FMT Y; PT_OFF 0;XINCR 2.0000E-6;XZERO 1.7536E-6; XUNIT "s";YMULT \(1.0000 \mathrm{E}-3\);YOFF 0.0000 ; YZERO 0.0000 ;YUNIT " V ".

\section*{WFMInpre:BIT_Nr}

This command sets or queries the number of bits per binary waveform point for the waveform, as specified by the DATa:DESTination command. This specification is meaningful only when WFMInpre:ENCdg is set to BIN.
```

Group Waveform Transfer
Syntax WFMInpre:BIT_Nr <NR1>
WFMInpre:BIT_Nr?
Related Commands DATa:DESTination, WFMInpre:ENCdg, WFMInpre:BYT_Nr, WFMOutpre:BIT_Nr

```

Arguments

Examples
WFMINPRE:BIT_NR 16 sets the number of bits per waveform point to 16 , for incoming RI and RP binary format data.

WFMINPRE:BIT_NR? might return :WFMINPRE:BIT_NR 8, indicating that incoming RI or RP binary format data uses 8 bits per waveform point.

\section*{WFMInpre:BN_Fmt}

Group Waveform Transfer

Syntax WFMInpre:BN_Fmt \{RI|RP|FP\} WFMInpre:BN_Fmt?

Related Commands WFMOutpre:BN_Fmt

Arguments RI specifies signed integer data point representation.
RP specifies positive integer data point representation.
FP specifies single-precision binary floating point representation.

Examples WFMINPRE:BN_FMT FP specifies that incoming data will be interpreted as single-precision binary floating point numbers.

WFMINPRE:BN_FMT? might return :WFMINPRE:BN_FMT RI, indicating that the incoming data is currently interpreted as signed integers.

\section*{WFMInpre:BYT_Nr}

Group Waveform Transfer

Syntax WFMInpre:BYT_Nr <NR1>
WFMInpre:BYT_Nr?

Related Commands DATa:DESTination, WFMInpre:BN_Fmt, WFMInpre:ENCdg, WFMInpre:BIT_Nr, WFMOutpre:BYT_Nr

Arguments <NR1> is the number of bytes per data point and can be 1,2 (RI, RP) or 4 (FP).

Examples WFMINPRE:BYT_NR 1 sets the number of bytes per incoming waveform data point to 1 , which is the default setting.
WFMINPRE:BYT_NR? might return :WFMINPRE:BYT_NR 2 indicating that there are 2 bytes per incoming waveform data point.

\section*{WFMInpre:BYT_Or}

This command sets or queries which byte of binary waveform data is transmitted first for incoming waveform data when data points require more than one byte. This specification only has meaning when WFMInpre:ENCdg is set to BIN and WFMInpre:BYT_Nr is greater than 1.

Group Waveform Transfer

Syntax WFMInpre:BYT_Or \{LSB|MSB\}
WFMInpre: BYT_Or?

Related Commands WFMInpre:ENCdg, WFMInpre:BYT_Nr, WFMOutpre:BYT_Or

Arguments LSB specifies that the least significant byte will be transmitted first.
MSB specifies that the most significant byte will be transmitted first.

Examples WFMINPRE:BYT_OR MSB sets the most significant incoming byte of incoming waveform data to be transmitted first.

WFMINPRE:BYT_OR? might return :WFMINPRE: BYT_OR LSB, indicating that the least significant incoming CURVe data byte will be transmitted first.

\section*{WFMInpre:ENCdg}

This command sets or queries the type of encoding for incoming waveform data.

Group Waveform Transfer

Syntax WFMInpre:ENCdg \{ASCii|BINary\} WFMInpre: ENCdg?

Related Commands WFMOutpre:ENCdg

Arguments ASCii specifies that the incoming data is in ASCii II format.
BINary specifies that the incoming data is in a binary format whose further interpretation requires knowledge of BYT_NR, BIT_NR, BN_FMT, and BYT_OR.

Examples WFMINPRE:ENCDG ASCii sets the format of incoming waveform data to ASCII format.

WFMINPRE:ENCDG? might return :WFMINPRE: ENCDG BINary, indicating that the incoming waveform data is in binary format.

\section*{WFMInpre:NR_FR? (Query Only)}

This query returns the number of frames to be transferred to the instrument with the CURVe command.

Group Waveform Transfer

Syntax WFMInpre:NR_FR?

Related Commands CURVe, DATa, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre:NR_Pt, WFMOutpre:NR_FR?, WFMOutpre:NR_Pt?

Examples WFMINPRE:NR_FR? will always return :WFMINPRE:NR_FR 1, indicating that there is 1 data frame in the transmitted waveform record.

\section*{WFMInpre:NR_Pt}

This command sets or queries the number of data points that are in the transmitted waveform record.

Group Waveform Transfer

Syntax WFMInpre:NR_Pt <NR1>
WFMInpre:NR_Pt?

Related Commands CURVe, DATa, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre:NR_FR?, WFMOutpre:NR_FR?, WFMOutpre:NR_Pt?

Arguments <NR1> is the number of data points if WFMInpre:PT_Fmt is set to Y. It is the number of min-max pairs if WFMInpre:PT_Fmt is set to ENV.

Examples WFMINPRE:NR_PT 5000 specifies that 5000 data points will be transmitted.
WFMINPRE:NR_PT? might return :WFMINPRE:NR_PT 8000, indicating that there are 8000 data points in the transmitted waveform record.

\section*{WFMInpre:PT_Fmt}

Group Waveform Transfer

Syntax WFMInpre:PT_Fmt \{ENV|Y\}
WFMInpre:PT_Fmt?

Related Commands WFMOutpre:PT_Fmt?

Arguments ENV specifies that the waveform is transmitted in envelope mode as maximum and minimum point pairs. Only Y values are explicitly transmitted. Absolute coordinates are given by:
\[
\begin{aligned}
& \text { Xn }=\text { XZEro }+ \text { XINcr (N-PT_Off) } \\
& \text { Ynmax }=\text { YZEro }+ \text { YMUlt (ynmax }- \text { YOFf) } \\
& \text { Ynmin }=\text { YZEro }+ \text { YMUlt (ynmin }- \text { YOFf) }
\end{aligned}
\]

Y specifies a normal waveform where one ASCII or binary data point is transmitted for each point in the waveform record. Only Y values are explicitly transmitted. Absolute coordinates are given by:
\[
\begin{aligned}
& X n=\text { XZEro }+ \text { XINcr }(\text { N-PT_Off }) \\
& Y n=\text { YZEro }+ \text { YMUlt }(\text { Yn }- \text { YOFf })
\end{aligned}
\]

\section*{Examples}

WFMINPRE: PT_FMT ENV sets the incoming waveform data point format to enveloped.

WFMINPRE: PT_FMT? might return :WFMINPRE:PT_FMT ENV, indicating that the waveform is transmitted as maximum and minimum point pairs.

\section*{WFMInpre:PT_Off}

Group Waveform Transfer

Syntax WFMInpre:PT_Off <NR1>
WFMInpre:PT_Off?

Related Commands DATa:DESTination, DATa:STARt, WFMOutpre:PT_Off?

Arguments \(\quad \begin{aligned} & <\text { NR1> is -(record length }-1) \text { to record length and is the position of the data } \\ & \text { point immediately following the actual trigger. <NR1> is expressed relative }\end{aligned}\)
to DATa:STARt.

Examples WFMINPRE:PT_OFF 1 specifies that the trigger point is the same as the Data:Start point.

WFMINPRE: PT_OFF? might return :WFMINPRE: PT_OFF 0, indicating that the incoming waveform trigger point is the first point in the waveform record.

\section*{WFMInpre:WFId (No Query Form)}

This command (no query form) accepts but ignores the argument. This command is provided only to allow a waveform extracted from the instrument to be easily imported.

Group Waveform Transfer

Syntax WFMInpre:WFId <QString>

Related Commands DATa:DESTination, WFMInpre:BN_Fmt, WFMInpre:ENCdg, WFMOutpre:WFId?

Arguments <QString> must be a valid IEEE-488.2 string (but the contents are ignored).

Examples WFMINPRE:WFID "CH1, DC COUPLING, 2.000V/DIV, 400.0NS/DIV, 500 POINTS, SAMPLE MODE" is a syntactically correct command.

\section*{WFMInpre:XINcr}

This command sets or queries the horizontal interval between incoming waveform points in units specified by WFMInpre:XUNit.

Group Waveform Transfer

Syntax WFMInpre:XINCr <NR3> WFMInpre:XINcr?

Related Commands WFMInpre:XUNit, WFMOutpre:XINcr?

Arguments <NR3> is the horizontal interval representation.

Examples WFMINPRE:XINCR \(3 \mathrm{E}-3\) sets the interval between Incoming waveform points to 3 ms .

WFMINPRE:XINCR? might return :WFMINPRE:XINCR \(1.0000 \mathrm{E}-3\), indicating that if WFMInpre:XUNit is set to " s ", there is a 1 ms interval between incoming waveform points.

\section*{WFMInpre:XUNit}

This command sets or queries the horizontal units of the incoming waveform.

Group Waveform Transfer

Syntax WFMInpre: XUNit <QString> WFMInpre:XUNit?

Related Commands

Arguments

Examples
WFMINPRE:XUNIT "HZ" specifies that the horizontal units for the incoming waveform are hertz.

WFMINPRE:XUNIT? might return :WFMINPRE:XUNIT " s ", indicating that the horizontal units for the incoming waveform are seconds.

\section*{WFMInpre:XZEro}

Group Waveform Transfer

Syntax WFMInpre:XZEro <NR3> WFMInpre:XZEro?

Related Commands

Arguments

Examples WFMINPRE:XZERO 5.7E-6 specifies that the trigger actually occurred \(5.7 \mu \mathrm{~s}\) before the sample designated by WFMInpre:PT_Off.

WFMINPRE:XZERO? might return :WFMINPRE:XZEro 7.5000E-6, indicating that the trigger occurs \(7.5 \mu\) s before the sample designated by WFMInpre:PT_Off.

\section*{WFMInpre:YMUIt}

This command sets or queries the vertical scale factor (in units/digitizing level) for the reference waveform, specified by DATa:DESTination, upon a CURVe command.

Group Waveform Transfer

Syntax WFMInpre:YMU7t <NR3>
WFMInpre:YMUlt?

Related Commands DATa:DESTination, WFMInpre:BYT_Nr, WFMInpre:YUNit

Arguments <NR3> is the vertical scale factor per digitizing level of the incoming waveform points.

Examples WFMINPRE:YMULT 20E-3 specifies that (if WFMInpre:YUNit is "V" and WFMInpre:BYT_Nr is 1 ), the vertical scale is 20 mV /digitizing level ( \(500 \mathrm{mV} / \mathrm{div}\) ).

WFMINPRE: YMULT? might return :WFMINPRE:YMULT \(40.0000 \mathrm{E}-3\), indicating that the vertical scale is 40 mV /digitizing level ( \(1 \mathrm{~V} / \mathrm{div}\) ).

\section*{WFMInpre:YOFf}

Group Waveform Transfer

Syntax WFMInpre:YOFf <NR3> WFMInpre:YOFf?

Related Command
WFMInpre:BYT_Nr, WFMInpre:YMUlt, WFMOutpre:YOFf?

Arguments <NR3> is the vertical offset in digitizing levels.

Examples WFMINPRE:YOFF 50 specifies that the zero reference point for the incoming waveform is 50 digitizing levels ( 2 divisions) above the center of the data range. WFMINPRE:YOFF? might return :WFMINPRE:YOFF 25, indicating the vertical position of the incoming waveform in digitizing levels.

\section*{WFMInpre:YUNit}

This command sets or queries the vertical units of the incoming waveform.

Group Waveform Transfer

Syntax WFMInpre:YuNit <QString> WFMInpre:YUNit?

Related Commands WFMOutpre:YUNit?

Arguments <QString> contains a maximum of three alpha characters that represent the vertical unit of measure for the incoming waveform.

Examples WFMINPRE:YUNIT "PA" specifies that the vertical units for the incoming waveform are Pascal.

WFMINPRE:YUNIT? might return :WFMINPRE:YUNIT "s", indicating the vertical units for the incoming waveform are seconds.

\section*{WFMInpre:YZEro}

This command sets or queries the offset of the incoming waveform in units specified by WFMInpre:YUNit. Variations in this number are analogous to changing the vertical offset of the waveform.

Group Waveform Transfer

Syntax WFMInpre:YZEro <NR3>
WFMInpre:YZEro?

Related Commands

Arguments

Examples WFMINPRE:YZERO \(1.5 \mathrm{E}+0\) specifies that the zero reference point for the incoming waveform is 1.5 V below the center of the data range (given that WFMInpre:YuNit is set to V).

WFMINPRE:YZERO? might return :WFMINPRE:YZEro 7.5000E-6, indicating that the zero reference for the incoming waveform is \(7.5 \mu \mathrm{~V}\) below the center of the data range (given that WFMInpre: YUNit is set to V ).

\section*{WFMOutpre? (Query Only)}

This query-only command queries the waveform formatting data for the waveform specified by the DATa:SOUrce command. The preamble components are considered to be of two types; formatting and interpretation. The formatting components are: ENCdg, BN_Fmt, BYT_Or, BYT_Nr, BIT_Nr. The interpretation components are derived from the DATa: source specified waveform.

Group Waveform Transfer

Syntax WFMOutpre?
\begin{tabular}{|c|c|}
\hline Examples & WFMOUTPRE? might return the waveform formatting data as: :WFMOUTPRE:BYT_NR 2;BIT_NR 16;ENCDG BINARY;BN_FMT RI;BYT_OR MSB;WFID "Ch1, DC coupling, 200.OmV/div, 10.00us/div, 1250 points, Sample mode";NR_PT 1000;PT_FMT Y;XUNIT "s";XINCR 80.0000E-9;XZERO 0.0000;PT_OFF 625;YUNIT "V";YMULT 31.2500E-6;YOFF 0.0000;YZERO 0.0000;NR_FR 3. \\
\hline
\end{tabular}

\section*{WFMOutpre:BIT_Nr}

Group Waveform Transfer

Syntax WFMOutpre:BIT_Nr<NR1> WFMOutpre:BIT_Nr?

Related Commands DATa:SOUrce, WFMOutpre:BN_Fmt, WFMOutpre:ENCdg

Arguments <NR1> number of bits per data point can be \(8,16,32\) or 64 .

Examples

\section*{WFMOutpre:BN_Fmt}

Group

Syntax WFMOutpre:BN_Fmt \{RI|RP|FP\} WFMOutpre: BN_Fmt?

DATa:SOUrce

Arguments

Examples

\section*{WFMOutpre:BYT_Nr}

This command sets or queries the binary field data width for the waveform specified by the DATa:SOUrce command. Note that values will be constrained according to the underlying waveform data. This specification is only meaningful when WFMOutpre:ENCdg is set to BIN, and WFMOutpre:BN_Fmt is set to either RI or RP.

Group Waveform Transfer

Syntax WFMOutpre:BYT_Nr <NR1>
WFMOutpre:BYT_Nr?

\author{
Related Commands DATa:SOUrce, WFMOutpre:BN_Fmt, WFMOutpre:ENCdg
}

Arguments <NR1> is the number of bytes per data point and can be \(1,2,4\) or 8 . A value of 1 or 2 bytes per waveform point indicates channel data; 4 bytes per waveform point indicate math data; 8 bytes per waveform point indicate pixel map (DPO) data.

Examples WFMOUTPRE:BYT_NR 1 sets the number of bytes per outgoing waveform data point to 1 , which is the default setting.

WFMOUTPRE:BYT_NR? might return :WFMOUTPRE: BYT_NR 2, indicating that there are 2 bytes per outgoing waveform data point.

\section*{WFMOutpre:BYT_Or}

\author{
Group Waveform Transfer \\ Syntax WFMOutpre:BYT_Or \{LSB|MSB\} \\ WFMOutpre:BYT_Or? \\ Related Commands WFMOutpre:ENCdg
}

Arguments LSB specifies that the least significant byte will be transmitted first. MSB specifies that the most significant byte will be transmitted first.

Examples WFMOUTPRE:BYT_OR MSB sets the most significant outgoing byte of waveform data to be transmitted first.

WFMOUTPRE: BYT_OR? might return :WFMOUTPRE:BYT_OR LSB, indicating that the least significant data byte will be transmitted first.

\section*{WFMOutpre:ENCdg}

Group Waveform Transfer

Syntax WFMOutpre:ENCdg \{ASCii|BINary\} WFMOutpre: ENCdg?

Related Commands DATa:ENCdg, WFMOutpre:BYT_Nr, WFMOutpre:BYT_Or, WFMOutpre:BIT_Nr, WFMOutpre:BN_Fmt

Arguments ASCii specifies that the outgoing data is to be in ASCII format. Waveforms internally stored as integers will be sent as \(<\) NR1 \(>\) numbers, while those stored as floating point will be sent as \(<\) NR \(3>\) numbers.

BINary specifies that outgoing data is to be in a binary format whose further specification is determined by WFMOutpre:BYT_Nr, WFMOutpre:BIT_Nr, WFMOutpre:BN_Fmt and WFMOutpre:BYT_Or.

Examples WFMOUTPRE: ENCDG ASCii specifies that the outgoing waveform data will be sent in ASCII format.

WFMOUTPRE:ENCDG? might return :WFMOUTPRE:ENCDG BINary, indicating that outgoing waveform data will be sent in binary format.

\section*{WFMOutpre:NR_FR? (Query Only)}

This query-only command returns the number of frames for the DATa:SOUrce waveform transmitted in response to a CURVe? query.

\author{
Group Waveform Transfer \\ Syntax WFMOutpre:NR_FR? \\ Related Commands CURVe, DATa, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre:NR_FR?, WFMInpre:NR_Pt, WFMOutpre:NR_Pt? \\ Examples WFMOUTPRE:NR_FR? might return :WFMOUTPRE:NR_FR 500, indicating that there are 500 data frames to be sent.
}

\section*{WFMOutpre:NR_Pt? (Query Only)}

This query-only command returns the number of points for the DATa:SOUrce waveform that will be transmitted in response to a CURVe? query.

Group Waveform Transfer

Syntax WFMOutpre:NR_Pt?

Related Commands CURVe, DATa, DATa:STARt, DATa:STOP, SAVe:WAVEform, SAVe:WAVEform:FILEFormat, WFMInpre:NR_FR?, WFMInpre:NR_Pt, WFMOutpre:NR_FR?

Examples WFMOUTPRE:NR_PT? might return :WFMOUTPRE:NR_PT 5000, indicating that there are 5000 data points to be sent.

\section*{WFMOutpre:PT_Fmt? (Query Only)}

This query-only command returns the point format for the waveform specified by the DATa:SOUrce command. The format specifies a set of equations describing how the scale factors in the preamble are used to give meaning to the CURVe data points.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:PT_Fmt?

Related Commands CURVe, DATa:SOUrce

Examples WFMOUTPRE:PT_FMT? might return :WFMOutpre:PT_Fmt ENV, indicating that the waveform data is a series of min-max pairs.

\section*{WFMOutpre:PT_Off? (Query Only)}

This query-only command returns the trigger point relative to DATa:STARt for the waveform specified by the DATa:SOUrce command.

NOTE. This returned value is the point immediately following the actual trigger.

Group Waveform Transfer

Syntax WFMOutpre:PT_Off?

Related Commands DATa:SOUrce, DATa:STARt, WFMOutpre:XZEro?

Examples WFMOUTPRE:PT_OFF? might return :WFMOUTPRE:PT_OFF 251 specifying that the trigger actually occurred between points 250 and 251.

\section*{WFMOutpre:PT_ORder? (Query Only)}

This query-only command specifies whether the source waveform is Fast Acquisition. A Fast Acquisition waveform is stored as a 252 (vertical) by 1000 (horizontal) point bitmap. Each point represents display intensity for that screen location. Only CURVe? query functions are allowed on Fast Acquisition waveforms.

When the WFMOutpre:PT_OR query returns Column, this indicates that the source is a Fast Acquisition waveform (and that each of 1000 possible horizontal columns being transmitted contains 252 vertical points). When the WFMOutpre:PT_OR? query returns Linear, this indicates that the source is not a Fast Acquisition waveform (and that each horizontal column being sent contains only one vertical point). Note that waveform points are transmitted in the following order: top to bottom, then left to right.

Group Waveform Transfer

Syntax WFMOutpre:PT_ORder?

Related Commands DATa:SOUrce

Examples WFMOUTPRE:PT_ORDER? might return :WFMOUTPRE:PT_OR COL specifying that the waveform designated by the DATa:SOUrce waveform is a Fast Acquisition waveform.

WFMOUTPRE:PT_ORDER? might return :WFMOUTPRE:PT_OR LINEAR, indicating that the source waveform is a non-Fast Acquisition waveform.

\section*{WFMOutpre:WFId? (Query Only)}

This query-only command returns a string describing several aspects of the acquisition parameters for the waveform specified by the DATa:SOUrce command.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

\section*{Syntax WFMOutpre:WFId?}

\section*{Related Commands DATa:SOUrce}

Returns <QString> contains the following comma-separated fields documented in the following tables:

Table 2-51: Waveform Suffixes
\begin{tabular}{|c|c|c|}
\hline Field & Description & Examples \\
\hline Source & The source identification string as it appears in the front panel scale factor readouts. & \begin{tabular}{l}
"CH1-4" \\
"Math1-3 \\
"Ref1-4"
\end{tabular} \\
\hline Coupling & A string describing the vertical coupling of the waveform (the Source1 waveform in the case of Dual Waveform Math). & "AC coupling" "DC coupling" "GND coupling" \\
\hline Vert Scale & A string containing the vertical scale factor of the unzoomed waveform. The numeric portion will always be four digits. The examples cover all known internal units. & " \(100.0 \mathrm{mV} / \mathrm{div}^{\prime}\) " 20.00 dB/div" "45.00 deg/div" "785.4 mrad/div" " \(500.0 \mu \mathrm{Vs} / \mathrm{div} "\) "10.00 kV/s/div" "200.0 mV/div" " 50.00 unk/div" \\
\hline Horiz Scale & A string containing the horizontal scale factor of the unzoomed waveform. The numeric portion will always be four digits. The examples cover all known internal units. & \begin{tabular}{l}
"100 ms/div" \\
"10.00 kHz/div" \\
" 50.00 c/div"
\end{tabular} \\
\hline Record Length & A string containing the number of waveform points available in the entire record. The numeric portion is given as an integer. & "500 points" "500000 points" \\
\hline Acquisition Mode & A string describing the mode used to acquire the waveform. & \begin{tabular}{l}
"Sample mode" \\
"Pk Detect mode" \\
"Hi Res mode" \\
"Envelope mode" \\
"Average mode"
\end{tabular} \\
\hline
\end{tabular}

Examples WFMOUTPRE:WFID? might return :WFMOUTPRE:WFID "Ch1, DC coupling, \(100.0 \mathrm{mvolts} / \mathrm{div}, 500.0 \mu \mathrm{~s} / \mathrm{div}, 500\) points, Hi Res mode".

\section*{WFMOutpre:XINcr? (Query Only)}

This query-only command returns the horizontal point spacing in units of WFMOutpre:XUNit for the waveform specified by the DATa:SOUrce command. This value corresponds to the sampling interval.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:XINcr?

Related Commands DATa:SOUrce, WFMOutpre:XUNit?

Examples WFMOUTPRE:XINCR? might return :WFMOUTPRE:XINCR 10.0000E-6, indicating that the horizontal sampling interval is \(10 \mu \mathrm{~s} /\) point ( \(500 \mu \mathrm{~s} / \mathrm{div}\) ).

\section*{WFMOutpre:XUNit? (Query Only)}

This query-only command returns the horizontal units for the waveform specified by the DATa:SOUrce command.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:XUNit?

Related Commands DATa:SOUrce

Examples WFMOUTPRE:XUNIT? might return :WFMOUTPRE:XUNIT "HZ", indicating that the horizontal units for the waveform are in Hertz.

\section*{WFMOutpre:XZEro? (Query Only)}

This query-only command returns the sub-sample time between the trigger sample (designated by PT_OFF) and the occurrence of the actual trigger for the waveform specified by the DATa:SOUrce command. This value is in units of WFMOutpre:XUNit.

An error is reported if the DATa:SOUrce waveform does not exist.

NOTE. During steady state operation, when all control changes have settled and triggers are arriving on a regular basis, this is the only part of the preamble that changes on each acquisition.

Group Waveform Transfer

Syntax WFMOutpre:XZEro?

Related Commands DATa:SOUrce, WFMOutpre:XUNit?

Examples WFMOUTPRE:XZERO? might return :WFMOUTPRE:XZERO 5.6300E-9, indicating that the trigger actually occurred 5.63 ns before the trigger sample.

\section*{WFMOutpre:YMUIt? (Query Only)}

This query-only command returns the vertical scale factor per digitizing level in units specified by WFMOutpre:YUNit for the waveform specified by the DATa:SOUrce command. For those formats in which WFMOutpre:BYT_Nr is important (all non-floating point formats), WFMOutpre:YMUlt? must take the location of the binary point implied by BYT_NR into consideration.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:YMU7t?

Related Commands DATa:SOUrce

Examples WFMOUTPRE:YMULT? might return :WFMOUTPRE:YMULT 4.0000E-3, indicating that the vertical scale for the corresponding waveform is \(100 \mathrm{mV} / \mathrm{div}\).

\section*{WFMOutpre:YOFf? (Query Only)}

This query-only command returns the vertical offset in digitized levels for the waveform specified by the DATa:SOUrce command. For those formats in which BYT_NR is important (all non-floating point formats), this command must take the location of the binary point implied by WFMOutpre:BYT_Nr into consideration.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:YOFf?

Related Commands DATa:SOUrce, WFMOutpre:BYT_Nr

Examples WFMOUTPRE:YOFF? might return :WFMOUTPRE:YOFF -50.0000E+0, indicating that the position indicator for the waveform was 50 digitizing levels ( 2 divisions) below center screen.

\section*{WFMOutpre:YUNit? (Query Only)}

This query-only command returns the vertical units for the waveform specified by the DATa:SOUrce command.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:YuNit?

Related Commands DATa:SOUrce

Examples WFMOUTPRE:YUNIT? might return :WFMOUTPRE:YUNIT "dB", indicating that the vertical units for the waveform are measured in decibels.

\section*{WFMOutpre:YZEro? (Query Only)}

This query-only command returns the vertical offset in units specified by WFMOutpre:YUNit? for the waveform specified by the DATa:SOUrce command.

An error is reported if the DATa:SOUrce waveform does not exist.

Group Waveform Transfer

Syntax WFMOutpre:YZEro?

Related Commands DATa:SOUrce, WFMOutpre:YUNit?
```

Examples WFMOUTPRE:YZERO? might return :WFMOUTPRE:YZERO -100.0000E-3, indicating that vertical offset is set to -100 mV .

```

\section*{Z00m}

\section*{Arguments}

RESET resets the zoom transforms to default values for all traces.
RESETLi ve resets the zoom transforms to default values for live traces.
\begin{tabular}{|c|c|}
\hline Examples & zOOM RESET resets the zoom transforms to default values for all traces. \\
\hline & ZOOM? might return :ZOOM:MODE 0;GRATICULE:SIZE 80;SPLIT \\
\hline & EIGHTYTWENTY:ZOOM:SCROLL:DIRECTION STOP; LOCK 0;SPEED \\
\hline & 1:ZOOM:ZOOM1:STATE 1; SCROLLLOCK 1;CH1:HORIZONTAL:POSITION \\
\hline & 50.0000; SCALE 5:ZOOM:ZOOM1:CH1:VERTICAL:POSTION0.0000; \\
\hline & SCALE 1.0000:ZOOM:ZOOM1:CH2:HORIZONTAL:POSITION \\
\hline & 50.0000;SCALE 5:ZOOM:ZOOM1:CH2:VERTICAL:POSITION 0.0000; \\
\hline & SCALE 1.0000:ZOOM:ZOOM1:CH3:HORIZONTAL:POSITION 50.0000; \\
\hline & SCALE 5:ZOOM:ZOOM1:CH3:VERTICAL:POSITION 0.0000; SCALE \\
\hline & 1.0000:ZOOM:ZOOM1:CH4:HORIZONTAL:POSITION 50.0000; \\
\hline & SCALE 5:ZOOM:ZOOM1:CH4:VERTICAL:POSITION 0.0000;SCALE \\
\hline & 1.0000:ZOOM:ZOOM1:MATH1:HORIZONTAL:POSITION 50.0000; \\
\hline & SCALE 5:ZOOM:ZOOM1:MATH1:VERTICAL:POSITION 0.0000;SCALE \\
\hline & 1.0000:ZOOM:ZOOM1:MATH2:HORIZONTAL:POSITION 50.0000; SCALE \\
\hline & 5:ZOOM:ZOOM1:MATH2:VERTICAL:POSITION 0.0000; \\
\hline
\end{tabular}

\section*{ZOOm:GRAticule:SIZE}

This command sets or queries the size in percent, of the Zoom (lower) graticule.

Group Zoom

Syntax Zoom:GRAticule:SIZE \(\{50|80| 100\}\) zoom:GRAticule:SIZE?

Arguments 50 sets the size of the Zoom graticule to \(50 \%\).
80 set the size of the Zoom graticule to \(80 \%\).
100 sets the size of the Zoom graticule to \(100 \%\).

Examples ZOOM:GRATICULE:SIZE 100 sets the zoom graticule size to \(100 \%\).
ZOOM:GRATICULE:SIZE? might return :ZOOM:GRATICULE:SIZE 100, indicating that the zoom graticule size is set to \(100 \%\).

\section*{ZOOm:HORizontal:POSition}

This command sets or queries the horizontal position around which the zoom waveform is displayed. It is freely movable within the confines of the acquired waveform \((0 \%\) to \(100 \%)\) and measured from left to right of the acquired waveform.

Group Zoom

Syntax zoom:HORizontal:POSition <NR3> zoom:HORizontal:POSition?

Arguments <NR3> is a value from 0 to 100.00 and is the percent of the waveform that is to the left of screen center, when the zoom factor is \(1 \times\) or greater.

Examples ZOOM:HORIZONTAL:POSITION 50 sets the horizontal position to 50 .
ZOOM: HORIZONTAL: POSITION? might return :ZOOM:HORIZONTAL: POSITION 23.90000, indicating that the horizontal position is set to 23.9.

\section*{ZOOm:HORizontal:SCAle}

This command sets or queries the zoom horizontal scale factor around which the zoom waveform is displayed.

Group Zoom
```

Syntax zoom:HORizontal:SCA1e <NR3>
ZOOm:HORizontal:SCA1e?

```

Arguments <NR3> is the amount of expansion in the horizontal direction in 1-2-5 increments.

Examples ZOOM: HORIZONTAL:SCALE 5 sets the horizontal scale to 5 .
ZOOM: HORIZONTAL:SCALE? might return :ZOOM:HORIZONTAL:SCALE 10, indicating that the horizontal scale is set to 10 .

\section*{ZOOm:MATH<x>:HORizontal:POSition}

This command sets or queries the horizontal position of the specified math waveform.

Group Zoom

Syntax zoom:MATH<x>:HORizontal:POSition <NR3> ZOOm:MATH<x>:HORizontal:POSition?

Arguments <NR3> is a value from 0 to 100.00 and is the percent of the waveform that is to the left of screen center, when the zoom factor is \(1 \times\) or greater.

Examples ZOOM:MATH1:HORIZONTAL:POSITION 50 sets the horizontal position of the specified Math 1 waveform to 50 .

ZOOM:MATH1:HORIZONTAL:POSITION? might return :ZOOM:MATH1:HORIZONTAL:POSITION 23.9000, indicating that the horizontal position of the specified Math 1 waveform is set to 23.9.

\section*{ZOOm:MATH<x>:HORizontal:SCAle}

This command sets or queries the zoom horizontal scale factor of the specified math waveform.

Group Zoom

Syntax ZOOm:MATH<x>:HORizontal:SCAle <NR3>
ZOOm:MATH<x>:HORizontal:SCA1e?

Arguments <NR3> is the amount of expansion in the horizontal direction in 1-2-5 increments.

Examples ZOOM:MATH1:HORIZONTAL:SCALE 10 sets the horizontal scale factor of the specified Math 1 waveform to 10 .

ZOOM:MATH1:HORIZONTAL:SCALE? might return :ZOOM:MATH1:HORIZONTAL:SCALE 5, indicating that the horizontal scale factor of the specified Math 1 waveform to 5 .

\section*{ZOOm:MATH<x>:VERTical:POSition}

This command sets or queries the vertical position of the specified math waveform.

Group Zoom

Syntax zoom:MATH<x>:VERTical:POSition <NR3> zoom:MATH<x>:VERTica1:POSition?

Arguments <NR3> is the vertical position, expressed in divisions.

Examples ZOOM:MATH1:VERTICAL: POSITION 5 sets the vertical l position of the specified Math 1 waveform to 5.

ZOOM:MATH1:VERTICAL:POSITION? might return :ZOOM:MATH1:VERTICAL:POSITION 340.0000E-3, indicating that the vertical position of the specified Math 1 waveform is set to 0.34 .

\section*{ZOOm:MATH<x>:VERTical:SCAle}

This command sets or queries the zoom vertical scale of the specified math waveform.

Group Zoom

Syntax zoom:MATH<x>:VERTical:SCATe <NR3> zoom:MATH<x>:VERTical:SCATe?

Arguments <NR3> sets the horizontal scale factor of the specified Math 1 waveform to 10 .

Examples ZOOM:MATH1:VERTICAL:SCALE 5 sets the vertical scale factor of the specified Math 1 waveform to 5 .

ZOOM:MATH1:VERTICAL:SCALE? might return :ZOOM:MATH1:VERTICAL:SCALE 2.0000, indicating that the vertical scale factor of the specified Math 1 waveform is set to 2 .

\section*{ZOOm:MODe}

This command turns Zoom mode on or off. The Zoom query returns the current state of Zoom mode. This command is equivalent to pressing the ZOOM button located on the front panel.

Group Zoom

Syntax zoom: MODe \{ON|OFF|<NR1>\}
zoom:MODe

Arguments ON turns on Zoom mode.
OFF turns off Zoom mode.
<NR1> = 0 turns off Zoom mode; any other value turns on Zoom mode.

Examples ZOOM: MODE OFF turns off Zoom mode.
ZOOM:MODE? might return :ZOOM:MODE 1, indicating that Zoom mode is currently turned on.

\section*{ZOOm:REF<x>:HORizontal:POSition}

This command sets or queries the horizontal position of the specified reference waveform.

Group Zoom

Syntax ZOOm:REF<X>:HORizontal:POSition <NR3> ZOOM:REF<X>:HORizontal:POSition?

Arguments <NR3> is a value from 0 to 100.00 and is the percent of the waveform that is to the left of screen center, when the zoom factor is \(1 \times\) or greater.

Examples ZOOM:REF1:HORIZONTAL:POSITION 50 sets the horizontal position of the specified Reference 1 waveform to 50 .

ZOOM: REF1:HORIZONTAL:POSITION? might return
:ZOOM:REF1:HORIZONTAL:POSITION 23.9000, indicating that the horizontal position of the specified Reference 1 waveform is set to 23.9 .

\section*{ZOOm:REF<x>:HORizontal:SCAle}

This command sets or queries the zoom horizontal scale factor of the specified reference waveform.

Group Zoom

Syntax ZOOm:REF<x>:HORizontal:SCAle <NR3> ZOOM:REF<x>:HORizontal:SCAle?

Arguments <NR3> is the amount of expansion in the horizontal direction in 1-2-5 increments.

Examples ZOOM:REF1:HORIZONTAL:SCALE 10 sets the horizontal scale factor of the specified Reference 1 waveform to 10 .

ZOOM:REF1:HORIZONTAL:SCALE? might return
:ZOOM:REF1:HORIZONTAL:SCALE 5, indicating that the horizontal scale factor of the specified Reference 1 waveform to 5 .

\section*{ZOOm:REF<x>:VERTical:POSition}

This command sets or queries the vertical position of the specified reference waveform.

Group Zoom

Syntax zoom:REF<x>:VERTical:POSition <NR3> zoom:REF<x>:VERTical:POSition?

Arguments <NR3> is the vertical position, expressed in divisions.

Examples ZOOM:REF1:VERTICAL:POSITION 5 sets the vertical 1 position of the specified Reference 1 waveform to 5 .

ZOOM:REF1:VERTICAL:POSITION? might return
:ZOOM:REF1:VERTICAL: POSITION 340.0000E-3, indicating that the vertical position of the specified Reference 1 waveform is set to 0.34 .

\section*{ZOOm:REF<x>:VERTical:SCAle}

This command sets or queries the zoom vertical scale of the specified reference waveform.

Group Zoom

Syntax Zoom:REF<x>:VERTical:SCA1e <NR3> ZOOm:REF<X>:VERTical:SCAle?

Arguments <NR3> sets the horizontal scale factor of the specified Reference 1 waveform to 10 .

Examples ZOOM:REF1:VERTICAL:SCALE 5 sets the vertical scale factor of the specified Reference 1 waveform to 5 .

ZOOM: REF1:VERTICAL:SCALE? might return :ZOOM:REF1:VERTICAL:SCALE 2.0000 , indicating that the vertical scale factor of the specified Reference 1 waveform is set to 2 .

\section*{ZOOm:SCROLL:DIREction}

This command sets or queries the direction for automatic scrolling of zoomed waveforms.

Group Zoom

Syntax zoom:SCROLL:DIREction \{FWD|FFWD|REV| FREV|STOP\} ZOOm:SCROLL:DIRECtion?

Arguments FWD starts AutoScroll. The Zoom Box moves from left to right. FFWD starts AutoScroll. Increases the scrolling speed in the forward direction. REV starts AutoScroll. The Zoom Box moves from right to left. FREV starts AutoScroll. Increases the scrolling speed in the reverse direction. STOP halts AutoScroll.

Examples ZOOM:SCROLL:DIRECTION FWD starts AutoScroll. The Zoom Box moves from left to right.

ZOOM:SCROLL:DIRECTION? might return :ZOOM:SCROLL:DIRECTION REVERSE, indicating that Zoom Box is moving from right to left.

\section*{ZOOm:SCROLL:LOCk}

This command sets or queries the state of Scroll Lock, which "locks" zoomed waveforms under common control.

Group Zoom

Syntax zoom:SCROLL:LOCk \{ON|OFF|<NR1>\} zoom: SCROLL:LOCk?

Arguments ON enables Scroll Lock.
OFF disables Scroll Lock.
<NR1> = 0 disables Scroll Lock for all zoom windows; any other value enables Scroll Lock for all zoom windows.

Examples ZOOM: SCROLL:LOCK ON enables Scroll Lock for zoomed waveforms identified as locked.

ZOOM:SCROLL:LOCK? might return :ZOOM:SCROLL:LOCK OFF, indicating that the scroll lock function is disabled.

\section*{ZOOm:SCROLL:SPEED}

This command sets or queries the speed of automatic scrolling.

Group Zoom

Syntax zoom:SCROLL:SPEED <NR1> ZOOm:SCROLL:SPEED?

Arguments <NR1> is a value from 1 to 10 .

Examples ZOOM:SCROLL:SPEED 2 will scroll zoomed waveform(s) 2 divisions per update.
ZOOM:SCROLL:SPEED? might return :ZOOM:SCROLL:SPEED 1, indicating that the scroll speed is set to move zoomed waveform(s) 1 division per update.

\section*{ZOOm:STATE}

This command sets or queries the specified zoom on or off.

Group Zoom

Syntax zoom: STATE \{ON|OFF|<NR1>\}
ZOOM: STATE?

Arguments ON turns zoom on or off.
OFF turns zoom on or off.
<NR1> = 0 disables the zoom; any other value enables the zoom.

Examples ZOOM: STATE ON turns zoom on.
ZOOM: STATE? might return : ZOOM: STATE 1, indicating that zoom is on.

\section*{ZOOm:VERTical:POSition}

This command sets or queries the vertical position around which the zoom waveform is displayed. It is freely movable within the confines of the acquired waveform \((0 \%\) to \(100 \%)\) and measured from left to right of the acquired waveform.

Group Zoom

Syntax zoom:VERTical:POSition <NR3> ZOOm:VERTical:POSition?

Arguments NR3 is a value from 0 to 100.00 and is the percent of the waveform that is to the left of screen center, when the zoom factor is \(1 \times\) or greater.

Examples ZOOM:VERTICAL: POSITION 50 sets the vertical position to 50 .
ZOOM:VERTICAL: POSITION? might return :ZOOM:VERTICAL:POSITION
23.90000, indicating that the vertical position is set to 23.9.

\section*{ZOOm:VERTical:SCAle}

This command sets or queries the zoom vertical scale factor around which the zoom waveform is displayed.

Group Zoom

Syntax zoom:VERTical:SCA1e <NR3> ZOOm:VERTical:SCAle?

Arguments <NR3> is the amount of expansion in the vertical direction in 1-2-5 increments.

Examples ZOOM:VERTICAL:SCALE 5 sets the vertical scale to 5 .
ZOOM:VERTICAL:SCALE? might return :ZOOM:VERTICAL:SCALE 10, indicating that the vertical scale is set to 10 .

\section*{ZOOm:ZOOM<x>}

This command resets the zoom transforms to default values for all traces of the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window. The ZOOm:REF \(<x>\) :VERTical:SCAle? query returns the current vertical and horizontal positioning and scaling of the display.

Group Zoom

Syntax zoom:ZOOM<x> \{RESET|RESETLive\}
zoom:zoom<x>?

Arguments RESET resets the zoom transforms to default values for all traces of the specified zoom.

RESETLive resets the zoom transforms to default values for live traces of the specified zoom.

Examples ZOOM: ZOOM1 RESET resets the zoom transforms for all traces of Zoom1 to their default values

ZOOM:ZOOM1? might return :ZOOM:ZOOM1:STATE 1;SCROLLLOCK
1; CH1:HORIZONTAL POSITION 50.0000;SCALE 5; :ZOOM:ZOOM1:CH1:VERTICAL:POSITION 0.0000; SCALE 1.0000; :ZOOM:ZOOM1:CH2:HORIZONTAL:POSTION 50.0000;

SCALE 5; :ZOOM:ZOOM1:CH2:VERTICAL:POSITION 0.000; SCALE 1.0000; :ZOOM:ZOOM1:CH3:HORIZONTAL:POSITION50.000; SCALE 5;:ZOOM: ZOOM1:CH3:VERTICAL..., indicating the Zoom1 transforms for all traces.

\section*{Z00m:ZOOM<x>:DCHAN:DISplay}

This command sets or queries the display of the digital waveforms for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window. The digital waveforms affected vary from \(\mathrm{CH} 1, \mathrm{CH} 2, \mathrm{CH} 3, \mathrm{CH} 4\), Math1, Math2, Math3, Math4, and D0 through D15. When zoom is set on any one of the waveforms from D0 through D15, it would apply to all of the waveforms (D0 through D15).

Group Zoom

Syntax zoom:ZOOM<x>:DCHAN:DISplay \{<NR1>|OFF|ON\}
zoom:ZOOM<x>:DCHAN:DISplay?

Arguments <NR1> = 0 disables the specified zoom; any other value enables the specified zoom.

OFF disables the specified zoom.
ON displays the specified zoom.

Examples ZOOM:ZOOM1:DCHAN:DISPLAY ON displays the digital waveforms for the specified Zoom1.

ZOOM:ZOOM1:DCHAN:DISPLAY? might return :ZOOM:ZOOM1:DCHAN:DISPLAY 0 , indicating that the display of the digital waveforms for the specified Zoom1 is disabled.

\section*{Z00m:ZOOM<x>:SCROLLLock}

This command sets or queries Scroll Lock for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window.

Group Zoom

Syntax zoom:ZOOM<x>:SCROLLLock \{ON|OFF|<NR1>\}
zoom:ZOOM<x>:SCROLLLock?

Arguments ON locks waveforms for the specified zoom window \(\langle\mathrm{x}\rangle\).
OFF unlocks waveforms for the specified zoom window \(\langle\mathrm{x}>\).
<NR1> = 0 unlocks waveforms for the specified zoom window \(\langle x\rangle\); any other value locks waveforms for the specified zoom window \(\langle x>\).

Examples zOOM:ZOOM1:SCROLLLOCK ON turns Zoom1 scroll lock on.
zoom: zoom1: SCROLLLOCK? returns either ON|1 or OFF|0 for Zoom1.

\section*{ZOOm:ZOOM<x>:STATE}

This command sets or queries the specified zoom on or off, where x is an integer from 1 to 4 representing the desired zoom window.

Default is Zoom1 on, Zoom2-4 off.

Group Zoom

Syntax zoom:ZOOM<x>: STATE \{ON|OFF|<NR1>\}
zoom:ZOOM<x>:STATE?

Arguments \(\quad\) ON turns Zoom 1-4 on.
OFF turns Zoom 1-4 off.
<NR1> = 0 disables the specified zoom; any other value enables the specified zoom.

Examples zOOM:ZOOM1:STATE ON turns Zoom1 on.
ZOOM: ZOOM2:STATE? might return :ZOOM:ZOOM2:STATE 1, indicating that Zoom2 is on.

\section*{ZOOm:ZOOM<x>:<wfm>:DISplay}

This command sets or queries the display of the specified waveform for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window. The waveform affected is determine by \(<\mathrm{wfm}>\) which can vary from CH1, CH2, CH3, CH4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3, or Ref4.

Group Zoom
```

Syntax zoom: ZOOM<x>:<wfm>:DISplay \{<NR1>|OFF|ON\}
ZOOm: ZOOM<x>: <wfm>:DISplay?

```

Arguments <NR1> A zero disables the specified zoom; any other value enables the specified zoom.

OFF disables the specified zoom.
ON displays the specified zoom.

Examples ZOOM:ZOOM1:CH1:DISPLAY ON displays the specified zoom waveform.
ZоOM:ZОOM1:CH1:DISPLAY? might return :ZOOM:ZOOM1:CH1:DISPLAY 0, indicating the channel 1 zoom is disabled.

\section*{ZOOm:ZOOM<x>:<wfm>:HORizontal:POSition}

This command sets or queries the horizontal position of the specified waveform for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window. The setting of the ZOOm:ZOOM \(<\mathrm{x}>:\) SCROLLLock command determines the waveforms that are affected.

The waveform affected is determine by <wfm> which can vary from \(\mathrm{CH} 1, \mathrm{CH} 2\), CH3, CH4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3, or Ref4.

Group Zoom

Syntax zOOm:ZOOM<x>:<wfm>:HORizontal:POSition <NR3> zoom: ZOOM<x>:<wfm>:HORizontal:POSition?

Arguments <NR3> is a value from 0 to 100.00 and is the percent of the waveform that is to the left of screen center, when the zoom factor is \(1 \times\) or greater.

Examples ZOOM:ZOOM1:CH1:HORIZONTAL:POSITION 50 sets the Zoom1 reference pointer at \(50 \%\) of acquired waveform.

ZOOM:ZOOM1:CH1:HORIZONTAL:POSITION? might return :ZOOM1:CH1:HORIZONTAL:POSITION 50.0000, indicating that the Zoom1 reference pointer for Channel 1 is currently set at \(50 \%\) of acquired waveform.

\section*{ZOOm:ZOOM<x>:<wfm>:HORizontal:SCAle}

This command sets or queries the zoom horizontal scale factor of the specified waveform for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window.

The waveform affected is determine by <wfm> which can vary from \(\mathrm{CH} 1, \mathrm{CH} 2\), CH3, CH4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3, or Ref4.

Group Zoom

Syntax zoom: ZOOM<x>:<wfm>:HORizonta1:SCA1e<NR3> zoom:ZOOM<x>:<wfm>:HORizontal:SCAle?

Arguments <NR3> is the amount of expansion in the horizontal direction in 1-2-5 increments.

Examples zoom:ZOOM1:CH1:HORIZONTAL:SCALE 5 sets the horizontal scale factor of Channel 1 to 5.

ZOOM: ZOOM2:CH2:HORIZONTAL:SCALE? might return
:ZOOM2:CH2:HORIZONTAL:SCALE 1, indicating that Channel 2 has a horizontal scale factor of 1 .

\section*{ZOOm:ZOOM<x>:<wfm>:VERTical:POSition}

This command sets or queries the vertical position of the specified waveform for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window. The setting of the ZOOm: ZOOM<x>: SCROLLLOCk command determines the waveforms that are affected. The \(<w f m>\) can be a channel, math, or reference waveform.

The waveform affected is determine by <wfm> which can vary from CH1, CH2, CH3, CH4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3, or Ref4.

Group Zoom

Syntax zoom:zOOM<x>:<wfm>:VERTical:POSition <NR3> zoom:ZOOM<x>:<wfm>:VERTical:POSition?

Arguments <NR3> is the vertical position, expressed in divisions.

Examples ZOOM:ZOOM1:CH1:VERTICAL: POSITION 2 sets the Zoom1 vertical position to 2 , which centers the zoom trace at the second division of the acquired trace.

ZOOM:ZOOM1:CH1:VERTICAL:POSITION? might return :ZoOm1:CH1:VERTica1:POSition 0.0000, indicating that the Zoom1 trace for Channel 1 is centered at division 0 of the acquired trace.

\section*{ZOOm:ZOOM<x>:<wfm>:VERTical:SCAle}

This command sets or queries the zoom vertical scale of the specified waveform for the specified zoom, where x is an integer from 1 to 4 representing the desired zoom window.

The waveform affected is determine by \(<w f m>\) which can vary from \(\mathrm{CH} 1, \mathrm{CH} 2\), CH3, CH4, Math1, Math2, Math3, Math4, Ref1, Ref2, Ref3, or Ref4.

Group Zoom

Syntax Zoom:ZOOM<x>:<wfm>:VERTical:SCA7e<NR3> ZOOm:ZOOM<x>:<wfm>:VERTical:SCA1e?

Arguments <NR3> is the amount of vertical expansion or compression, which operates on a \(1-2-5\) sequence (for example, 1, 2, 5, 10, 20, 50, 100...). Based on the value that you entered, this command uses the nearest scale factor. Setting the vertical scale to 1 indicates unity (no zoom).

Examples ZOOM:ZOOM2:CH2:VERTICAL:SCALE 5 sets the vertical scale of Channel 2 to \(5 \times\).
zoom:ZOOM2:CH2:VERTICAL:SCALE? might return :ZOOM2:CH2:VERTICAL:SCALE 2.0000 , indicating that the vertical scale is \(2 \times\).

\section*{Status and events}

The instrument provides a status and event reporting system for the GPIB interfaces. This system informs you of certain significant events that occur within the instrument.

The instrument status handling system consists of five 8 -bit registers and two queues for each interface. The remaining Status subtopics describe these registers and components. They also explain how the event handling system operates.

\section*{Registers}

Overview The registers in the event handling system fall into two functional groups:
- Status Registers contain information about the status of the instrument. They include the Standard Event Status Register (SESR).
- Enable Registers determine whether selected types of events are reported to the Status Registers and the Event Queue. They include the Device Event Status Enable Register (DESER), the Event Status Enable Register (ESER), and the Service Request Enable Register (SRER).

Status The Standard Event Status Register (SESR) and the Status Byte Register (SBR) record certain types of events that can occur while the instrument is in use. IEEE Std 488.2-1987 defines these registers.

Each bit in a Status Register records a particular type of event, such as an execution error or message available. When an event of a given type occurs, the instrument sets the bit that represents that type of event to a value of one. (You can disable bits so that they ignore events and remain at zero. See Enable Registers). Reading the status registers tells you what types of events have occurred.

The Standard Event Status Register (SESR). The SESR records eight types of events that can occur within the instrument. Use the *ESR? query to read the SESR register. Reading the register clears the bits of the register so that the register can accumulate information about new events.

NOTE. TekVISA applications use SESR bit 6 to respond to any of several events, including some front panel actions.
\begin{tabular}{|l|l|l|l|l|l|l|l|}
\hline 7 & 6 & 5 & 4 & 3 & 2 & 1 & 0 \\
PON & URQ & CME & EXE & DDE & QYE & RQC & OPC \\
\hline
\end{tabular}

Table 3-1: SESR Bit Functions
\begin{tabular}{lll}
\hline Bit & Function \\
\hline 7 (MSB) & PON & \begin{tabular}{l} 
Power On. Shows that the instrument was powered on. On \\
completion, the diagnostic tests also set this bit.
\end{tabular} \\
\hline 6 & URQ & \begin{tabular}{l} 
User Request. Indicates that an application event has \\
occurred. *See preceding note.
\end{tabular} \\
\hline 5 & CME & \begin{tabular}{l} 
Command Error. Shows that an error occurred while the \\
instrument was parsing a command or query.
\end{tabular} \\
\hline 4 & DDE & \begin{tabular}{l} 
Execution Error. Shows that an error executing a command \\
or query.
\end{tabular} \\
\hline 3 & Device Error. Shows that a device error occurred. \\
\hline 2 & \begin{tabular}{l} 
Query Error. Either an attempt was made to read the Output \\
Queue when no data was present or pending, or that data in \\
the Output Queue was lost.
\end{tabular} \\
\hline 0 (LSB) & \begin{tabular}{l} 
Request Control. This is not used. \\
\hline
\end{tabular} \begin{tabular}{l} 
Operation Complete. Shows that the operation is complete. \\
This bit is set when all pending operations complete \\
following an *OPC command.
\end{tabular} \\
\hline
\end{tabular}

Status Byte Register (SBR). Records whether output is available in the Output Queue, whether the instrument requests service, and whether the SESR has recorded any events.

Use a Serial Poll or the *STB? query to read the contents of the SBR. The bits in the SBR are set and cleared depending on the contents of the SESR, the Event Status Enable Register (ESER), and the Output Queue. When you use a Serial Poll to obtain the SBR, bit 6 is the RQS bit. When you use the *STB? query to obtain the SBR, bit 6 is the MSS bit. Reading the SBR does not clear the bits.

Table 3-2: SBR bit functions
\begin{tabular}{lll}
\hline Bit & Function & \\
\hline 7 (MSB) & Not used. \\
\hline 6 & RQS & \begin{tabular}{l} 
Request Service. Obtained from a serial poll. Shows that \\
the instrument requests service from the GPIB controller.
\end{tabular} \\
\hline 6 & MSS & \begin{tabular}{l} 
Master Status Summary. Obtained from *STB? query. \\
Summarizes the ESB and MAV bits in the SBR.
\end{tabular} \\
\hline 5 & MSB & \begin{tabular}{l} 
Event Status Bit. Shows that status is enabled and present \\
in the SESR.
\end{tabular} \\
\hline 4 & \begin{tabular}{l} 
Message Available. Shows that output is available in the \\
Output Queue.
\end{tabular} \\
\hline
\end{tabular}

Table 3-2: SBR bit functions (cont.)
\begin{tabular}{lll} 
Bit & Function & \\
\hline 3 & - & Not used. \\
\hline 2 & - & Not used. \\
\hline \(1-0\) & - & Not used. \\
\hline
\end{tabular}

Enable DESER, ESER, and SRER allow you to select which events are reported to the Status Registers and the Event Queue. Each Enable Register acts as a filter to a Status Register (the DESER also acts as a filter to the Event Queue) and can prevent information from being recorded in the register or queue.

Each bit in an Enable Register corresponds to a bit in the Status Register it controls. In order for an event to be reported to a bit in the Status Register, the corresponding bit in the Enable Register must be set to one. If the bit in the Enable Register is set to zero, the event is not recorded.

Various commands set the bits in the Enable Registers. The Enable Registers and the commands used to set them are described as follows.

The Device Event Status Enable Register (DESER). This register controls which types of events are reported to the SESR and the Event Queue. The bits in the DESER correspond to those in the SESR.

Use the DESE command to enable and disable the bits in the DESER. Use the DESE? query to read the DESER.
\begin{tabular}{|l|l|l|l|l|l|l|l|}
\hline 7 & 6 & 5 & 4 & 3 & 2 & 1 & 0 \\
\(P O N\) & URQ & CME & EXE & DDE & QYE & RQC & OPC \\
\hline
\end{tabular}

Event Status Enable Register (ESER). This register controls which types of events are summarized by the Event Status Bit (ESB) in the SBR. Use the *ESE command to set the bits in the ESER. Use the *ESE? query to read it.
\begin{tabular}{|l|l|l|l|l|l|l|l|}
\hline 7 & 6 & 5 & 4 & 3 & 2 & 1 & 0 \\
\(P O N\) & URQ & CME & EXE & DDE & QYE & RQC & OPC \\
\hline
\end{tabular}

Service Request Enable Register (SRER). This register controls which bits in the SBR generate a Service Request and are summarized by the Master Status Summary (MSS) bit.
Use the *SRE command to set the SRER. Use the *SRE? query to read the register. The RQS bit remains set to one until either the Status Byte Register is read with a Serial Poll or the MSS bit changes back to a zero.
\begin{tabular}{|l|l|l|l|l|l|l|l|}
\hline 7 & 6 & 5 & 4 & 3 & 2 & 1 & 0 \\
- & - & ESB & MAV & - & - & - & - \\
\hline
\end{tabular}

\section*{*PSC command}
*PSC command The *PSC command controls the Enable Registers contents at power-on. Sending *PSC 1 sets the Enable Registers at power on as follows:
- DESER 255 (equivalent to a DESe 255 command)
- ESER 0 (equivalent to an *ESE 0 command)
- SRER 0 (equivalent to an *SRE 0 command)

Sending *PSC 0 lets the Enable Registers maintain their values in nonvolatile memory through a power cycle.

NOTE. Note: To enable the PON (Power On) event to generate a Service Request, send *PSC 0, use the DESe and *ESE commands to enable PON in the DESER and ESER, and use the *SRE command to enable bit 5 in the SRER. Subsequent power-on cycles will generate a Service Request.

\section*{Queues}

The *PSC command controls the Enable Registers contents at power-on. Sending *PSC 1 sets the Enable Registers at power on as follows:

1
CAUTION. When a controller sends a query, an \(\langle E O M\rangle\), and a second query, the instrument normally clears the first response and outputs the second while reporting a Query Error (QYE bit in the ESER) to indicate the lost response. A fast controller, however, can receive a part or all of the first response as well. To avoid this situation, the controller should always read the response immediately after sending any terminated query message or send a DCL (Device Clear) before sending the second query.

Event Queue The Event Queue stores detailed information on up to 33 events. If more than 32 events stack up in the Event Queue, the 32nd event is replaced by event code 350, "Queue Overflow."

Read the Event Queue with the EVENT? query (which returns only the event number), with the EVMSG? query (which returns the event number and a text description of the event), or with the ALLEV? query (which returns all the event numbers with a description of the event). Reading an event removes it from the queue.

Before reading an event from the Event Queue, you must use the *ESR? query to read the summary of the event from the SESR. This makes the events summarized by the *ESR? read available to the EVENT? and EVMSG? queries, and empties the SESR.

Reading the SESR erases any events that were summarized by previous *ESR? reads but not read from the Event Queue. Events that follow an *ESR? read are put in the Event Queue but are not available until *ESR? is used again.

\section*{Event handling sequence}

The figure below shows how to use the status and event handling system. In the explanation that follows, numbers in parentheses refer to numbers in the figure.

When an event occurs, a signal is sent to the DESER (1). If that type of event is enabled in the DESER (that is, if the bit for that event type is set to 1 ), the appropriate bit in the SESR is set to one, and the event is recorded in the Event Queue (2). If the corresponding bit in the ESER is also enabled (3), then the ESB bit in the SBR is set to one (4).

When output is sent to the Output Queue, the MAV bit in the SBR is set to one (5).
When a bit in the SBR is set to one and the corresponding bit in the SRER is enabled (6), the MSS bit in the SBR is set to one and a service request is generated (7).

\section*{Synchronization methods}

Overview Although most GPIB commands are completed almost immediately after being received by the instrument, some commands start a process that requires more time. For example, once a single sequence acquisition command is executed, depending upon the applied signals and trigger settings, it can be a few seconds before the acquisition is complete. Rather than remain idle while the operation is in process, the instrument will continue processing other commands. This means that some operations will not be completed in the order that they were sent.

Sometimes the result of an operation depends on the result of an earlier operation. A first operation must complete before the next one gets processed. The instrument status and event reporting system provides ways to do this.

For example, a typical application might involve acquiring a single-sequence waveform and then taking a measurement on the acquired waveform. You could use the following command sequence to do this:
```

/** Set up conditional acquisition **/
ACQUIRE:STATE OFF
SELECT:CH1 ON
HORIZONTAL:MODE:RECORDLENGTH 1000
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/** Acquire waveform data **/
ACQUIRE:STATE ON
/** Set up the measurement parameters **/
MEASUREMENT:IMMED:TYPE AMPLITUDE
MEASUREMENT: IMMED:SOURCE CH1
/** Take amplitude measurement **/
MEASUREMENT:IMMED:VALUE?

```

The acquisition of the waveform requires extended processing time. It might not finish before the instrument takes an amplitude measurement (see the following figure). This can result in an incorrect amplitude value.

To ensure that the instrument completes waveform acquisition before taking the measurement on the acquired data, you can synchronize the program.

You can use four commands to synchronize the operation of the instrument with your application program: *WAI, BUSY, *OPC, and *OPC?
*WAI The *WAI command forces completion of previous commands that generate an OPC message. No commands after the *WAI are processed before the OPC message(s) are generated

The same command sequence using the *WAI command for synchronization looks like this:
```

/* Set up conditional acquisition */
ACQUIRE:STATE OFF
SELECT:CH1 ON
HORIZONTAL:MODE:RECORDLENGTH }100
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/* Acquire waveform data */
ACQUIRE:STATE ON
/* Set up the measurement parameters */
MEASUREMENT:IMMED:TYPE AMPLITUDE
MEASUREMENT:IMMED:SOURCE CH1
/* wait until the acquisition is complete before taking
the measurement*/
*/
*WAI
/* Take amplitude measurement */
MEASUREMENT:IMMED:VALUE?

```

The controller can continue to write commands to the input buffer of the instrument, but the commands will not be processed by the instrument until all OPC operations in process are complete. If the input buffer becomes full, the
controller will be unable to write more commands to the buffer. This can cause a time-out.

BUSY The BUSY? query allows you to find out whether the instrument is busy processing a command that has an extended processing time such as single-sequence acquisition.

The same command sequence, using the BUSY? query for synchronization, looks like this:
```

/* Set up conditional acquisition */
ACQUIRE:STATE OFF
SELECT:CH1 ON
HORIZONTAL:MODE:RECORDLENGTH 1000
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/* Acquire waveform data */
ACQUIRE:STATE ON
/* Set up the measurement parameters */
MEASUREMENT:IMMED:TYPE AMPLITUDE
MEASUREMENT:IMMED:SOURCE CH1
/* Wait until the acquisition is complete before taking
the measurement */
while BUSY keep looping
/* Take amplitude measurement */
MEASUREMENT:IMMED:VALUE

```

This sequence lets you create your own wait loop rather than using the *WAI command. The BUSY? query helps you avoid time-outs caused by writing too many commands to the input buffer. The controller is still tied up though, and the repeated BUSY? query will result in more bus traffic.

\section*{*OPC}

If the corresponding status registers are enabled, the *OPC command sets the OPC bit in the Standard Event Status Register (SESR) when an operation is complete. You achieve synchronization by using this command with either a serial poll or service request handler.

Serial poll method: Enable the OPC bit in the Device Event Status Enable Register (DESER) and the Event Status Enable Register (ESER) using the DESE and *ESE commands.

When the operation is complete, the OPC bit in the Standard Event Status Register (SESR) will be enabled and the Event Status Bit (ESB) in the Status Byte Register will be enabled.

The same command sequence using the *OPC command for synchronization with serial polling looks like this:
/* Set up conditional acquisition */

\section*{ACQUIRE:STATE OFF}

SELECT:CH1 ON
HORIZONTAL:MODE:RECORDLENGTH 1000
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/* Enable the status registers */
DESE 1
*ESE 1
*SRE 0
/* Acquire waveform data */
ACQUIRE:STATE ON
/* Set up the measurement parameters */
MEASUREMENT:IMMED:TYPE AMPLITUDE
MEASUREMENT:IMMED:SOURCE CH1
/* Wait until the acquisition is complete before taking the measurement.
*/
*OPC
While serial poll \(=0\), keep looping
/* Take amplitude measurement */
MEASUREMENT:IMMED:VALUE
This technique requires less bus traffic than did looping on BUSY.
Service request method: Enable the OPC bit in the Device Event Status Enable Register (DESER) and the Event Status Enable Register (ESER) using the DESE and \(*\) ESE commands.

You can also enable service requests by setting the ESB bit in the Service Request Enable Register (SRER) using the *SRE command. When the operation is complete, a Service Request will be generated.

The same command sequence using the *OPC command for synchronization looks like this
/* Set up conditional acquisition */
ACQUIRE:STATE OFF
SELECT:CH1 ON

HORIZONTAL:MODE:RECORDLENGTH 1000
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/* Enable the status registers */
DESE 1
*ESE 1
*SRE 32
/* Acquire waveform data */
ACQUIRE:STATE ON
/* Set up the measurement parameters */
MEASUREMENT:IMMED:TYPE AMPLITUDE
MEASUREMENT:IMMED:SOURCE CH1
/* Wait until the acquisition is complete before taking the measurement
*/
*OPC
The program can now do different tasks such as talk to other devices. The SRQ, when it comes, interrupts those tasks and returns control to this task.
/* Take amplitude measurement */
MEASUREMENT:IMMED:VALUE
This technique is more efficient but requires more sophisticated programming.
*OPC?
The *OPC? query places a 1 in the Output Queue once an operation that generates an OPC message is complete. A time out could occur if you try to read the output queue before there is any data in it.

The same command sequence using the *OPC? query for synchronization looks like this:
/* Set up conditional acquisition */
ACQUIRE:STATE OFF
SELECT:CH1 ON
HORIZONTAL:MODE:RECORDLENGTH 1000
ACQUIRE:MODE SAMPLE
ACQUIRE:STOPAFTER SEQUENCE
/* Acquire waveform data */
ACQUIRE:STATE ON
/* Set up the measurement parameters */
MEASUREMENT:IMMED:TYPE AMPLITUDE

\section*{MEASUREMENT:IMMED:SOURCE CH1}
/* Wait until the acquisition is complete before taking the measurement */
*OPC?
Wait for read from Output Queue.
/* Take amplitude measurement */

\section*{MEASUREMENT:IMMED:VALUE}

This is the simplest approach. It requires no status handling or loops. However, you must set the controller time-out for longer than the acquisition operation.

Messages Overview. The information contained in the topic tabs above covers all the programming interface messages the instrument generates in response to commands and queries.

For most messages, a secondary message from the instrument gives more detail about the cause of the error or the meaning of the message. This message is part of the message string and is separated from the main message by a semicolon.

Each message is the result of an event. Each type of event sets a specific bit in the SESR and is controlled by the equivalent bit in the DESER. Thus, each message is associated with a specific SESR bit. In the message tables, the associated SESR bit is specified in the table title, with exceptions noted with the error message text.

No event. The following table shows the messages when the system has no events or status to report. These have no associated SESR bit.

\section*{Table 3-3: No Event Messages}
\begin{tabular}{ll} 
Code & Message \\
\hline 0 & No events to report; queue empty \\
\hline 1 & No events to report; new events pending *ESR? \\
\hline
\end{tabular}

Command error. The following table shows the command error messages generated by improper syntax. Check that the command is properly formed and that it follows the rules in the section on command Syntax.

Table 3-4: Command error messages (CME Bit 5)
\begin{tabular}{ll}
\hline Code & Message \\
\hline 100 & Command error \\
\hline 101 & Invalid character \\
\hline 102 & Syntax error \\
\hline 103 & Invalid separator \\
\hline 104 & Data type error \\
\hline 105 & GET not allowed \\
\hline 108 & Parameter not allowed \\
\hline 109 & Missing parameter \\
\hline 110 & Command header error \\
\hline 111 & Header separator error \\
\hline 112 & Program mnemonic too long \\
\hline 113 & Undefined header \\
\hline 114 & Header suffix out of range \\
\hline 120 & Numeric data error \\
\hline 121 & Invalid character in numeric \\
\hline 123 & Exponent too large \\
\hline 124 & Too many digits \\
\hline 128 & Numeric data not allowed \\
\hline 130 & Suffix error \\
\hline 131 & Invalid suffix \\
\hline 134 & Suffix too long \\
\hline 138 & Suffix not allowed \\
\hline 140 & Character data error \\
\hline 141 & Invalid character data \\
\hline 144 & Character data too long \\
\hline 148 & Character data not allowed \\
\hline 150 & String data error \\
\hline 151 & Invalid string data \\
\hline 158 & String data not allowed \\
\hline 160 & Block data error \\
\hline 161 & Invalid block data \\
\hline 168 & Block data not allowed \\
\hline 170 & Command expression error \\
\hline 178 & Invalid expression \\
\hline 181 & Expression data not allowed \\
\hline & Macro error \\
\hline Invalid outside macro definition \\
\hline
\end{tabular}

Table 3-4: Command error messages (CME Bit 5) (cont.)
\begin{tabular}{ll} 
Code & Message \\
\hline 183 & Invalid inside macro definition \\
\hline 184 & Macro parameter error \\
\hline 190 & Communication option not present \\
\hline 191 & Unable to open or parse arbitrary filter file \\
\hline
\end{tabular}

Execution error. The following table lists the execution errors that are detected during execution of a command.

Table 3-5: Execution error messages (EXE Bit 4)
\begin{tabular}{ll} 
Code & Message \\
\hline 200 & Execution error \\
\hline 201 & Invalid while in local \\
\hline 202 & Settings lost due to RTL \\
\hline 210 & Trigger error \\
\hline 212 & Trigger ignored \\
\hline 213 & Arm ignored \\
\hline 214 & Init ignored \\
\hline 215 & Trigger deadlock \\
\hline 220 & Arm deadlock \\
\hline 221 & Trigger delay not available \\
\hline 222 & Parameter error \\
\hline 223 & Settings conflict \\
\hline 224 & Data out of range \\
\hline 225 & Too much data \\
\hline 226 & Ilegal parameter value \\
\hline 230 & Out of memory \\
\hline 231 & Lists not same length \\
\hline\(\frac{\text { Data corrupt or stale }}{240}\) & Data questionable \\
\hline 241 & Hardware error \\
\hline 244 & Hardware missing \\
\hline 245 & Invalid printer selected \\
\hline 250 & Hardcopy/Export operation timed out \\
\hline 251 & Mass storage error \\
\hline 252 & Missing mass storage \\
\hline 253 & Missing media \\
\hline & Corrupt media \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{ll}
\hline Code & Message \\
\hline 254 & Media full \\
\hline 255 & Directory full \\
\hline 256 & File name not found \\
\hline 257 & File name error \\
\hline 258 & Media protected \\
\hline 260 & File system error \\
\hline 261 & Execution expression error \\
\hline 270 & Math error in expression \\
\hline 271 & Execution macro error \\
\hline 272 & Macro syntax error \\
\hline 273 & Macro execution error \\
\hline 274 & Illegal macro label \\
\hline \hline 276 & Execution macro parameter error \\
\hline 277 & Macro definition too long \\
\hline 278 & Macro recursion error \\
\hline 280 & Macro redefinition not allowed \\
\hline 281 & Macro header not found \\
\hline 282 & Program error \\
\hline 283 & Cannot create program \\
\hline 284 & Illegal program name \\
\hline 285 & Illegal variable name \\
\hline 286 & Program currently running \\
\hline 2200 & Program syntax error \\
\hline 2201 & Program runtime error \\
\hline 2202 & Measurement error, Measurement system error \\
\hline 2203 & Measurement error, Zero period \\
\hline 2204 & Measurement error, No period found \\
\hline 2205 & Measurement error, No period, second waveform \\
\hline 2206 & Measurement error, Low signal amplitude \\
\hline 2207 & Measurement error, Low amplitude, second waveform \\
\hline 2208 & Measurement error, Invalid gate \\
\hline 2209 & Measurement error, Measurement overflow \\
\hline 2210 & Measurement error, Waveform does not cross Mid Ref \\
\hline 2212 & Measurementerent error, No Mid Ref crossing, second waveform \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{|c|c|}
\hline Code & Message \\
\hline 2213 & Measurement error, No positive crossing \\
\hline 2214 & Measurement error, No crossing \\
\hline 2215 & Measurement error, No crossing, second waveform \\
\hline 2216 & Measurement error, No crossing, target waveform \\
\hline 2217 & Measurement error, Constant waveform \\
\hline 2218 & Measurement error, Unused \\
\hline 2219 & Measurement error, No valid edge - No arm sample \\
\hline 2220 & Measurement error, No valid edge - No arm cross \\
\hline 2221 & Measurement error, No valid edge - No trigger cross \\
\hline 2222 & Measurement error, No valid edge - No second cross \\
\hline 2223 & Measurement error, Waveform mismatch \\
\hline 2225 & Measurement error, No waveform to measure \\
\hline 2226 & Measurement error, Null Waveform \\
\hline 2227 & Measurement error, Positive and Negative Clipping \\
\hline 2228 & Measurement error, Positive Clipping \\
\hline 2229 & Measurement error, Negative Clipping \\
\hline 2230 & Measurement error, High Ref < Low Ref \\
\hline 2231 & Measurement error, no statistics available \\
\hline 2233 & Requested waveform is temporarily unavailable \\
\hline 2241 & Waveform requested is invalid \\
\hline 2243 & The measurement cannot be turned on because the source for the measurement is incompatible \\
\hline 2244 & Source waveform is not active \\
\hline 2248 & This reference waveform cannot be activated \\
\hline 2249 & Reference deletion error, the reference waveform is in use for math \\
\hline 2250 & Reference error, the reference waveform file is invalid \\
\hline 2251 & Reference error, Waveform preamble does not match actual \\
\hline 2252 & Reference error, Source waveform is not valid \\
\hline 2253 & Reference error, Too many points received \\
\hline 2254 & Reference error, Too few points received \\
\hline 2255 & Reference error, destination reference is used by a math source \\
\hline 2256 & Reference error, cannot reposition or rescale a reference waveform that was saved in FastAcq mode \\
\hline 2257 & Reference warning, saving a previewed waveform results in an empty reference \\
\hline 2258 & Reference warning, saving a FastAcq waveform may result in an empty reference \\
\hline 2259 & File too big \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{|c|c|}
\hline Code & Message \\
\hline 2261 & Calibration error, wait for the warm-up interval to expire before invoking SPC \\
\hline 2270 & Alias error \\
\hline 2271 & Alias syntax error \\
\hline 2273 & Illegal alias label \\
\hline 2276 & Alias expansion error \\
\hline 2277 & Alias redefinition not allowed \\
\hline 2278 & Alias header not found \\
\hline 2287 & You have 4 free trials left for this application \\
\hline 2288 & You have 3 free trials left for this application \\
\hline 2289 & You have 2 free trials left for this application \\
\hline 2294 & You have 1 free trial left for this application \\
\hline 2295 & This is the last free trial for this application \\
\hline 2296 & To guarantee accuracy the vertical amplifiers must use the same coupling and the same model probes \\
\hline 2297 & CH 1 and AUX cannot be selected as the \(A\) trigger event and the \(B\) trigger event respectively or vice versa \\
\hline 2298 & CAL: failed to read NVram, will use uncalibrated factory defaults. The scope must be calibrated at the factory \\
\hline 2299 & Failed to read SPC Calibration file, will use uncalibrated factory defaults until SPC is performed \\
\hline 2309 & Video Trigger does not allow selection of default trigger holdoff \\
\hline 2310 & CAL: invalid command \\
\hline 2312 & Deskew not applied when FastAcq is on \\
\hline 2313 & Probe error, wait for the warmup interval to expire before doing probe calibration \\
\hline 2318 & Consider system bandwidth when testing at this bit rate \\
\hline 2319 & Deskew is re-enabled \\
\hline 2321 & Histogram warning, histogram turned off because Zoom or FastFrame was enabled \\
\hline 2322 & Histogram warning, turning histogram on turned other features off \\
\hline 2330 & FastFrame time stamp query requested too many time stamps \\
\hline 2350 & When FastFrame is active, the reference waveform source must be displayed \\
\hline 2351 & Acquire Modes (Avg|Env) incompatible with FastFrame \\
\hline 2352 & Acquire Modes (Avg|Env) incompatible with FastFrame. Set to Sample \\
\hline 2360 & FastAcq warning, FastAcq turned Off \\
\hline 2370 & Zoom warning, Zoom turned Off \\
\hline 2371 & Zoom error, Zoom has circular definition \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{|c|c|}
\hline Code & Message \\
\hline 2372 & Zoom error, Source zoom is not active \\
\hline 2400 & Not enough memory available \\
\hline 2401 & This channel cannot be activated \\
\hline 2402 & Math/Meas/Histo have circular definition \\
\hline 2403 & Cannot enter XYZ mode because Channel 4 is active (in use) \\
\hline 2404 & XY waveform error, cannot activate channel while in XY mode \\
\hline 2405 & XYZ waveform error, cannot activate channel while in XYZ mode \\
\hline 2410 & Empty math string \\
\hline 2411 & Syntax error in math string \\
\hline 2412 & Semantic error in math string \\
\hline 2413 & Math expression is too complex \\
\hline 2414 & Spectral Function Syntax Error, can operate only on single Channel or Math source \\
\hline 2415 & Spectral Function Semantic Error, cannot operate on static (Reference) sources \\
\hline 2420 & Histogram cannot be performed on this type of waveform \\
\hline 2425 & Mask counting cannot be performed on this type of wfm \\
\hline 2430 & WfmDB cannot be built on this type of wfm \\
\hline 2470 & Trigger error, cannot enter Random holdoff unless type is set to Edge \\
\hline 2471 & Trigger error, cannot enter Random holdoff unless source is set to Channel 1-4 \\
\hline 2472 & Trigger error; cannot enter Random holdoff unless \(A->B\) Sequence is set to A Only \\
\hline 2473 & Trigger T cannot be turned on when in XY display format mode \\
\hline 2474 & Trigger slope not available, coerced to Rise \\
\hline 2475 & Either trigger slope not available when in MultiScope AND mode \\
\hline 2476 & Trigger type not available in MultiScope AND mode \\
\hline 2477 & Pattern lock trigger not available when MultiScope triggering is enabled \\
\hline 2500 & Setup error, file does not look like a setup file \\
\hline \(\underline{2501}\) & Setup warning, could not recall all values from external setup \\
\hline 2510 & iCapture source selection failed; new source already in use \\
\hline 2511 & Busses may not contain iCapture signals as members \\
\hline 2512 & iCapture sources were reassigned to support serial bus triggering \\
\hline 2513 & Clocked Parallel Bus clock source changed because previous source was added as member signal \\
\hline 2600 & Mask testing complete \\
\hline 2601 & Mask testing failed \\
\hline 2610 & Standard Mask Autoset failed, not allowed for Math or Ref Waveforms \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{|c|c|}
\hline Code & Message \\
\hline 2611 & Standard Mask Autoset failed, source of selected mask type not found \\
\hline 2612 & Turn off Optical Filtering to allow this to work \\
\hline 2613 & Optical Filtering not allowed \\
\hline 2614 & Autoset is not allowed during Edit User Mask \\
\hline 2615 & Mask setup error, file does not look like a setup file \\
\hline 2620 & Mask error, too few points received \\
\hline 2700 & Limit Test Error: Reference and source channel have different horizontal settings \\
\hline 2701 & Limit Test Failure: Incompatible record lengths \\
\hline 2702 & Template creation error: Source waveform not compatible \\
\hline 2703 & Template creation error: Target reference is being used in an active limit test \\
\hline 2704 & Limit Test Error: Reference is not a valid template \\
\hline 2705 & Limit Test Failure: Cannot compare a reference to itself \\
\hline 2706 & Limit Test Error: Disk Full \\
\hline 2707 & Limit testing failed \\
\hline 2708 & Select a source and template to compare before turning on the limit test \\
\hline 2740 & No SMTP Server address is entered \\
\hline 2741 & Sending E-mail... \\
\hline 2742 & Email on Trigger is disabled when Fast Acquisitions are enabled \\
\hline 2743 & Email error; must have measurements active before selecting this option \\
\hline 2750 & H-Bar cursors are not supported in xy mode \\
\hline 2751 & V-Bar cursors are not supported in xy mode \\
\hline 2752 & Cursor Error; the current source is invalid or inactive \\
\hline 2760 & Mark limit reached \\
\hline 2761 & No mark present \\
\hline 2762 & Search copy failed \\
\hline 2763 & Unable to recall the Marks \\
\hline 2764 & Reference error, the reference waveform file is unsupported \\
\hline 2765 & The Search cannot be turned on due to FastAcq or WfmDB mode \\
\hline 2766 & Advanced Search Option not present \\
\hline 2767 & Inputs \(\mathrm{CH} 1-\mathrm{CH} 4\) incompatible; set state clock source to CH 4 \\
\hline 2768 & Inputs incompatible; first set \(\mathrm{CH} 1-\mathrm{CH} 4\) inputs to XXXX \\
\hline 2769 & Search Mark sources must have matching record lengths \\
\hline 2770 & Trigger Pulse source must be \(\mathrm{CH} 1-\mathrm{CH} 4\) for this pulse class \\
\hline 2771 & This Trigger Pulse class is not available for D0-D15 \\
\hline 2772 & D15-D0 is already used by A Event \\
\hline 2773 & D15-D0 is already used by B Event \\
\hline
\end{tabular}

Table 3-5: Execution error messages (EXE Bit 4) (cont.)
\begin{tabular}{ll} 
Code & Message \\
\hline 2774 & D15-D0 is already used by B Event Reset \\
\hline 2775 & D15-D0 is already used by A Event qualification \\
\hline 2776 & D15-D0 is already used by B Event qualification \\
\hline 2777 & Busses cannot contain both live and reference signals \\
\hline 2778 & Attempt to multiply add a signal to a bus \\
\hline
\end{tabular}

Device error. The following table lists the device errors that can occur during instrument operation. These errors might indicate that the instrument needs repair.

Table 3-6: Device error messages (DDE Bit 3)
\begin{tabular}{ll} 
Code & Message \\
\hline 300 & Device-specific error \\
\hline 310 & System error \\
\hline 311 & Memory error \\
\hline 312 & PUD memory lost \\
\hline 313 & Calibration memory lost \\
\hline 314 & Save/recall memory lost \\
\hline 315 & Configuration memory lost \\
\hline 330 & Self test failed \\
\hline 350 & Queue overflow (does not set DDE bit) \\
\hline
\end{tabular}

System event. The following table lists the system event messages. These messages are generated whenever certain system conditions occur.

NOTE. The only system event messages available for reading back with the EVENT? or ALLEV? queries are events that have a bit indicated in the following table.

Table 3-7: System event messages
\begin{tabular}{ll} 
Code & Message \\
\hline 400 & Query event \\
\hline 401 & Power on (PON bit 7 set) \\
\hline 402 & Operation complete (OPC bit 0 set) \\
\hline 403 & User request (URQ bit 6 set) \\
\hline 404 & Power fail (DDE bit 3 set) \\
\hline 405 & Request control \\
\hline 410 & Query INTERRUPTED (QYE bit 2 set) \\
\hline
\end{tabular}

Table 3-7: System event messages (cont.)
\begin{tabular}{ll} 
Code & Message \\
\hline 420 & Query UNTERMINATED (QYE bit 2 set) \\
\hline 430 & Query DEADLOCKED (QYE bit 2 set) \\
\hline 440 & Query UNTERMINATED after indefinite response (QYE bit 2 set) \\
\hline 468 & Knob/Keypad value changed \\
\hline 469 & App button pressed \\
\hline 470 & TekScope minimized \\
\hline 471 & TekScope restored \\
\hline 472 & Application variable changed \\
\hline 485 & Ch1 probe button pressed \\
\hline 486 & Ch2 probe button pressed \\
\hline 487 & Ch3 probe button pressed \\
\hline 488 & Ch4 probe button pressed \\
\hline 489 & Aux probe button pressed \\
\hline
\end{tabular}

Execution warning. The following table lists warning messages that do not interrupt the flow of command execution. These notify you that you might get unexpected results.

Table 3-8: Execution warning messages (EXE Bit 4)
\begin{tabular}{ll} 
Code & Message \\
\hline 532 & Curve data too long, Curve truncated \\
\hline 533 & Curve error, Preamble values are inconsistent \\
\hline 535 & \begin{tabular}{l} 
Curve error, Reference data sources not allowed in streaming or \\
next-waveform mode
\end{tabular} \\
\hline 536 & \begin{tabular}{l} 
Curve error, Acquisition mode must be set to Run for streaming or \\
next-waveform mode
\end{tabular} \\
\hline 537 & \begin{tabular}{l} 
Curve error, Cannot stream or next-waveform math waveforms while in \\
roll mode
\end{tabular} \\
\hline 540 & Measurement warning \\
\hline 541 & Measurement warning, Low signal amplitude \\
\hline 542 & Measurement warning, Unstable histogram \\
\hline 543 & Measurement warning, Low resolution \\
\hline 544 & Measurement warning, Uncertain edge \\
\hline 545 & Measurement warning, Invalid min max \\
\hline 546 & Measurement warning, Need 3 edges \\
\hline 547 & Measurement warning, Clipping positive/negative \\
\hline 548 & Measurement warning, Clipping positive \\
\hline 549 & Measurement warning, Clipping negative \\
\hline
\end{tabular}

Table 3-8: Execution warning messages (EXE Bit 4) (cont.)
\begin{tabular}{ll} 
Code & Message \\
\hline 551 & FASTAcq mode is active - deactivate to use math \\
\hline 590 & \begin{tabular}{l} 
Diagnostic warning, running GPIB diagnostic over GPIB may affect \\
talk/listen program
\end{tabular} \\
\hline
\end{tabular}

Internal warning. The following table shows internal errors that indicate an internal fault in the instrument.

Table 3-9: Internal warning messages
\begin{tabular}{ll} 
Code & Message \\
\hline 600 & Internal warning \\
\hline 630 & Internal warning, Input overload \\
\hline
\end{tabular}

External application error. The following table shows external application errors in the instrument.

Table 3-10: External application error
\begin{tabular}{ll} 
Code & Message \\
\hline 2800 & External application error \\
\hline
\end{tabular}

\section*{Appendix C: Factory default setup values}

\section*{Default setup}

The following tables list the default setup values by command group. The instrument sets these values when you press the front panel DEFAULT SETUP button or send the FACtory command. Only those commands that have values set by the DEFAULT SETUP function are listed in these tables.

NOTE. The following commands do not affect the DATa parameters: TEKSecure, *RST, RECALL:SETUP FACtory. These are the initial factory default settings for DATa :DATA:DESTINATION REF1;ENCDG RIBINARY;SOURCE CH1;START 1;STOP 5000;FRAMESTART 1;FRAMESTOP 5000.

NOTE. Find the most up-to-date values for your instrument and software by pressing default setup and looking at the instrument to get the default values.

NOTE. Some of these commands may not be available on your model.

Table C-1: Acquisition default values
\begin{tabular}{ll} 
Command & Default values \\
\hline ACQuire:MAGnivu & OFF \\
\hline ACQuire:MODe & SAMPLE \\
\hline ACQuire:NUMAVg & 16 \\
\hline ACQuire:NUMEnv & 10 \\
\hline ACQuire:NUMSAMples & 100000 \\
\hline ACQuire:SAMPlingmode & TT \\
\hline ACQuire:STATE & 1 (ON) \\
\hline ACQuire:STOPAfter & RUNSTOP \\
\hline FASTAcq:STATE & 0 \\
\hline
\end{tabular}

Table C-2: Alias default values
\begin{tabular}{ll} 
Command & Default values \\
\hline ALlas:STATE & 0 (OFF) \\
\hline
\end{tabular}

\section*{Appendix D: GPIB interface specifications}

This topic describes details of the GPIB remote interface of the instrument. Normally, you will not need this information to use the instrument, but this information can be useful if you are connecting to controllers with unusual configurations.

\section*{Interface messages}

The following table shows the standard interface messages that the instrument supports.

Table D-1: Standard interface messages
\begin{tabular}{ll}
\hline Message & Interface \\
\hline DCL & Yes \\
\hline GET & Yes \\
\hline GTL & Yes \\
\hline LLO & Yes \\
\hline PPC & No \\
\hline PPD & No \\
\hline PPE & No \\
\hline PPU & No \\
\hline SDC & Yes \\
\hline SPD & Yes \\
\hline SPE & Yes \\
\hline TCT & No \\
\hline UNL & Yes \\
\hline UNT & Yes \\
\hline Listen Addresses & Yes \\
\hline Talk Addresses & Yes \\
\hline
\end{tabular}

\section*{GPIB functions}

The following table lists the interface functions and electrical functions subsets supported by this instrument with brief descriptions of each.

Table D-2: Interface functions
\begin{tabular}{|c|c|c|}
\hline Interface Function & Subset & Meaning \\
\hline Acceptor Handshake & AH1 & The instrument can receive multiline messages across the interface from other devices. \\
\hline Controller & C1 & Controller capability, the instrument can control other devices. \\
\hline Device Clear & DC1 & The instrument can respond to both the DCL (Device Clear) interface message and to the Selected Device Clear (SDC) interface message when the instrument is listen-addressed. \\
\hline Device Trigger & DT1 & Device Trigger capability, the instrument does respond to the GET (Group Execute Trigger) interface message. \\
\hline Electrical & E2 & The instrument uses tri-state buffers, which are optimal for high-speed data transfer. \\
\hline Listener & L4 & The instrument becomes a listener when it detects the listen address being sent over the bus with the ATN line asserted. The instrument ceases to be a listener and becomes a talker when it detects the talk address being sent over the bus with the ATN line asserted. \\
\hline Parallel Poll & PP0 & No Parallel Poll Capability, the instrument does not respond to PPC (Parallel Poll Configure), PPO (Parallel POIl Disable, PPE (Parallel Poll Enable), or PPU (Parallel Poll Unconfigure) interface messages, nor does it send a status message when the ATN and EOI lines are asserted simultaneously. \\
\hline Remote/Local & RL1 & The instrument can respond to both GTL (Go To Local) and LLO (Local Lock Out) interface messages. \\
\hline Service Request & SR1 & The instrument can assert the SRQ line to notify the controller in charge that it requires service. \\
\hline Source Handshake & SH1 & The instrument can initiate multiline messages to send across the interface to other devices. \\
\hline Takker & T5 & The instrument becomes a talker when it detects the talk address being sent over the bus with the ATN line asserted. The instrument ceases to be a talker and becomes a listener when it detects the listen address being sent over the bus with the ATN line asserted. The instrument also ceases to be a talker when it detects the talk address of another device being sent over the data lines with ATN asserted. \\
\hline
\end{tabular}

\section*{Glossary}

\section*{ASCII}

Acronym for the American Standard Code for Information Interchange. Controllers transmit commands to the instrument using ASCII character encoding.

\section*{Address}

A 7-bit code that identifies an instrument on the communication bus. The digitizing instrument must have a unique address for the controller to recognize and transmit commands to it.

\section*{Backus-Naur Form (BNF)}

A standard notation system for command syntax diagrams. The syntax diagrams in this manual use BNF notation.

\section*{Controller}

A computer or other device that sends commands to and accepts responses from the digitizing instrument.

\section*{EOI}

A mnemonic referring to the control line End or Identify on the GPIB interface bus. One of the two possible end-of-message terminators.

\section*{EOM}

A generic acronym referring to the end-of-message terminator. The end-of-message terminator can be either an EOI or the ASCII code for line feed (LF).

\section*{Equivalent-Time sampling (ET)}

A sampling mode in which the instrument acquires signals over many repetitions of the event. This instrument uses a type of equivalent time sampling called random equivalent time sampling. It utilizes an internal clock that runs asynchronously with respect to the input signal and the signal trigger. The instrument takes samples continuously, independent of the trigger position, and displays them based on the time difference between the sample and the trigger. Although the samples are taken sequentially in time, they are random with respect to the trigger.

\section*{Real-Time sampling}

A sampling mode where the instrument samples fast enough to completely fill a waveform record from a single trigger event. Use real-time sampling to capture single-shot or transient events.

\section*{GPIB}

An acronym for General Purpose Interface Bus, the common name for the interface system defined in IEEE Std-488.

\section*{IEEE}

An acronym for the Institute for Electrical and Electronic Engineers.

\section*{TEKSecure}

A Tektronix custom command that initializes both waveform and setup memories. This overwrites any previously stored data.

\section*{Serial poll}

A device on the GPIB bus can request service from the GPIB Controller by asserting the GPIB SRQ line (a Hardware line that is only present on the GPIB communications bus). When a controller acknowledges the SRQ, it "serial polls" each open device on the bus to determine which device on the bus requested service. Any device requesting service returns a status byte with bit 6 set and then unasserts the SRQ line. Devices not requiring service return a status byte with bit 6 cleared.

[^0]:    NOTE. This command does not work with Single Sequence.

[^1]:    Arguments QString is a quoted string of up to 48 characters where the allowable characters are 0,1 , and X . The bits specified in the quoted string replace the least significant bits, leaving any unspecified upper bits unchanged.

    Examples SEARCH:SEARCH1:TRIGGER:A:BUS:ETHERNET:MAC:ADDRESS:DESTINATION:VALUE "XXXXXXXX0011010111111100000001111010101011001000" specifies to use the value of XX:35:FC:07:AA:C8 hex when searching on the Ethernet MAC address destination field.
